About the Editors

Spencer C. Tucker, Ph.D., held the John Biggs Chair of Military History at his alma mater of the Virginia Military Institute, Lexington, for six years until his retirement from teaching in 2003. Before that, he was professor of history for thirty years at Texas Christian University, Fort Worth. He has also been a Fulbright scholar and, as an army captain, an intelligence analyst in the Pentagon. Currently the Senior Fellow in Military History at ABC-CLIO, he has written or edited twenty-five books, including the award-winning *Encyclopedia of World War II*, *Encyclopedia of World War I*, and upcoming *Encyclopedia of the Cold War*, all published by ABC-CLIO.

Priscilla Mary Roberts received her Ph.D. from Cambridge University and is a lecturer in history and honorary director of the Center of American Studies at the University of Hong Kong. Dr. Roberts has received numerous research awards and was assistant editor of the *Encyclopedia of the Korean War*, and *Encyclopedia of the Vietnam War*, published by ABC-CLIO. She spent 2003 as a visiting Fulbright scholar at the Institute for European, Russian, and Eurasian Studies at The George Washington University in Washington, D.C.

Warsaw Pact Invasion of Czechoslovakia, 1968: 2227

Preface

The Cold War was, simply put, the single most important event of the second half of the twentieth century. For the purposes of the encyclopedia we have included some background information on World War II, such as the Allied conferences. We have chosen to end the entries within the encyclopedia in 1991, with the breakup of the Soviet Union and the disbandment of the Warsaw Pact. A number of entries, however, including biographies and those treating particular countries, continue past that date.

While the Cold War period was marked by diplomatic and military confrontation (although fortunately no major war of the superpowers involving nuclear weapons occurred), it also shaped the lives of the billions of people who lived through it in many countless ways. We have tried, therefore, to address its social and economic impact, not only in the individual country entries but by including entries on such topics as literature, music, film, and religion. Members of the editorial advisory board and individual contributors suggested additional entries, and we incorporated many of their ideas. Many entries were updated shortly before publication.

The encyclopedia contains entries treating most of the world's nations, and we have included separate entries on the most important military establishments. Other categories emphasized are individuals, diplomacy (conferences as well as treaties), weapons systems, wars, and important battles. Obviously, even in an encyclopedia of a million words it is impossible to include every individual or event, but we hope that we have treated the most influential.

I have been ably assisted on this project by associate editor Dr. Paul P. Pierpaoli Jr. and assistant editors Dr. Timothy C. Dowling, Mr. Gordon Hogg, and Dr. Priscilla Roberts. Editorial Advisory Board members assisted in special ways. I would especially like to recognize Shawn Livingston and Law Yuk-fun, who were quick to answer highly esoteric inquiries. Dr. Pierpaoli and I did all preliminary editing, and the assistant editors each read the entire copy and made editorial suggestions.

This encyclopedia contains the widest range of international contributors than any I have previously edited. Included are scholars from such

nations as Australia, Austria, the People's Republic of China, Egypt, France, Germany, Hungary, India, Japan, the Republic of Korea, Poland, South Africa, Turkey, and the United States.

I am especially pleased to work again with Dr. Roberts on the documents volume. We have been associated with a number of encyclopedia projects, and there is simply no more professional, reliable associate than Dr. Roberts. Her specialty is the Cold War, and she has an amazing grasp of its documents.

I am, as always, indebted to my wife Beverly for her patience and her unfailing support.

General Essays

A Personal Perspective

It seems paradoxical when we stop to consider how rapidly the period we call the Cold War, the forty-five years during which the United States and the Soviet Union faced each other in a potentially deadly standoff, has nearly faded from our memories. Although the two nations were officially at peace during that time, their very survival was in peril of nuclear destruction. That fact was well known in all circles. “Don’t talk to me about restoring the dollar after a nuclear exchange,” I once heard President Dwight “Ike” Eisenhower say in a cabinet meeting. “We’ll be grubbing for worms.” Yet today the Cold War is hardly mentioned.

It is difficult to identify exactly when the demise of the Cold War occurred because it came in steps. The tearing down of the Berlin Wall in 1989 signaled that the Soviet Union was willing to relax its control over Eastern Europe, but it was not until the USSR as an empire collapsed in 1991 that the transformation from Cold War to uneasy peace was complete.

It is also difficult to pinpoint exactly when it began. Some place the date as early as August 1945, when the United States dropped atomic bombs on Hiroshima and Nagasaki, acts that the Soviets supposedly interpreted as a threat to them. The adherents of that theory underrate the extent of the American determination to end the long and bitter struggle they had waged against their Japanese enemies. The possible effect on the Soviets was not part of the decision to drop the bomb. A Russian friend whom I highly respect has given a more plausible theory. The Soviets, he says, viewed the Cold War as beginning with Sir Winston Churchill’s “Iron Curtain” speech at Fulton, Missouri, in 1946. It was at that time, my friend says, that the Soviets began to feel threatened by the West. Up to that time, he says, the tight control that the USSR exercised over Eastern Europe was seen by the Soviets as an inevitable sequel to the end of the war in Europe.

Relationships between the United States and the Soviet Union had always been shaky. Admittedly, the Russian Revolution that overthrew Nicholas II in March 1917 was at first viewed favorably by Americans, who bore no love for any absolute monarch. But the moderates who took power were soon themselves toppled by the Bolsheviks in a second revolution. The

Bolsheviks withdrew Russia from the war with Germany and threatened to spread their communist doctrine to other countries. At that point, all the West became alarmed. When the German emissaries met with the Allies at Compiègne in November 1918 to conclude the armistice that ended World War I, they warned Marshal Ferdinand Foch, obviously as a ploy, of possible Bolshevik revolutions in France and Britain if the terms were too harsh on Germany.

The Americans shared the distrust of Bolshevism so prevalent in France and Britain, but to a lesser degree. The United States supplied troops to the ill-fated Allied occupations of Vladivostok, Archangel, and Murmansk in the later days of World War I, but we got out as soon as possible. Yet it was an astonishing fifteen years after 1918 before the United States, under the newly inaugurated President Franklin D. Roosevelt, recognized the Soviet government. The general Western mistrust of the Bolsheviks did much to engender suspicion of continued Soviet hostility.

During the six years after extending diplomatic recognition the Americans paid little attention to the Soviet Union, principally because of the expansionist policies of Adolf Hitler. In late August 1939, however, Germany and the Soviet Union signed a nonaggression treaty that gave Hitler free rein to launch an attack on Poland. A week after that pact was signed, Hitler sent German troops into Poland, and on 3 September 1939 France and Britain declared war. On 16 September, acting under secret terms of the nonaggression pact, the Soviets invaded Poland from the east. Hitler and Josef Stalin then divided the country between them.

Eight months later, freed by the pact with the USSR from the danger of a two-front war, German troops overran Norway and Denmark and then France, Belgium, and the Netherlands, thus occupying most of Western Europe. The Americans, who viewed this with dismay, blamed Hitler above all but also blamed Stalin, as Hitler's accomplice, almost as much.

World War II (1939–1945)

The German-Soviet alliance did not last. In mid-1941, Stalin was suddenly thrust into the position of a hero in the United States. His newfound popularity did not stem from any virtuous action on his part but rather on the fact that in late June, Hitler's massed armies crossed the border into Belarus, the Ukraine, and Russia in an unprovoked attack. Stalin was caught much by surprise, but the Soviet people sprang to the defense of Mother Russia and put up stiff resistance, paying dearly in the process. Americans watched the heroic Soviet performance of the Red Army and Soviet peasants with profound admiration. Stalin appeared twice on the front of *Time* magazine as "Man of the Year."

Six months later, in December 1941, the United States found itself the Soviet Union's actual ally in the war against Hitler. Japanese carriers attacked Pearl Harbor on 7 December, and Hitler declared war against the United States a few days later. We were all in the same boat, to quote Roosevelt: Britain, the Soviet Union, and the United States fighting a common enemy.

It was and remained an uneasy alliance. The Soviets could never quite accept the idea that the West was attempting to aid them in their struggle for

survival against Germany without harboring some ulterior motives of their own. Yet the Allies, and certainly the Americans, were sincerely doing everything in their power to come to the aid of their beleaguered ally. Even while the Americans and British were undergoing costly and humiliating defeats at the hands of the Japanese in early 1942, General George C. Marshall, U.S. Army chief of staff, was advocating an Anglo-American invasion of France with the object of forcing Hitler to withdraw vital divisions from the Eastern Front. Although that operation was never executed, the Allies sent supplies to Archangel and Murmansk in dangerous and costly convoys. We managed to deliver a great deal—for example, a half million General Motors 2½-ton trucks. The Lend-Lease supplies we sent may not in themselves have saved the Soviet Union from defeat, but they went a long way to help.

Throughout the time they fought as allies, the United States, Britain, and the USSR attempted to coordinate their war efforts. The relationship between the United States and Britain was extremely close, and the Soviets cooperated as best they could within the restrictions imposed by their secret society. It is important to note that American political policy, laid down by President Roosevelt, was one of complete friendship with the Soviets in their joint war against Germany. That policy explains many actions the Allies later took that appeared naive once the spirit of wartime cooperation ended.

It is interesting to note Roosevelt's exaggerated confidence in what he was sure would be his ability to contend with the Soviets after the shooting stopped. "Don't worry," he promised, "I'll take care of Uncle Joe." That bit of hubris has usually been quoted in a humorous context. And yet it is intriguing to conjecture whether the Cold War might have been averted had Roosevelt survived. As it was, he died at Warm Springs on 12 April 1945, just a month short of victory in Europe.

The Honeymoon

The end of the war in Europe witnessed a strong but brief era of goodwill among the three principal victors. I personally was a witness, both at the working level and in the halls of the powerful.

My personal exposure to the Soviets started out on a rather frightening note. As a lieutenant in the 1st Infantry Division in Czechoslovakia, I joined four other officers a few days after the end of the war for a joyride to Carlsbad, behind Soviet lines. As we drove into the town and turned a corner, we encountered a handsome but very dirty young Russian soldier, who although drunk was sober enough to recognize our party as Americans. Exuberantly, he tried to kiss all five of us. I was spared because of my position in the jeep. But we were careful. He was brandishing a Luger, and a dead German civilian was lying in a pool of blood beside us.

Later exposures were more pleasant. In August, three months after V-E Day, my father, General Eisenhower, was invited to visit Moscow in his capacity as supreme commander for the Western powers in the war just finished. He sent for me to accompany him as his aide.

The striking aspect of the visit was the lavish reception the Russians gave the commander of a foreign nation's army. Georgi Zhukov, General

Eisenhower's Soviet counterpart in Berlin, met us at Tempelhof Airport for the flight to Moscow in Ike's C-54 (DC-4) four-engine aircraft. Zhukov, as the official host, was the soul of hospitality and congeniality. By this time the two commanders, Eisenhower and Zhukov, had been representing their countries in the four-power government of Germany, and they had become friends—as close of friends as public life permits.

In Moscow the party first attended a parade. Significantly, my father was invited to undergo a four-hour ordeal atop Vladimir Lenin's tomb with Zhukov and Stalin. He was, I later learned, the first foreigner ever accorded that honor. One evening, the entire party was entertained at dinner, with Stalin himself officiating, acting friendly enough but mysterious as always. During the following three days, there were tours of collective farms, aircraft factories, and even the Moscow subway. Together at the American embassy during the evening of 15 August (V-J Day), Soviets and Americans celebrated the news of Japan's surrender. In Leningrad the ceremonies drew to a close.

As a final gesture, my father invited Zhukov to pay a return visit to the United States. Ike could not accompany the marshal, he said with regret, but he would provide his personal airplane and send me along as Zhukov's aide. Zhukov was delighted. "If Lieutenant Eisenhower goes along with me," he said, "then I know the plane will not go down in the Atlantic."

It was not to be. In mid-September 1945, almost the day of the scheduled departure, word came from the Soviets that Marshal Zhukov had become sick and could not make the trip to the United States. To my mind, although the term "Cold War" had not yet been invented, this represented the end of the honeymoon.

The Early Days of the Cold War

With the cancellation of Zhukov's trip to the United States, we in Europe were concerned, but we could not foresee how serious the rift between East and West was to become. Before my father left Germany to become army chief of staff in late 1945, we mused together over the new developments and expected only a reasonably short period of tension. We were, of course, worried about the fate of Zhukov and conjectured that he had overplayed his hand. His popularity perhaps had gone to his head, and Stalin, who brooked no competition, had put his foot down.

Early 1946 saw the forces in Europe preoccupied with the trials and execution of the top Nazis in Nuremberg. In the United States, however, the big news was Winston Churchill's "Iron Curtain" speech at Fulton. The United States continued to enjoy a monopoly on the atomic weapon, and we unrealistically hoped we could keep that monopoly indefinitely. In fact, the Soviets had begun working on the project and tested their first weapon in 1949.

The year 1946 also witnessed another event: the formulation of American policy for dealing with the Soviets during the years ahead. Based on a telegram by George Kennan from the U.S. embassy in Moscow, it visualized simply holding the communist world within the borders it then occupied. The West would not attempt to take aggressive action against the Soviet

empire but would do everything possible to prevent its expansion, even in countries outside its borders. The world would live for years in a state of tension.

Exactly what accelerated the tensions is unclear, at least to me. The Soviets certainly had nothing to fear from the small U.S. and British occupation forces in Europe. After the mad rush to bring our soldiers home from overseas following the war, we finally left only one American infantry division, the 1st, to occupy the American zones of both Germany and Austria. That division was supplemented by a constabulary about the size of a combat command of an armored division, but together they constituted little threat. The United States possessed the atomic bomb, to be sure, but nobody outside the inner circles of government knew how many atomic bombs. Had war come, we presumably could have destroyed Moscow, but the powerful Red Army in Eastern Europe could overrun all of Western Europe with no difficulty. At the same time, psychological factors were at work in the form of books and other information leaking out of the Soviet Union. Books such as Viktor Kravchenko's *I Chose Freedom* and Arthur Koestler's *Darkness at Noon* revealed aspects of the inner Soviet Union that Americans in general had not previously known. The tensions between the two societies were now ideological as well as military.

In 1948 the Soviet Union had its first real confrontation with the United States and Britain. Red Army forces cut off all ground communication between the Western sector of Berlin and the part of Germany occupied by Western forces. Although it can be argued that the occupation of Berlin had become an anachronism, the Western powers had developed an obligation to the people of West Berlin to protect them from the Soviets, and the Allies decided that they had to stay.

President Harry S. Truman, with the advice and counsel of Marshall, the great soldier-statesman, took a moderate course. Although the United States was still the sole possessor of the atomic weapon, Truman and Marshall decided to wait out the siege and feed the population in the western zone of Berlin by supplies sent in by aircraft.

The result, which comprises a story in itself, was a spectacular feat. For eleven months, planes flew into Tempelhof Airport around the clock; a major city was fed and provided coal by air. The Soviets, unwilling to push the Allies further, raised the siege after eleven months. The world was astounded, although many of our citizens had a feeling that the United States was being pushed around and that the initiative in the East-West confrontation belonged to the East.

In 1949 China joined the Soviet Union, adding millions of people to the communist bloc. The corrupt regime of the Nationalist Chinese President Jiang Jieshi fell to Mao Zedong's communist regime. Although the partnership between the Soviets and the communist Chinese regime was never as close as the West imagined, they comprised, in the Western mind, a solid bloc. This supposition did much to affect the actions of the West in dealing with both countries.

The Korean War (1950–1953)

On Sunday 25 June 1950, forces of the Democratic People's Republic of Korea (DPRK, North Korea) crossed the artificial border between North and South Korea, the 38th Parallel of latitude, invading the Republic of Korea (ROK, South Korea). The North Koreans, armed with Russian weapons, easily overran most of South Korea that half of the peninsula sponsored and once occupied by American forces.

President Truman acted promptly. He committed American air and sea power immediately to lend support to the South Koreans, and a couple of days later he sent the ill-fated U.S. 24th Infantry Division from occupation duty in Japan across to join the battle. The 24th Infantry was nearly wiped out, and its commander was captured by the North Koreans.

Like the Berlin airlift, the Korean “police action” constitutes a story in itself. Both sides built up strength, and the North Koreans were finally stopped in the southeast corner of the Korean Peninsula. They were then roundly defeated by a breakout from the Pusan Perimeter, coupled with an amphibious landing at Inchon, near Seoul. It seemed as if the war was over until the Chinese intervened and pushed back United Nations (UN) forces from North Korea. After three years, two of them being fought while peace talks were on, the two sides wound up along a line almost identical to the original 38th Parallel. Others may argue, but to me the Korean War was a success. The objective had always been professed as being only to liberate South Korea.

The Korean War, however, produced consequences of great political import. The overt communist aggression demonstrated to the West that serious consequences could result from lack of preparedness. Congress gave the president authority to raise American ground forces in Europe from one division to six divisions. The North Atlantic Treaty Organization (NATO), previously a pact of little consequence, was transformed into a military organization with headquarters in Paris, with General Eisenhower called from retirement to command it. The United States had been restrained in its policy for fighting the war in Korea for fear of drawing the Soviet Union into a third world war if we bombed its ally, China. For dissenting against national policy in public, General Douglas MacArthur was removed from the Korean command, with serious consequences for the remaining eighteen months of the Truman administration. What had begun with tensions after World War II had now grown into a life-and-death affair.

The Crisis Years (1950s)

The world was to enjoy no respite from tension with the end of the fighting in Korea. No sooner had an armistice been signed at Panmunjom in July 1953 than the West learned that the Soviets had now tested an operational thermonuclear bomb, commonly called a hydrogen bomb. Soon thereafter it became known that the Soviets had developed long-range aircraft, Bears and Bisons, capable of hitting the United States. Thus, the crisis of the Korean War was supplanted by a threat of an entirely new and intensified dimension.

The period of greatest danger, therefore, coincided almost exactly with the presidency of Eisenhower.

A word of explanation is in order for my contention that the 1950s were the most dangerous years. Those were the years in which the two blocs—East and West—were developing and stockpiling weapons of mass destruction, but strategists on both sides were considering the possibility of winning a war using a first strike by aircraft and missiles armed with nuclear warheads. Winning, however, meant completely destroying the enemy while at the same time having a part of one's own country survive. That hope, ridiculous as it was, was held by some people, and that is what made the 1950s such a dangerous period.

The immediate danger was drastically reduced, however, not by a reduction of terror but by the invention of a new weapon, the virtue of which eliminated any hope of survival of an atomic exchange, even by the aggressor. By 1960, the United States had developed an operational submarine-launched atomic missile that was capable of being deployed anywhere on the seven seas and firing missiles to hit targets thousands of miles inland while at the same time remaining virtually invisible under water. Thus, any unrealistic dreams that a preemptive strike could leave an attacker with "acceptable" losses disappeared. A new term, "mutual assured destruction," eventually grew from this new development.

Fortunately, during this period of greatest danger, the leaders of both the Eastern and Western blocs were sane men, and mutual assured destruction as well as mutually assured unacceptable losses had been quietly recognized early. But the danger arose from the combination of conventional and atomic wars. Even if the United States and the Soviet Union engaged in a war that was initially confined to conventional weaponry, the eventual use of nuclear weapons seemed inevitable. If the survival of one or the other nation was deemed to be doomed in a conventional war, that nation might use the nuclear weapon as a last resort. For that reason, the Western nations and the Soviets never fought directly throughout the entire Cold War. Surrogates such as Korea, Vietnam, and Afghanistan did fight, however.

President Eisenhower attempted to deal with the Cold War in two ways. The first was his sincere effort to develop understanding between the two nations by means of cultural exchanges. The other was to keep America (and the Western Allies) protected against a surprise Soviet attack. (It would also protect the Soviets from surprise attack from the West.) With the death of Stalin in early 1953, Eisenhower held hopes that Stalin's successor—whoever he might turn out to be—might feel a little less hostile to the West and be willing to find a reasonable way of approaching the problem. In one respect, Eisenhower was right: the Soviets desired a conference as well. Therefore, as a token of mutual trust, the four powers occupying Austria—the United States, the USSR, Britain, and France—agreed to neutralize the country by withdrawing all their military forces from it. With that visible evidence of mutual goodwill, the four powers met at Geneva, Switzerland, in the summer of 1955.

The Geneva Conference produced much rhetoric, but Eisenhower put forth one concrete and dramatic suggestion commonly called the Open Skies Proposal. Both East and West, according to this scheme, would exchange blueprints of their armed forces. In addition, both sides would be cleared to make extensive aerial reconnaissance over the other's territory. In that manner, surprise attack would be at least deterred.

Three of the four members of the Soviet delegation stalled briefly, expressing interest. One man, Nikita Khrushchev, did not. Although theoretically only one of the four so-called equals—the Soviets were supposedly being governed by Khrushchev, Zhukov, Nikolai Bulganin (nominal chief), and Vyacheslav Molotov—Khrushchev refused outright, almost angrily. Eisenhower was not overly surprised. Much of what would be disclosed on the Western side was already easily available to anyone; the Soviets were unwilling to give up their secret society. But at least the West had found out who was in charge of the Soviet government—Khrushchev.

After his Open Skies Proposal had died at Geneva, Eisenhower resorted to unilateral action. The Central Intelligence Agency (CIA) completed development of a high-altitude reconnaissance plane called the U-2. A remarkable aircraft, it flew at such a high altitude that for a time, at least, it was deemed safe from known Soviet antiaircraft missiles. During the years it operated, the U-2 Program carried out overflights of Russia and provided much valuable intelligence. In so doing, it enabled Eisenhower to conduct foreign affairs in a more daring manner than would have been the case had he not possessed that intelligence.

The U-2 Program was illegal from the viewpoint of international law. President Eisenhower, however, deemed it essential. Furthermore, Secretary of State John Foster Dulles had always insisted that even if a U-2 were to be shot down, Khrushchev would never admit that flights had been going on for some time over Soviet airspace.

Those years were fraught with secondary confrontations and scares. The crisis over the Chinese islands of Quemoy and Matsu, just off the coast of the mainland but occupied by Jiang's Republic of China (Taiwan) seemed touch-and-go. Of more public notice was the Soviet launching of the first Earth satellite, *Sputnik*, in late 1957. That feat, which proved that the Soviets had developed missiles of greater thrust than any developed by the United States, caused a near panic in the public. Eisenhower assured the public that the satellites bore no relationship to our national defense, which was based on smaller missiles posted in European locations. Before the furor had calmed down, Eisenhower had organized NASA, the Marshall Space Center at Huntsville, and the Science Advisory Council in the White House.

The greatest East-West crisis of the 1950s, however, was the confrontation over the status of West Berlin, an issue then more than ten years old. At Thanksgiving 1948, Khrushchev issued an ultimatum for the withdrawal of Western troops from the city of Berlin; the consequence for failure to do so could mean war. He gave a deadline of six months.

Here Eisenhower realized that the West could never win a conventional war in Europe against the gigantic Soviet force deployed there. The Soviets

surrounded Berlin, so the West's occupation forces in the city were insignificant. Eisenhower therefore made it known, sometimes subtly, that the United States had no intention of fighting a conventional war in Europe. He would respond to a Soviet move to cut off the city by using atomic weapons. In early March 1959, I attended a White House meeting with congressional leaders during which Ike assured his astonished and frightened audience that he was going through with a prearranged, scheduled cut of 30,000 men despite the current tensions. If Khrushchev went through with his threat, we would unleash the Strategic Air Command's bombers—or so the tea leaves read.

The meeting had a sobering effect on the assembled participants, and frankly it frightened me. I have mulled the matter over in my mind many times and have never been certain whether the president would have gone through with that threat. After long consideration, I have concluded that he would not. It would be better to lose not only Berlin but even all of Western Europe than to destroy Earth. But Ike was a great poker player, and the deterrence worked. Khrushchev could not have been unaware that his six-month ultimatum had slipped by while the diplomats exchanged words around the conference tables.

For a while it appeared that a real understanding might be developed between Khrushchev and the West. A visit of the Soviet premier to the United States resulted in a temporary era of good feeling between the two superpowers. But that period came to an end when the unthinkable occurred: a U-2 was shot down over Sverdlovsk, near Moscow. The results were severe, although we never came close to going to war. After much furor, including a shoe-banging exhibition by Khrushchev in the UN, the international situation calmed. The chance for détente was gone, but Khrushchev's ultimatum over Berlin had been neutralized.

One more major crisis, perhaps the most serious, was yet to be played out, however. In January 1961, President John F. Kennedy came into office. Although inexperienced, he was determined to take action. His first target was Fidel Castro's Cuba. In April, Cuban rebels, openly trained and supported by the United States, landed at the Bay of Pigs on Cuba's southern coast only to be overwhelmed and captured by Castro's troops. The resulting embarrassment to the United States, reinforced by the lack of Western resistance to his building the Berlin Wall in December 1961, apparently gave Khrushchev an unrealistic confidence that he could bulldoze Kennedy under any circumstances. In late October 1962, Khrushchev decided that he could take the bold step of installing missiles, supposedly nuclear-armed, on the soil of his ally Cuba.

In this instance, however, conventional military forces proved their supremacy in a practical world. President Kennedy proclaimed a blockade of Cuba and ordered the U.S. Navy to intercept the Soviet ships carrying the missiles. Ultimately Khrushchev backed down, and both sides made concessions. But both powers felt a relief. They had stepped up to the brink, and both now realized that they had been spared Armageddon. The Cold War continued formally for almost two more decades, but from then on it was defanged.

The Years of Confrontation (1962–1989)

The world, or rather the East and West, learned the lessons of the Cuban Missile Crisis well. Although the two sides remained implacable enemies—or seemed to—the fear of instant annihilation was largely gone. No longer did schoolchildren undergo atomic air raid drills; no longer did people build fallout shelters in their basements. Military threats gave way to diplomatic activity and clandestine spying.

Within a year or two of the Cuban Missile Crisis, however, the attention of the United States turned from the large-scale threat of general war to what was, by comparison, a small war, the American misadventure in Vietnam. This was not the kind of war for which the American arsenal of superweapons had been designed. Yet it was, in a way, an auxiliary part of the Cold War, because it was waged between a communist nation—the Democratic Republic of Vietnam (DRV, North Vietnam)—and the United States. More important, it was perhaps the last military action based on the basic American policy of containment, set forth in 1946. The United States lost the Vietnam War without suffering defeat in any pitched battle. It all came about by an American misunderstanding of the Vietnamese. In Vietnamese minds, it was not a war of ideology; it was a war simply of national independence.

In 1979, the reverse occurred when the Soviet Union made the error of invading Afghanistan with similar disastrous results. Again, that conflict was not strictly a part of the Cold War, although the United States unabashedly armed the Afghans against the Soviet invaders, hardly an act of friendship toward the Soviet Union.

At the time of the end of the Vietnam War, I had an experience that gave me some idea of the reasons for the mistrust of the Soviets by the West, perhaps only one of many causes for the beginning of the Cold War.

On 8 May 1975, I was a member of a diplomatic delegation to Moscow headed by former Ambassador W. Averell Harriman. The purpose was to celebrate the thirtieth anniversary of the Nazi surrender in Europe. The Western delegations were studded with prominent military leaders: Generals Alfred M. Gruenther and Lyman L. Lemnitzer, both former supreme commanders in Europe under NATO, and Admiral Lord Louis Mountbatten, one of the most prominent British figures of the war.

In most respects, the diplomatic visit was both routine and pleasant. The memorable moment, however, came at the ceremony itself. Soviet Premier Leonid Brezhnev, before an audience of thousands, spent what seemed like an interminable time berating the Western powers for their supposed delay in crossing the English Channel in World War II. The Soviets, in desperate straits in early 1942, had believed that the Allies could have come to their aid much earlier than they did. In their minds, the Allies, Winston Churchill in particular, were indifferent to the prospect of the Soviets being bled white.

In a way the scene had slightly amusing aspects. The most notable memory, to me, is that of Lord Mountbatten, up on the stage, resplendent in a white uniform and every decoration imaginable. He was forced to sit unhappily and listen to the tirade with no prospect of replying. Yet outside the Great Hall, the atmosphere was relatively friendly. I, for one, was happy

to have a short visit with Soviet Foreign Minister Andrei Gromyko, whom I had come to know slightly from other diplomatic encounters. Those of us present had no idea that a period of relaxation of tension—*détente*—was about to begin.

In July 1975, only a month after the visit to Moscow, the Western powers and the Soviets signed a treaty in Helsinki, Finland, that was destined to produce serious and unexpected consequences. The purpose of the treaty was to create some stability in Europe, and to that end both sides reluctantly made uncomfortable concessions. The West agreed to language that seemed to recognize the permanency of Soviet occupation of Eastern Europe (which everyone at that time knew was a hard fact of life). The Soviets, on the other hand, allowed a paragraph to be included that mentioned human rights, apparently in the hope that such an innocuous and general paragraph would go unnoticed.

Neither concession went unnoticed. Many Americans and British were enraged at our officially recognizing the Soviet occupation of Eastern Europe. In the USSR, where ferment was already beginning, the language of that one paragraph encouraged dissent. Boris Pasternak in 1948 and Aleksandr Solzhenitsyn in 1974 had been persecuted for their Nobel Prize-winning books about the abuses of the Soviet regime. But neither had been exterminated. That would not have been the case under Stalin. The movement toward individual freedom in the Soviet Union was under way.

In the period of confrontation, both sides made efforts to ease the tension. As early as 1969, East-West talks on the Strategic Arms Limitation Treaty (SALT I) were begun, followed some time later by SALT II. These disarmament talks, in themselves, were forlorn efforts—both sides had far too many deliverable thermonuclear weapons, and neither could be expected to leave the other side at an advantage. Nevertheless, the spirit behind the talks—the realization that a nuclear exchange would be insanity—made holding them worthwhile.

In 1986 an event occurred at Chernobyl in the Ukraine that did more, in my view, than any other to bring the Cold War to an end. A nuclear power plant there began a meltdown that besides taking many lives affected much of Europe, reaching all the way to Denmark, and cast atomic energy in a new light. The Chernobyl reactor was small, only a twenty-kiloton plant, and the contrast of that small nuclear explosion with a single (one-megaton) thermonuclear weapon, of which each side had thousands, apparently helped the world to come to its senses. The Cold War could not go on forever.

Although it was not readily apparent to observers in the West, the Soviet Union's control over occupied Eastern Europe was far from uniform. The country enjoying the greatest latitude within the Soviet Union was Poland, where trouble began fermenting at about the time of the Helsinki Accords. There an obscure electrician by the name of Lech Wałęsa began organizing resistance in the Gdansk shipyards.

In June 1979, Pope John Paul II, a Pole, paid a visit to his native land. The fact of his being permitted into a nominally atheistic country seemed a sure indication that Soviet control over its satellites was loosening even more.

And so it did. The next year Wałęsa and two other men organized a trade union called *Solidarność* (Solidarity), which survived. His activities became known in the West, so much so that Wałęsa was named “Man of the Year” by *Time* magazine in 1980.

Wałęsa’s rise in Poland was paralleled by that of Mikhail Gorbachev, the man who shares the credit with Wałęsa as being most responsible for the end of the Cold War. Gorbachev became secretary-general of the Communist Party of the Soviet Union (CPSU) in 1986. Long aware of the weakness in the Soviet economy and political structure, Gorbachev initiated two programs: *glasnost*, meaning openness, and *perestroika*, meaning restructuring. He initiated his reforms gradually. Perhaps his most important single act was taken in June 1988, when the CPSU launched radical reforms to reduce party control over the governmental apparatus. He also renounced the Brezhnev Doctrine, thus allowing the East European nations more latitude in determining their own affairs.

The loosening up of the Soviet Union—and therefore the end of the Cold War—was prompted by economic difficulties in the Soviet Union. The peoples who had heretofore been held under rigid control were now enjoying new freedoms, but the pressures of a collapsing economy encouraged Georgia, the Ukraine, Armenia, Azerbaijan, Belarus, and the Baltic states (Estonia, Latvia, and Lithuania) to make further moves toward true independence. Gorbachev’s attempt to establish a voluntary federation failed. On 13 November 1989 the Berlin Wall was broken down, and Brandenburg Gate was officially opened the next month.

Though Gorbachev was—and still is—a hero in the West, he was removed from power by a more aggressive Boris Yeltsin in 1991. The Union of Soviet Socialist Republics was a thing of the past, and the Cold War was over.

Retrospect

In looking back at the years of the Cold War, one’s first and overriding reaction to its end is one of relief. Considering the magnitude of the tragedy that would have befallen the whole human race in the event of a single mistake, one can only be thankful that the world survived at all.

There are secondary questions, however, such as who was responsible for the Cold War—the Soviets, the West, or both? It is not a matter of fixing blame. The answer is of importance simply as a guidepost to the future. We must ensure that such a confrontation does not occur again. Unfortunately, we cannot disinvent thermonuclear weapons. (In fact, there are nations today, far less reliable than the old Soviet Union, that now possess them.) Nations that have them in their arsenals are never going to destroy them as long as other nations still have them. It is necessary, then, that policies affecting the family of nations must be such that the world will never again come to the brink of nuclear war.

In the early days of the Cold War, beginning in 1945, there was no doubt in the minds of the Western nations that the instigators were the Soviets. After all, U.S. policy (and to a lesser extent British policy) was to extend the hand of friendship to our Eastern ally. During World War II we sent vast

quantities of supplies to the Soviet Union. Sometimes the West made concessions that have been criticized from a political perspective, as with General Eisenhower's decision, late in World War II, to halt the Western armies on the lines of the Elbe and Mulde Rivers rather than race the Soviets to Berlin. Regardless of military considerations, that decision was totally consistent with President Roosevelt's desires. Since the West was generous, we argued, that fault must lay with the Soviets.

Some years after the war, however, some historians came up with the revisionist view that trade policies and other considerations forced the Soviets' hands and made them feel on the defensive. So the blame was laid, at least for a while, on the West. And later still, a group of postrevisionists, led by the prominent historian John Lewis Gaddis, have come to lay the causes at the feet of both sides, although they emphasize the belligerent attitude of Stalin as being a major factor.

The important thing right now is the future. Happily, the West has joined the Russians in working together in many fields. Russian acceptance of NATO expansion to the East, including even the Baltic states, is a development unthinkable only a few years ago.

We should not, however, view the end of the Cold War as a Western triumph in the spirit of winning or losing a football game. I understand that some years ago a NATO commander, visiting the Soviet Union, boasted about how the West had "won" the Cold War. Such an attitude can be nothing else than counterproductive.

In these pages I have said little about the role played by the U.S. government, particularly the presidents and the troops who held the line in Europe, in bringing the Cold War to an end. I have avoided that issue principally because it is loaded with American politics, and in my opinion the Western nations did little of a positive nature to accelerate the march of change in the Soviet Union. The idea has been touted that President Ronald Reagan's promotion of the Strategic Defense Initiative, the ambitious and expensive antimissile program, frightened the Soviet leaders so as to bring about their economic collapse. I reject that theory. The disintegration of the Soviet Union had begun too long before.

This introduction has attempted to furnish an outline only. The entries in this encyclopedia will provide the reader with discussions of detailed facets of the problems of the Cold War. In many cases the experts will disagree with my thoughts, which are admittedly affected by my own experiences. But this much is certain: the fact that the world survived the Cold War has made it possible for all of us to study it and express our views on it frankly.

JOHN S. D. EISENHOWER

Origins of the Cold War to 1950

The deadlock between East and West was the single most momentous development in the post–World War II period and dominated the next half century. The term “Cold War” apparently originated in 1893 with German Marxist Edward Bernstein, who used it to describe the arms race in pre–World War I Europe in which there was “no shooting” but there was “bleeding.” Its usage for the East–West confrontation, however, seems to have originated with the British writer George Orwell in an article of 19 October 1945. More famously, American financier Bernard Baruch used the phrase in the course of a speech in 1947. Put in its simplest terms, the Cold War was the rivalry that developed between the two superpowers—the Soviet Union and the United States—as each sought to fill the power vacuum left by the defeat of Germany and Japan. Leaders on each side believed that they were forced to expand their national hegemony by the “aggressive” actions of the other. Misunderstandings, bluff, pride, personal and geopolitical ambitions, and simple animosity between the two sides grew until the struggle became the Cold War.

At the end of World War II, Washington, D.C., and Moscow each had different views of the world. The United States sought a system based on the rule of law and placed high hopes on a new organization of states known as the United Nations (UN), which took its name from the victorious powers of World War II. The UN closely resembled the old League of Nations, the organization that President Woodrow Wilson had championed at the Paris Peace Conference following World War I and that the United States had then refused to join.

Typically for the United States in wartime, leaders in Washington had paid scant attention to trying to shape the postwar world. During World War II, President Franklin Roosevelt had not greatly concerned himself with postwar political problems, working on the assumption that the UN could resolve them later. Washington’s preoccupation throughout the conflict was winning the war as quickly as possible and at the least cost in American lives. This frustrated British Prime Minister Winston Churchill, who, as was the case with his Soviet counterpart Josef Stalin, sought to establish spheres of

U.S. President Harry Truman (*center*) shakes the hands of British Prime Minister Winston Churchill (*left*) and Soviet Premier Josef Stalin (*right*) on the opening day of the Potsdam Conference in Germany, 17 July–2 August 1945. (U.S. Army, Harry S. Truman Library)

influence. U.S. leaders held—at least overtly—to the Wilsonian position that a balance of power and the spheres of influence were both outdated and immoral.

At the end of the war, a power vacuum existed throughout much of the world. In defeating Germany and Japan, the United States had in fact destroyed traditional bulwarks against communist expansion, although the fact was largely unappreciated at the time. In Europe there was not a single strong continental state able to bar Soviet expansion. In the Far East there was only China, which Roosevelt had expected to be one of the great powers and a guarantor of a peace settlement, but China had been badly weakened by the long war with Japan and was in any case about to plunge into a full-scale civil war of its own.

Americans assumed that wars ended when the shooting stopped, and thus domestic political considerations compelled the rapid demobilization of the armed forces before the situation abroad had stabilized. Although the Soviet Union was actually much weaker in 1945 than was assumed at the time, Churchill expressed the view that only the U.S. nuclear monopoly prevented the USSR from overrunning Western Europe.

In 1945, though, the Soviet Union had just emerged from a desperate struggle for survival. The German and Soviet armies had fought back and forth the western USSR and had laid waste to vast stretches of the region. Twenty-five million people were left homeless, and perhaps one-quarter of the total property value of the country had been lost. The human costs were staggering, with as many as 27 million dead. The effects of all this upon the people of the Soviet Union can scarcely be comprehended. Certainly for the indefinite future whatever government held power in Moscow would be obsessed with security. This, rather than expansion, was the Kremlin's paramount concern in the immediate postwar years.

Despite all the destruction, the Russians emerged from the war in the most powerful international position in their history. The shattering of Axis military might and the weakness of the West European powers seemed to open the way to Soviet political domination over much of Eurasia and the realization of long-sought aims.

Stalin, who had seen the Western powers after World War I erect a *cordon sanitaire* in the form of a string of buffer states against communism, now sought to do the same in reverse: to erect a *cordon sanitaire* to keep the West out. This was for security reasons, as Russia had been attacked across the plains of Poland three times since 1812, but it was also to prevent the spread of Western ideas and political notions. To Western leaders, the Kremlin seemed to have reverted to nineteenth-century diplomacy, establishing spheres of influence, bargaining for territory, and disregarding the UN. West-

ern leaders did not appreciate the extent to which concerns over security and xenophobia drove this policy.

Finally, there was the ideological motivation. Although its leaders had soft-pedaled it during World War II, the Soviet Union had never abandoned its goal of furthering international communism. Irrespective of security concerns, the Kremlin was ideologically committed to combating capitalism. It is thus inconceivable that Stalin would not have attempted to take full advantage of the opportunities that presented themselves at the end of the war.

As with the United States, Soviet foreign policy was closely tied to domestic needs. The Cold War would aid in enforcing authority and cooperation at home. The communist world had to appear to be threatened by encircling enemies. By the close of the war, millions of Soviet soldiers had been in the West and had seen the quality of life and amenities there. They found their own system sadly wanting by comparison, and clearly they expected a better quality of life with the end of the war. Only a new announced threat from abroad would cause them to close ranks behind the Soviet leadership. Playing the nationalist card would enable the Kremlin to mobilize public effort and suffocate dissent.

Although for different reasons, Roosevelt shared with Stalin a strong antipathy toward European colonialism, and Washington encouraged the disintegration of the European colonial empires. While idealistic and correct morally, this stance nonetheless reduced the strength of U.S. allies such as Britain, France, and the Netherlands and helped ensure that ultimately the United States would have to carry most of the burden of defense of the non-communist world.

Roosevelt gambled his place in history in part on the mistaken assumption that he could arrange a *détente* with the Soviet Union. His optimism regarding “Uncle Joe” Stalin was ill-founded, however. By mid-March 1945 it was patently obvious, even to Roosevelt, that the Soviets were taking over Poland and Romania and violating at least the spirit of the Yalta agreements regarding multiparty systems and free elections.

Roosevelt died in April 1945. His successor Harry S. Truman insisted, despite Churchill’s protests regarding the mounting evidence that the Soviets were not keeping their pledges, that U.S. forces withdraw from areas they had occupied deep beyond the lines assigned to the Soviets for the occupation of Germany. The American public clearly did not want confrontation or a global economic and political-military struggle with the Soviet Union. Americans were limited internationalists who merely wanted to enjoy their economic prosperity.

The Soviets, however, were already angry over Washington’s abrupt termination of World War II Lend-Lease aid on 21 August 1945, regardless of the terms of the original law. Russian ill will was also generated by the usually smooth cooperation of the Anglo-Saxon powers and Moscow’s belief that the two constantly combined against the Soviet Union. The U.S. monopoly on the atomic bomb also aroused fear in the Soviet Union as a small but vocal group of Americans demanded preventive war. Soviet concerns increased

when the United States retained bomber bases within striking distance of Soviet industrial areas and undertook naval maneuvers in the Mediterranean Sea.

The USSR, however, rejected a plan put forth by the United States to bring nuclear weapons under international control; instead, it proceeded with its atomic research (aided by espionage) and exploded its own bomb in September 1949. The atomic arms race was under way.

Certainly American and British attitudes toward Soviet activity in Eastern Europe and the Balkans exasperated Moscow. Having accepted Soviet hegemony there, why did the West continue to criticize? Initially Moscow permitted political parties other than the Communist Party, and now it seemed to the suspicious leaders in the Kremlin as though the West was encouraging these parties against Soviet interests. At a minimum the USSR required security, while the United States wanted democratic parties in a Western-style democracy. In only one country, Finland, did the Soviet Union and the West achieve the sort of compromise implicit in the Yalta agreements. In countries such as Poland and Hungary, noncommunist parties were highly unlikely to ensure the security that the Soviet Union desired, and Western encouragement of these groups seemed to Moscow to be a threat.

On the American side, the Russian moves kindled exasperation and then alarm as the Soviet Union interfered in the democratic processes of one East European state after another. In addition, the UN seemed paralyzed as the Soviet Union, in order to protect its interests when the majority was consistently against it, made increasing use of its UN Security Council veto. Despite this, Western pressure in the UN did help secure a Soviet withdrawal from northern Iran in 1946 in what was the first major test for the international body.

This did not mean that the West was unified. In Britain, left-wing Labourites criticized American capitalism and wanted to work with the Russian communists. The French, especially interim President Charles De Gaulle, made vigorous efforts to build a third force in Europe as a counterbalance to the Anglo-Saxon powers and the Soviet Union. It is thus tempting to conclude that only Moscow could have driven the West to the unity achieved by 1949. As Belgian diplomat Paul-Henri Spaak put it, Stalin was the real founder of the North Atlantic Treaty Organization (NATO).

The British bore the brunt of the initial defense against communism. Foreign Minister Ernest Bevin took up Churchill's role as a voice of Western democracy against totalitarianism and fought many verbal duels with Soviet Foreign Minister Vyacheslav M. Molotov in the Council of Foreign Ministers. But for a variety of reasons, chiefly financial, Britain eventually had to abandon its role as world policeman.

Churchill sounded the alarm regarding the Soviet Union in a March 1946 speech in Fulton, Missouri. With President Truman at his side, Churchill said that "from Stettin in the Baltic to Trieste in the Adriatic, an iron curtain has descended across the continent." The peril would not be surmounted by ignoring it or following a policy of appeasement. Churchill called for a "special relationship" between Britain and the United States to meet the chal-

lenge. Americans were not enthusiastic. Ten days later, U.S. Secretary of State James F. Byrnes declared that the United States was no more interested in an alliance with Britain against the USSR than in one with the Soviet Union against Britain. Churchill's words, however, proved prophetic.

Germany was the principal tinderbox of the Cold War, and by September 1946 the collision of interests there led Byrnes to tell an audience of military government officials and Germans in Stuttgart that the Americans would not withdraw from Germany under pressure and that the Germans would soon be receiving additional self-government.

By early 1947, when peace treaties were finally signed in Paris with other defeated states, the time had arrived to begin work on peace arrangements for Austria and Germany, but talks soon deadlocked. By the spring of 1947, East and West were approaching a complete break over the German question. The Soviets were stripping their zone of anything movable and failing to supply food to the western zones as promised. Facing increasing costs and difficulties caused by a lack of Soviet cooperation, the British and the Americans merged their zones into Bizonia at the beginning of 1947. General of the Army George C. Marshall's first appearance as secretary of state at a major conference marked a hardening American reaction, as Washington reached the conclusion that the Soviet Union's actions were aggressive and not defensive.

In addition to its demands on Iran, Moscow pressured Turkey to return land lost by Russia at the end of World War I and also to permit the USSR a share in the defense of the straits connecting the Black Sea to the Mediterranean. There was also trouble in Greece, where communist guerrillas were at war against the royal government. Civil war began there because of a rightist victory in the Greek elections, the return of the unpopular King George II, and intransigence on both sides. Fighting flared at the end of 1946, and the Greek communists secured material support from Yugoslavia, Bulgaria, and Albania—all communist bastions. The communists seized control of large portions of northern Greece. Athens appealed to the UN, but the Soviet Union vetoed a Security Council resolution based on an investigative commission's report of evidence of support from the neighboring communist states.

In February 1947 the British government publicly informed the United States that it could no longer afford to support the Greek government, news of which Washington had been forewarned. Still, this came as a shock and a surprise to Washington. On 12 March 1947, therefore, President Truman addressed a joint session of Congress and announced what came to be known as the Truman Doctrine. Stating that "we must assist free peoples to work out their own destinies in their own way," he promised that the United States would "support free peoples who are resisting attempted subjugation by armed minorities or by outside pressures." The United States now took up the burden of being the world's policeman.

In a remarkably short time, the U.S. Congress appropriated \$400 million for Greece and Turkey, somewhat over half of this in military aid. This U.S. attempt to draw a line against communist expansion was successful, helped

along by Yugoslav leader Josip Broz Tito's break with Moscow, which cut off most of the aid to the communist rebels. By the end of 1949 the Greek insurrection had been contained. There was trepidation in the United States over the Truman Doctrine, but the alternative of giving in seemed far more perilous. The Truman Doctrine was a momentous step; it led directly to the Marshall Plan and NATO.

By the spring of 1947 the United States had distributed about \$16 billion in emergency relief, most of it to European states, but no general economic recovery had taken place, and in fact Britain, France, and Italy were still in serious distress. The winter of 1946–1947 had been particularly severe, and strikes were widespread, especially in France and Italy. In France, the communists controlled the huge General Confederation of Labor (CGT) and threatened to bring the country to a standstill and perhaps even seize power. U.S. policymakers reasoned that if Italy and France, with large communist parties, could be taken, then perhaps all of Europe would fall under Soviet influence.

To prevent such an alarming scenario, a more sustained and better-organized reconstruction effort was needed. Thus, the Marshall Plan was born. In a speech at Harvard University on 5 June 1947, Secretary of State Marshall announced a plan for the reconstruction of Europe. He promised that the United States would undertake financial assistance to Europe but

only if the nations of Europe got together, devised long-range assistance plans for economic recovery, and concentrated on self-help and mutual assistance.

Behind this initiative lay the fear that continued economic troubles would weaken the resistance of the surviving Western nations to communism. Of course, continued American prosperity was also tied to a European economic revival. Indeed, without an economically strong Western Europe—historically the largest trading partner with the United States—the future of American economic prowess and of capitalism in general might be seriously jeopardized.

A U.S. State Department planning group headed by George F. Kennan had sketched out the Marshall Plan. It was announced as open to all, but the plan was devised so that the Soviet Union would have to reject it and thus ensure congressional passage. Without Soviet participation, the probability of its success would also be greatly enhanced.

The plan called for a joint effort by the countries concerned and a strict accounting of aid to ensure that it would go not only to alleviating distress but also for constructive measures to restore economic stability. Molotov insisted on bilateral agreements in which the United States would give money to each country separately, with sums determined according to their proportionate shares in helping to defeat Germany. He claimed that American oversight of

Poster supporting the Marshall Plan is titled "Whatever the weather we only reach welfare together." (Swim Ink 2, LLC/Corbis)

spending constituted interference in the internal affairs of the countries concerned. The Soviet Union feared that economic aid to the satellite countries might draw them to the West and for that reason did not permit them to participate.

In December 1947, the U.S. Congress passed an Interim Act for \$522 million in aid; the following April it approved the Foreign Assistance Act and appropriated \$6.8 billion for the first fifteen months of a program slated to run for four years. This came just in time to influence crucial elections in Italy, where the communists were making a bid for power; with American aid a reality, on 18 April 1948 the Christian Democrats won an absolute majority there.

Two days before this, on 16 April 1948, sixteen noncommunist European states signed a convention establishing the Organization for European Economic Cooperation (OEEC) in preparation for Marshall Plan assistance. During the next four years, Congress appropriated \$13.2 billion in aid plus an additional sum for Asia, bringing the total to \$14.2 billion. Marshall Plan aid was almost completely nonmilitary. Through 1949 the United States spent \$20.5 billion on economic aid and only \$1.2 billion in military aid. The Korean War, however, proved to be a watershed. From 1950 through 1954 the United States expended \$14.1 billion on nonmilitary aid and \$10.9 billion on military assistance.

Whatever the motives behind these developments in U.S. policy, the Marshall Plan made the recovery of Western Europe possible and began the process of spectacular growth that characterized the West European economies over the next two decades. It was also a strong impetus to economic unification, creating the momentum for European economic cooperation and leading to the European Common Market.

Both the Truman Doctrine and the Marshall Plan were early manifestations of the containment policy against communist expansion. Writing in an unsigned ("Mr. X") article in the July 1947 issue of the influential *Journal of Foreign Affairs*, Kennan stated that U.S. policy "must be that of a long-term, patient but firm and vigilant containment of Russian expansive tendencies." However, even Kennan did not visualize as total an implementation as occurred.

Communist reaction to the Marshall Plan went beyond rejecting it for Eastern Europe. A wave of communist-inspired strikes hit West European countries in protest against the plan and because communist ministers had been dropped from both the French and Italian cabinets in May 1947. The Soviet Union also began to rearm.

In October 1947 the Soviets established the nine-nation Communist Information Bureau, also known as the Cominform. It took the place of the old Communist International (Comintern), which had been abolished in 1943 in order to show solidarity with the Soviet Union's allies. The new agency had as its goal the propagation of communism throughout the world.

In January 1949 Moscow established the Council for Mutual Economic Assistance, also known as Comecon. It was intended as an organization parallel to the OEEC for integrating the national economies of the satellite

nations with that of the Soviet Union. The Kremlin also announced its own program of economic assistance, known as the Molotov Plan, but under it the Soviet Union received more than it gave, as raw materials were exchanged for shoddy and unwanted Soviet products.

In late November and early December 1947, the Council of Foreign Ministers (composed of the United States, the Soviet Union, Britain, and France) made a final attempt at resolving the deadlock over Germany. It ended in total impasse. The lines had hardened, and the Soviets tightened their control in the satellite states. One by one, surviving opposition leaders were purged. In February 1948 Czechoslovakia fell to a communist coup d'état. This sent a shock wave through Western Europe but also marked the zenith of communist expansion in Europe.

In early 1948 the three Western powers began discussing the establishment of a German government for their combined zones. The Western zones of Berlin seemed vulnerable, as they were an island deep within the Soviet zone of Germany. The Kremlin reasoned that if it could seize West Berlin, this might dishearten and intimidate the West. It might also discourage American adventures on the European side of the Atlantic. Beginning on 1 April 1948, little by little the Soviets cut off surface access to the city. A week later the Western governments introduced new currency for their zones. This was the signal for the blockade to begin in earnest. By early August it was complete.

Direction of this first major "battle" of the Cold War fell to the U.S. military governor in Germany, Lieutenant General Lucius Clay. He informed Washington that, were the United States to withdraw, "our position in Europe is threatened, and Communism will run rampant." Clay said that there were three alternatives: to withdraw from Berlin, to attempt to push an armored column up the autobahn, or to organize an airlift to try to supply the city by air. Truman's reaction was, "We shall stay, period." He opted for the third choice as least likely to lead to a shooting war with the Soviet Union.

While it would not be hard to supply Allied personnel by air, providing for more than 2 million Germans in the Western zones of Berlin seemed impossible. The airlift went on for 324 days. In it, the United States, Britain, and France flew 278,118 flights and transported more than 2.326 million tons of cargo.

The Russians expected to push the West out of Berlin without war and, despite numerous threats, never did challenge the aerial supply system. Both sides in effect drew back from a shooting war. By early 1949, however, the Russians were forced to conclude that the blockade was a failure. A counterblockade of East Germany by the West deprived the Soviet Zone of essential goods, and this put pressure on the Russians. The Soviet representative on the UN Security Council, Jacob Malik, finally dropped a hint to his American counterpart, Philip Jessup, that the Russians were prepared to end the blockade. On 12 May 1949, land traffic to Berlin resumed. During the blockade, however, a new Basic Law (an ersatz constitution) for the West German Republic was approved.

By its pressure the USSR had forced the West Europeans to face up to the necessity of greater unity. This led to a whole series of treaties and organ-

Berlin children play Luftbrücke (air bridge) during the Berlin Airlift of 1948–1949. They used model American planes sold in German toy shops throughout the western sector of Berlin. (U.S. Air Force)

izations, such as the Council of Europe and the European Common Market. Militarily the emergency quickly brought about the Brussels Pact and the formation of NATO.

France and Great Britain had already signed a military alliance at Dunkirk in March 1947. A year later these two countries, along with Belgium, Luxembourg, and the Netherlands, joined forces in the Treaty of Brussels. Fundamentally an agreement for social, economic, and cultural collaboration, it was also a military alliance of the five nations that inevitably took on the character of a defensive alliance against the Russians. Because the Treaty of Brussels (Brussels Pact) countries would obviously not be able to defend themselves without U.S. assistance, discussions were soon under way for a broader alliance.

In June 1948 there was a significant break with tradition in American foreign policy. Senator Arthur H. Vandenberg, Republican and chairman of the powerful Senate Foreign Relations Committee, drafted a resolution that was approved by the Senate. It reaffirmed the U.S. policy of working with the UN. It was the sense of the Senate that the veto should be removed from all

questions involving international disputes and the admission of new members. It also associated the United States “with such regional and other collective arrangements as are based on continuous and effective self-help and mutual aid, as affect the national security.” This ran counter to George Washington’s admonition against “entangling alliances,” which had been heeded since 1796.

Talks began between the West European allies and the United States and, on 4 April 1949 the North Atlantic Pact was signed in Washington by the United States, Canada, Britain, France, the three Benelux states, Norway, Denmark, Iceland, Portugal, and Italy. By this treaty, the twelve nations declared that “an armed attack against one or more . . . shall be considered an attack against them all,” and each would assist the attacked in whatever fashion it deemed best, including by armed force. The resultant NATO would be headed by a council and a defense committee; Supreme Headquarters Allied Powers Europe (SHAPE) was ultimately set up outside of Paris. The treaty went into effect, after ratification, on 24 August 1949 for a twenty-year period. As one pundit put it, “NATO was created to keep the Americans in, the Russians out, and the Germans down.” It could be argued, however, that the new American policies, so far removed from the public mood in 1945, were more the result of perceived Soviet pressure than any initiative from Washington.

Thus the opening round of the Cold War ended in stalemate, with each side entrenched in its half of the continent. For the time being, however, Europe had a breathing spell. But the status quo was about to change. In late August 1949 the USSR exploded its first atomic bomb, an event that shocked Washington and shattered the U.S. atomic monopoly. In October 1949 the communists were victorious in China, and on 25 June 1950 war broke out in Korea. The Cold War was entering a new and far more dangerous phase.

Course of the Cold War (1950–1991)

Although the Cold War began earlier and certainly was under way with the Soviet Union's decision to institute a blockade of the Western zones of Berlin in June 1948, the struggle between East and West took a decisive turn in June 1950 with the beginning of the Korean War (1950–1953), the first real shooting war of the Cold War.

There is little doubt that Soviet leader Josef Stalin was heavily involved in authorizing the invasion of the Republic of Korea (ROK, South Korea) by forces of the Democratic People's Republic of Korea (DPRK, North Korea). North Korean leader Kim Il Sung met twice with the Soviet leader and secured his approval for the invasion, but Stalin insisted that Kim also secure the blessing of People's Republic of China (PRC) leader Mao Zedong. Stalin promised to support the invasion and supplied substantial material and military assistance, including Soviet aircraft and pilots who actively flew against United Nations Command (UNC) bombers and fighters in far North Korea. Although Soviet aviators trained Chinese pilots and then turned over their aircraft to them, Stalin never would allow the Soviet Air Force to carry out ground support missions or protect Chinese communist forces on the ground. Mao Zedong was bitter over this, claiming that Stalin had extended that pledge before China's entry into the war in October 1950.

South Korea appeared quite vulnerable in June 1950. With the Japanese surrender, the Soviets had occupied northern Korea above the 38th Parallel, while U.S. forces had occupied the southern half of the country. Efforts to reunify the two halves of Korea foundered on the rocks of the Cold War, with the Soviets refusing to allow elections sponsored by the United Nations (UN) in their zone. Stalin and Mao undoubtedly believed Kim's assessment that the United States would not fight for Korea (U.S. leaders, including Far East commander General Douglas MacArthur and Secretary of State Dean Acheson, excluded South Korea from the U.S. defense perimeter in public pronouncements) or that even if it did fight, the war would be over before the United States could intervene in force. Fearful that South Korean leader Syngman Rhee might unleash hostilities in an attempt to reunify Korea, the United States had provided only defensive weapons to South Korea, and very

Withdrawing United Nations (UN) forces cross the 38th Parallel from the Democratic Republic of Korea (DPRK, North Korea) into the Republic of Korea (ROK, South Korea) at the end of 1950 during the Korean War. (National Archives and Records Administration)

few at that. The North had fighter and bomber aircraft, tanks, and heavy artillery. The South had none of these.

U.S. military intelligence failed to give sufficient weight to the massive North Korean military buildup. Analysts assumed that because the United States possessed the atomic bomb, North Korea would never invade the South. Kim almost succeeded. In what Harry S. Truman said was the most difficult decision of his presidency, he decided to fight for Korea. American forces arrived from Japan just in time and in sufficient numbers to stave off defeat. The UN also intervened, thanks to the poorly timed Soviet boycott of the Security Council demanding that the PRC receive the seat held by the Republic of China (ROC, Taiwan). The Inchon invasion of September 1950 and concurrent UNC breakout from the Pusan Perimeter led to a UNC invasion of North Korea in an effort to reunify the nation. The Truman administration ignored Chinese warnings of possible intervention. As UNC forces drove to the Yalu River, the Chinese entered the war, and in November they smashed a UNC offensive and pushed south of the 38th Parallel. Gradually UNC lines stabilized, and the Chinese were driven north again.

The war then changed from a contest of movement to one of position. The Western powers, and especially the United States, concluded that restoration of the prewar status quo would be sufficient and that reuniting Korea was not worth the cost or risk of wider conflict. In Washington's view, it was the "wrong war, in the wrong place, with the wrong enemy." Peace talks dragged on, hampered by the issue of prisoner exchanges; the fighting finally ended with the signing of an armistice in July 1953. Throughout the rest of the Cold War and beyond, Korea remained one of the world's flashpoints.

The Korean War affected the Cold War in a number of other places. It led to the institutionalization of the military-industrial complex in the United States and raised fears that the nation was morphing into a garrison state. After all its previous wars, the United States had disarmed. The U.S. military underwent a massive expansion during the Korean War, however, and remained strong thereafter.

The Korean War brought the Cold War to Asia, turning the region into one of the main battlefields of Cold War rivalry. It also led the Truman administration to extend direct military assistance to the French in Indochina, where they had been fighting the communist-led Viet Minh since 1946. The French claimed that their war pitted democracy against communism and that Indochina and Korea were in this sense related. Policymakers in Washington professed to believe the French argument that they had indeed granted independence to the state of Vietnam and that their struggle was about anti-communism rather than recognizing the true anticolonial motivation of the war there.

The Korean War also fed anticommunist paranoia in the United States that found expression in McCarthyism. And it had a pronounced impact on developments in Europe, especially the rearmament of the Federal Republic of Germany (FRG, West Germany). Many leaders saw direct parallels between the divided Korea and a divided Germany. In this way, as in many others, the end of the Korean War in 1953 marked a turning point in the nature of the Cold War.

Both the Soviet Union and the United States had new leadership in 1953. Dwight D. Eisenhower took office in January as president of the United States, with John Foster Dulles as his secretary of state. Stalin died in March and was followed by a collective leadership that ultimately gave way to rule by Nikita Khrushchev.

Fear of thermonuclear war dominated the 1950s. The Soviet Union exploded its first hydrogen bomb in 1953, and Americans worried that the Soviets might strike the American heartland with long-range bombers. Revelations of Soviet spies in the U.S. nuclear program led to witch-hunts and the belief that communist spies were everywhere. On the Soviet side, leaders were deeply concerned about the proven strategic bombing capability of the United States and the ring of U.S. overseas bases that surrounded the Soviet Union. A diplomacy of stalemate, based on mutual fear of destruction through nuclear weapons, held sway.

In January 1954 Dulles announced the Eisenhower administration's policy of "massive retaliation" with heavy reliance on nuclear weapons in the

event of a Soviet attack. The European allies of the United States worried about American saber-rattling and feared that Washington might unwisely unleash a nuclear war, particularly as Dulles made much of going to the “brink” of war in order to confront the communist states. Such a prospect was particularly worrisome, as the most likely location for a military confrontation was the European continent. Throughout the Cold War, much of official Washington professed to believe in monolithic communism—the idea that all communist states moved together in lockstep, with Moscow calling the shots. This proved to be a mistaken notion, and it ignored the traditional antagonism between China and Vietnam as well as other rivalries.

In 1954 France suffered a resounding military defeat in a remote valley in northeastern Vietnam at Dien Bien Phu. The Indochina War had never been popular in France, and this defeat enabled the French politicians to shift the burden of blame to the military and extricate their nation from the war. Not coincidental to the timing of the battle, a conference was under way at Geneva to discuss problems in Asia. The resulting Geneva Accords of July 1954 provided for the independence of Laos, Cambodia, and Vietnam. Vietnam was “temporarily” divided at the 17th Parallel with elections to take place throughout the entire country in two years to reunify it.

Republic of Vietnam (RVN, South Vietnam) President Ngo Dinh Diem refused to permit the elections, however, and the Eisenhower administration firmly supported Diem. Washington pointed out that communists ruled the Democratic Republic of Vietnam (DRV, North Vietnam) and that communists, once in power, had never allowed truly free elections that might unseat them. Nevertheless, Diem’s decision led to a renewal of the struggle to unify Vietnam that became the Vietnam War (1957–1975).

Meanwhile, French Army regulars found themselves immediately transported to fight in Algeria, where nationalist agitation led to the outbreak of violence in November 1954. The Algerian War simmered for a time but then grew in intensity and claimed increasing numbers of French soldiers including draftees, although the brunt of the fighting on the French side was carried by the professionals. Ultimately, fears among the French settlers in Algeria and professional army officers that they were again going to be sold out by the Paris government led to a military putsch. This ended the French Fourth Republic in May 1958 with the return to power of General Charles de Gaulle, who proceeded to establish the Fifth Republic with a greatly strengthened presidency, tailor-made for the general himself.

In the 1950s a group of nations was emerging as a self-proclaimed neutralist or nonaligned bloc—also known as the third world or developing world to distinguish it from the Western powers and the communist bloc. India’s Prime Minister Jawaharlal Nehru became its leader, but other prominent spokesmen were Josip Broz Tito of Yugoslavia and Gamal Abdel Nasser of Egypt. In April 1955 representatives of twenty-nine African and Asian states held a major conference at Bandung in Indonesia to set out the guidelines for nonalignment. For Washington at least, this brand of neutralism—laced with a strong condemnation of colonialism and imperialism promoted by leaders of the developing world—often seemed to favor the Soviet Union.

In Europe, the major problem was the ongoing impasse over the settlements with Germany and Austria. In January 1954 the foreign ministers of Britain, France, the Soviet Union, and the United States met in Berlin, but there was no progress on fundamental issues. The United States insisted on free elections throughout Germany, which was to the advantage of the West, while the Soviet Union preferred direct talks between the FRG and the German Democratic Republic (GDR, East Germany). The Soviets also made it clear to their Western counterparts that the price for the reunification of Germany and Austria would be the permanent demilitarization of both states. Washington, however, firmly supported the creation of a West European army that would include the FRG. This became known as the European Defense Community (EDC). In August 1954, however, the French National Assembly rejected the EDC, effectively killing it. A formula was then found for the FRG to rearm within the North Atlantic Treaty Organization (NATO).

In 1955 the Soviet government made a number of moves to ease the Cold War. The USSR established diplomatic relations with West Germany and agreed to release the last German prisoners of war from World War II. Finland received the territory of Porkkala near Helsinki, which the Soviet Union had secured at the end of World War II. The Soviets also evacuated their naval base at Port Arthur in the Far East. Finally, the Soviets agreed to the Treaty of Belvedere that ended the occupation of Austria and restored it to full sovereignty, on the pledge of permanent Austrian neutrality and economic concessions.

In these circumstances, the leaders and foreign ministers of the United States, the Soviet Union, Great Britain, and France met in Geneva in July 1955 in a new effort to resolve the impasse over Germany. President Eisenhower, Premier Nikolai Bulganin, Prime Minister Sir Anthony Eden, and Premier Edgar Faure met in a cordial atmosphere. Eisenhower issued his Open Skies Proposal to prevent surprise aerial attack and to pave the way for wide-scale disarmament. The Soviet leaders, however, had no intention of opening Soviet territory to foreign inspection and thus rebuffed the proposal. Nor were the Soviets interested in a mutual security pact between the U.S.-sponsored NATO and its counterpart, the Soviet-sponsored Warsaw Pact (created in May 1955). Both sides also refused to budge from their previous positions regarding Germany, and the result was impasse. In October 1955 the foreign ministers again met in Geneva and again failed to find common ground. Hopes for a settlement regarding Germany had disappeared.

The continuing threat posed by the Soviet Union greatly boosted the movement toward European unification. Only the continuing military threat posed by the Soviets could have caused the West European states to come together. The Council of Europe had been established in 1949. It was followed by the 1953 European Coal and Steel Community, and although efforts by the West European states to create a European army that included West Germany failed, the European Economic Community (EEC) came into being in 1957. In 1959 Britain took the lead in forming a counterpart, the European Free Trade Association.

The year 1956 saw two watershed events of the Cold War occur simultaneously: the Suez Crisis and the Hungarian Revolution. To try to meet a perceived growing threat by the Soviet Union in the Middle East, the United States had promoted the formation of the Baghdad Pact in 1955. Iraq and Turkey were the original signatories, soon followed by Britain, Pakistan, and Iran. Many in the Arab world, especially the Egyptian leader Nasser, saw this treaty as nothing less than an attempt by the West to reassert its old colonial control over the Middle East.

In 1956 Nasser sought funding for a long-advocated project—construction of a high dam at Aswan on the upper Nile. The Egyptian leader saw this as a means of improving the Egyptian standard of living and strengthening his standing in the Middle East. At the same time, however, Nasser sought to secure new weapons that would place the Egyptian military on a par with that of Israel. Dulles promised U.S. assistance for the dam but refused the Egyptian request for advanced weaponry, and Egypt turned to the Soviet bloc for the new weapons. This along with Nasser's diplomatic recognition of the PRC incensed Dulles, who then withdrew the offer to assist in financing the dam.

To pay for the dam, Nasser therefore nationalized the Suez Canal, a step that he had already been contemplating.

Nasser's actions led to the formation of a coalition of Britain, France, and Israel against him. The British government had the largest stake in the Suez Canal Company and in its operations, and Prime Minister Eden developed an almost pathological hatred of Nasser and was determined to topple the Egyptian leader. The French believed that Egypt was actively supporting the Algerian rebels, while the Israelis were angry over Nasser's decision to blockade the Gulf of Aqaba (Israel's entry into the Indian Ocean) as well as Egyptian sponsorship of fedayeen (Arab commando) raids against the Jewish state. Leaders of the three powers therefore concluded an agreement whereby Israel would invade the Sinai and give Britain and France an excuse to intervene militarily to "protect" the canal.

The Israelis moved at the end of October, and the French and British governments demanded the right to occupy the canal zone. When the Egyptian government rejected the ultimatum, on 5 November 1956 French and British forces striking from Cyprus invaded and occupied Port Said at the Mediterranean end of the canal.

Both the Soviet Union and the United States demanded that the British, French, and Israelis withdraw from Egyptian territory. While the Soviet Union threatened to send "volunteers," it was the position of the United States that was critical. President Eisenhower, livid that Eden had not informed him beforehand, put heavy economic pressure on Britain, obliging the allied forces to withdraw.

The Suez Crisis was a major event in the Cold War. Israel and Egypt were the chief winners. The blockade of the Gulf of Aqaba was ended, and UN observers were brought in to police the frontier between Egypt and Israeli. Nasser found himself a hero in the Arab world; his prestige soared on the retreat of the British and French. The Soviet Union and the UN also benefited. Britain was the chief loser. The Suez Crisis marked the effective end of Britain as a world power. And it shattered the solidarity of the major Western powers. Unfortunately for the West, the crisis came at the worst possible time, diverting attention from the concurrent Soviet action against the Hungarian Revolution.

The Hungarian Revolution of late October and early November 1956 was one of the most dramatic events of the Cold War, although it was not the first sign of restiveness within the Soviet bloc. In June 1953, after the death of Stalin, worker unrest led to rioting in East Berlin and across the Soviet Occupied Zone, which was crushed only by Soviet tanks. Khrushchev's moves toward de-Stalinization in early 1956, particularly his "secret speech" revealing the dictator's crimes, led to unrest in Poland in June 1956. There were demonstrations in Poznań, with industrial workers demanding redress of grievances. Order was restored only by deploying large numbers of security police.

Similar protests in Hungary that October became revolution, however. Encouraged by events in Poznań and by the limited reforms subsequently introduced in Poland, student demonstrators in Budapest protested the wide

gulf between the stated goals of the communist regime and the reality of its rule. This demonstration led to widespread demands for democratic reform, an end to the hated security police and censorship, and Hungary's withdrawal from the Warsaw Pact. Hungarian Premier Imre Nagy, brought to power in an effort to accommodate the reformists, found himself swept along by a revolutionary tide. He announced a host of changes that included free elections, an end to press censorship, and reform of the hated security police.

The Soviets had already decided to intervene before Nagy's demands rose to include a Soviet troop withdrawal and the announcement that Hungary would withdraw from the Warsaw Pact. The Kremlin found Nagy's commitment to democratic reforms unacceptable. If the situation in Hungary was allowed to stand, Soviet leaders feared that the movement would surely spread to other satellites.

On 4 November 1956, Khrushchev sent 200,000 Soviet troops and 2,000 tanks into Hungary. Nagy called for resistance, and the Hungarians fought as best they could. Over the next several weeks thousands of people died; 200,000 Hungarians fled to neighboring Austria.

There was near universal condemnation of the Soviet action, but no action was taken, in part because the Soviet move was made while the Western powers were embroiled in the Suez Crisis. There was much criticism of the United States among Hungarians and a corresponding loss of faith regarding both Dulles's frequent talk of "rolling back communism" and prior pledges of U.S. assistance toward this end. The lesson of the Hungarian Revolution for the peoples of the Soviet bloc was that the Kremlin could do as it pleased within its existing sphere of influence.

The Cold War appeared to spread in the late 1950s with increasing Soviet challenges in the Middle East, Africa, and Asia, especially in its support for so-called "wars of liberation." In an effort to reassert U.S. influence in the Middle East, the American president announced the Eisenhower Doctrine in early 1957. It pledged the United States to support the independence of Middle Eastern countries against the threat of communism. Washington intended this to underline the importance of the Baghdad Pact, to which the United States was not a signatory. The Eisenhower administration also continued to send significant economic and military aid to the Diem government of the Republic of Vietnam (RVN, South Vietnam).

The Soviet challenge also spread to space, as Khrushchev was keenly interested in his nation's space program. On 17 August 1957 the Soviets fired the first intercontinental ballistic missile (ICBM)—the United States did not fire its first ICBM until the next year—and on 4 October 1957 the Soviets launched the first satellite into Earth's orbit. *Sputnik 1* was especially embarrassing to the United States, as it was seen as a sign of Soviet scientific prowess, and became more so when in December a much smaller U.S. rocket exploded on the launch pad. The United States did not place its first satellite into orbit until January 1958, and it was still far smaller than those launched by the Soviets. *Sputnik 1* also marked the start of the Space Race between the two superpowers.

Many in the West questioned whether the United States still held an edge in military technology, and the notion spread that there was a so-called missile gap in which the Soviets held a sizable lead. Although Eisenhower knew, thanks to U-2 reconnaissance flights over the Soviet Union, that no missile gap existed, he could not make this information public. Democratic presidential candidate John F. Kennedy's charges of a missile gap therefore might have swayed a close presidential election in November 1960, lost by Republican Richard Nixon, Eisenhower's vice president.

For NATO, the new missiles posed serious problems. In order to offset its far smaller manpower strength, NATO members agreed to the placing of missiles on their soil. This elicited fears in Europe that a Soviet preemptive strike or counterstrike might wipe out sizable population centers. At the same time, other Europeans questioned whether the United States would actually risk nuclear attack on its own soil in order to defend Western Europe. There were frequent protests against the placement of U.S. missiles in Europe. Often these took on an anti-American tone, while the threat from the Soviet Union was overlooked.

The irony was that at the same time Khrushchev trumpeted "peaceful coexistence," he also embarked on a period of "missile rattling," threatening on at least 150 different occasions the use of nuclear weapons against the West. This included specific threats, such as noting that only ten nuclear

warheads would render the entire island of Britain uninhabitable and threatening the destruction of the Acropolis. Many feared that the unpredictable Khrushchev might precipitously launch a catastrophic war.

In 1958 Khrushchev ushered in a period of acute tension when he resumed the pressure on the Western powers over Berlin. Believing that he was dealing from strength, he attempted to secure a Western withdrawal from Berlin. The Soviet leader referred to the city as “a bone stuck in my throat,” knowing that he could never stabilize East Germany until he could stop East Germans from fleeing to West Berlin. Because the autobahn leading across East Germany to the Western zones of Berlin was the one place in the world where armed Soviet and U.S. forces faced one another, the situation was very tense indeed.

In November 1958 the Soviets simply informed the Western occupying powers that they considered the agreements governing postwar Germany to be null and void. Khrushchev demanded that Berlin be turned into a demilitarized free city, and he gave a deadline of six months—to 27 May 1959—for resolving the situation. In February 1959 he threatened to sign a separate peace treaty with East Germany that would give it control of access routes into the divided city. East Germany might then choose to close the routes, setting up the possibility of war should the West attempt to reopen them by force.

To Western leaders, Khrushchev’s threats and posturing seemed reminiscent of Adolf Hitler’s threats before World War II, and they were determined not to yield to such pressure. In May 1959 the foreign ministers of the Soviet Union, the United States, Britain, and France met in Geneva where, until August, they endeavored to find a solution. Again there was no common meeting ground, but the three Western powers stood united, which may have given the Soviets pause. Khrushchev let his May deadline pass without taking action. The world breathed a collective sigh of relief as the Soviet leader probably lost his one chance for nuclear blackmail.

Khrushchev was somewhat mollified by an invitation from Eisenhower to visit the United States. The Soviet leader arrived in September 1959, just as the USSR landed a probe on the moon. Khrushchev and Eisenhower held extensive talks and actually generated a cordial, friendly atmosphere—the so-called Spirit of Camp David. Khrushchev, for his part, denied that there was ever any deadline over settling the Berlin issue. The two leaders also agreed to hold a summit in Paris in May 1960 to discuss Germany. Eisenhower was scheduled to visit the Soviet Union shortly thereafter.

This thaw in the Cold War proved short-lived, if indeed it existed at all. In any case, it was formally broken by the Kremlin following the 1 May 1960 U-2 Crisis, in which the Soviets shot down one of the U.S. reconnaissance aircraft that had been making regular overflights of the Soviet Union. Assuming that the plane and its pilot had not survived, Washington put out the story that a “weather aircraft” had gone off course and was missing. The Soviets then produced the pilot, Francis Gary Powers, trapping Washington in a lie. An angry Khrushchev stormed out of Paris, torpedoing the summit only a few hours after it began.

Neutralist leaders such as Nasser, Nehru, and Sukarno of Indonesia attacked the West in the UN. Khrushchev also delivered a speech before that body in September 1960. Strangely, he attacked the authority of the UN and particularly Secretary-General Dag Hammarskjöld, demanding that the position of secretary-general be made into a troika of three individuals: one representing the West, another the communist bloc, and the third the neutralists. Such an arrangement would no doubt have weakened the authority of the UN to act in crisis situations, and Khrushchev's stance ended up alienating the neutralists.

Khrushchev's frantic leadership also created friction within the communist bloc. By 1960, a simmering dispute between the Soviet Union and China erupted into full-blown antagonism—the Sino-Soviet split. Chinese leader Mao Zedong had dutifully followed Moscow's lead during the first decade of the Cold War, but cracks then began to appear in the relationship. For one thing, following the death of Stalin in 1953, Mao believed that he and not the new Kremlin leaders was the logical spokesman for international communism. Mao was much more confrontational toward the West than were the new leaders of the Soviet Union. Also, the Soviets had refused to share advanced nuclear technology with China and expand military aid. Then there was their 2,000-mile frontier—the longest in the world—and disputes over Mongolia.

In the confrontation between the two largest communist powers, most of the world's communist states lined up behind Moscow. In Europe, Beijing enjoyed the support only of Albania. By the spring of 1961 the split was sufficiently pronounced for the Soviet Union to withdraw all its technicians from China and cut off assistance to the PRC.

While this might have benefited the United States, leaders in Washington were in no position, either mentally or politically, to take advantage of the split in the communist world. President Kennedy, who took office in January 1961, almost immediately faced a series of international challenges. The first was the outbreak of fighting in Laos, where communist, neutralist, and rightist factions vied for power. Then in April 1961, U.S.-trained and -sponsored Cuban exile forces landed on that island in an attempt to overthrow its now avowedly communist leader, Fidel Castro. The operation, conceived and largely planned under Eisenhower, was incredibly botched. Without air cover, which Kennedy refused to provide, the Bay of Pigs invasion was doomed to failure, and Kennedy was forced to take responsibility.

An apparently weakened Kennedy met with Khrushchev in June 1961 in Vienna, where the Soviet leader renewed his pressure on Berlin. Attempting to test the new U.S. administration, Khrushchev intimated that he wanted the issue settled by the end of the year. Yet Khrushchev merely trotted out the same demands, with the sole concession that Berlin might be garrisoned by UN or neutralist troops. This time the Soviets began harassment of some Allied air traffic into the city, and the East-West German border was for a brief period almost completely closed. Again, the Soviet leader threatened the use of nuclear weapons, asking the British ambassador why 200 million people should have to die for 2 million Berliners.

Khrushchev was determined to stabilize East Germany, which was fast hemorrhaging its population. By the summer of 1961, some 3.5 million people, among them the young and best educated, had fled through the escape hatch of West Berlin to West Germany. The communist response came on 13 August with the erection of the Berlin Wall, the initiative coming from East German boss Walter Ulbricht rather than from Khrushchev. The escape hatch was at last closed, and East Germans were now walled in.

Kennedy stood firm. In a speech to the American people, he characterized the Soviet position as “what’s mine is mine and what’s yours is negotiable.” Kennedy called for a sizable increase in defense spending, a reinvigorated civil defense program, and mobilization of some reserve and National Guard air transport units. The only military action undertaken by the United States, however, was to send 1,500 reinforcing troops along the autobahn and into the city. Kennedy later went to Berlin and delivered one of the more memorable (and grammatically incorrect) phrases of the Cold War when he said, “Ich bin ein Berliner” (I am a Berliner). The ugly concrete barrier remained, however, symbolizing both the failure of communism and the unwillingness of the West to take action against those regimes.

In the fall of 1961, the Soviet Union broke a three-year moratorium on nuclear testing to explode a series of large bombs. This set the stage for the Cuban Missile Crisis of October 1962, the single most dangerous confrontation between the Soviet Union and the United States of the Cold War and the closest the two sides came to thermonuclear war.

Castro had come to power in Cuba in early 1959 and soon transformed the island into a communist state. Increasingly dire conditions on the island, in large part the consequence of U.S. economic policies designed to unseat Castro, forced the Cuban leader to turn to the Soviet Union for economic and military aid. Anxious to secure his ally and buttress his own popularity at home, Khrushchev responded. Cuba, so close to the United States, appeared to Khrushchev in the spring of 1962 as the ideal means by which to offset the heavy advantage in long-range nuclear weaponry enjoyed by the United States.

The high-rolling Khrushchev ordered the secret placement of SS-4 and SS-5 missiles on the island, hoping to present Kennedy with a *fait accompli*. Despite the contrary opinion of some key Soviet military officers, Khrushchev and Minister of Defense Marshal Rodion Malinovsky persisted in the belief that this could be accomplished without American detection. U.S. U-2 surveillance flights over Cuba, however, soon discovered the operation.

On 22 October 1962, in a dramatic television address to the American people, Kennedy revealed the presence of the missiles and demanded that they be removed. He ignored certain of his advisors who urged a preemptive military strike on the island, announcing a naval quarantine of Cuba instead. Peace hung in the balance for a week as Soviet ships carrying missiles continued toward the island nation.

On 27 October a U-2 was downed over Cuba by a surface-to-air missile, apparently on the orders of a Soviet general on the spot. The occurrence shocked even Khrushchev and may well have marked a watershed in his

John F. Kennedy delivers his famous “Ich Bin Ein Berliner” speech at the Rudolph Wilde Platz in West Berlin, 26 June 1963. (John F. Kennedy Library)

thinking. U.S. contingency plans called for an air strike if a U-2 was shot down, but Kennedy countermanded the order just in time.

Khrushchev's hand was weak, for the Soviet Navy was in no position to run the blockade, but he played it to the end. Convinced that the United States was about to invade Cuba, the Soviets arranged a face-saving compromise in which Castro, who had sought a preemptive Soviet nuclear strike on the United States, was all but ignored. Khrushchev agreed to remove the missiles along with jet bombers and some Soviet troops from Cuba. In return, the United States pledged not to invade Cuba and to withdraw its (obsolete) Jupiter missiles from Turkey. Massive Soviet economic assistance to Cuba continued, however. Khrushchev's misstep here was one of the chief

causes of his ouster from power less than two years later. It greatly strengthened Kennedy's hand, however, and encouraged a stronger response to communist aggression elsewhere.

The United States had become increasingly involved in Vietnam, supporting the government of the South Vietnam against an insurgency supported by North Vietnam that aimed to reunify Vietnam under communist rule. U.S. strategy in Vietnam was prompted by the containment policy and by the domino theory—the mistaken belief that if South Vietnam fell to the communists, the rest of South Asia would automatically follow. This U.S. policy toward Vietnam began in the Eisenhower administration, but the communist Viet Cong were apparently on the brink of winning the war in 1961–1962.

President Kennedy therefore increased the American involvement by dispatching both helicopters and additional American advisors. Both the People's Republic of China and the Soviet Union supported North Vietnam, although at considerably lower levels than the United States provided to the South Vietnam.

As each side raised the stakes, the Vietnam conflict slowly escalated. In 1965, President Lyndon B. Johnson, Kennedy's successor, began bombing North Vietnam and introduced U.S. ground troops into the RVN. Troop numbers steadily increased as North Vietnam sent its regular forces south. Following the costly but ultimately unsuccessful communist Tet Offensive of January 1968 and a sharp drop in American public support for the war, Washington sought a way out.

The war cost Johnson the presidency. With the polls showing plummeting public approval ratings and with Johnson facing sharp challenges from within his own party, he decided not to run again. Republican Richard Nixon won a very close race against Johnson's vice president, Hubert Humphrey.

Nixon, who was president from 1969 to 1974, accelerated the Johnson administration's policy of Vietnamization, or turning over more of the war to the South Vietnamese. But the war dragged on, with more U.S. casualties under Nixon than during the Johnson years, until a peace settlement was reached at Paris in January 1973 that enabled the United States to quit Vietnam "with honor." South Vietnam, largely abandoned by the United States, fell to a communist offensive in April 1975.

Even as the war in Vietnam wound down, other events were moving the Cold War from confrontation to cooperation, or *détente*. The policy of *détente* originated with de Gaulle's return to power in France in 1958. Uncertain that the United States would risk nuclear retaliation on its own soil to defend Europe, de Gaulle sought to develop a French nuclear deterrent and the means to deliver it (the Force de Frappe). He also wanted to organize Europe as a third force between the United States and the Soviet Union. De Gaulle negotiated independently with the Soviets and made well-publicized trips to Poland and Romania appealing for European unity. Soviet leaders were quite content with de Gaulle's attacks on the United States, but they had no intention of giving up their hold on their satellites. In 1966, angry because the United States and Britain would not share control of nuclear

weapons within NATO, de Gaulle nonetheless withdrew France from NATO military command.

West Germany was the next country to venture into détente. In the late 1960s, Foreign Minister Willy Brandt instituted what became known as *Ostpolitik*. This reflected a shift in attitude in West Germany regarding relations with East Germany. Under Chancellor Konrad Adenauer, West Germany had embraced the Hallstein Doctrine, refusing diplomatic relations with any nation that recognized East Germany. This policy had in part isolated West Germany as well as East Germany, however, and it had cost West Germany trading opportunities with East Germany. Brandt believed that trade and recognition would help facilitate rather than impede German reunification.

The Czech government also attempted to take advantage of the new, more flexible attitudes brought by détente in 1968. Under the leadership of Alexander Dubček, the regime introduced “socialism with a human face,” a host of reforms that ultimately included free elections and an end to censorship. Dubček, himself a communist, claimed that these steps would in fact preserve communism.

The Soviet reaction was swift and decisive. In August 1968, an estimated 500,000 Warsaw Pact troops (primarily Soviet Army but including units from East Germany, Poland, Hungary, and Bulgaria) invaded Czechoslovakia, where they met only minimal resistance from a stunned population. The so-called Prague Spring was over. The Czechs did not fight, for to do so would have been futile.

To justify the action, Soviet leader Leonid Brezhnev announced what became known as the Brezhnev Doctrine. This held that whenever a communist regime was threatened, other communist states had the right and indeed the obligation to intervene. This doctrine would later be invoked to justify the Soviets’ 1979 invasion of Afghanistan as well.

The Brezhnev Doctrine understandably alarmed the People’s Republic of China. Strictly interpreted, the Brezhnev Doctrine could be applied against the People’s Republic of China itself, for it had “strayed from the path” of Soviet-style communism. Indeed, at the end of the 1960s the Soviets assembled considerable forces along their long common border with China, and Moscow did nothing to dampen rumors that it was contemplating a preemptive nuclear strike against China. In 1969 and 1970 there were actually armed clashes along the border that easily could have escalated into full-scale war.

Such Chinese concerns were a key factor leading to a thaw in relations with the United States. Since the communist victory in China in 1949, the People’s Republic of China, even more than the Soviet Union, had been the *bête noire* of the conservative right in the United States, which regarded the “loss” of China as nothing short of a “sellout.” The United States and the People’s Republic of China did not have formal diplomatic ties, and their only talking ground was the UN or through third parties. That ended in February 1972 with the dramatic state visit of President Nixon to Beijing. Nixon, with impeccable Cold Warrior credentials from the 1950s, was perhaps the only U.S. president of the era who could have carried this off. The United States

nonetheless moved cautiously, fearful of alarming the Soviet Union and disturbing détente. U.S. negotiators also ran up against the stone wall of Chinese insistence on the return of Taiwan, which Washington had, since the Chinese Civil War and in defiance of most of the world's states, regarded as the true representative of China. Finally, in 1978 under President Jimmy Carter, the United States established full diplomatic ties with the People's Republic of China, necessitating a severing of diplomatic ties with Taiwan although not an end to U.S. support. The U.S.-People's Republic of China thaw was one of the more interesting events of the Cold War and served somewhat to inhibit Soviet aggressive behavior.

Another significant part of détente was the extension of Ostpolitik by Brandt. When he became chancellor of West Germany in 1969, he decisively changed relations with the Soviet bloc nations. Brandt jettisoned the Hallstein Doctrine and in 1970 concluded a treaty with Moscow whereby West Germany recognized the existing border between East Germany and Poland, implicitly recognizing East Germany itself. West Germany also extended considerable loans to the states of Central and Eastern Europe.

At the same time, even as the war in Vietnam continued, U.S. Presidents Johnson and Nixon endeavored to engage the Soviets in a range of discussions. They even raised the possibility of improved relations with the Soviets, to include access to Western technology, if the Vietnam War could be settled. Nixon and Secretary of State Henry Kissinger went so far as to declare the world to be multipolar, with East-West relations no longer the central issue in international affairs.

Nixon did not let substantial Soviet aid to North Vietnam interfere with efforts to strengthen détente. Traveling to Moscow in May 1972, he signed two major agreements with Brezhnev: the Strategic Arms Limitation Treaty, which came to be known as SALT I, and an agreement of principles to regularize relations between the two superpowers. The document held that as each power possessed the capability to destroy the other and much of the rest of the world besides, there was no alternative to the two powers conducting their relations on the basis of "peaceful coexistence." The two powers pledged to do their "utmost to avoid military confrontations and to prevent the outbreak of nuclear war." They also pledged to resolve their differences "by peaceful means."

To no one's surprise, this agreement did not usher in an era of perpetual peace. The Soviet side, for one thing, had entered into the agreement in the hopes of securing Western trade, investment, and badly needed technology. In the new era of détente, the Soviet leadership hoped to achieve its ends while also supporting communist expansion in the developing world by means of proxy forces. Nixon, for his part, announced the Nixon Doctrine in 1973, a rough parallel to Soviet policy whereby the United States would assist other nations in defending themselves against communist aggression but would no longer commit American troops to this effort.

Following the end of the Vietnam War, the United States reduced defense spending to about 5 percent of gross national product (GNP), while the Soviet Union's defense expenditures rose to more than 15 percent of GNP. The Soviet Union also obtained less for its defense spending than the United

States and thus was less able to bear the burden of this expense. Certainly the heavy claim of defense spending played a role in the ultimate collapse of the Soviet Union, but it is by no means clear that this alone brought an end to the Cold War.

Détente led to a tremendous increase in trade between Western nations and the Soviet bloc and greatly aided the communist bloc economies. West European nations and Japan gave extensive loans to the Soviet Union and its dependencies, most of which were used to prop up these communist regimes with short-term spending on consumer goods rather than to invest in long-term economic solutions. Much Western technology also flowed to the Soviet Union. The hope of those supporting détente was that improved trade and economic dependence on the West would discourage aggressive actions by the communist states.

While direct diplomatic confrontation between the Soviet Union and United States decreased in the period of the 1970s, both sides pursued the same goals by supporting proxy states, especially in the Middle East and in Africa, the scene of a number of civil wars, including one in Namibia. The late 1970s saw not only an Angolan civil war fueled by support from both the Soviets and from the West but also the actual intervention of Cuban troops in that African nation. The Soviets also benefited from the overthrow of key American ally Shah Mohammad Reza Pahlavi of Iran in 1979. Soon the new Iranian regime had seized as hostages U.S. embassy personnel, beginning a protracted standoff with the United States.

Although President Carter met with Brezhnev in Moscow to approve yet another strategic arms reduction agreement (SALT II) in June 1979, Soviet leaders sent troops into Afghanistan to protect the pro-Moscow communist government there only five months later, sending U.S.-Soviet relations plummeting. Ultimately the Soviets dispatched to Afghanistan some 150,000 men as well as substantial numbers of aircraft and tanks.

Instead of rolling to victory, however, the Soviets came up against tough Afghan guerrilla fighters, the mujahideen, who received aid from the United States through Pakistan. The most important U.S. assistance was probably in the form of Stinger shoulder-fired antiaircraft missiles that neutralized Soviet ground-support aircraft and helicopters. It seemed a close parallel with Vietnam, where the Soviets kept an insurgency going against the United States and its allies for more than two decades with only a modest outlay of its own. Relations between the two superpowers suffered further when, to punish the Soviet Union for its actions in Afghanistan, President Carter imposed a boycott on U.S. participation in the 1980 Moscow Olympics and then began a substantial U.S. military buildup that was continued under his successor.

The cost of globalism for the Soviet Union was high too, as it turned out. With the strain of Afghanistan, international aid commitments, and massive defense spending brought on by the large U.S. buildup and the Strategic Defense Initiative (SDI, Star Wars) initiated by President Ronald Reagan, the Soviets simply could not keep up. Soviet Premier Mikhail Gorbachev, who took power in March 1985, therefore had to deal with the consequences of decades of economic mismanagement.

U.S. President Ronald Reagan and Soviet President Mikhail Gorbachev in Red Square in Moscow, 31 May 1988. (Ronald Reagan Library)

A committed communist, Gorbachev nonetheless believed that the Soviet Union would have to reform itself if it was to compete with the West. His programs of *glasnost* (openness) and *perestroika* (transformation) were designed to rebuild the Soviet economy while maintaining communist control over the political life of the state. Unfortunately, his economic reforms produced scant improvement, and his moves to ease censorship often led to civil unrest and ethnic strife within the Soviet Union as well as national and regional independence movements.

Even as the Soviet Union slid toward chaos domestically, however, Gorbachev scored successes in foreign policy. In the course of two summit meetings with Reagan, he offered concessions and proposed sometimes striking solutions in a manner that led to improved U.S.-Soviet relations and agreements on the reduction of nuclear weapons, including the first agreement in history to eliminate an entire class of nuclear weapons. In 1988, Gorbachev ordered the unilateral withdrawal of Soviet troops from Afghanistan. He also promised publicly to refrain from military intervention in Eastern Europe, and he encouraged open elections in the states of the Soviet empire in Central and Eastern Europe.

After the surprising collapse of the government of East Germany and the dismantling of the Berlin Wall in the autumn of 1989, Gorbachev also agreed to the reunification of Germany and the inclusion in NATO of the new united Germany. Most observers credit Gorbachev, who was awarded the Nobel Peace Prize in 1990, with being the

driving force behind the end of the Cold War.

Although the Soviet leader's foreign policy was widely hailed abroad, the situation within the Soviet Union continued to deteriorate. Old-line communists considered Gorbachev's policies equivalent to treason. In 1990 several Soviet republics, including the Russian Soviet Federal Republic led by Boris Yeltsin, declared their independence. Gorbachev tried to stem this tide and preserve the Soviet Union, but he was unsuccessful. Talks between Soviet authorities and the break-away republics resulted in the creation of a new Russian federation (or confederation) in August 1991.

Also in August 1991, a number of high-ranking officials representing the rightist faction in the Communist Party—including the chief of the *Komitet Gosudarstvennoi Bezopasnosti* (KGB), the defense minister, the prime minister, and the vice president—placed Gorbachev under house arrest and attempted to seize power. Faced with Yeltsin's personal and courageous intervention on behalf of opposition groups, the coup collapsed after two days. Gorbachev returned to Moscow but was now dependent on Yeltsin, who banned the Communist Party from the new Russian republic. Gorbachev resigned as general secretary of the Communist Party in August 1991.

In December 1991, the presidents of Russia, Ukraine, and Belarus created a loose confederation known as the Commonwealth of Independent States (CIS). Eight other republics subsequently joined, and the CIS formally came into being that same month. Gorbachev resigned as president on 31 December, and the Soviet Union was officially dissolved.

The Cold War ended—fortunately—with a whimper rather than a bang. Few knowledgeable observers predicted that it would occur as it did. Most assumed that the Soviet Union was incapable of reforming itself and saw the Cold War ending only after the military defeat of the Soviet Union or if some sort of internal, violent revolution were to occur in the USSR. Almost no one had perceived the fragility and weakness of the economic and social structures in one of the world's superpowers that ultimately led to its demise.

Different dates have been advanced as the end of the Cold War. One is November 1990, when the Conference on Security and Cooperation in Europe (CSCE) met in Paris and signed the Conventional Forces in Europe Treaty. All European states were represented at the conference, save Albania. In July 1991 the Warsaw Pact officially disbanded. Another possible ending date for the Cold War is 1991 in general, when events in the Soviet Union, including the failed August 1991 coup in Moscow and the December dissolution of the Soviet Union, destroyed the political structures of Soviet communism. Finally, an argument can also be made for a date of November 1992, when William J. Clinton defeated George H. W. Bush, the last Cold War president, in the U.S. presidential election. Clinton's elevation to the presidency marked a political shift in emphasis away from foreign affairs to the resolution of domestic problems.

One of the great ironies of the Cold War was the rapid rebuilding of Japan and Germany. These two well-disciplined, hardworking peoples profited handsomely from the Cold War in the sense that the Western powers needed them as allies against the Soviet Union and therefore encouraged their rapid economic development. In West Germany's case, this need was so great as to allow the rearmament of that nation in 1955, which would have been considered far-fetched in 1945. By the end of the Cold War, Germany was the dominant economic power in Europe, while Japan occupied the same position in Asia.

Of course, the end of the Cold War did not extinguish international tensions and bloodshed. Problems in the Middle East remained unresolved; Yugoslavia broke apart in bloodshed that threatened to erupt into wider conflict and eventually triggered armed NATO intervention; Iran and Iraq were continuing concerns; civil war and famine remained endemic on the African continent already being ravaged by AIDS; nuclear proliferation widened, especially with the breakup of the Soviet Union, and the danger of terrorists securing nuclear weapons intensified; violence continued to plague Sri Lanka; and dalliance with nuclear weapons by the Democratic People's Republic of Korea remained an ongoing source of concern for the West. If anything, the breakup of the bipolar world increased, rather than lessened, challenges facing the world's diplomats.

COLD WAR

A

Soldier, diplomat, and king of Jordan. Born in Mecca on 12 September 1882, the second son of Hussein ibn Ali, sharif of Mecca, Abdullah studied in Istanbul, Turkey, and later became an Arab nationalist. During World War I, with British assistance, he facilitated the Hussein-MacMahon Correspondence that launched the 1916 Arab Revolt.

In the 1930s, King Abdullah conducted secret talks with Zionist leaders about a Jewish homeland in a Palestinian-Jordanian kingdom. In 1947 he told Jewish leaders that he would not oppose the creation of a Jewish state but planned to annex the West Bank area of Palestine. When other Arab countries learned of the clandestine agreement, they immediately opposed it, forcing a war with Israel.

During the 1948 Arab-Israeli War, Abdullah served as the commander in chief of Arab forces. As such, he sent his Arab forces into Palestine, occupying areas that he wished to annex. He avoided, however, attacking Jewish areas in the United Nations' partition plan, but his army did battle unsuccessfully for control of Jerusalem.

In 1950 Abdullah signed a nonaggression pact with Israel after secret negotiations, but he was forced to renounce it when threatened with expulsion from the Arab League. In return, the other Arab states accepted the annexation of Arab Palestine by Jordan. Abdullah was assassinated in Jerusalem on 21 July 1951.

Abel, Rudolf

(1903–1971)

Pseudonym of Vilyam (Willie) Genrikovich Fisher, the chief Soviet undercover agent in the United States from 1947 to 1957. The alias “Rudolf Abel” was adopted at the time of Fisher’s arrest in the United States in 1957. Born on 11 July 1903 in Newcastle upon Tyne, England, Fisher at age sixteen passed an entry exam to the University of London. Two years later he went to the Soviet Union, where he served first as a translator for the Comintern before a stint in the Red Army’s Radio Battalion during 1925–1926.

Fisher then served as a Soviet spy in the German Army before being assigned to New York City under the code name “Mark” in 1947. There he posed as a freelance artist known as Emil Robert Goldfus. In 1949, he assumed control of the Volunteer spy network headed by American communist Morris Cohen. The network included Theodore Alvin Hall, a nuclear physicist at Los Alamos and the youngest of the spies who passed information on the atom bomb to the Soviets. The network had also included atomic spies Julius Rosenberg and Klaus Fuchs.

In 1957 Fisher’s chief assistant, the alcoholic Reino Hayhanen, betrayed him to American authorities. Arrested and sentenced to thirty years in prison, Fisher served only four years at the Atlanta Federal Penitentiary before he was exchanged on 10 February 1962 for downed American U-2 pilot Francis Gary Powers on the Glienicke Bridge in West Berlin, ever after known as “the bridge of spies.” The drama of the exchange and the book by Fisher’s lawyer, *Strangers on a Bridge*, cemented Fisher’s reputation as a master spy, even though his American residency had not produced any great intelligence coups. Fisher spent the remainder of his career working at the KGB Illegals Directorate in Moscow. He died of lung cancer in Moscow on 15 November 1971.

Abrams, Creighton Williams

(1914–1974)

U.S. Army general, celebrated combat leader, and army chief of staff (1972–1974). Born in Springfield, Massachusetts, on 15 September 1914, Creighton Abrams graduated from the U.S. Military Academy, West Point, in 1936 and was posted to the 7th Cavalry Regiment at Fort Bliss, Texas. When World War II loomed, he volunteered for the newly formed armored force.

Abrams first rose to professional prominence as a lieutenant colonel and commander of a tank battalion that often spearheaded General George Patton's Third Army in the drive across Europe. Abrams led the forces that punched through German lines to relieve the encircled 101st Airborne Division at Bastogne during the Battle of the Bulge, earned two Distinguished Service Crosses and many other decorations, and received a battlefield promotion to full colonel.

After World War II, Abrams served as director of tactics at the Armor School, Fort Knox (1946–1948); was a corps chief of staff late in the Korean War (1953–1954); and from 1960 to 1962 commanded the 3rd Armored Division in Germany, a key post during the Cold War. A year later he took command of its parent V Corps. In mid-1964 he was recalled from Europe, promoted to four-star general, and made the army's vice chief of staff. In that assignment (1964–1967) he was deeply involved in the army's troop buildup for the war in Vietnam.

In May 1967 Abrams was himself assigned to Vietnam as deputy commander. In that position he concentrated primarily on improvement of South Vietnamese armed forces. During the 1968 Tet Offensive when the forces involved performed far better than expected, Abrams received much of the credit. He formally assumed command of American forces in Vietnam in July 1968. A consummate tactician who proved to have a feel for this kind of conflict, he moved quickly to change the conduct of the war in fundamental ways. His predecessor's attrition strategy, search and destroy tactics, and emphasis on body counts as the measure of battlefield success were all discarded.

Abrams instead stressed population security, the new measure of merit, as the key to success. He prescribed a "one war" approach in which combat operations, pacification, and upgrading South Vietnamese forces were of equal importance and priority. He cut back on multibattalion sweeps, replacing them with thousands of small unit patrols and ambushes that blocked communist forces' access to the people and interdicted their movement of forces and supplies. Clear-and-hold operations became the standard tactical approach, with expanded and better-armed Vietnamese territorial forces providing the hold. Population security progressed accordingly. Meanwhile, U.S. forces were incrementally withdrawn, their missions taken over by the improving South Vietnamese.

Abrams left Vietnam in June 1972 to become U.S. Army chief of staff. There he set about dealing with the myriad problems of an army that had been through a devastating ordeal. He concentrated on readiness and on the well-being of the soldier, always the touchstones of his professional concern. Stricken with cancer, Abrams died in office in Washington, D.C., on 4 September 1974. He had set a course of reform and rebuilding that General

U.S. Army General Creighton Williams Abrams commanded U.S. forces in Vietnam during 1969–1972. (Herbert Elmer Abrams/Center for Military History)

John W. Vessey, former chairman of the Joint Chiefs of Staff, later recalled in a letter to the publisher Simon and Schuster: “When Americans watched the stunning success of our armed forces in Desert Storm, they were watching the Abrams vision in action. The modern equipment, the effective air support, the use of the reserve components and, most important of all, the advanced training which taught our people how to stay alive on the battlefield were all seeds planted by Abe.”

Acheson, Dean Gooderham

(1893–1971)

U.S. secretary of state (1949–1953) and chief architect of U.S. foreign policy in the formative years of the Cold War. Born on 11 April 1893 in Middletown, Connecticut, to British parents, Dean Acheson attended the prestigious Groton School and graduated from Yale University in 1915. He earned a degree from Harvard Law School in 1918 and went on to serve as private secretary to Supreme Court Justice Louis Brandeis from 1919 to 1921. After his Supreme Court stint, Acheson joined a Washington, D.C., law firm. He entered public life in 1933 when President Franklin D. Roosevelt named him undersecretary of the treasury. Acheson resigned soon thereafter, however, over a disagreement concerning gold and currency policies. In 1940 he authored a key legal opinion that led to the Lend-Lease program. In 1941, he became assistant secretary of state and then undersecretary of state in 1945.

The possessor of a brilliant legal mind, a regal bearing, and a biting wit, Acheson initially favored a policy of postwar cooperation with the Soviet Union. But he quickly reversed his view and, along with George F. Kennan,

became one of the chief proponents of the Cold War containment policy. Unlike Kennan, who believed that the contest with the Soviet Union was primarily political in nature, Acheson stressed the military dimension. Sobered by the failure of democratic nations to halt the Axis powers in the 1930s, Acheson advocated a policy of developing military strength before negotiating with the Soviet Union. After the USSR detonated its first atomic bomb in September 1949, he played a leading role in persuading President Harry S. Truman to move ahead with the development of the hydrogen bomb.

Acheson also played a critical role in implementing major Cold War initiatives in Europe. When the British informed the United States in early 1947 that they no longer possessed the financial means to support Greece and Turkey, Acheson pushed the Truman administration to take quick action, warning that if the United States did not supplant British power in the eastern Mediterranean, the result would likely be Soviet control of the region. Truman then announced his Greco-Turkish aid package and enunciated the Truman Doctrine to augment the containment policy. Acheson aggressively promoted the 1947 Marshall Plan to aid West European recovery efforts and to resist pressures that might lead to communist regimes there. Despite his role in creating the United Nations (UN), Acheson did not believe that it could prevent Soviet aggression or the spread of militant communism. Instead, he trusted military power and saw the North Atlantic Treaty Organization (NATO) as the best means of defending the West from the Soviets. NATO had the added benefits of strengthening U.S. ties with Europe, quelling internal unrest, and binding West Germany to the alliance.

When Acheson was sworn in as secretary of state on 21 January 1949, he was already recognized as the key architect of postwar foreign policy. As such, Truman, a great admirer of Acheson, gave him wide latitude in foreign policy matters. During his tenure in office, Acheson pushed through the implementation of NSC-68 and won Senate approval for continued stationing of American troops in Europe and for extensive military aid to the NATO allies. He failed, however, to secure European approval for German rearmament, which was stymied by French opposition.

Acheson's tendency to view international affairs largely from a European perspective hampered his efforts to deal with rising nationalism in the developing world. His attachment to a world united by imperial prosperity and order created unnecessary problems for the Western Allies as well as for emerging nations. Asia, possessing no significant industrial base outside of Japan, ranked low among Acheson's priorities. He based American policy on the tenuous—and as it turned out faulty—premise that communist China was the puppet of the Soviet Union. He sided with the French regarding

As U.S. secretary of state from 1949 to 1953, Dean Acheson played a key role in formulating American foreign policy at the beginning of the Cold War. (Library of Congress)

In the 1960s, Acheson returned to public life as the head of NATO task forces, special envoy, diplomatic troubleshooter, and foreign policy advisor for Presidents John F. Kennedy and Lyndon B. Johnson.

Indochina, advising Truman to make what proved to be a fateful commitment of American assistance to anti-Viet Minh forces in 1950. Acheson all but ignored Africa and Latin America, mainly because neither region was as yet on the front lines of the Cold War. Like those who preceded him, Acheson viewed Britain as an indispensable American ally and partner.

A primary target of Republican Senator Joseph McCarthy's anticommunist witch hunt, Acheson was lambasted for being friendly with alleged spy Alger Hiss, "losing" China to communism, and being unable to end the Korean War, which Acheson's enemies wrongly believed he provoked by publicly excluding it from America's "defense perimeter" in a January 1950 speech. Acheson also provided fodder for other Republicans, namely Richard M. Nixon, who in 1952 derided Democratic presidential nominee Adlai Stevenson for having graduated from "Dean Acheson's College of Cowardly Communist Containment."

Acheson retired from public life in 1953 but was not disengaged from public policy. He soon became the main Democratic critic of President Dwight D. Eisenhower's foreign policy. Acheson regarded NSC-68, which advocated the strengthening of conventional military forces to provide options other than nuclear war, as the foreign policy bible for the Cold War era. When the Eisenhower administration committed itself to a policy of massive retaliation that emphasized nuclear responses over conventional responses to crises, the former secretary of state reacted with utter disbelief to what he termed "defense on the cheap."

In the 1960s, Acheson returned to public life as the head of NATO task forces, special envoy, diplomatic troubleshooter, and foreign policy advisor for Presidents John F. Kennedy and Lyndon B. Johnson. Acheson was noted for his hawkish advice to Kennedy during the Cuban Missile Crisis of 1962. Acheson died of a heart attack on 12 October 1971 in Sandy Spring, Maryland.

Irish politician and Sinn Féin party leader in Northern Ireland. Born on 6 October 1948 in Belfast, Northern Ireland, Gerard “Gerry” Adams Jr. left school early and worked as a bartender. In 1964, he joined Sinn Féin, the political arm of the Irish Republican Army (IRA). Although Adams has always denied being a member of the IRA, British and Irish official sources suggest otherwise. Incarcerated in 1972 under the Special Powers Act, he was set free for peace talks that same year. However, he was imprisoned again from 1973 to 1977 and for a brief period in 1978.

After his release from prison in 1978, Adams assumed the vice presidency of Sinn Féin. As early as 1979, he tried to convince his party to give up violence and turn to political action. In 1983, the year he was elected to the House of Commons, he and the northern cadres took control of the republican movement. As the new president of Sinn Féin, Adams ended the party’s policy of abstention so that party representatives could be seated in Parliament. A skillful political tactician, Adams has since managed to steer his followers toward a peaceful solution to the Northern Ireland conflict without causing the party to break apart. Although by no means an uncontroversial figure, he is viewed as one of the major engineers of the 1998 Good Friday Agreement.

German politician, mayor of Köln (Cologne) from 1917 to 1933, chancellor of the Prussian State Council from 1922 to 1933, and first chancellor of the Federal Republic of Germany (FRG, West Germany) from 1949 to 1963. Born 5 January 1876 in Köln, Konrad Adenauer studied law in Freiburg, Munich, and Bonn. In 1897 he began his long career in government service in the Prussian justice administration before spending a brief time as an attorney in private practice. Sponsored by the Catholic Center Party, he was elected to the Köln city council in 1906; by 1909, he had become deputy lord mayor of the city. After being assigned oversight for Köln’s food supplies from 1914 to

Adenauer, Konrad
(1876–1967)

One of the greatest German statesmen, Konrad Adenauer presided over the creation of the Federal Republic of Germany (FRG, West Germany) after World War II and served as its first chancellor during 1949–1963. (Library of Congress)

1917, he moved on to assume the post of lord mayor of the city in 1917, a post he held until the advent of Nazi rule in 1933.

Adenauer flirted with the idea of a separate Rhenish state during the early troubled years of the Weimar Republic. But he subsequently adopted a position similar to that of Gustav Stresemann, who viewed Weimar Germany as a “republic of convenience.” Adenauer added the post of chancellor of the Prussian State Council to his portfolio in 1922. In 1933, he was imprisoned by the Nazi regime for his opposition activities and narrowly escaped death.

Returned as mayor of Köln by British authorities in March 1945, Adenauer clashed with them over priorities, and the British dismissed him from that post in October 1945. This freed him to take a leading role in national politics, and he became a cofounder and the leader of the Christian Democratic Union (CDU). Elected the first chancellor of the FRG in September 1949 by the Bundestag (lower house of parliament) by a majority of one vote, he was largely responsible for facilitating its recovery and reconstruction efforts and for moving the new state into the Western orbit during the formative years of the Cold War. His credentials as a strong opponent of the Nazi regime allowed him to resist the pressures to reunify Germany as a neutral, socialist state.

Adenauer was already convinced of the need for cooperation if Germany were to avoid renewed political chaos. At the same time, he maintained tight control over his new party and refused to enter a “Grand Coalition” with the German Social Democratic Party (SPD) after the 1949 elections elevated him to the chancellorship. He chose instead to bring the smaller Free Democratic Party and the more conservative Bavarian counterpart of the CDU, the Christian Social Union, into his cabinet. When the Western powers decided to allow the FRG to establish its own Ministry for Foreign Affairs in 1951, Adenauer took that position himself.

This combination proved stable enough to survive the initial challenges of statehood. To the dismay of many in Germany, Adenauer supported the rejection of the Soviet note proposing that Germany be neutralized and reunified in 1952. His statecraft and the growing threat of the Soviet Union eventually reconciled France to the idea of an independent West Germany. The FRG was allowed to rearm and join the North Atlantic Treaty Organization (NATO) in 1955. Adenauer also played a key role in ending the long-standing animosity between Germany and France. At the same time, he was able to maintain reasonable and effective relations with the Soviet Union and the rest of the Eastern bloc. He successfully negotiated the return of the last prisoners of war from the Soviet Union even as the FRG entered NATO. Adenauer always insisted, however, that the FRG was the only legitimate

German state, a policy later formalized as the Hallstein Doctrine. He also supported German aid for Israel.

Adenauer's increasingly autocratic rule, however, eventually led to turmoil. In 1962, several journalists were arrested on charges of treason on orders from Adenauer's cabinet. The resulting scandal, known as the *Spiegel* Affair, led Adenauer to promise to step down as chancellor in 1963. Yet Adenauer still managed to retain a great deal of influence in the government of the FRG. He remained chairman of the CDU, and Ludwig Erhard, his loyal lieutenant, was chosen from the party ranks to succeed him as chancellor. Erhard had served in Adenauer's cabinet from the outset and followed fundamentally similar policies during his term as chancellor.

Adenauer died in Rhöndorf, near the West German capital of Bonn, on 19 April 1967 with his legacy as one of Germany's greatest politicians essentially intact. Erhard and the CDU lost the elections of 1969, handing power over to the SPD, but the foundations of an independent, pro-Western FRG had been firmly established.

A landlocked nation of 252,000 square miles in South Asia with a population in 1950 of some 8.2 million people. Afghanistan borders Iran to the west; Turkmenistan, Uzbekistan, and Tajikistan to the north; China to the northeast; and Pakistan to the east and south. This geographically forbidding nation, almost half of which is more than 6,500 feet in elevation, with extensive desert regions and mountains exceeding 16,000 feet, is no stranger to international intrigue.

Afghanistan became a center of the so-called Great Game, an imperialist rivalry between Britain and Russia, in the nineteenth century. The struggle

Afghanistan

ended before the turn of the century, however, with the establishment of an independent Afghanistan that divided the regional ethnic groups in the area between Russia, British India, and Afghanistan. As elsewhere in the world, artificial borders mandated by European empires left residual problems that festered throughout the twentieth century.

The Cold War caught Afghanistan between the Soviet Union, naturally interested in a country on its southern border with ethnic connections to Soviet Central Asian republics, and the United States, which was fearful of communist expansion. The American containment policy sought to encircle communist Russia and China with an interlocking system of alliances including the North Atlantic Treaty Organization (NATO), the Central Treaty Organization (CENTO), and the Southeast Asia Treaty Organization (SEATO), and so Afghanistan found itself wedged between the West and the East.

After 1933, Afghanistan's King Muhammad Zahir had tried to enhance his position by dealing with the Soviets as a counter to the British in India. After World War II, the United States displaced Britain as the Western force in Asia, and Afghanistan continued to court the Soviets as a counter to Western imperialism. An agreement with the Soviets in 1950 provided Afghanistan with substantial economic support and promises of oil shipments, albeit interrupted by disputes over the Pashtun border with Pakistan.

At the time, proponents of containment envisioned an interlocking system of alliances to surround the communist world. NATO was the first in 1949 to secure Western Europe. In 1954 CENTO and SEATO surrounded the southern and eastern flanks of the communist bloc. Never fully realized, the idea was to link the three through multilateral collective security guarantees. CENTO included Pakistan, Iran, Iraq, and the linchpin Turkey, which was also a part of NATO. Pakistan was also a member of SEATO and thus tied to NATO through Turkey. Afghanistan was not included in any of these mechanisms.

In 1953 Mohammad Daoud Khan, a member of the Afghan royal family, became prime minister. Daoud secured a Soviet economic development loan of \$3 million in 1954 that preceded a 1955 visit by Soviet leaders Nikita Khrushchev and Nikolai Bulganin, who promised another \$100 million. The United States refused military aid to Afghanistan but did assist in improving the Qandahar Airport. The Soviets then promised military aid and a military aircraft facility at Mazir-e-Sharif. For a time, it seemed that Afghanistan was the fortunate beneficiary of Cold War rivalries.

Daoud's tenure ended in 1963 when Zahir resumed direct rule. The details of Daoud's fall are not entirely clear, although several factors were involved including inflation, continued tensions with Pakistan, popular opposition to Daoud's secular government, and the king's desire to broaden participation in government. The king ruled directly for a decade, during which time a leftist political opposition movement gained momentum, led by Babrak Karmal of the People's Democratic Party of Afghanistan (PDA). Political unrest and a severe drought resulted in a military coup in 1973 that placed Daoud back in power, now as head of a republic with support from Karmal.

Daoud, a moderate leftist, surprised many by seeking U.S. financial aid through the shah of Iran. The Soviets were also providing aid; Daoud visited the Soviet Union in 1974 and again in 1977.

Daoud continued to play both superpowers against each other and in the meantime developed closer ties with Iran and Saudi Arabia. By 1978, Daoud lost Karmal's support on the Left and the Islamist fundamentalists' support on the Right. That same year, Daoud's government was overthrown. Karmal and Nur Muhammad Taraki now led a new government with strong ties to the Soviets. The two Afghan leaders soon split, however, and in 1979 the Soviet Union sent troops to support Karmal.

Meanwhile, local tribal leaders took advantage of the turmoil, as did Islamic fundamentalists who feared that Soviet rule would result in a wholly secular regime. This dynamic forced the Soviets to back Karmal's regime with 150,000 troops and massive military aid. Sensing Soviet vulnerability, the United States provided arms and covert aid to the Afghan mujahideen (guerrilla insurrectionists). The parallel to Vietnam is not without merit. In Vietnam the communist power provided sufficient aid to the North Vietnamese and their Viet Cong allies to keep the United States bogged down in

Afghan resistance fighters return to a village that has been destroyed by Soviet forces, 25 March 1986. (U.S. Department of Defense)

a protracted struggle until 1973. In Afghanistan, the United States supplied aid to keep the Soviets pinned down until 1989, when they gave up and withdrew.

In neither case was the outcome predictable, however. The North Vietnamese united Vietnam but then gradually moved closer to the United States. Afghanistan was plunged into a long civil war that ended in 1996 when the repressive Taliban regime came to power, cultivating ties to the terrorist al-Qaeda movement. Ironically, the Taliban and al-Qaeda had received training and arms from the United States during the Afghanistan War. Ultimately, Afghanistan became a tragic victim of the Cold War, with implications that went far beyond the end of the Cold War in 1991.

Afghanistan War (1979–1989)

War that destroyed the U.S.-Soviet détente of the 1970s; inaugurated a new, dangerous stage in the Cold War; and badly weakened the Soviet military and economic establishments. The Soviet-Afghan War represented the culmination of events dating to April 1978, when Afghan communists, supported by left-wing army leaders, overthrew the unpopular, authoritarian government of Mohammad Daoud and proclaimed the People's Democratic Republic of Afghanistan. Although the extent of Soviet involvement in the coup remains unclear, Moscow certainly welcomed it and quickly established close relations with the new regime headed by Nur Mohammad Taraki, who was committed to bringing socialism to Afghanistan.

With the ambitious, extremely militant foreign minister Hafizullah Amin as its driving force, the Taraki regime quickly alienated much of Afghanistan's population by conducting a terror campaign against its opponents and introducing a series of social and economic reforms at odds with the religious and cultural norms of the country's highly conservative, Muslim, tribal society. Afghanistan's Muslim leaders soon declared a jihad against "godless communism," and by August 1978 the Taraki regime faced an open revolt, a situation made especially dangerous by the defection of a portion of the army to the rebel cause.

SOVIET INVASION OF AFGHANISTAN, 1979

As Afghanistan descended into civil war, Moscow grew increasingly concerned. Committed to preventing the overthrow of a friendly, neighboring communist government and fearful of the effects that a potential Islamic fundamentalist regime might have on the Muslim population of Soviet Central Asia, specifically those in the republics bordering Afghanistan, the Soviets moved toward military intervention. During the last months of 1979, the Leonid Brezhnev government dispatched approximately 4,500 combat advisors to assist the Afghan communist regime while simultaneously allowing Soviet aircraft to conduct bombing raids against rebel positions. Although Soviet Deputy Defense Minister Ivan G. Pavlovskii, who had played an important role in the 1968 Soviet invasion of Czechoslovakia, counseled against full-scale intervention in Afghanistan, his superior, Defense Minister Dmitry Ustinov, convinced Brezhnev to undertake an invasion, arguing that only such action could preserve the Afghan communist regime. He also promised that the Soviet presence there would be short.

Brezhnev ultimately decided in favor of war, the pivotal factor arguably being the September 1979 seizure of power by Hafizullah Amin, who had ordered Taraki arrested and murdered. Apparently shocked by Amin's act of supreme betrayal and inclined to believe that only a massive intervention could save the situation, Brezhnev gave approval for the invasion. Beginning in late November 1979 and continuing during the first weeks of December, the Soviet military concentrated the Fortieth Army, composed primarily of

Soviet soldiers and a BMD-1 airborne combat vehicle in Kabul, Afghanistan, in March 1986. (U.S. Department of Defense)

Central Asian troops, along the Afghan border. On 24 December, Soviet forces crossed the frontier, while Moscow claimed that the Afghan government had requested help against an unnamed outside threat.

Relying on mechanized tactics and close air support, Soviet units quickly seized the Afghan capital of Kabul. In the process, a special assault force stormed the presidential palace and killed Amin, replacing him with the more moderate Barak Kemal, who attempted, unsuccessfully, to win popular support by portraying himself as a devoted Muslim and Afghan nationalist. Soviet forces, numbering at least 50,000 men by the end of January 1980, went on to occupy the other major Afghan cities and secured major highways. In response, rebel mujahideen forces resorted to guerrilla warfare, their primary goal being to avoid defeat in the hopes of outlasting Soviet intervention.

Moscow's invasion of Afghanistan had immediate and adverse international consequences, effectively wrecking détente that was already in dire straits by December 1979 thanks to recent increases in missile deployments in Europe. Having devoted much effort to improving relations with Moscow, U.S. President Jimmy Carter believed that he had been betrayed. He reacted swiftly and strongly to the Afghan invasion.

On 28 December 1979, Carter publicly denounced the Soviet action as a "blatant violation of accepted international rules of behavior." Three days later, he accused Moscow of lying about its motives for intervening and declared that the invasion had dramatically altered his view of the Soviet Union's foreign policy goals. On 3 January 1980, the president asked the U.S.

Senate to delay consideration of SALT II. Finally, on 23 January, in his State of the Union Address, Carter warned that the Soviet action in Afghanistan posed a potentially serious threat to world peace because control of Afghanistan would put Moscow in a position to dominate the strategic Persian Gulf and thus interdict at will the flow of Middle East oil.

The president followed these pronouncements by enunciating what soon became known as the Carter Doctrine, declaring that any effort to dominate the Persian Gulf would be interpreted as an attack on American interests that would be rebuffed by force if necessary. Carter also announced his intention to limit the sale of technology and agricultural products to the USSR, and he imposed restrictions on Soviet fishing privileges in U.S. waters. In addition, he notified the International Olympic Committee that in light of the Soviet invasion of Afghanistan, neither he nor the American public would support sending a U.S. team to the 1980 Moscow Summer Games. The president called upon America's allies to follow suit.

Carter also asked Congress to support increased defense spending and registration for the draft, pushed for the creation of a Rapid Deployment Force that could intervene in the Persian Gulf or other areas threatened by Soviet expansionism, offered increased military aid to Pakistan, moved to enhance ties with the People's Republic of China (PRC), approved covert CIA assistance to the mujahideen, and signed a presidential directive on 25 July 1980 providing for increased targeting of Soviet nuclear forces.

Carter's sharp response was undercut to a certain extent by several developments. First, key U.S. allies rejected both economic sanctions and an Olympic boycott. Second, Argentina and several other states actually increased their grain sales to Moscow. Third, a somewhat jaded American public tended to doubt the president's assertions about Soviet motives and believed that he had needlessly reenergized the Cold War.

Ronald Reagan, who defeated Carter in the November 1980 presidential election, took an even harder stand with the Soviets. Describing the Soviet Union as an "evil empire" that had used détente for its own nefarious purposes, the Reagan administration poured vast sums of money into a massive military buildup that even saw the president push the development of the Strategic Defense Initiative (SDI)—labeled "Star Wars" by its critics—a missile defense system dependent on satellites to destroy enemy missiles with lasers or particle beams before armed warheads separated and headed for their targets. The Soviet response was to build additional missiles and warheads.

Meanwhile, confronted with guerrilla warfare in Afghanistan, the USSR remained committed to waging a limited war and found itself drawn, inexorably, into an ever-deeper bloody quagmire against a determined opponent whose confidence and morale grew with each passing month. To make matters worse for Moscow, domestic criticism of the war by prominent dissidents such as Andrei Sakharov appeared early on, while foreign assistance in the form of food, transport vehicles, and weaponry (especially the Stinger anti-aircraft missile launchers) from the United States began reaching the mujahideen as the fighting dragged on.

The mujahideen resorted to guerilla warfare, their primary goal being to avoid defeat in the hopes of outlasting Soviet intervention.

Neither the commitment of more troops, the use of chemical weapons, nor the replacement of the unpopular Kemal could bring Moscow any closer to victory. Accordingly, by 1986 the Soviet leadership, now headed by the reformist General Secretary Mikhail Gorbachev, began contemplating ways of extricating itself from what many observers characterized as the “Soviet Union’s Vietnam.”

In April 1988, Gorbachev agreed to a United Nations mediation proposal providing for the withdrawal of Soviet troops over a ten-month period. One month later the departure of Soviet military forces, which had grown to an estimated 115,000 troops, commenced—a process that was finally completed in February 1989.

Although the Soviets left Afghanistan with a procommunist regime, a team of military advisors, and substantial quantities of equipment, the nine years’ war had exacted a high toll, costing the Soviets an estimated 50,000 casualties. It seriously damaged the Red Army’s military reputation, further undermining the legitimacy of the Soviet system, and nearly bankrupted the Kremlin. For the Afghans, the war proved equally costly. An estimated 1 million civilians were dead, and another 5 million were refugees. Much of the country was devastated.

Africa

The Cold War in Africa commenced with the end of the colonial era, continued through Africa’s independence movements, and finally ended in the postcolonial period. The Soviet Union linked African national liberation movements to its own Marxist-Leninist ideology in order to gain a foothold in the continent. The United States, on the other hand, responded fitfully and belatedly to African decolonization. In 1945 the African continent contained a population of perhaps 224 million people.

AFRICAN INDEPENDENCE, 1951 – 1968

Individual African states—and regions—were an important component in the geopolitical chess match between the United States and the USSR, but not until later in the Cold War. From the late 1950s to the late 1970s, the United States purposely played a secondary role to that of the Europeans in Africa. During President Dwight D. Eisenhower's second term (1957–1961), the U.S. National Security Council proposed a “division of labor” for the developing world; the Europeans would be responsible for Africa, while the United States would play the dominant role in Latin America. The White House, in particular, expected France to police francophone Africa, while Great Britain would take the lead in southern Africa. Nonetheless, it was also the Eisenhower administration that created the Bureau of African Affairs within the U.S. Department of State. In 1957, Senator John F. Kennedy presciently warned of growing communist influence in Africa. As the Cold War advanced, African countries became labeled as either pro-Soviet or pro-American. A shorthand for this dichotomy was membership in either the relatively radical Casablanca Group, led by Ghana's President Kwame Nkrumah, or membership in the more pro-West Monrovia Group.

From 1981 to 1988, U.S. military aid to sub-Saharan Africa amounted to about \$1 billion. During the latter days of the Cold War, American aid became indistinguishable from U.S. geopolitical aims. Pro-Western governments such as the one in Senegal under President Abdou Diouf received aid, for instance, while Marxist governments such as President Didier Ratsiraka's of Madagascar did not. The United States routinely tied its aid to African nations to their geopolitical importance.

Generally speaking, America's Cold War geopolitical interests in sub-Saharan Africa were narrow in scope, but where the commitment existed it ran deep and often manifested itself in covert activity. Three regions deserve special mention: the Horn of Africa (Ethiopia and Somalia), where an intense superpower rivalry played out; Zaire (Democratic Republic of the Congo), one of the earliest battlegrounds of Cold War rivalry; and southern Africa, where the superpowers fought a proxy war in Angola and where they were directly or indirectly involved in an intricately latticed struggle for independence and freedom in Mozambique, Namibia, Rhodesia (Zimbabwe), and South Africa.

The Horn of Africa is comprised of Ethiopia, Somalia, and Djibouti. Because it adjoins the Middle East and the Indian Ocean, flanks the oil-rich states of Arabia, controls the Bab-el-Maneb Straits (an important choke point for oil), and overlooks the passages where the Red Sea, the Gulf of Aden, and the Indian Ocean converge, it was a very important piece in the Cold War geopolitical chess game. The competition between the United States and the Soviet Union in the Horn was intense, and their policies were analogous, if obviously in direct competition. American policy there was grounded on four principles: the economic security of the West (i.e., oil), stability and security in the Middle East and in the Horn, the ability to block Soviet attempts to choke Western oil lanes, and keeping the Red Sea and the Indian Ocean open for Israeli and Israel-bound shipping. The Soviet strategy in the Horn was predicated upon strategic deterrence, naval presence, sea denial or sea

control, and projection of power. The geopolitical competition between the United States and the USSR revolved around the Ethiopian-Somalian conflict.

America's foothold in the Horn was Ethiopia, where it had maintained a presence since 1953. The Soviet Union initially had a strong presence in Somalia. Between 1953 and 1974, when Ethiopian ruler Haile Selassie was overthrown, the United States supplied more than \$200 million in military aid to Ethiopia, which in 1970 comprised almost half of all aid to sub-Saharan Africa. In 1953, an American military base opened at Kagnaw Station in Asmara, Ethiopia, for, among other purposes, tracking space satellites and relaying military communications. More than 3,200 U.S. military personnel were stationed there. The United States also supported counterinsurgency teams fighting the Eritrean Liberation Movement. American support of Ethiopia was largely a response to the regional machinations of the Soviet Union. General Barre, the head of the Supreme Revolutionary Council of Somalia (an overtly socialist organization), had by 1977 received more than \$250 million in military aid from the Soviets. The Soviet Union also helped construct port facilities at Berbera, overlooking the Red Sea, as well as communication facilities. This base was strategically situated almost directly opposite the Soviet naval facilities in South Yemen's port of Aden.

The strategic equation in the Horn took a strange twist beginning in the mid-1970s. With the weakening and then the collapse of Selassie's regime in Ethiopia, the United States was forced to abandon its base in Asmara and moved its base of operations to the island of Diego Garcia (1,500 miles off the African coast in the Indian Ocean). Colonel Mengistu Haile Mariam, the leader of the Derg military junta, ruled Ethiopia under a Marxist-Leninist dictatorship from 1974 until 1991. This provided a window of opportunity that the Soviets could not resist, but they had to be careful not to alienate their Somali allies.

The Soviets responded to the new Ethiopian government's request for assistance (which the United States was no longer willing to provide) just as the Eritreans and Somalis were enjoying more success in Ethiopia. In September 1977, the Soviet Union began the delivery of approximately \$385 million in arms, including 48 MiG jet fighters, 200 T-54 and T-55 tanks, and SAM-3 and SAM-7 anti-aircraft missiles. The Soviet Union had gambled that its new relationship with Ethiopia would not affect its relationship with Somalia, a bet that it lost. The Soviet Union was expelled from Somalia in 1977. It also failed to achieve its aims in Ethiopia, for after seven years of civil war the Tigrean People's Liberation Front (TPLF) from far southern Ethiopia entered Addis Ababa in May 1991, overthrowing the Marxist regime. Meanwhile, the United States had become the major patron of Somalia, supported Barre throughout the 1980s, and inherited the strategic base in Berbera once held by the Soviets.

During the 1960s, Washington ordered a series of covert actions in the Democratic Republic of the Congo (DRC, Zaire). The DRC was a flashpoint in the Cold War almost from its inception. Three central events in its history punctuate the role it played in the U.S.-USSR geopolitical competition in

Volunteers with the United Nations Operation in the Congo (ONUC) during the 1960s. Established in 1960 by the United Nations Security Council to assist the newly independent Congo by restoring order and providing technical assistance, the ONUC operated until 1964. (Corel)

sub-Saharan Africa: the defeat of Prime Minister Patrice Lumumba and rise of Mobutu Sese Seko, the first secessionist crisis in Katanga (renamed Shaba in 1971) in 1960, and the second secessionist crisis in Shaba in 1978.

The first and most significant result of such actions was the assassination of Lumumba and the subsequent rise of the pro-Western Mobutu. Mobutu, who ran what became commonly known as a kleptocracy, received approximately \$1.5 billion in economic and military aid over the course of nearly twenty-five years. The United States considered Mobutu a vital cog in its global anticommunist network as well as a supplier of important strategic minerals (cobalt, copper, diamonds, gold, cadmium, and uranium).

In June 1960, the Belgian Congo gained independence and was renamed the Republic of Congo, with Joseph Kasavubu as its first president and Lumumba as its first prime minister. Lumumba, a leftist, almost immediately faced a secessionist crisis in the mineral-rich Katanga province. At the request of the Congolese government, United Nations (UN) troops were sent in to restore order. The United States opposed Lumumba's nationalist and nonaligned policies and his implicit support of the Soviet Union. In September 1960 President Kasavubu, along with the army, dismissed Lumumba and in January 1961 delivered him to the secessionists in Katanga province who then executed him.

From 1961 until 1964 (when Belgian paratroopers finally restored order), there was fighting between rival secessionist groups. American-educated Moïse Tshombé then emerged as the leader of the Katanga secessionists. After a short period of exile, Tshombé was named the premier of the Government of Reconciliation by Kasavubu in 1964. Two years later Tshombé was dismissed and accused of treason and again went into exile. He was kidnapped and imprisoned in Algeria, where he died in prison in 1969. President Kasavubu was ousted in a second Mobutu-led coup in November 1965. By 1967, the pro-Lumumbist elements had been effectively defeated. Zaire then became a staging area for neighboring Cold War struggles.

Mobutu's involvement in neighboring Angola's civil war resulted in the Front for the National Liberation of the Congo (FLNC) invasion of Zaire's Shaba region in March 1977, known as the Shaba I Crisis. Included in the invading force was a small remnant of the Katangan rebels. The FLNC quickly captured several towns and gained control of the railroad to about thirty kilometers from the copper mining town of Kolwezi. The dissidents aimed to take over the entire country and depose Mobutu. Their advance and the threat to Kolwezi forced Mobutu to appeal for international assistance. Thus, Belgium, France, and the United States responded to Mobutu's request by immediately airlifting military supplies to Zaire. Other African states, namely Egypt and Morocco, also supported Zaire during the crisis. By the end of May, the joint force had regained control of Shaba. The FLNC then withdrew to Angola and Zambia.

Government reprisals after Shaba I drove 50,000–70,000 refugees into Angola. Also, Zaire's continued support for Angolan dissident groups ensured continued Angolan government support for the FLNC. The Shaba II Crisis was triggered in May 1978 when the FLNC launched its second invasion of Zaire in a little over a year. During early May 1978, ten FLNC battalions entered Shaba through northern Zambia, a sparsely populated area inhabited by the same ethnic groups (Lunda and Ndembu) that made up the FLNC. A small group went toward Mutshatsha, about 60 miles west of Kolwezi, to block the path of Zairian reinforcements that threatened to move into the area. During the night of 11–12 May 1978, the remainder of the force moved to Kolwezi, where it joined with the rebels who had earlier infiltrated the town. The town of Kolwezi was lightly defended, and the rebels quickly gained a foothold in the mineral-rich Shaba (formerly Katanga) province, thereby controlling about 75 percent of the country's export earnings. The French and Belgian governments requested U.S. help in putting down the rebellion.

The administration of President Jimmy Carter viewed Shaba II as an instance of Soviet expansionism. Subsequently, in a total of thirty-eight flight missions, U.S. planes transported roughly 2,500 French and Belgian troops and supporting equipment to the region. The American commitment to Mobutu and Zaire was consistent with its long-standing support of Mobutu and with the U.S. concern over Soviet/Cuban influence in neighboring Angola. President Carter, in fact, rebuked Cuban leader Fidel Castro for supporting the FLNC attack launched from Angolan territory. Carter's national

The United States was almost completely dependent on southern Africa for its uranium supply and was willing to go to great lengths to secure the critical fuel for its nuclear arsenal.

security advisor, Zbigniew Brzezinski, claimed that the invasion was launched with Moscow's blessing. The Carter administration believed that it had to respond to aggressive Soviet/Cuban penetration of Africa (15,000 Cuban troops and Soviet advisors were already in Ethiopia). By the end of May 1978, the second Shaba invasion was all but over. Belgian forces began to withdraw, leaving a battalion in Kamina, and the French Foreign Legion departed by the end of May.

Southern Africa was the third African hot spot during the Cold War. The epicenter of American-Soviet conflict was Angola, but Namibia, Mozambique, Zimbabwe, and South Africa also featured prominently in the latter years of the Cold War. Each of these countries, with the notable exception of South Africa, was seen as aligned with the Soviet Union during the Cold War. Namibia, under tight South African control, was linked to the Angolan civil war. Mozambique, which gained independence on 25 June 1974, was a self-designated Marxist-Leninist regime led by Samora Machel, chairman of the Frente Libertação de Moçambique (Frelimo) and president of the People's Republic of Mozambique, and joined the Soviet-led Council of Mutual Economic Assistance. In turn, Frelimo, with the backing of the Soviet Union and other communist states, supported Robert Mugabe's Zimbabwe African National Union (ZANU) and its armed wing, the Zimbabwe African National Liberation Army (ZANLA), in the Rhodesia/Zimbabwe national liberation struggle against the settler regime of Ian Smith, leader of the Rhodesian Front (RF).

The RF had declared Rhodesia's independence from Great Britain in 1965, triggering a fifteen-year-long civil war. A second insurgency group in Rhodesia/Zimbabwe led by Joshua Nkoma's Zimbabwe African Peoples Union (ZAPU) along with its armed wing, the Zimbabwe People's Revolutionary Army (ZIPRA), was supported by the Soviet-aligned Popular Movement for the Liberation of Angola (MPLA). In an important subplot during the era, the United States was almost completely dependent on southern Africa for its uranium supply and was willing to go to great lengths to secure the critical fuel for its nuclear arsenal.

In March 1975, a civil war broke out in Angola. The United States initially supported the National Front for the Liberation of Angola (FNLA) as a counter to the Marxist MPLA. After the FNLA fell apart, America switched its support to the National Union for the Total Independence of Angola (UNITA). The United States refused to support the de jure MPLA government, and what followed was a quarter century of civil war. The Soviets and Cubans intervened in Angola in support of the Marxist MPLA regime, which subsequently developed close military ties with the South West Africa People's Organization (SWAPO, Namibia) and the socialist regime in Mozambique as well as with Zambia and the African National Congress in South Africa. American involvement in Angola was seriously inhibited by the U.S. Congress's Clark Amendment of 1975, which banned military aid to any Angolan party. For a decade, direct U.S. involvement in southern Africa was minimal. The election of President Ronald Reagan, however, changed that.

Jonas Savimbi, leader of the [União Nacional para a Independência Total de Angola] (UNITA, [National Union for the Total Independence of Angola]), one of the chief forces in the Angolan Civil War, which began in 1975. (Patrick Chauvel/Sygma/Corbis)

In July 1985, Congress repealed the Clark Amendment. Thus, the leader of UNITA, Jonas Savimbi, became a primary recipient of U.S. paramilitary aid under the Reagan Doctrine, which argued that the USSR should not only be contained but that its influence and gains abroad (such as in Angola) should be rolled back. Zaire was a major conduit (along with South Africa) for U.S. covert assistance. At the peak of America's clandestine operations, Reagan labeled Savimbi a "combatant for liberty."

In 1981, under the stewardship of Chester Crocker, assistant secretary of state for African affairs, the United States announced a policy of constructive engagement for southern Africa. This was the endgame for U.S.-Soviet competition in the region. Crocker linked the independence of Namibia (from South Africa) to the withdrawal of Cuban troops from Angola. This entailed a quasi-alliance with South Africa's apartheid government but not support for the regime in Pretoria per se. To some, this disinterred what was called the Tar Baby Option, President Richard Nixon's secret policy of rapprochement with Smith's white minority regime in Rhodesia/Zimbabwe embodied in Option Two of the National Security Study Memorandum 39, a review of U.S. African policy ordered by National Security Advisor Henry Kissinger. The United States became one of three UN members (along with Portugal and South Africa) that allowed trade with Rhodesia from 1971 to 1977 under

the Byrd Amendment, which circumvented UN sanctions against Rhodesia by permitting importation of Rhodesian chrome.

Nevertheless, following eight long years of negotiations, constructive engagement led to the 1998 New York Accords and the subsequent exit from Angola of Cuban and South African forces aligned, respectively, with the MPLA and UNITA. The Cold War in southern Africa was over.

Africa, Soviet Interventions in

Soviet interventions in Africa, mostly by military means, were largely a product of its Cold War rivalry with the United States. Africa received relatively little attention from Soviet foreign policymakers until the advent of widespread decolonization in the early 1960s. The growing number of newly independent states in Africa attracted the attention of Soviet Premier Nikita Khrushchev, who was anxious to extend Soviet influence in the region. New and independent African nations such as Ghana and Guinea turned to the Soviet Union to help balance Western influence and, in some cases, to strengthen their regimes.

Soviet military intervention in Africa began on a modest scale in the Congo (formerly Zaire) in 1960. But in January 1961 Soviet aid to the Congo

began to dwindle as its attention shifted elsewhere, particularly to neighboring Angola.

As early as 1961, the Soviet Union began establishing tentative ties with Agostinho Neto and the Popular Movement for the Liberation of Angola (MPLA) and supported Neto in his struggle against Portuguese colonial rule. During Neto's struggle against South African troops in the early 1970s, the United States supported the National Front for the Liberation of Angola (FNLA) and the National Union for the Total Independence of Angola (UNITA). Soviet support in Angola remained minimal until the Portuguese revolution of 1974, which brought an end to its African empire. The Soviet Union also seemed increasingly willing to take advantage of the American retreat in Vietnam and U.S. congressional demands for an end to the covert aid program being conducted by the Central Intelligence Agency (CIA) in Angola. With Soviet military aid and Cuban troops, Neto won control of the capital of Luanda and became president in 1975. Even though civil war continued, he set about building a socialist government. By the late 1970s and early 1980s, the Soviet Union was providing the Neto regime with nearly \$200 million a year in military aid.

Soviet success in Angola spurred Premier Leonid Brezhnev to additional involvement in the Horn of Africa. In 1974 the overthrow of Haile Selassie's monarchy in Ethiopia by the socialist junta led by Mengistu Haile Mariam opened the door for Soviet influence there as well. As Soviet relations with Ethiopia improved, those with neighboring Somalia worsened.

In 1977 Somalia abrogated its treaty of friendship with the Soviet Union, closed the naval base at Berbera, and formed an alliance with the United States, which had only recently terminated its aid program to socialist Ethiopia. With this abrupt change, a border war between Ethiopia and Somalia broke out over the region of Ogaden. Soviet aid flooded Ethiopia, reaching well over \$2 billion by 1982, and Somali forces were driven from Ogaden. Yet Soviet policy always contained a degree of caution, and it thus remained silent on Ethiopian efforts to subjugate Eritrea.

Intervention in southern Africa was not as direct but was nonetheless important for Soviet foreign and strategic policy on the continent. Aid to the Front for the Liberation of Mozambique (Frelimo) in Mozambique and the socialist government of Samora Machel provided a base from which to attack white supremacists in Rhodesia and South Africa. Soviet assistance to Joshua Nkomo's Zimbabwe African People's Union (ZAPU) was not very effective, as the rival Zimbabwe African National Union (ZANU) loosely allied itself with the People's Republic of China (PRC). In allied states such as Angola, Mozambique, and Tanzania, the Soviet Union helped to arm and train soldiers from the African National Congress (ANC) and the Southwest African

Soviet and Eastern bloc military advisors in Angola, 1 April 1983. (U.S. Department of Defense)

U.S./Soviet Interventions in Africa, 1960s–1990s

<i>Intervention in</i>	<i>Intervention by</i>	<i>Years of Intervention</i>	<i>Result of Intervention</i>
Angola	Soviet Union	1961–1980s	Agostinho Neto became president of Angola in 1975
Mozambique	Soviet Union	1962–1980s	Aid to the socialist regime of Samora Machel provided a base from which to attack white supremacists in Rhodesia and South Africa
Zimbabwe	Soviet Union	1971–1980s	Aid to Joshua Nkomo's Zimbabwe African People's Union did not prevent Zimbabwe's alliance with the People's Republic of China
Zimbabwe	United States	1975–1979	Unsuccessfully covertly aided the white Rhodesian regime
Angola	United States	1975–1980s	Tried to prevent the pro-Soviet Popular Movement for the Independence of Angola from coming to power
Ethiopia	Soviet Union	1977–1982	Somali forces were driven from Ogaden
Mozambique	United States	1979–1990	Supported anticommunist group RENAMO in guerrilla raids against the existing infrastructure

People Organization (SWAPO). While Soviet military aid was substantial, it was not sufficient to prevent counterrevolutionary movements in the region.

Both American and Soviet interventions in Africa during the Cold War gave many African leaders the opportunity to find outside support and, for a time, boosted Africa's international stature. Soviet relations with African states usually began with economic and cultural agreements and then were followed by military aid to bolster friendly leaders in important states. In return, the Soviet Union sometimes asked for maritime agreements to increase its fleet presence and urged African governments to take a socialist orientation. When Soviet President Mikhail Gorbachev came to power in 1985, African intervention was no longer a priority, as Moscow turned its attention to mending its own ailing economy.

Soviet and American intervention in Africa increased the number of arms on the continent, as each side continued to support strong men who would defend their interests and influence in the region. At their height, arms transfers to Africa probably reached \$4 billion per year.

During the Cold War, U.S. intervention in Africa took many different forms. American intervention was shaped in part by history, as the nation had experienced varied economic and cultural ties with different parts of Africa over a long period of time. Freed slaves from the United States settled in Liberia in the early nineteenth century, and so that country became a virtual American colony. Much of the continent, however, was ruled by European colonial powers and therefore had been long off-limits to American influences.

By the 1940s American economic and cultural ties to South Africa were significant, and in the early Cold War period the United States relied heavily upon South African uranium deposits for its nuclear programs. At the same time, the United States continued to make clear its opposition to formal colonialism and welcomed Africa's independence movements in the 1950s, hoping that newly independent nations would not slide into the Soviets' orbit of power.

The strongest initial African ally in this period was Emperor Haile Selassie of Ethiopia, who allowed the United States to build a major communications facility in his country. Direct U.S. political involvement in Africa was, however, quite unlikely. When the Congo crisis erupted in 1960, the United States remained determined to exert influence via the United Nations (UN), despite evidence of Soviet and Cuban involvement there. President John F. Kennedy was concerned that America should not be seen as actively supporting the apartheid regime in South Africa and so, despite that country's strategic significance, American policymakers began to take measures to express their displeasure with apartheid. In general, however, Africa remained low on the list of U.S. priorities, and under President Richard M. Nixon American policy again swung behind the white minority regimes of southern Africa, on the grounds that the existing liberation forces were unlikely to overthrow them.

In the 1970s, however, the continent underwent significant changes. In 1974 the United States lost a key ally when Selassie was overthrown. Then, with the approach of Angola's independence in 1975, U.S. Secretary of State Henry Kissinger decided to intervene covertly to prevent the pro-Soviet Popular Movement for the Liberation of Angola (MPLA) from coming to power. The Ford administration provided the Central Intelligence Agency (CIA) with funding to work with the South Africans to support the two rival Angolan political movements, the Union for the Total Independence of Angola (UNITA) and the National Front for the Liberation of Angola (FNLA). But after the arrival of Cuban forces in Angola, the CIA operation collapsed in disaster, and the Clark Amendment passed by the U.S. Congress forbade the use of funds for further covert operations in that country. The CIA then sought to recruit mercenaries for use in Angola and to aid the increasingly beleaguered white Rhodesian regime in Zimbabwe's liberation war. These measures proved equally ineffective, however.

The Clark Amendment was repealed in the 1980s, when President Ronald Reagan hoped to dislodge the pro-Soviet MPLA government in Angola by supporting UNITA. Angolan rebel leader Jonas Savimbi was invited to

Washington and hailed as a “freedom fighter.” At the same time, Reagan’s assistant secretary of state for African affairs, Chester Crocker, was trying to secure the linkage of the complete withdrawal of Cuban forces from Angola with the independence of Namibia. In 1988, through active mediation in a series of meetings among the governments of Angola, Cuba, and South Africa, Crocker was at last able to achieve a negotiated settlement of the Namibia issue, and the Namibia/Angola accords were signed at UN headquarters in December 1988. This was perhaps the U.S. government’s most successful intervention in Africa, although by that point the United States was working together with the Soviet Union rather than against it.

African National Congress

Black national liberation movement in South Africa. Long before the advent of the Cold War, the African National Congress (ANC), formed in 1912 by a group of black South Africans headed by Pixley Seme, had links with the Communist Party of South Africa (CPSA), which was formed in 1921. Black Africans could be members of both, but until the 1950s the two remained distinct organizations with different philosophies, as the ANC was, as its name suggested, a black nationalist organization. After the white-majority National Party came to power in 1948 and established a harsher form of racial segregation known as apartheid, the CPSA was forced to go underground in 1950. At that juncture, links between the ANC and CPSA became closer.

Former CPSA members along with the Congress of Democrats, an all-white organization established in 1950, worked closely with the ANC leadership in the antiapartheid Congress Alliance of the mid-1950s. Members of the newly formed South African Communist Party (SACP) played a leading role in the creation of Umkhonto weSizwe (MK), which engaged in sabotage from 1961 and in time became the armed wing of the ANC. In the beginning, a young Nelson Mandela was the commander of the MK.

Supporters of South Africa's African National Congress (ANC) gather on 12 August 1952 in Johannesburg as part of a civil disobedience campaign to protest the apartheid regime of racial segregation. The protesters were later arrested. (AFP/Getty Images)

The ANC itself, banned in April 1960 by the white Afrikaner National Party, was forced to work underground and in exile. This drew the ANC and the SACP closer still, to the extent that some have claimed that the exiled ANC leadership was dominated by the SACP. This is an exaggeration. The leading figures in the ANC—including Albert Luthuli, the ANC leader who was awarded the Nobel Peace Prize in 1961; Oliver Tambo, the leader in exile from 1960 who succeeded Luthuli as ANC president; and Nelson Mandela, who with the other leading members of MK was sentenced to life imprisonment on Robben Island in 1964—were not communists.

Thabo Mbeki, who would ultimately succeed Mandela as South Africa's president in 1999, was a member of the ANC for a time and went to Moscow for military training along with many other ANC members. Whereas the ANC's rival, the Pan-Africanist Congress, established relations with China in the 1960s, it was the Soviet Union that provided the ANC with the bulk of its funding and all its military support and hardware. In South Africa itself, many underground or imprisoned ANC members were, in the 1970s, influenced by the Black Consciousness Movement (BCM). Adherents of the BCM who joined the ANC tended to oppose the organization's close ties with the SACP.

From a Cold War perspective, the United States long viewed the ANC as pro-Moscow and a “terrorist” organization, and it was not until the late 1980s that an ANC leader was invited to Washington. The ANC and MK always maintained that throughout their armed struggle they only targeted government structures and not civilians, although by the mid-1980s they were forced to admit that civilians sometimes got caught in the cross fire. Many young ANC members were radicalized by the repression meted out by the South African government from the Soweto Uprising of 1976 on, especially during the People’s Uprising of the mid-1980s. The ANC then began to talk of ending both apartheid and capitalism by establishing a socialist state in South Africa.

The ANC leadership in exile was more attuned to international currents, however, and by the mid-1980s conceded that if the ANC came to power it would do so in the context of a multiparty system and would not be able to introduce socialism, at least in the short run. As the Cold War began to wind down, important voices in both the SACP and ANC renewed the call for a negotiated settlement.

The governmental ban of the ANC and SACP was lifted in February 1990 by South African President F. W. de Klerk. By then, with the collapse of communism in Eastern Europe, the whites’ fear of communism had waned, and within the ANC itself the influence of communism had greatly diminished. With the Cold War virtually ended, Mandela toured the United States after his release from prison in February 1990 and received a rapturous reception. He would not, however, visit the former Soviet Union until many years later. Since the establishment of majority rule in March 1994, the ANC has been the governing party in South Africa. Although its alliance with the SACP has endured, its policies have been far removed from socialism.

Aideed, Mohamed Farah

(1934–1996)

Controversial Somali warlord who opposed the United Nations’ peace-keeping mission in Somalia of 1992–1995. Born Mohamed Farah Hassan on 15 December 1934, probably in the central highland region of the former Italian Somaliland, Hassan preferred the moniker of “Aideed,” a childhood

nickname. After joining Somalia's Police Corps in 1954, he attended infantry school near Rome and soon after became chief of police in Mogadishu. Following his promotion to lieutenant in 1960, he spent three years in Moscow at the Frunze Military Academy. He later served as chief military advisor to Mohammed Siyad Barre's regime and then as Somalia's ambassador to India during 1984–1989.

In January 1991 Aideed successfully led opposition forces in deposing Barre and then embarked on a brutal military campaign to overthrow the interim government that resulted in a full-blown civil war and ignited intra-clan hostilities that soon turned Mogadishu into a shattered war zone. The mounting crisis was magnified by the onset of a severe drought in the region, which prompted the United Nations (UN) to intervene in Somalia in April 1992. Aideed responded to the UN presence by ordering his militia to seize all foreign food aid shipments meant for the starving population. In May 1993, after the successful relief efforts of Operation RESTORE HOPE, UN peace-keeping forces were ordered to police the region and maintain stability.

Aideed's militia fought back viciously, repeatedly wounding UN troops. On 3 October 1993, a bloody confrontation between Aideed's militia and U.S. military forces resulted in heavy casualties for both sides. The high-profile battle led the United States to withdraw from Somalia, allowing Aideed to consolidate his power for a time. In September 1995, shortly after the complete departure of UN personnel, Aideed declared himself president of the Somali Republic. He was, however, under constant threat from rival clans, and on 2 August 1996 he died in southern Mogadishu from a gunshot wound following an intraclan skirmish.

Term used for a nuclear warhead detonation in the atmosphere. In nuclear weapons doctrine, air bursts are usually reserved for use against populated areas, where the effects of the blast and spread of radiation are maximized by an above-ground detonation. Air bursts can also be used to increase the damage caused by the electromagnetic pulse (EMP) created by a nuclear weapon. EMP is an electromagnetic charge somewhat similar to a solar flare that can

Air Burst

cripple or destroy electronics of all types. Thus, a nuclear air burst can readily render communications, vehicles, ships, computers, and missile guidance systems unusable.

The first atomic bomb, dropped over Hiroshima on 6 August 1945, was an air burst, exploding some 1,890 feet over the city. The blast obliterated 4 square miles of Hiroshima, destroying 62,000 buildings. More than 71,000 Japanese died; another 20,000 were wounded, and 171,000 were left homeless.

Aircraft

Having benefited greatly from the technological leaps made during World War II, aircraft emerged as vital military, political, and socialization tools for both sides of the Cold War divide. Fixed- and rotary-wing aircraft were developed and fielded at a phenomenal pace and emerged as key components of geopolitical policies and ambitions.

The close of World War II saw the beginning of the end of the era of piston-powered fighter aircraft, as both Germany and Great Britain fielded jet-powered aircraft in combat. Building largely on German research, both the United States and the USSR unveiled seminal jet-powered models in the years immediately after the war. Soviet production began with the Mikoyan-Gurevich MiG-15 Fagot, of North Atlantic Treaty Organization (NATO) designation, that saw service in 1948 and stunned U.S. pilots in the early days of the Korean War. The MiG-15's primary U.S. counterpart in the skies above the Korean Peninsula was the North American F-86 Sabre, which utilized the latest in swept-wing technology and could achieve transonic speeds in level flight while protecting American pilots through the use of the first production aircraft ejector seats. Although the F-86 was marginally inferior to its Soviet nemesis, the model enjoyed stunning success in Korea due largely to the superior training and tactics of American pilots over their Soviet and Chinese counterparts.

Although test pilot Chuck Yeager had piloted the Bell X-1 *Glamorous Glennis* through the sound barrier in 1947, the title of the world's first truly supersonic war-fighting machine resided with America's next production model jet fighter, the F-100 Super Sabre. Debuting in 1954 as the first in the

During the Korean War, U.S. Operation MOOLAH offered \$100,000 and political asylum to the first communist pilot to defect with an undamaged MiG-15. The United States wanted the Soviet-built aircraft for assessment and evaluation. Shown here is the MiG-15 flown by North Korean defector pilot Lieutenant No Kum Sok to Kimpo Airfield in South Korea on 21 September 1953. He claimed that he had not been aware of the financial incentive. (National Archives and Records Administration)

Century series of U.S. fighters, the Super Sabre can be more accurately labeled as an interceptor/fighter/bomber.

Utilizing two Tumanskii turbojets to reach Mach 1.36 speed, the MiG-19 Farmer became the first supersonic fighter produced outside the United States when it entered service in 1955. The MiG-19 saw extensive use during Vietnam and the Arab-Israeli wars of 1967 and 1973. Plans for the MiG-19 were also exported to China, where by the late 1950s the model was produced by the Shenyang Aircraft Factory for the People's Liberation Army Air Force (PLAAF) under the designation of J-6.

France's ability to keep pace in the Cold War's rapidly evolving fighter industry was maintained almost solely by designs fielded by the firm of Marcel Dassault. The Buchenwald survivor's Mystère II joined the Armée de l'Air in 1954 and after only a year's time was joined by the Mystère IV. The latter model was also exported to Israel, where it quickly saw action against Egyptian MiG-15s during the 1956 Suez Crisis.

Britain's entry into the realm of the supersonic fighter began with the English Electric (later British Aircraft Corporation) Lightning, which Fighter Command declared operational in 1959. The single-seat Lightning's distinctive, vertically stacked engine configuration allowed the aircraft to reach speeds that would break the then-current air-speed record of Mach 1.72 during

U.S. McDonnell-Douglas F-4 Phantom II fighter aircraft shown in flight over Florida. (U.S. Air Force)

flight testing in 1957. The idiosyncratic design would also prove to be the model's downfall, however, as the twin engines left scant room in the fuselage for fuel, limiting the Lightning to a range of under two hours.

The U.S. Navy responded to the demands and restraints of carrier-based flight by continuing to employ piston-powered fighters well after the land-based services had switched to jet power. Models such as the Vought F4U Corsair and Douglas AD Skyraider saw action during the Korean War, and the versatile Skyraider remained operational in Vietnam into the 1970s. Naval turbojet models were produced beginning in the mid-1950s, most notably with the Douglas A-4 Skyhawk and F4D (later F-6) Skyray, the navy's first supersonic jet.

The navy caught up with its land-based contemporaries with the 1961 service debut of the McDonnell (later McDonnell-Douglas) F-4 Phantom II, which proved so successful that the U.S. Air Force began land-based use of the F-4C model in 1963. The Phantom became the premier U.S. fighter/bomber in Vietnam after 1965, providing air cover for and later replacing the less capable F-100s and F-105s. F-4s notched the first air-to-air kills against the North Vietnamese Air Force for both the U.S. Navy and Air Force in June and July 1965, respectively, by downing MiG-17s over Gen Phu and Hanoi.

The United States also exported the F-4 in large numbers to ten allied countries, most notably Australia, Britain, Israel, Iran, Japan, South Korea,

and West Germany. In all, approximately 1,000 airframes were sent abroad, complementing a tally of more than 4,000 for domestic use and making the Phantom the most-produced Western fighter aircraft in the postwar period.

Although prolific by any standard, F-4 production numbers were dwarfed by the MiG-21 Fishbed, which entered Soviet service in 1959 and was produced by the USSR, several Warsaw Pact countries, India, and China in numbers exceeding 10,000 units over the next forty years. With a length of 51 feet 8 inches and a wingspan of only 23 feet 5 inches, the Fishbed was much more compact than any of its contemporary Western adversaries. Although its size limited the aircraft's range, its light weight allowed speeds surpassing Mach 2 and provided the first successful fighter and interceptor combination in the Soviet air fleet. The PLAAF also made extensive use of the Fishbed (designated J-7) after it was licensed by the Soviets in 1961. Although early production numbers were kept low by deteriorating Sino-Soviet relations, production of the delta-winged fighter began again in earnest in the late 1970s and early 1980s and continued to the conclusion of the Cold War.

Taking on the true interceptor role was the MiG-25 Foxbat, which entered service in 1970 specifically to counter the threat of Mach 3 U.S. bombers that, although they never came into existence, were presupposed to be the next logical step in aircraft development on both sides of the Iron Curtain. Although the MiG-25 could generate enough thrust to propel the aircraft to speeds upwards of Mach 3.2, unknown outside Soviet circles, structural limitations meant that reaching speeds higher than Mach 2.8 would almost certainly result in complete engine failure. Also unknown to the West at the time was that the Foxbat had negligible maneuverability and close combat potential; thus, Western air analysts found themselves presented with an aircraft that they assumed could beat all challengers. This scare, later proven to have been unfounded, resulted in increased research and development into what would become the F-15 and F-16 programs.

The early 1970s saw a flurry of fighter deliveries to both camps in their efforts to maintain an edge in air superiority. The MiG-23 Flogger and its eponymous ground attack counterpart, the MiG-27, entered service in 1973 and 1975, respectively. In the United States, 1972 marked the operational introduction of the Grumman F-14 Tomcat, which, when coupled with the newly designed AIM-54 Phoenix missile, provided the U.S. Navy with a formidable interceptor. The F-14 would prove a major success worthy of replacing the aging F-4. The F-14 also became the premier Iranian fighter.

January 1976 saw the first delivery of an operational McDonnell-Douglas (later Boeing) F-15 Eagle, which set the standard in tactical fighter design through the closing years of the Cold War. The Eagle amassed an enviable no-loss record in air-to-air engagements, most often in the hands of Israeli pilots fighting Syrian-flown MiGs. Following on the heels of the F-15 were the General Dynamics (later Lockheed-Martin) F-16 Fighting Falcon in 1979 and the U.S. Navy's McDonnell-Douglas F/A-18 Hornet in 1983.

With the skyrocketing costs of modern fighters, some West European countries decided to keep pace with U.S. advancements by combining research and funding. The result of a consortium among Britain, Italy, and

Germany was the Panavia Tornado, a multirole combat aircraft (MRCA) that first flew in 1974 and would enter service in its interdiction and strike configuration with each of its sponsor nations as well as in an air defense variation in Britain. Dassault Aviation maintained its primacy within the French aerospace industry when its futuristically named Mirage 2000 gained operational status with the Armée de l'Air in 1983.

Both the 1983 Mikoyan MiG-29 Fulcrum and the 1986 Sukhoi Su-27 Flanker were developed out of the Soviet-advanced tactical fighter initiative, which called for direct counterparts to fourth-generation U.S. aircraft. Although potentially equal in raw technical capability to the U.S. models, the Fulcrum and Flanker were costly to produce and effected limited results in combat, due largely to the widening gulf in pilot proficiency between the East and the West.

As the Soviet military had concentrated almost exclusively on tactical airpower during World War II, at the end of the conflict the Allies had a near total monopoly on strategic bombers. Foremost among these was the venerable Boeing B-29 Superfortress, which had been employed solely in the Pacific theater and was best known for the delivery, by the *Enola Gay*, of the first atomic bomb over Hiroshima in August 1945. The B-29 continued active service throughout the 1940s and early 1950s, most notably as President Harry S. Truman's nuclear ace against the Soviets during the Berlin Blockade as well as during the Korean War. The Superfortress proved so successful, in fact, that Soviet leader Josef Stalin ordered clones produced by reverse engineering from those that had been forced to land in Soviet territory in 1945. The resultant aircraft, known as the Tupolev Tu-4 Bull, entered service in 1949 as the Soviet Air Force's first nuclear-capable bomber and was rumored to be true to its American antecedent right down to the bullet holes found in one of the recovered B-29s.

The Soviets were not content to see the United States maintain heavy bomber superiority. One of the first designs was the Tupolev Tu-14, a twin-engine jet aircraft of traditional appearance produced from 1947 in a variety of models and remaining in service until the 1960s. The first successful Soviet bomber design, however, was the superb twin-engine Ilyushin Il-28 Beagle, which first appeared in prototype in 1948. It remained in first-line service for some twenty years and flew in the service of the People's Republic of China (PRC) throughout the Cold War. It was the counterpart to the British Canberra and U.S. North American B-45. More than 10,000 Il-28 bombers were built and distributed to Soviet bloc nations. The Democratic People's Republic of Korea (DPRK, North Korea) obtained a number of Il-28s from the Soviets and flew them against the Republic of Korea (ROK, South Korea) at the beginning of the Korean War in June 1950.

The first Soviet giant bomber was the huge Myasishchev Mya-4 Bison swept-wing turbojet bomber, developed on the orders of Stalin beginning in 1949 as a plane that could reach the United States and return to base. It first became known to the West in 1955 when, much to Soviet Premier Nikita Khrushchev's satisfaction, a scheme of repeatedly flying the limited stock of Mya-4 Bisons over the reviewing stand at the Moscow air show achieved its

desired effect: U.S. military leaders within the Strategic Air Command (SAC) loudly pronounced the need for increased funding to reduce the so-called bomber gap. Such pessimistic claims were later found to have as much to do with SAC self-aggrandizement as with actual Soviet capabilities. The Bison entered service in 1956, but only about 150 Mya-4s were produced. The Bison was, in fact, a strategic white elephant with a maximum range of 7,700 miles, far short of intercontinental round-trip flight. Bisons were, in fact, employed largely as tanker and reconnaissance aircraft.

More successful was its turboprop contemporary, the Tu-95 Bear of 1955. Conspicuously employing four sets of 18-foot diameter contrarotating propellers, the Bear was the world's fastest propeller-driven aircraft, capable of cruising speeds of more than 500 mph. It had a range of 9,000 miles with a payload of up to 25,000 pounds. The Bear was intended as a nuclear bomber.

This design was countered by the Boeing B-52 Stratofortress. This phenomenal aircraft joined SAC in 1955 and became the enduring long-range strategic bomber of the U.S. fleet throughout the entire Cold War. Continued upgrades allowed the B-52 to continue as the workhorse U.S. strategic bomber into the twenty-first century. With a range of 8,800 miles, the B-52 could carry a phenomenal 40,000 pounds of bombs or missiles. B-52s played a leading role in the Vietnam War, flying in direct support of ground forces in South Vietnam and, in December 1972, bombing Hanoi and Haiphong. In January 1991 a B-52H flew nonstop from Louisiana to Baghdad to drop cruise missiles and return, the longest bombing mission in history.

After successfully developing a nuclear weapon in 1952, Great Britain sought to maintain parity with the two superpowers by fielding a series of nuclear-capable bombers, known collectively as the V-bombers. The sequence began with the Vickers Valiant in 1955, which released Britain's first air-dropped nuclear weapon in a test over Australia in 1956. The Valiant was followed in quick succession by the Vulcan and Victor, although the V-bombers lost their strategic role to the Royal Navy's Polaris submarines as early as 1968. Indeed, the only bombs dropped in anger by the later models came well after the series had lost its nuclear mandate when, in 1982, Vulcans were enlisted to bomb the Falkland Islands, with Victors providing aerial refueling support en route.

The 1956 arrival of the Boeing KC-135 Stratotanker, a dedicated aerial refueling aircraft, meant that strategic bombers had ranges limited only by crew fatigue. In accordance with the policy of mutual assured destruction (MAD), SAC Commander General Curtis LeMay kept a certain number of nuclear-equipped B-52s airborne at all times. Given their now seemingly

Aircraft Types by Country

<i>Model</i>	<i>Produced By</i>	<i>Year</i>
Fixed-wing		
I-28 Beagle	Soviet Union	1948
Tu-4 Bull	Soviet Union	1949
Mya-4 Bison	Soviet Union	1949
Mystère II	France	1954
U-2 Dragon Lady	United States	1954
Tu-95 Bear	Soviet Union	1955
Vickers Valiant	Britain	1955
B-52 Stratofortress	United States	1955
KC-135 Stratotanker	United States	1956
C-130 Hercules	United States	1956
Lightning	Britain	1959
MiG-21 Fishbed	Soviet Union	1959
F-4 Phantom II	United States	1961
ak-25RD Mandrake	Soviet Union	1963
SR-71 Blackbird	United States	1966
MiG-25 Foxbat	Soviet Union	1970
IL-76 Candid	Soviet Union	1971
Panavia Tornado	Britain, Italy, Germany	1974
MiG-23 Flogger	Soviet Union	1975
F-15 Eagle	United States	1976
F-16 Fighting Falcon	United States	1979
F/A-18 Hornet	United States	1983
MiG-29 Fulcrum	Soviet Union	1983
Su-27 Flanker	Soviet Union	1986
B-2 Spirit Stealth Bomber	United States	1989
Rotary-wing		
Sikorsky R-5	United States	1946
UH-1 Iroquois	United States	1956
Mi-6	Soviet Union	1956
CH-47 Chinook	United States	1961
S-64	Soviet Union	1962
AH-1 HueyCobra	United States	1966

In 1966 Lockheed followed the U-2 with the remarkable SR-71 Blackbird, which continues to hold the world speed record at 2,193 mph.

limitless range, the sole remaining hindrance to bomber dominance was the ability to avoid interception by enemy fighters or antiaircraft missiles. In response, both sides in the Cold War shifted their attention to speed in the 1960s and 1970s, often with limited results. The first to arrive was the Mach 2 Tu-22M Backfire that, like its MiG-23 and Su-17 fighter counterparts, used variable-geometry wings to achieve high-speed, low-level flight. Variable geometry was also used on the Rockwell (later Boeing) B-1B Lancer that, although originally conceived in 1965, took twenty years to emerge from its incubation period, the A-model having been shelved entirely in 1977. Even less timely was the Northrop Grumman B-2 Spirit stealth bomber, which made its inopportune entrance on 17 July 1989 and shortly thereafter, with the end of the Cold War, lost its primary adversary and mission while racking up a final cost of more than \$2.2 billion per airframe.

The bomber gap and the later missile gap reinforced America's need for actionable intelligence in the form of aerial espionage. To this end, President Dwight D. Eisenhower requested what came to be known as the Lockheed U-2 Dragon Lady in 1954, and the plane conducted its first operational mission on 4 July 1956 by overflying Leningrad and Moscow. Overflights of Soviet airspace continued until 1 May 1960, when a U-2 piloted by Francis Gary Powers was shot down over Sverdlovsk. In 1966 Lockheed followed the U-2 with the remarkable SR-71 Blackbird, which continues to hold the world speed record of 2,193 mph. Both planes enjoyed operational lives spanning the remainder of the Cold War.

The primary British contribution to the reconnaissance effort came in the form of the Hawker-Siddeley (later BAe Systems) Nimrod, which was derived from the de Havilland Comet airliner and began service in 1969 in maritime signals intelligence and antisubmarine roles.

Soviet efforts at a dedicated aerial reconnaissance platform emerged only after Powers's downing in the form of the Yakovlev Yak-25RD Mandrake, which entered into service in April 1963 and achieved only limited success. More frequently used by the Soviets were reconnaissance-adapted fighters and bombers, including the Tu-95, Tu-160, MiG-21, and MiG-25.

Despite the often hot engagements between pilots on either side of the Cold War divide, the first post-World War II test for Western airpower came not in the form of outright battle but rather in an uneasy test of resolve between Stalin and Truman over the Berlin Blockade and subsequent airlift beginning in June 1948. Operation VITTLES and its British counterpart PLAINFARE began on 26 June when eighty U.S. Air Force Douglas C-47 Gooney Bird cargo planes lifted milk, flour, and medicine to the citizens of Berlin. With a maximum load capacity of just three tons, the twin-engine C-47 could not carry the goods necessary for an operation that would last until May 1949, and soon the Allies enlisted the help of the four-engine C-54 Skymaster, which had a nine-ton capacity.

Tactical airlift was redefined in 1956 with the advent of the Lockheed C-130 Hercules (also known as Herc). Capable of short takeoffs on dirt runways and equipped with four turboprops mounted high on the wings for maximum ground clearance, the Herc proved to be an exceptionally capable

Equipment belonging to the 32nd Combat Mobility Hospital being loaded into a Lockheed C-130 Hercules aircraft during Exercise REFORGER 81. (U.S. Department of Defense)

and resilient cargo platform. In addition to its primary transport role, the C-130 served throughout the Cold War in roles ranging from command and control to airborne hospital. It was exported to more than fifty countries. Although not as prolifically produced, the Antonov An-12 Cub provided the Warsaw Pact with a similar tactical airlift capability and mirrored the C-130 in size, capability, and breadth of mission.

The Lockheed C-141 Starlifter and, after 1970, the Lockheed C-5 Galaxy provided the United States with its strategic heavy lifting. The Galaxy was designed to carry 500,000 pounds of cargo, including the U.S. Army's bulkiest vehicles. Not to be outdone, the Soviets matched the C-141 with the Ilyushin IL-76 Candid in 1971 and the C-5 with the Antonov An-124 Condor in 1982, the latter of which remains the largest military aircraft ever mass-produced.

The civilian air transport sector mirrored the advancements pioneered within the military over the course of the Cold War. Through the 1950s, U.S. dominance in the industry was challenged only by the British, epitomized by the latter's development of the world's first turbojet-powered airliner, the de Havilland D.H.106 Comet, in 1949. Although significantly faster than its American piston-powered counterparts, the Comet could carry only thirty-six passengers and demonstrated a structural weakness that led to calamitous midair disasters. Although later variants of the Comet would double the

number of passengers and prove to be much safer, the model never recovered from its initial weaknesses in the public's eye and was quickly outclassed when Boeing released its Model 707 turbojet in 1958. The Soviet design bureau Tupolev introduced several airliners in the 1950s based on its bombers: the Tu-16 Badger accommodated passengers as the Tu-104, while the Tu-95 Bear was reclassified as the Tu-114.

Short- and medium-range airliners thrived in the U.S. market in the 1960s, particularly the Douglas DC-9 and Boeing Models 727 and 737. Longer-range mass transport was provided by the 747 jumbo jet, which first flew in February 1969 and could accommodate up to 500 passengers over a maximum distance of 6,200 miles. Supersonic travel became a mark of prestige, if not commercial success, for each bloc by the 1960s and 1970s: the Soviets produced the Mach 2.3 Tu-144 in model form at the 1965 Paris Air Show, while a collaborative Anglo-French program generated the Mach 2.2 BAe/Aerospatiale Concorde in 1976.

Rotary-wing aircraft did not make the substantial gains in technology and capability experienced by their fixed-wing counterparts during World War II. The first military helicopter with more than limited operational aptitude was the Sikorsky R-5, which entered service in 1946 and was used for observation, communications, and search and rescue during the Korean War. In 1956, the Bell Company established itself within the rotary community with the noteworthy UH-1 Iroquois, better known as the "Huey." UH-1 variants saw action in a variety of transport and attack roles in the Vietnam War and beyond.

Helicopter production became more specialized as it slowly advanced, leading to dedicated transport and gunship designs only by the late 1950s and early 1960s. In 1957, the Soviet Mil design bureau unveiled the Mi-6 heavy-lift chopper, while the U.S. inventory remained devoid of medium and heavy lifters until the debut of the Boeing-Vertol CH-47 Chinook in 1961 and Sikorsky S-64 in 1962. Twenty years after the Mi-6, Mil followed up with the even larger Mi-26, which operated with a unique configuration of eight rotors and was the heaviest rotary-wing aircraft to achieve flight during the Cold War.

Bell created the first dedicated helicopter gunship in 1966 with its Model 209, fielded under the moniker AH-1 HueyCobra and later simply Cobra. Although the U.S. Army continued to use the AH-1 throughout the Cold War, the Hughes (later Boeing) AH-64 was introduced in 1975 as a replacement for the earlier model. Soviet attack capability was entrusted largely to the gunship versions of the Mi-8 Hip and Mi-24 Hind in the 1960s and 1970s and to the Mi-28 Havoc in the 1980s. Aircraft, both fixed-wing and rotary, enjoyed tremendous advances in the period of the Cold War.

Aircraft carriers were first utilized in combat in World War I. During that conflict, the Royal Navy converted a merchant ship, the *Argus*, into the first carrier with an unobstructed flight deck, but the war ended before it could be put into action. The U.S. and Japanese navies soon followed the British example. The first U.S. aircraft carrier was the *Langley*, commissioned in 1922. Japan's first carrier, the *Hosho* (1922), was also the first such vessel designed as a carrier from the keel up. Nevertheless, carriers still remained largely experimental and had yet to be fully tested in war. That all changed in World War II.

On 10–11 November 1940, during a British attack on Taranto, and on 7 December 1941, with a Japanese strike at Pearl Harbor, aircraft carriers proved their worth and opened a dramatic new era at sea. Carriers played leading roles in almost all of the major sea battles of the Pacific theater during the war, including the Coral Sea, Midway, and Leyte Gulf. The Battle of the Coral Sea was the first engagement that pitted fleets in battle out of sight of the other, the fighting being carried out by aircraft alone. Aircraft carriers could deliver more firepower than even the largest battleships. During World War II, carriers came to replace battleships as the indispensable capital ships of modern naval warfare.

In the post–World War II period, aircraft carriers were both enlarged and improved technologically. But because of the great expense involved in building and maintaining carriers, some U.S. policymakers, still skeptical of their true value, sought to limit their production. President Harry S. Truman's administration, for example, canceled construction of the carrier *United States* in 1949, leading to the so-called Revolt of the Admirals. But little more than a year later, aircraft carriers in the Far East proved invaluable in projecting U.S./United Nations airpower into the Korean War. Carriers again proved

Aircraft Carriers

The nuclear-powered aircraft carrier USS *Enterprise* (CVAN-65) in the Gulf of Tonkin on 28 May 1966, during the Vietnam War. With Douglas A-4 Skyhawk fighter bombers at its bow, the *Enterprise* is ready to recover additional strike aircraft. (National Archives and Records Administration)

their worth during the Vietnam War, providing floating air bases from which to launch air combat missions well inland.

During the Cold War, U.S. carriers served two primary functions, first as a weapons system for land attacks and second as a defensive system to protect the larger fleet from submarine, surface, and airborne threats from both aircraft and missiles. Generally, a larger carrier costs less per aircraft embarked than a smaller one, and it can also launch larger aircraft, which themselves can dominate wider areas. Moreover, such aircraft carriers usually deliver a lower cost per unit of ordnance or per unit of defensive capability. The larger carriers can also carry more ammunition and fuel, are outfitted with more sophisticated electronic countermeasures, and have more armor protection than the smaller aircraft carriers.

In wartime, power projection and naval striking capacity are integral to naval strategy. Aircraft carriers are routinely deployed as a show of force to an area of potential conflict and can also be rapidly deployed to another region of the world should a crisis erupt, ready to operate as a navy's most credible, sustainable, and independent base to launch everything from unobtrusive surveillance to devastating air strikes. A carrier with a complement of fifty attack aircraft can deliver more than 150 strikes per day against littoral targets. Together with their onboard air wings, aircraft carriers play vital roles across the full spectrum of naval strategy, deployable worldwide in support of

national interests or allied combat missions.

It is important to note that the ability of an aircraft carrier to remain on station in international waters for extended periods of time is dependent upon naval support forces. Although large aircraft carriers can carry great quantities of fuel, food, and spare parts for sustained, unsupported operations, these stocks must still be replenished on a periodic basis.

Carriers built during the Cold War were larger than their World War II predecessors. They also featured armored flight decks. The introduction of jet aircraft posed potentially serious problems because they possessed heavier weight, slower acceleration, and higher landing speeds and had greater fuel consumption than piston-driven aircraft. A number of British innovations contributed to the solution of these problems: the steam-powered catapult, the angled flight deck, the mirrored landing-signal system, and the ski-jump deck and V/STOL (Vertical/Short Take-Off and Landing) airplane. The ski-jump carrier permits a small ship to operate V/STOL aircraft, such as the Hawker-Siddeley Harrier, at the limits of its lifting potential. In September 1960, the United States launched the world's first nuclear-powered carrier, the *Enterprise*. Nuclear engines made voyages of up to 1 million miles possible without the need for refueling. When commissioned, the *Enterprise* was the

largest warship in the world, and it was the second nuclear-powered surface warship to enter service behind the U.S. cruiser *Long Beach*.

The immense cost of such large super aircraft carriers has essentially put them out of reach of the British, Russians, and French. The small V/STOL carrier is all the sea-based air capability that most navies can afford, and the United States is alone in its use of the super multipurpose carriers.

Carriers may be roughly segmented into three classifications: the super carriers, such as the U.S. Navy's CNV Nimitz-class (102,000 tons, fully loaded) and CV Kitty Hawk-class (93,960 tons); the middle class, such as the French *Charles de Gaulle* (42,000 tons) and the Russian *Admiral Kuznetsov* (58,500 tons); and the V/STOL-class, exemplified by the British *Invincible* (20,600 tons), the Italian *Giuseppe Garibaldi* (13,850 tons) and *Andrea Doria* (26,500 tons estimated, under construction), the Spanish *Principe de Asturias* (17,188 tons), the Indian *Viraat* (ex-Royal Navy *Hermes*, 28,700 tons) and *Vikrant* (38,000 tons reported, under construction), the Russian modified Kiev-class *Vikramaditya* (ex-*Admiral Gorshkov*) (23,900 tons), and the Thai *Chakri Naruebet* (11,485 tons).

In the development of military doctrine, victory in war is usually followed by a period of complacency and stagnation, while defeat spurs a period of critical self-examination and robust internal debate that often leads to dramatic doctrinal innovations. This was true for the United States following the Vietnam War. For the U.S. military, the trauma of the loss in Vietnam was compounded by the unexpected lethality of modern weapons witnessed in the short but violent 1973 Yom Kippur War. That in turn led to an increasing recognition that the North Atlantic Treaty Organization (NATO) could not rely on battlefield nuclear weapons to offset the overwhelming numerical advantage of the Warsaw Pact in any future war on the European continent.

Working through the problem, American military thinkers identified two types of wars that the United States could face in the future: a heavy

AirLand Battle

mechanized war in Europe or a light infantry war in some other part of the world. Although the mechanized war in Europe was the least likely scenario, it was also the most dangerous. U.S. military doctrine had to be revised to be able to defeat America's strongest and most dangerous enemy.

Initially, the sights of the American military were fixed at the tactical level—"Win the First Battle"—with little consideration beyond that. There also was a recognition that the next major conflict would be a "Come As You Are War." Under the direct guidance of General William E. DePuy, the first commander of the newly established U.S. Army Training and Doctrine Command (TRADOC), the initial expression of this doctrinal rethinking was the 1976 edition of *FM 100-5, Operations*. The new manual introduced the notion of active defense, a highly questionable substitute for the tested defensive concepts of mobile defense and defense in depth. In focusing on the lethality of modern weapons, the new doctrine stressed the effects of firepower by devoting the preponderance of space to a discussion of its effects. The new *FM 100-5* did not ignore maneuver, but it did relegate that element of combat power to the mere function of movement to deliver firepower rather than gain positional advantage.

The 1976 edition of *FM 100-5* was wildly controversial even before it had been fully distributed to the field. The critics of DePuy's doctrine rejected it as too mechanical, too dogmatic, and too mathematically deterministic. Nonetheless, DePuy's efforts were a major contribution to the post-Vietnam U.S. Army because, for the first time in many years, officers were again thinking and writing about doctrine. The resulting debate fueled a renaissance in American military thinking.

The immediate reactions to the 1976 edition resulted in the notion of follow-on forces attack (FOFA), which in turn led to recognition of the operational depth of the battlefield. That led directly to the final acceptance by the American military and NATO of the concept of the operational level of war, as distinct from the tactical or the strategic. The Soviets had formally recognized this level of warfare as early as the 1920s and had aggressively worked to define and expand the theory of operational art ever since. The West had long rejected the concept as little more than yet another crackpot element of Marxist thinking, but the Soviets had been right all along on this point.

The principal guiding force behind the development of AirLand Battle doctrine was General Donn A. Starry, who assumed command of TRADOC in July 1977. Working directly under Starry, Major General Donald R. Morelli, TRADOC's deputy chief of staff of doctrine, closely supervised the team of doctrine writers, which included Lieutenant Colonels Leonard D. Holder, Huba Wass de Czega, and Richard Hart Sinnerich. Classical German military thought had a great deal of influence on the development of the new doctrine. Even in the 1976 edition of *FM 100-5*, General DePuy had instructed the doctrine writers to study carefully the current capstone doctrinal manual of the West German Bundeswehr. That manual, *HDv 100/100, Truppenführung* (Command and Control in Battle), was based closely on the manual of the same name first introduced in 1932 with which the German Army

fought World War II. Through the influence of the German manual, such standard German doctrinal concepts as *Auftragstaktik* (mission orders) and *Schwerpunkt* (center of gravity) became firmly embedded in American military thinking.

The 1982 edition of *FM 100-5* marked the U.S. military's first formal recognition of the operational level of war and introduced the concepts of AirLand Battle and Deep Battle. AirLand Battle doctrine took a nonlinear view of combat. It enlarged the battlefield area, stressing unified air and ground operations throughout the theater. It recognized the nonquantifiable elements of combat power and restressed that maneuver was as important as firepower. Most significantly, the doctrine emphasized the human element of war, "courageous, well-trained soldiers and skillful, effective leaders." An undercurrent to this last theme, of course, was the fact that the United States had only recently abolished conscription and was then in the process of building an all-volunteer, professional army. AirLand Battle doctrine identified the keys to success in war, which included indirect approaches, speed and violence, flexibility and reliance on the initiative of junior leaders, rapid decision making, clearly defined objectives and operational concepts, a clearly designated main effort, and deep attack.

Depth was one of the keys. A commander had to fight and synchronize three simultaneous battles: close, deep, and rear. The deep battle, of course, would be the enemy's rear battle, and vice versa. A well-coordinated attack deep in an enemy's rear might in fact prove decisive. This marked the first recognition in American military doctrine that the battle might not necessarily be decided along the line of contact.

One of the most controversial features of the 1976 edition of *FM 100-5* had been the elimination of the venerable Principles of War, first adopted by the U.S. Army in the early 1920s. The 1982 edition restored the Principles of War but then went one step further by introducing the Four Tenets of AirLand Battle: initiative, depth, agility, and synchronization. Initiative is the ability to set the terms of the battle by action and was identified as the greatest advantage in war. Depth has components of time, space, and resources. Agility is the ability to act faster than the enemy to exploit his weakness and frustrate his plans. Synchronization ensures that no effort will be wasted, either initially or as operations develop.

Some critics complained that the Four Tenets of AirLand Battle were unnecessary additions to the Principles of War or were ultimately an attempt to replace them. But as other analysts pointed out, the Four Tenets were for the most part combinations of two or more of the Principles of War. Synchronization, for example, combined economy of force and unity of effort. Initiative combined offensive, maneuver, and surprise.

The 1982 *FM 100-5* was a major milestone in American military thought, but it was far from a perfect document. After its release to the field the debate continued, and the doctrine writers continued to refine the document. The 1986 edition of *FM 100-5* contained no significant changes or innovations, but it presented a far better discussion of the doctrine and corrected some of the minor errors in the 1982 edition. Some errors still remained, however. The

The overwhelmingly successful prosecution of the First Gulf War in 1991 was based on the 1986 edition of *FM 100-5*, which was arguably the single best official articulation of American war-fighting doctrine ever published.

1986 edition used the German concept of the *Schwerpunkt* interchangeably as either the center of gravity or the decisive point. As defined originally by nineteenth-century Prussian military strategist Carl von Clausewitz, however, the center of gravity and the decisive point (*Entscheidungsstelle*) were two distinct and separate concepts. The confusion was not corrected until the 1993 edition of *FM 100-5*, which stated clearly: “Decisive points are not centers of gravity, they are the keys to getting at the centers of gravity.”

NATO never fully embraced the AirLand Battle doctrine, and, ironically, neither did the U.S. Air Force. In any event, the new doctrine never had to be used in an actual war against the Warsaw Pact on the plains of Northern Europe. AirLand Battle, however, greatly concerned the Soviets and was just one more element of pressure in the 1980s that eventually contributed to the collapse of the communist Soviet Union. The overwhelmingly successful prosecution of the First Gulf War in 1991 was based on the 1986 edition of *FM 100-5*, which was arguably the single best official articulation of American war-fighting doctrine ever published.

The 1993 edition of *FM 100-5* actually shifted the emphasis away from operations and conventional war fighting toward strategy and operations other than war (OOTW). Even the term “AirLand Battle” was dropped in favor of “Army Operations,” but that was more the result of bureaucratic in-fighting between the U.S. Army and the U.S. Air Force. A new edition of *FM 100-5* in 1998 was supposed to shift the emphasis back to the operational art, but the final coordinating draft caused considerable internal controversy. The new manual was finally issued in June 2001, under a new numbering system, as *FM 3-0 Operations*. Although the term “AirLand Battle” is no longer officially in use, the U.S. Army continues to train and operate in accordance with its principles.

The Balkan nation of Albania is located on the southeastern coast of the Adriatic Sea. It is bordered to the north and east by Serbia and Montenegro, due east by the former Yugoslavian republic of Macedonia, and to the south-east by Greece. Albania, with a 1945 population of some 1.1 million people, comprises 11,000 square miles. During 1941–1944, Albanian nationalist and communist forces fought against one another as well as against German and Italian troops in a struggle for control of the country. Between September 1943 when the Italian fascist regime was overthrown and Italy surrendered to the Allies and November 1944 when Germany withdrew from Albania, the communists slowly ground down nationalist forces in a brutal civil war. The communists, rather ironically backed by the United States, Britain, and Yugoslavian guerrillas led by Josip Broz Tito, established *de facto* control over southern Albania by January 1944.

Enver Hoxha, a former French teacher and longtime Albanian communist, became chairman of the Anti-Fascist Council of National Liberation, an arm of the Albanian National Liberation Front, in January 1944. By May 1944 he was also the supreme commander of the National Liberation Army (NLA). With the aid of British arms and Allied air cover, in October 1944 the NLA moved north and captured the capital of Tirana. Hoxha was then named prime minister, and in December 1944 he repaid Tito for his help by sending Albanian forces to fight alongside Yugoslavian communist forces to defeat ethnic Albanian forces in Kosovo.

During the early years of the Cold War, Hoxha systematically consolidated his power and took on the added posts of foreign minister, defense minister, and army commander in chief. He and his second-in-command, Mehmet Shehu, terrorized remnant nationalist holdouts, stamped out any potential opposition, and established a totalitarian communist government that was among the most oppressive in the world. By mid-1946, all Albanian industries had been nationalized. The Agrarian Reform Law led to the seizure of the lands of large landowners and their redistribution to the peasants, and the economy was fully centralized.

In July 1946 Albania signed a treaty of friendship and cooperation with Yugoslavia, but within a year the alliance collapsed in part because of Hoxha's fear that his nation would be annexed by Yugoslavia. When the Soviet-controlled Cominform expelled Yugoslavia in June 1948 because of Tito's independent streak, the Hoxha regime became rabidly Stalinist and turned to the Soviet Union for economic assistance. At the same time, Albanian relations with the West deteriorated, especially after two British ships struck Albanian mines in the channel between Albania and Corfu in October 1946. Britain and the United States spent the next seven years trying in vain to overthrow the Hoxha regime. These efforts only increased Albanian xenophobia and convinced Hoxha that the West was not to be trusted.

In February 1949 Albania joined Comecon and began to trade exclusively with Eastern bloc nations. Following the Soviet Union's lead, Hoxha

Women picking cotton in Albania, 1956. (Library of Congress)

initiated a series of Five-Year Plans designed to take advantage of Albania's abundant natural resources, including oil, copper, and coal. The plans also included an ambitious program to modernize the country's electrical and transportation infrastructure.

Soviet Premier Nikita Khrushchev's speech of February 1956, in which he denounced Stalin and his policies, further deepened Albania's distrust of the outside world. Hoxha and Shehu condemned Khrushchev's concept of peaceful coexistence, choosing to maintain their strict Stalinist stance. At the same time, Albania condemned Tito's overtures to the West, and state-sanctioned political repression increased with the establishment by 1961 of some fourteen gulag-style camps for political prisoners. Many of the prisoners were used as slave laborers in nearby mines and industrial centers, leading one historian to dub Albania "the Mediterranean Gulag."

Between 1958 and 1960 Albania further ostracized itself by becoming a player in the emerging Sino-Soviet split. Albania tilted toward the People's Republic of China (PRC) and again condemned the notions of peaceful coexistence, de-Stalinization, and Titoism. At the November 1960 Moscow conference of world communist representatives, Hoxha verbally attacked the Soviet Union's policies. Shortly thereafter, the Soviets ended their technical and economic support of Albania. The PRC then stepped in and became Albania's new patron.

True to form, Albania followed China's lead when Chinese leader Mao Zedong announced the Great Proletarian Cultural Revolution. In 1965 Hoxha initiated his own Cultural and Ideological Revolution. The already-oppressive nature of Albanian life became even more entrenched as government authorities sought to eliminate "professionalism" in the nation's bureaucracies, including the army, and forcibly transfer white-collar workers to the industrial and agricultural sectors. In 1967 the government prohibited all aspects of religion in the public sphere. As a result, mosques and churches were seized and transformed into warehouses and workshops as the Hoxha regime declared Albania "the world's first atheistic nation." Meanwhile, Hoxha's portrait and alleged writings were plastered throughout Albania, mimicking Stalin's and Mao's cults of personality. In 1968, after the Prague Spring and subsequent Soviet invasion of Czechoslovakia, Albania cut its last remaining ties with the Soviets by withdrawing from the Warsaw Pact.

China's diplomatic overtures to the United States, which began in 1971, led to a decrease in U.S. commitments to Albania. When U.S. President Richard M. Nixon made his historic visit to China in February 1972, Albania pointedly refused to publicize it. To compensate for its faltering relations with China, Hoxha then revived relations with Yugoslavia and Greece. During 1972–1975, Albania strengthened its commercial, diplomatic, and cultural ties to Western Europe. But Tirana showed the limits of this by refusing to participate in the Conference on Security and Cooperation in Europe (CSCE). Albania became the only European nation to boycott the Helsinki Conference on Human Rights of July 1975.

After Mao's death in 1976, Albania publicly condemned his successors, who responded by welcoming Tito with open arms during a 1977 state visit to China. They then cut off all aid to Albania a year later. As Hoxha continued to improve relations with Western Europe, he launched yet another series of purges, culminating in the alleged suicide of his right-hand man Shehu on 18 December 1981. Historians believe that Hoxha ordered Shehu killed, and in November 1982 Shehu was posthumously accused of being a spy for both the United States and the Soviet Union.

Hoxha's death in April 1985 brought his handpicked successor, Ramiz Alia, to power. Alia had been acting prime minister since 1983. Alia's image soon replaced Hoxha's on Albanian signs and buildings, and he continued Albania's self-imposed isolation even as he established official diplomatic relations with the Federal Republic of Germany (FRG, West Germany). By the time the Berlin Wall came down in the fall of 1989, Albania was in desperate financial and economic straits, with a repressed and paranoid population barely able to cope in the new era of posttotalitarian Eastern Europe.

Albert II, King of Belgium (1934–)

King of Belgium since 1993. Albert Félix Humbert Théodore Christian Eugène Marie Saxe-Coburg was born on 6 June 1934 in Brussels at the Château Stuyvenberg, the younger son of King Leopold III (1901–1983) and his first wife, Princess Astrid of Sweden (1905–1935). At birth, he was given the title Prince of Liège. When Leopold II abdicated the throne in 1951, Albert's older brother, Baudouin, succeeded as king, and Albert became the heir apparent. In 1959, Albert married Queen Paola, with whom he fathered three children.

Albert became the sixth king of the Belgians on 9 August 1993, nine days after Baudouin's death. Albert II was a consistent supporter of U.S. Cold War policies and a strong proponent of European economic and political integration.

Albert, who served as a vice admiral in the Belgian Navy, was convinced that Belgian (and European) prosperity was threatened by the Soviet Union. Throughout his public career, he has been dedicated to making Europe an economic and diplomatic power. Brussels is the headquarters of the European Community (EC) and the North Atlantic Treaty Organization (NATO), two institutions that Albert steadfastly championed. He has also maintained a close diplomatic relationship with the United States. Albert continues to lure foreign investment to Belgium and to promote export opportunities for Belgian products.

In 1984, Albert created the Prince Albert Fund, which provides scholarships for students interested in international trade. In the post–Cold War period, he has encouraged political and economic reform in Eastern Europe and the former Soviet Union.

Northwest African nation, almost 920,000 square miles in area, with a 1945 population of slightly over 8 million; originally peopled by Berbers (who still make up a sizable national minority), now predominantly Arab. Algeria is bordered to the west by Morocco and Mauritania, to the north by the Mediterranean Sea, to the east by Tunisia and Libya, to the south by Niger, Mali, and Chad. In 1830 France seized Algiers and from then until 1847 expanded its holdings to the interior in a protracted war that created modern Algeria, which was absorbed into France's metropolitan administrative structure in 1848.

French colonizers and their descendants (known as colons) dispossessed native Algerians of the best arable lands and monopolized political power. The non-European population worked the colons' lands or eked out a meager living in the less hospitable areas. By 1945 Algeria's population included approximately 900,000 colons, whose numbers had vastly expanded since the 1920s.

The postwar era saw the rapid growth of a militant nationalist movement that was adamantly opposed by the colons, who were determined that Algeria should remain part of France. In May 1945, Muslims throughout Algeria demonstrated against colonial rule. When French colonial police fired on the protesters in Sétif, they responded by attacking Europeans. In retaliation, the military carried out reprisals that killed thousands of Algerian Muslims. This massacre accelerated the conflict that culminated in the brutal Algerian War during 1954–1962.

From the beginning of the war, the Front de Libération Nationale (FLN) appealed to the United Nations (UN) for support of the nationalist cause, while France appealed to the United States and its European allies for assistance in its colonial claim. The Americans initially urged a negotiated peace, hoping to avoid a confrontation with France without antagonizing Arab nations. Alarmed at the French role in the 1956 Suez Crisis, the United States then adopted a less compromising line with France, determined to prevent a wider conflict between Arab nationalists and France (and Britain). The war also split the communist bloc, with the People's Republic of China (PRC) supporting the Algerian nationalists and the Soviet Union keeping its distance.

The war actively influenced French politics and led to social and political turmoil in metropolitan France that toppled the Fourth French Republic in 1958 and brought to power General Charles de Gaulle, who created the Fifth French Republic. In 1962 de Gaulle, then president of France and having exhausted other options, signed the Évian Agreements of March 1962 that granted Algeria its independence effective 3 July 1962. Tens of thousands of colons immediately immigrated to France. The FLN-led Algerian government, headed by Prime Minister Mohamed Ben Bella, promptly confiscated the colons' abandoned property and established a decentralized socialist economy and one-party state. Upon independence, Algerian military forces numbered around 125,000 men, including various irregular militias that were gradually eliminated or integrated into the national force.

Crowds in Algiers celebrate their country's independence on 4 July 1962. A referendum held three days earlier secured Algerian independence from France after eight years of one of the longest and bloodiest wars to overthrow European colonial rule in Africa. (Central Press/Getty Images)

Ben Bella's attempt to consolidate his power, combined with popular discontent with the economy's inefficiency, sparked a bloodless military coup by Defense Minister Houari Boumédiénne in June 1965. In 1971, the government endeavored to stimulate economic growth by nationalizing the oil industry and investing the revenues in centrally orchestrated industrial development. Boumédiénne's military-dominated government took on an increasingly authoritarian cast over the years. The military expanded rapidly during the 1970s and 1980s, with the army numbering 110,000, the air force 12,000, and the navy 8,000 by 1985.

Algeria's leaders sought to retain their autonomy, joining their country to the Non-Aligned Movement. Boumédiénne phased out French military bases. Although Algeria denounced perceived American imperialism and supported Cuba, the Viet Cong in South Vietnam, Palestinian nationalists, and African anticolonial fighters, it maintained a strong trading relationship with the United States. At the same time, Algeria cultivated economic ties with the Soviet Union, which provided the nation with important military matériel and training. When the Spanish relinquished control of Western Sahara in 1976, Morocco attempted to annex the region. This led to a twelve-year war with Algeria, which supported the guerrilla movement fighting for the region's independence. Diplomatic relations with the United States warmed after Algeria negotiated the release of American hostages in Iran in 1980 and Morocco fell out of U.S. favor by allying with Libya in 1984.

In 1976, a long-promised constitution that provided for elections was enacted, although Algeria remained a one-party state. When Boumédiénne died in December 1978, power passed to Chadli Bendjedid, the army-backed candidate. Bendjedid retreated from Boumédiénne's increasingly ineffective economic policies, privatizing much of the economy and encouraging entrepreneurship. However, accumulated debt continued to retard economic expansion. Growing public protests from labor unions, students, and Islamic fundamentalists forced the government to end restrictions on political expression in 1988.

The Islamic Salvation Front (Front Islamique du Salut, FIS) proved the most successful of the host of new political parties founded. After large victories by the FIS in local elections in June 1990 and national elections in December 1991, Bendjedid resigned. A new regime under Mohamed Boudiaf imposed martial law, banning the FIS in March 1992. In response, Islamist radicals began a guerrilla war that has persisted to the present, taking a toll of 150,000 or more lives. Although Algeria's military government managed to gain the upper hand in the struggle after 1998, Islamic groups

continue to wage war on the state, which maintains control through brutal repression and tainted elections.

Eight-year military effort by France (1954–1962) to maintain its hold on its last, largest, and most important colony. France regarded the Algerian War as part of the larger Cold War and tried unsuccessfully to convince its North Atlantic Treaty Organization (NATO) partners that keeping Algeria French was in the best interests of the alliance. Unsupported by its allies, France found itself increasingly isolated in diplomatic circles. Ultimately, it experienced a humiliating defeat and a colonial exodus.

For 130 years, Algeria had been at the core of the French Empire. France conquered Algiers in 1830 and expanded the territory. Algeria became the headquarters of the French Foreign Legion (at Sidi-Bel-Abbès) and home to the largest number of European settlers in the Islamic world. In 1960 there were 1 million Europeans (colons) in Algeria. Unique among French colonies, Algeria became a political component of France, as Algiers, Constantine, and Oran were made departments of the French Republic and had representation in the French Chamber of Deputies.

Nonetheless, Algeria was not fully three French departments, as only the European population enjoyed full rights there. The colon and Muslim populations lived separate and unequal lives, with the Europeans controlling the bulk of the wealth. During this time, the French expanded Algeria's frontiers deep into the Sahara.

The Great Depression of the 1930s affected Algeria's Muslims more than any experience since their conquest, as they began to migrate from the countryside into the cities in search of work. Subsequently, the Muslim birth-rate climbed dramatically because of easier access to health care facilities.

While the colons sought to preserve their status, French officials vacillated between promoting colon interests and promoting reforms for the Muslims. Pro-Muslim reform efforts ultimately failed because of political pressure from the colons and their representatives in Paris. While French political theorists debated between assimilation and autonomy for Algeria's Muslims, the Muslim majority remained largely resentful of the privileged status of the colons.

Algerian War (1954–1962)

Unique among French colonies, Algeria became a political component of France, as Algiers, Constantine, and Oran were made departments of the French Republic and had representation in the French Chamber of Deputies.

The first Muslim political organizations appeared in the 1930s, the most important of these being Ahmed Messali Hadj's Mouvement pour le Triomphe des Libertés Démocratiques (MTLD). World War II brought opportunities for change that increasing numbers of Algerian Muslims desired. Following the Anglo-American landings in North Africa in November 1942, Muslim activists met with American envoy Robert Murphy and Free French General Henri Giraud concerning postwar freedoms but received no firm commitments. As the war in Europe was ending and the Arab League was forming, pent-up Muslim frustrations were vented in the Sétif Uprising of 8 May 1945. Muslim mobs massacred colons before colonial troops restored order, and hundreds of Muslims were killed in a colon reprisal that was termed a "rat-hunt."

Returning Muslim veterans were shocked by what they regarded as the French government's heavy-handed actions after Sétif, and some (including veteran Ahmed Ben Bella) joined the MTLD. Ben Bella went on to form the MTLD's paramilitary branch, the Organization Speciale, and soon fled to Egypt to enlist the support of President Gamal Abdel Nasser. Proindependence Algerian Muslims were emboldened by Ho Chi Minh's victory over French forces at Dien Bien Phu in Vietnam in May 1954, and when Algerian Muslim leaders met Ho at the Bandung Conference in April 1955, he told them that the French could be defeated.

Ben Bella and his compatriots formed the Front de Libération Nationale (FLN) on 10 October 1954, and the FLN revolution officially began on the night of 31 October–1 November. The FLN organized its manpower into several military districts, or *wilayas*. Its goal was to end French control of Algeria and drive out or eliminate the colon population. Wilaya 4, located near Algiers, was especially important, and the FLN was particularly active in Kabylia and the Aures Mountains. The party's organization was rigidly hierarchical and tolerated no dissent. In form and style, it resembled Soviet bloc communist parties, although it claimed to offer a noncommunist and non-Western alternative ideology, articulated by Frantz Fanon.

As France increased the number of its military forces in Algeria to fight the growing insurgency, French officials sought support from NATO partners in the Algerian War, arguing that keeping Algeria French would ensure that NATO's southern flank would be safe from communism. As a part of France, Algeria was included in the original NATO charter. Washington's position, nonetheless, was that European colonial empires were obsolete. Furthermore, U.S. officials believed that the United States could positively influence decolonization movements in the developing world.

The Arab League promoted Pan-Arabism and the image of universal Arab and Muslim support for the FLN. The French grant of independence to both Tunisia and Morocco in March 1956 further bolstered Algeria's Muslims. When France, Britain, and Israel invaded Egypt in the Suez Crisis of 1956, both the United States and the Soviet Union condemned the move, and the French, unable to topple Nasser, were forced to contend with an FLN supply base that they could neither attack nor eliminate.

Members of the Algerian National Liberation Front (FLN) pose before their World War II surplus machine guns in the mountains of Algeria on 6 June 1957. The rebel group was formed by Ahmed Ben Bella and other nationalists in 1954 to fight for Algerian independence from France. That goal was realized in 1962, following nearly eight years of warfare. (Bettmann/Corbis)

On 20 August 1955, the FLN attacked colon civilians in the Philippeville Massacre, and colon reprisals resulted in the deaths of several thousand Muslims. The year-long Battle of Algiers began in September 1956 with FLN operative Saadi Yacef's terrorist-style bombing campaign against colon civilians. Meanwhile, other FLN leaders targeted governmental officials for assassination. The FLN movement faced a setback on 22 October, however, when Ben Bella was captured.

In December 1956 and January 1957, battle-tested French troops with combat experience in Indochina arrived in Algeria to restore order in Algiers. Among them were General Raoul Salan (commander in chief), paratrooper commander Major General Jacques Massu, and Colonels Yves Goddard and Marcel Bigeard, both of whom were adept at intelligence gathering and infiltration. Massu's men made steady headway, and Goddard himself captured Saadi Yacef in September 1957. The Battle of Algiers was now won. The 1965 film *The Battle of Algiers*, produced by Gillo Pontecorvo and Saadi Yacef (with money provided by the FLN), garnered international support for the FLN, as it depicted the French simply as brutal occupiers. The French

employed torture to force FLN operatives to talk, while others were murdered in the process. The FLN, on the other hand, also routinely murdered captured French soldiers and colon civilians.

Despite victory in Algiers, French forces were not able to quell the Algerian rebellion or gain the confidence of the colons. Some colons were fearful that the French government was about to negotiate with the FLN. In the spring of 1958, colon Ultra groups began to hatch a plan to change the colonial government. Colon veteran Pierre Lagailarde organized hundreds of Ultra commandos and began a revolt on 13 May 1958. Soon, tens of thousands of colons and Muslims arrived outside of the government building in Algiers to protest French government policy. Massu quickly formed a Committee of Public Safety, and Salan assumed leadership of the body. Salan then went before the throngs of protesters. Although the plotters would have preferred someone more frankly authoritarian, Salan called for the return to power of General Charles de Gaulle. Although de Gaulle had been out of power for more than a decade, on 19 May he announced his willingness to assume authority.

Massu was prepared to bring back de Gaulle by force if necessary, but military options were not needed. On 1 June 1958, the French National Assembly made de Gaulle premier, technically the last premier of the Fourth Republic. Algeria had managed to change the political leadership of the mother country.

De Gaulle visited Algeria five times between June and December 1958. At Oran on 4 June, he said about France's mission in Algeria that "she is here forever." A month later, he proposed a budget allocation of 15 billion francs for Algerian housing, education, and public works, and that October he suggested an even more sweeping proposal called the Constantine Plan. The funding for the massive projects, however, was never forthcoming, and true Algerian reform was never realized. It was probably too late, in any case, for reform to impact the Muslim community of Algeria.

Algeria's new military commander, General Maurice Challe, arrived in Algeria on 12 December 1958 and launched a series of attacks on FLN positions in rural Kabylia in early 1959. Muslim troops loyal to the French guided special mobile French troops called Commandos de Chasse. An aggressive set of sorties deep in Kabylia made much headway, and Challe calculated that by the end of October his men had killed half of the FLN operatives in Kabylia. A second phase of the offensive was to occur in 1960, but by then de Gaulle, who had gradually eliminated options, had decided that Algerian independence was inevitable.

De Gaulle braced his generals for the decision to let go of Algeria in late August 1959 and then addressed the nation on 19 September 1959, declaring his support for Algerian self-determination. Fearing for their future, some Ultras created the Front Nationale Français and fomented another revolt on 24 January 1960 in the so-called Barricades Week. Mayhem ensued when policemen tried to restore order, and many people were killed or wounded. General Challe and the colony's governor, Paul Delouvrier, fled Algiers on 28 January, but the next day de Gaulle, wearing his old army uniform, turned

the tide via a televised address to the nation. On 1 February, army units swore loyalty to the government. The revolt quickly collapsed. Early in 1961, increasingly desperate Ultras formed a terrorist group called the Secret Army Organization (OAS) that targeted colons whom they regarded as traitors.

The Generals' Putsch of 20–26 April 1961 seriously threatened de Gaulle's regime. General Challe wanted a revolt limited to Algeria, but Salan and his colleagues (Ground Forces Chief of Staff General André Zeller and recently retired Inspector General of the Air Force Edmond Jouhaud) had all prepared for a revolt in France as well. The generals had the support of many frontline officers in addition to almost two divisions of troops. The Foreign Legion arrested the colony's commander in chief, General Fernand Gambiez, and paratroopers near Rambouillet prepared to march on Paris after obtaining armored support. The coup collapsed, however, as police units managed to convince the paratroopers to depart, and army units again swore loyalty to de Gaulle.

On 10 June 1961 de Gaulle held secret meetings with FLN representatives in Paris and then on 14 June made a televised appeal for the FLN's so-called Provisional Government to come to Paris to negotiate an end to the war. Peace talks during 25–29 June failed to lead to resolution, but de Gaulle's mind was already made up. During his visit to Algeria in December, he was greeted by large pro-FLN Muslim rallies and Muslim anticolon riots. The United Nations recognized Algeria's independence on 20 December, and on 8 January 1962 the French public voted in favor of Algerian independence.

After the failed coup, a massive exodus of colons commenced. Nearly 1 million returned to their ancestral homelands (half of them went to France, and most of the rest went to Spain and Italy). Peace talks resumed in March at Évian, and both sides reached a settlement on 18 May 1962.

The formal handover of power occurred on 4 July when the FLN's Provisional Committee took control of Algeria. In September, Ben Bella was elected Algeria's first president. The Algerian War resulted in some 18,000 French military deaths, 3,000 colon deaths, and about 300,000 Muslim deaths. Some 30,000 colons remained behind, including the socialist mayor of Algiers, Jacques Chevallier. They were ostensibly granted equal rights in the peace treaty but instead faced official discrimination by the FLN government and the loss of much of their property. The FLN remained in power until 1989, practicing a form of socialism until changes in Soviet foreign policy necessitated changes in Algerian internal affairs.

Alia, Ramiz (1925–)

Albanian politician and communist leader. Born on 18 October 1925 in Shköder, Albania, to a Muslim family from the Kosovo region of Yugoslavia, Ramiz Alia joined the Communist Party of Albania in 1943 and served as political commissar with Albanian troops fighting with Yugoslav partisans against Axis forces. After the war, he held leadership positions in the party's youth organization and joined the party's Central Committee and the Politburo in 1948 and 1956, respectively. A protégé of Albanian leader Enver Hoxha, Alia rose through the party ranks, holding various party and governmental positions over the next several decades.

In the early 1980s, Alia became Hoxha's chosen successor. After Hoxha's death in April 1985, Alia became first secretary of the Central Committee and de facto leader of Albania. As such, he pledged to uphold his predecessor's policies. Albania's economic problems and international isolation, however, influenced Alia's pursuit of pragmatic reforms, including easing restrictions on international trade, land ownership, and religion. But these reforms did little to stop the country's downward spiral. By the end of 1990, demonstrations had erupted throughout Albania, and opposition to the Communist Party's monopoly forced Alia to abandon one-party rule. In March 1991 Alia permitted multiparty elections, which the communists nonetheless won. Although Alia lost his seat in parliament, he became president in April 1991 but was forced to relinquish his party posts. In a free election held in March 1992, the opposition routed the communists in the now-renamed Socialist Party. As a result, Alia resigned the presidency on 3 April 1992. In 1994 he was arrested and convicted of political corruption while serving in office. After a year in prison, Alia retired from public life.

Peruvian reformist political party. While in exile in Mexico, Peruvian politician Victor Raúl Haya de la Torre founded the Peruvian reformist party Alianza Popular Revolucionaria Americana (APRA), also known as the Partido Aprista, in May 1924. The revolutionary platform of the APRA called for major social reform, political unification of Latin America, and the establishment of worldwide solidarity of the oppressed. Despite the lower-class, populist overtones of his impassioned oratory, Haya de la Torre maintained that it was the oppressed middle class who would lead the movement.

After his return to Peru in 1931, Haya de la Torre ran unsuccessfully for the presidency. When a radical APRA member assassinated Sánchez Cerro, the newly elected president, in April 1933, the government retaliated with military force to subdue the APRA. Because the APRA was at times guilty of violent radicalism, the authorities outlawed it from 1941 through 1945 and from 1948 through 1956. Nonetheless, the APRA continued to influence politics in Peru. After decades of struggle, the APRA finally succeeded in electing Alan García president in 1985; he went on to lose a subsequent election to Alberto Fujimori in 1990.

Although APRA leaders never controlled the country for any significant period of time, their early activities created consensus within the Peruvian reform movement. Unfortunately, they were not able to foster the continuation of that consensus, and the APRA ultimately failed to achieve its goals.

Alianza Popular Revolucionaria Americana

Left-wing politician and president of Chile (1970–1973). Born on 26 July 1908 in Valparaíso, Chile, Salvador Allende Gossens was of middle-class origins. He trained as a physician but never practiced medicine. Allende was a cofounder, and eventually the standard-bearer, of the Chilean Socialist Party and also served in its militia as a young man. He went on to serve as cabinet minister and president of the Chilean senate.

Allende ran for president four times, finally winning a plurality by 39,000 votes as leader of Unidad Popular (Popular Unity), a leftist coalition, on 4 September 1970. He had been a thorn in the side of several U.S. presidential administrations, as policymakers feared that an Allende presidency would bring about a communist state, open to Soviet influence in the region and a threat to American interests in Chile.

President Richard M. Nixon was a particularly vociferous opponent of Allende and publicly stated as much after the 1970 election. The Chilean constitution stipulated that the Chilean congress must choose the president if no candidate won by a majority. Behind the scenes, U.S. Ambassador Edward M. Korry tried unsuccessfully to assemble a consensus to deny Allende the presidency. In addition, the Central Intelligence Agency (CIA) covertly provided weapons to right-wing conspirators to foment a coup, which was also unsuccessful. Allende was inaugurated on 3 November 1970.

As Allende instituted socialist programs and established diplomatic ties with Cuba's communist leader Fidel Castro, Washington simultaneously attempted to squeeze the Chilean economy while secretly giving some \$7 million to Allende's political adversaries. Allende's socialist economic policies helped create inflation and shortages in Chile, alienating the middle and

upper classes. Military leaders, led by General Augusto Pinochet, finally toppled the Allende government on 11 September 1973. Allende committed suicide in the presidential palace in Santiago on the same day. Pinochet emerged as the leader of the military junta and ruled Chile until 1989.

A financial aid program devised by the United States in March 1961 to promote social reform in Latin America. The program's architects hoped to curb violence and prevent communist-inspired revolutions in the region. In its dealings with Latin America after World War II, the United States had generally emphasized security imperatives at the expense of social and economic concerns. Two events in the late 1950s, however, demonstrated the risks of this course. First, in May 1958 Vice President Richard M. Nixon's goodwill tour of South America provoked hostile demonstrations and major rioting in Caracas, Venezuela, and Lima, Peru. Second, Cuba's Fidel Castro seized control of that nation's government in January 1959, and by 1960 he was becoming increasingly anti-American and pro-Soviet.

Rejecting the region's pleas for a Latin American plan similar to the Marshall Plan, the United States had endorsed private investment and free trade as the keys to Latin America's socioeconomic development. While this trade-not-aid approach meshed well with President Dwight Eisenhower's efforts to eschew direct aid, it often conflicted with the prevailing economic climate in Latin America.

By the late 1950s, however, the Eisenhower administration did direct more of its attention to Latin America's economic and social problems. Latin Americans had long sought U.S. support for a regional development bank. In August 1958 the United States dropped its long-standing opposition to the bank and in October 1960 supported the establishment of the Inter-American Development Bank. This shift in U.S. policy continued at Bogotá, Colombia, in September 1960 at a special meeting called by the Council of the

Alliance for Progress

Organization of American States (OAS) to study new measures for Pan-American economic cooperation. In signing the Act of Bogotá, the Eisenhower administration laid the groundwork for the Alliance for Progress by pledging \$500 million for economic development and social reform in Latin America. In return the Latin American nations agreed to implement sound economic policies and to eliminate obstacles to social and economic progress.

During the U.S. presidential elections of 1960, Democratic nominee John F. Kennedy criticized the Eisenhower administration and Republican candidate Richard M. Nixon for “losing” Cuba and failing to align U.S. policy with the rising aspirations of Latin Americans. After a narrow victory, Kennedy called for an “alliance for progress” between the United States and Latin America in his inaugural address.

In March 1961 the Kennedy administration formally committed itself to an Alliance for Progress with Latin America, a long-term program of U.S. aid linked to social and structural reforms, economic development, and democratization. The program took official form at the inter-American meeting at Punta del Este, Uruguay, in August 1961. The conference proclaimed a lengthy list of objectives for the program, including democratization, acceleration of social and economic development, promotion of education, fair wages and working conditions, health programs, tax reforms, agrarian reform, fiscal stability, and the stimulation of private enterprise. To achieve its goals,

the program would need \$100 billion during its first decade. External sources would furnish \$20 billion of the needed \$100 billion, with the United States pledging to provide a major part of that funding. The remaining \$80 billion was expected to come from Latin American sources, both public and private. The U.S. preoccupation with containing the communist threat was very much in evidence in its launching of the program, which was designed to provide peaceful, democratic alternatives to violent social revolution and a “second Cuba” in the hemisphere.

Nevertheless, the objectives of the Alliance for Progress soon collided with the harsh realities of international economics and growing domestic pressures in both Latin America and the United States. The program implicitly assumed that most Latin American elites would support reforms to avoid violent revolution. Many of the elites, however, were not serious about implementing major reform, realizing that such changes might strip them of power. With Latin America already experiencing a high level of political instability, U.S. officials hesitated to apply too much pressure for reform, fearing that it would only add to the political uncertainty in the region. And if the program promoted growth but not structural reforms, the traditional elites would naturally reap most of the rewards of increased growth. Much of the Alliance for Progress aid went to paying off earlier loans rather than promoting social modernization and economic development. Rapid population growth in Latin America also undermined potential advances in social and economic reform.

Domestic politics in the United States also hindered the success of the Alliance for Progress program. Kennedy’s assassination in 1963 removed the leader most closely connected to the fate of the program. Projected funding for the program was based on capital needs for a decade, but the annual U.S. congressional appropriations process meant that presidents could not guarantee long-term levels of economic aid.

In the United States, a series of problems undercut the Alliance for Progress beginning in the mid-1960s. Kennedy’s successor, Lyndon B. Johnson, was primarily interested in domestic issues, while in foreign policy he became increasingly preoccupied with the deteriorating situation in Vietnam. The ability of the program to uplift Latin America was oversold from its inception. These exaggerated hopes for the program made later disillusionment with it all the easier. Latin American governments were often unwilling or unable to implement the program’s structural reforms. The U.S. Congress cut funding for the program, which quickly lost its reform content and evolved into a conventional aid program. Although there was no officially declared ending of the Alliance for Progress, like many other programs of its time, it became subsumed by political pressures and broader Cold War imperatives and thus never fulfilled its original goals.

Allied Control Council of Germany

Allied administrative body established to govern post–World War II Germany. The Allied Control Council was agreed to by the three victorious World War II allies, the United States, the Soviet Union, and Great Britain. France became the fourth power to join the council in 1945. The council met for the first time in Berlin on 5 June 1945 and was officially inaugurated on 30 August 1945.

The council was designed to function as the supreme governing, controlling, coordinating, and administrative body cochaired by the four occupation powers on German territory. Headed first by the four supreme Allied military commanders, the council was supported by some 170 separate and subordinate administrative and advisory bodies.

Each of the council's four members held veto powers, and all major decisions had to be reached unanimously. Due mainly to French and Soviet obstructionism, significant decisions became virtually impossible to reach, and the council's administrative efficiency was hopelessly compromised. To make matters worse, the commanders of the four occupation zones exercised absolute and autonomous power on behalf of their governments in their respective designated areas of Germany. By the summer of 1946, the competing and often contradictory interests of the United States and the Soviet Union over war reparations had rendered the council largely dysfunctional.

By 1949, the Allied Control Council of Germany virtually ceased to function due to insurmountable differences among the four powers, diplomatic games, and a stalemate over currency reform in the western zones of occupation. Although the United States introduced a proposal for an all-zonal reform in January 1948 and linked its approval to a sixty-day ultimatum, Washington in fact hoped that the Soviets would reject it. Indeed it was Soviet Marshal Vasily Sokolovsky who first abandoned the Allied Control Council on 20 March 1948, saving American General Lucius D. Clay the embarrassment of having to take this first step. Instead of objecting to currency reform and other occupation issues via the council, the Soviets decided, beginning in April 1948, to initiate a blockade of West Berlin by cordoning off the three western sectors by both land and water routes.

Technically, the Allied Control Council continued to exist for decades, because none of the four nations ever officially canceled its membership.

Attempts to revive the institution in the 1950s proved to be short-lived. Finally, the so-called 2 + 4 Treaties of 1990 between the four Allied powers and the two German states officially terminated the Allied Control Council.

Influential American journalist who ardently advocated a hard line toward the Soviet Union during the Cold War. Born in Avon, Connecticut, on 10 October 1910 into a prominent family, Joseph Alsop graduated from Harvard University in 1932 and then joined the *New York Herald Tribune* as a staff reporter. After World War II, he collaborated with his brother Stewart on the syndicated column “Matter of Fact,” which espoused the new internationalism of their generation. The Alsop brothers parted company in 1958 over personal and political differences.

An unabashed member of Washington’s cultural and social elite, Alsop often threw elaborate parties at his fashionable home. An acquaintance of George F. Kennan, Alsop was a staunch supporter of Kennan’s containment policy toward the Soviet Union. In the 1950s he became particularly critical of President Dwight D. Eisenhower’s efforts to restrain defense spending and repeatedly warned of an impending missile gap with the Soviet Union. Beginning in 1957, Alsop communicated his concerns about the alleged missile gap to Massachusetts Senator John F. Kennedy. In Kennedy’s 1960 presidential campaign, during which he tried to assert that the United States had not done enough to address Soviet advances, he found a natural ally in Alsop, the man who would later claim to have coined the term “missile gap.”

Kennedy’s 1963 assassination shattered Alsop, but he nonetheless continued to support Kennedy’s successor, Lyndon B. Johnson. Alsop had single-mindedly supported the war in Vietnam from its very start—as early as 1954, when it was still largely a French enterprise—and he continued to do so as Johnson expanded U.S. involvement. But Alsop was profoundly shaken as he witnessed the American defeat there. Indeed, in 1975, five months before

Alsop, Joseph Wright
(1910–1989)

the last U.S. troops were withdrawn from Vietnam, he discontinued his signature column. Alsop died in Washington, D.C., on 28 August 1989.

Americans for Democratic Action

American political organization that lobbied for liberal-democratic values at home while taking a firm anticommunist line abroad. Americans for Democratic Action (ADA) emerged from a January 1947 conference in Washington, D.C., of prominent New Deal activists, leftist intellectuals, journalists, and trade unionists, some of whom had been members of a smaller World War II group, the Union for Democratic Action (UDA). The impetus for their meeting was the recent creation of former Vice President Henry Wallace's Progressive Citizens of America movement, which had clearly staked a bid for the institutional leadership of the American Left.

While there was little disagreement among the ADA founders and Wallace's Progressives on broad questions of domestic policy, they differed sharply on foreign affairs, specifically on the issue of Soviet relations. The ADA's position was that any compromise with a totalitarian state, no matter what its socialist credentials, would bring about the moral corruption of liberal principles championed in the United States. One of the first acts of the group was therefore a strident rhetorical drive against Wallace's third-party candidacy in the 1948 presidential election, with charges that the Progressives were communist stooges. This developed ironic overtones when the ADA was itself accused of being a communist front by Senator Joseph R. McCarthy two years later.

In its early years the ADA had no shortage of high-profile leaders, such as Eleanor Roosevelt, Senator Hubert Humphrey, the historian Arthur M. Schlesinger Jr., and the economist John Kenneth Galbraith. It even boasted as a founding member the well-known Hollywood actor Ronald Reagan, then a liberal New Dealer. The group's difficulty lay in expanding its membership beyond the narrow confines of the upper-middle-class, predominantly East

Eleanor Roosevelt and James E. Doyle at the seventh annual conference of Americans for Democratic Action in Chicago, 1954. (Library of Congress)

Coast elite. Initial collaboration with unions such as the United Auto Workers and the Textile Workers of America faltered in the 1950s as the traditional labor politics (and social conservatism) of the unionists diverged from the civil rights priorities of the ADA's academic and professional supporters. When the Congress of Industrial Organizations (CIO), which had given important financial aid to the early ADA, merged with the American Federation of Labor (AFL) in 1955, it rerouted these contributions to its own political action committees. Thus, blue-collar support dwindled, and the group's coffers never recovered from the loss of union contributions.

Perhaps the ADA's biggest challenge was the conflict between its liberal ideals and its party pragmatism. Although officially nonpartisan, in practice the organization operated from the left of the Democratic Party platform, which often meant endorsing electoral candidates and policies with which it disagreed. The ADA found it difficult to strike the right balance between criticizing Democrats who paid insufficient attention to civil rights while at the same time denying Republicans gains at the polls. For example, the group took an ambivalent line on President Harry Truman's 1947 Loyalty Program and was less than supportive of the 1954 *Brown v. Board of Education* decision ending school segregation for fear of scaring away Dixiecrats (Southern Democrats) from the national party.

As with so many other American Cold War institutions, however, it was the Vietnam conflict that brought the ADA's internal contradictions into full-blown crisis. The group had been a strong supporter of the John F. Kennedy presidency, with several members holding important posts in the administration, and President Lyndon B. Johnson inherited this enthusiastic backing upon his accession in 1963, particularly after the 1964 Civil Rights Act and the 1964 announcement of his Great Society program. But Johnson's increasingly hawkish line in Vietnam discomfited many members, and disagreement brewed within the ADA between those who saw Vietnam as a cautionary extension of the anticommunist containment policy and others who viewed it as illiberal aggression.

The ADA stuck to the Democratic mainstream in the 1964 election and declined to take part in the following year's antiwar mass protest in the capital. But by 1968 there was little remaining enthusiasm for Vietnam within the movement, and an open split emerged between moderate (though lukewarm) supporters of Hubert Humphrey's presidential candidacy and those reform liberals rallying around Allard Lowenstein, who opted instead for the antiwar campaign of Eugene McCarthy. These internal battles resulted in a transfer of membership, as more traditionalist campaigners left and were replaced by younger but less politically connected radicals. ADA influence within the Democratic Party consequently dwindled, and although the organization survived into the 1970s and beyond, it was henceforth relegated to the political margins.

Americas

Latin America, including Puerto Rico, with a 1945 population of more than 144 million, includes territory from the Mexican-American border southward as well as Spanish-speaking Caribbean territories. North America comprises the United States and Canada, with a 1945 population of more than 152 million. The two regions have shared a number of important historical experiences: slavery, the massacre and survival of indigenous peoples, the European settling of open frontiers, republican institutions, and religious zealotry.

U.S. Interventions in Latin America

<i>Where</i>	<i>Objective</i>	<i>Year</i>
Guatemala	Ousted Jacobo Arbenz Guzmán	1954
Cuba	Undermined the government	1961–2
British Guyana	Undermined the government	1960s
Chile	Undermined the government	1970s
Nicaragua	Attempted to destabilize the nation	1979
Grenada	Sent troops to forestall communist insurgency	1983
Panama	Invasion of the country	1989

Moving into the nineteenth and twentieth centuries, however, the two regions' commonality has significantly diverged. Latin America's political pendulum has swung between authoritarianism and democracy. North America's political system, in general, has remained stable and become gradually more egalitarian. In economic terms, during its colonial era Latin America was the wealthier region; however, with the industrialization of the late nineteenth century, North America quickly surpassed its southern neighbors.

The first major U.S. foreign policy pronouncement regarding Latin America was the Monroe Doctrine (1823), which declared the Western Hemisphere off-limits to further European colonialism. Viewed by many as a cornerstone of U.S. foreign policy, the doctrine was cast in negative terms, emphasizing what outside powers could *not* do in the Western Hemisphere. But it was nonetheless reinterpreted by subsequent U.S. leaders in more proactive terms, providing justification for U.S. intervention in Latin American affairs. A second turning point occurred in the 1880s, when American officials, most notably Secretary of State James G. Blaine, called for increased economic cooperation between the two regions.

Increasing U.S. investments in Latin America spawned anti-American sentiments. U.S. military intervention, and later cultural imperialism, confirmed the worst fears of the Latin American nationalists south of the Rio Grande River. Nineteenth-century military intervention, with only one major exception (the U.S. intervention in Brazil in 1893), was confined to the Caribbean region. Washington employed its military forces first in the brief Spanish-American War of 1898. By 1903 the United States had offered support to rebels in Panama (then a renegade province of Colombia), which they accepted, helping them to achieve independence from the South American nation. This also facilitated the construction of the Panama Canal, a U.S. project.

During the Great Depression, sources of capital and finished goods from the industrialized countries were unavailable. To jump-start their own industrialization, the Latin American nations implemented a policy of import-substitution industrialization by raising tariffs on imported items. This flew in the face of what had come to be known in Washington as the inter-American system: a free flow of capital, goods, and ideas between North and South America that would foster harmonious relations between the regions.

Even though U.S. leaders disliked Latin American economic policies that restricted the flow of trade and investment, President Franklin D. Roosevelt, in his first inaugural address on 4 March 1933, promulgated the Good

A nurse with the Servicio Cooperativo Interamericano de Salud Publico, a cooperative Point Four Program, visits a family in La Paz, Bolivia, in February 1951. (National Archives and Records Administration)

Neighbor policy. Because various U.S. military interventions in Latin America had strained relations between North and South America by the 1920s, Roosevelt very much wanted to strengthen ties between the regions. The backbone of the Good Neighbor policy was Roosevelt's nonintervention pledge, and it seemed to usher in a new era of friendly relations between the two regions. Moreover, hemispheric solidarity during World War II increased Latin American acquiescence to heavier doses of U.S. cultural imperialism via such media as radio and movies. In retrospect, this period proved to be the high point of hemispheric solidarity.

As the Cold War intensified in the aftermath of World War II, Washington began to fear communist insurgencies taking root in the hemisphere. In 1947 the United States and Latin American nations signed an alliance, the Rio Pact, to ensure that the Americas would remain anticommunist. In 1948, the Organization of American States (OAS) implemented the Rio Pact, providing collective security for the Americas. In addition, President Harry S. Truman increased U.S. bilateral assistance to Latin America that had first

been given during World War II. The Point Four Program assisted Latin America and other third world areas with infrastructure needs.

Fearing a communist takeover, Washington reneged on the Good Neighbor policy with a covert Central Intelligence Agency (CIA) intervention in Guatemala in 1954 that organized and supported a band of anticommunist military leaders who opposed Jacobo Arbenz Guzmán's regime. Arbenz, who was portrayed as a communist—or at the very least, a communist sympathizer—was ultimately forced from power that same year. The U.S. effort in Guatemala proved to be a harbinger in that the CIA went on to employ covert activity in the 1960s in Cuba and British Guiana (later Guyana), and in the 1970s in Chile, all in an attempt to undermine governments that allegedly threatened American interests.

With Fidel Castro's 1959 rise to power in Cuba, the Latin American Left grew in prominence. Traditionally, the Left worked to stimulate and focus *antiyanqui* (anti-U.S.) sentiment, and the 1960s proved no different. Castro, who declared in December 1961 that he was a communist, stated categorically that he would attempt to foment revolution in Latin America and other third world areas. The United States responded to Castro's threats by breaking relations with Cuba in January 1961, initiating a propaganda campaign against Castro, secretly trying to undermine his government, invading with a paramilitary force of Cuban nationals in the April 1961 Bay of Pigs debacle, and placing a total trade embargo on Cuba. Cuba soon proved to be a Cold War flash point with the Cuban Missile Crisis of 1962, which brought the world to the brink of nuclear war.

To prevent the spread of hemispheric communism, the administration of John F. Kennedy organized the Alliance for Progress, a multilateral assistance effort aimed at Latin America to promote economic, social, and political reforms. Although not the first assistance program aimed specifically at the Latin American region—the Inter-American Development Bank dated back to 1958—the program proved historic in its size and goals. Through the program, the Latin American countries agreed to pledge an investment of \$80 billion, while the United States pledged \$20 billion in aid over the next decade. Observers disagree on why the goals of the program were not achieved, and by the late 1960s the Alliance for Progress had played itself out. Despite this failure, the U.S. policymakers' ideas of granting assistance to promote social and economic reforms and to promote democracy lived on. The Caribbean Basin Initiative of 1981–1982, although it relied significantly less on grant aid, demonstrated that U.S. leaders shared the same assumptions regarding growth and stability as their 1960s predecessors.

Even as American officials saw security threats in a number of Latin American nations in the 1960s, economic relations remained an important part of the North American-Latin American relationship. The pre-World War II conflict between Latin American economic nationalism and U.S. free trade reemerged with a new intensity after World War II. Even before the end of the war, at an important inter-American conference held in the castle of Chapultepec in Mexico City in March 1945, Latin American and U.S. delegates clashed over whether the free flow of goods and services should

The invasion offered a low-risk way for the Reagan administration to display its credentials as a hard-line anticommunist government.

characterize inter-American economic policy or—as some Latin American leaders urged—whether individual nations should exert some control over foreign economic activity within their borders. This conflict would remain a fixture of inter-American relations until the 1980s, when economic liberalization (neoliberalism) helped to foster friendlier North-South relations in the Western Hemisphere.

As Latin American nations moved toward democracy in the 1980s, relations between North America and Latin America warmed. Yet the road to harmonious inter-American relations in the 1980s encountered two very serious roadblocks: crises in Central America, the Caribbean, and Panama and the ongoing drug war. As civil wars erupted throughout Central America in the 1970s and 1980s, U.S. leaders feared that Cuban and Soviet aid was supporting the efforts of the leftist guerrillas, who by 1979 had seized control in Nicaragua. The leftist guerrillas in Nicaragua, the Sandinistas, had broad support, at least at first, among many Nicaraguans. The United States attempted to destabilize Nicaragua through overt means (economic embargoes and anti-Sandinista rhetoric) and covert means (assistance to Nicaraguan rebel groups who wanted to overthrow the government). Washington's actions toward Nicaragua frayed relations with other nations in the hemisphere that opposed U.S. policy, including Canada, the first significant example of Canadian criticism of Washington's inter-American policy. Finally, the Sandinistas lost a critical election in 1990, defusing the crisis.

In 1983 President Ronald Reagan's administration was especially suspicious of Cuban assistance to rebel groups in the Caribbean. In 1983, Reagan therefore sent troops into tiny Grenada to forestall a communist insurgency there. The invasion offered a low-risk way for the Reagan administration to display its credentials as a hard-line anticommunist government.

Just as communism crumbled nonviolently in the autumn of 1989 in Eastern Europe, Washington invaded Panama in December 1989, capturing its unpopular leader General Manuel Noriega. American policymakers insisted that military intervention was the only way to remove the autocratic leader—who was also accused of heavy involvement in the drug trade—so that democracy could take firmer root in the Isthmian nation. To some observers, the U.S. invasion of Panama, coming at the end of the Cold War, showed that the diminishing communist threat would not necessarily mean the end of U.S. intervention in the Americas.

As the international narcotics trade grew and as U.S. imports of illicit drugs from Latin America increased, American leaders searched for ways to crush the drug trade. In this endeavor, U.S. law enforcement officials worked with Mexican government officers in particular. Many Mexicans, however, saw such efforts as an intrusion on their sovereignty. Even more controversially, U.S. military personnel trained members of some of the South American militaries in techniques used for destroying the plants that produced the raw materials for certain drugs (coca leaves in the Andes, in particular). In addition, the Drug Enforcement Agency (DEA) stepped up interdiction efforts, trying to reduce the flow of coca leaves from farms to processing plants. Both eradication and interdiction resulted in casualties among Andean coca

growers and their supporters. As a result, U.S.–Latin American relations deteriorated. The drug war waxed and waned but still proved a bone of contention among some Latin American nations and the United States into the twenty-first century.

With the end of the Cold War, two important new topics dominated inter-American relations: economic interaction and immigration. In 1994 the United States, Canada, and Mexico signed the North American Free Trade Agreement (NAFTA). U.S. leaders also pursued the plan for a free trade area to embrace South America as well as North America.

Latin American immigration to North America, especially from Mexico, began to change the complexion of U.S. and Canadian society, introducing new food, music, and other aspects of Hispanic popular culture. As Latin American immigration to the United States swelled, some Latinos in the United States, in particular the well-organized Cuban lobby in Florida, managed to influence U.S. foreign policy. In the early twenty-first century, rising numbers of immigrants, particularly Mexican immigrants, spurred some observers, such as Samuel Huntington in 2004, to fear that immigrants from south of the Rio Grande would not assimilate into U.S. society. Moving into the twenty-first century, immigration appeared as increasingly important in shaping the contours of U.S.–Latin American relations.

Amin, Idi (1924?–2003)

Ugandan politician and military leader. Idi Amin Dada Oumee was born to a Muslim family in either 1924 or 1925 in the Kalwa tribe in Koboko, British Uganda. In 1961 he became one of Uganda’s first commissioned army officers. Following Ugandan independence on 9 October 1962, he held the rank of major and worked closely with Prime Minister Milton Obote, who sent him abroad to oversee training programs. By 1970 Amin was head of the army.

After several years of strained relations with Obote, Amin launched a successful military coup on 25 January 1971, with widespread public support. Following several token gestures to make his rule seem more democratic than that of Obote, Amin moved to eliminate political and tribal rivals, many of whom fled to Tanzania. In September 1972 the Tanzanian exiles unsuccessfully attempted to overthrow Amin.

In 1972 Amin expelled all Asians and nationalized British-owned businesses, damaging the Ugandan economy. His policies caused tense relations

with the United States, Britain, and other Western countries, forcing him to turn to the Soviet Union for assistance. After expelling his Israeli advisors, Amin established cordial contacts in the Arab world, particularly with Libya and the Palestinians. In 1976 he conspired with Palestinian terrorists to hijack an Air France jetliner to Tel Aviv, forcing it to land in Entebbe, Uganda. Israeli commandos freed all but one hostage, killing the terrorists and several Ugandan soldiers.

As Amin's murderous wave of terror continued, Uganda's economy and society lay in tatters. Yet as Uganda slid further into chaos, Amin named himself field marshal in 1975 and president-for-life in 1976. In October 1978 he ordered an attack on Tanzania, which retaliated with an invasion of Uganda in early 1979. Aided by Ugandan exiles, Tanzanian forces advanced quickly, taking the capital city of Kampala in April 1979. Amin fled first to Libya and then to Jidda, Saudi Arabia, where he lived in exile and died on 16 August 2003.

Italian journalist, politician, and premier. Born on 14 January 1919 in Rome, as a youth Giulio Andreotti became active in the Catholic Students' Federation headed by Monsignor Giovanni Battista Montini (later Pope Paul VI). In 1941 Andreotti received a law degree from Rome University and then went to work as a journalist for the newspaper *Il Popolo*. During Italy's fascist era, he came to know future Italian Premier Alcide De Gasperi and would later become one of his closest confidantes and collaborators.

Following the Allied liberation of Rome in June 1944, Andreotti was named coordinator of Catholic youth and worked in the Christian Democratic Party with De Gasperi. In 1945 Andreotti was elected to the Constituent Assembly and held elective office thereafter until 1987. From 1947 to 1953, he served as premier undersecretary in four of De Gasperi's governments.

Andreotti, Giulio
(1919–)

Italian political leader Giulio Andreotti, shown here in May 1979. (Gianni Giansanti/Sygma/Corbis)

Andreotti enjoyed a brilliant political career, having served as minister of the interior in 1954, of finance in 1955 and again in 1958, of treasury during 1958–1959, and then of defense during 1959–1974. He was also minister of industry in 1966 and 1968. In 1972 he became premier of the Italian Republic, a position he occupied seven different times. As Italy's foreign minister from 1983 to 1989, he forged closer ties to Eastern bloc countries and was influential in the fall of communism in Europe in the late 1980s.

On 1 June 1991, Andreotti was named senator for life, but in 1995 he was accused of having had ties to the Italian Mafia and of having planned the assassination of the journalist Mino Pecorelli. After several years and multiple trials, Andreotti was ultimately acquitted.

An able politician and diplomat, Andreotti was considered one of Italy's most powerful men. He maintained Italy's central role in the North Atlantic Treaty Organization (NATO) and brokered a deal for the deployment of U.S. Pershing Missiles in Italy in the 1980s, despite public protests. At the same time, he was also able to reach agreements with Arab states and the Soviet Union. It was under his leadership that Italy's Fiat struck an economic deal with the Soviet Union. He also maintained close ties with the Vatican during his tenure in office. In domestic politics, he fought against the Italian Communist Party's influence but was also the man who brokered the so-called Historical Compromise, which supported the government by not opposing the seating of communists after the 1976 elections.

Andreotti was not just the most dynamic Italian politician of the postwar years but was also probably the most influential one during the Cold War era. To this day, he is still highly regarded by many Italians. Throughout his tireless political career, he found the time to write several books about his political experiences and about the people he knew. As a journalist, he headed the Catholic magazine *Concretezza* from 1955 to 1976 and currently edits the magazine *30 Giorni*.

Soviet diplomat, head of the Komitet Gosudarstvennoi Bezopasnosti (KGB) during 1967–1982, and fifth leader of the Union of Soviet Socialist Republics during 1982–1984. Born on 15 June 1914 in Stavropol, Russia, Yuri Vladimirovich Andropov dropped out of school when he was sixteen and worked at odd jobs, eventually joining the Komsomol, the communist youth organization. He became a full member of the Communist Party of the Soviet Union (CPSU) in 1939 and served in the newly founded Karelo-Finnish Republic from 1940 to 1944 as the first secretary of the regional Komsomol.

During World War II, Andropov was active in partisan guerrilla activities. After the war, he held positions in regional CPSU bureaus before being appointed to the CPSU Central Committee in 1951. In the immediate wake of Soviet leader Josef Stalin's death in 1953, Andropov was appointed counselor to the Soviet embassy in Budapest. Promoted to ambassador in 1954, his tenure witnessed the 1956 Hungarian Revolution. Andropov had warned Moscow of growing unrest in Hungary prior to the Revolution and then requested Soviet troop deployments to Hungary after the revolt began. He played a crucial role in establishing the new Hungarian Socialist Workers' Party under the leadership of János Kádár.

Andropov returned to Moscow in 1957 as the head of the Department for Liaison with Socialist Countries. He also succeeded Mikhail Suslov as a member of the Central Committee Secretariat in 1962 and became the head of the KGB in 1967. In 1973, he assumed a permanent membership in the Politburo but continued to serve as KGB leader until 1982.

On 10 November 1982, Andropov was elected the new general secretary of the CPSU, succeeding the late Soviet President Leonid Brezhnev. Andropov soon thereafter became the Soviet president and chairman of the Defense Council. During his fifteen-month rule, he sought to improve the Soviet economy by increasing productivity. He gave priority to the fight against corruption in the Soviet bureaucracy and attempted to improve Soviet work habits through vigorous campaigns against alcohol and for the improvement of work discipline.

In foreign policy, Andropov sought to maintain the status quo. He kept Soviet troops in Afghanistan, and despite his efforts to improve his image in the West, relations with the United States continued to deteriorate. He strongly opposed President Ronald Reagan's stationing of Pershing Missiles in the Federal Republic of Germany (FRG, West Germany), but Soviet relations with the West took a nose-dive after Soviet forces shot down a civilian South Korean jetliner (KAL Flight 007) in September 1983 when it strayed

Andropov, Yuri (1914–1984)

into Soviet airspace. All 269 passengers perished. The Soviets claimed clumsily and falsely that the jetliner was designed to spy on Soviet installations.

After months of poor health, Andropov died on 9 February 1984 in Moscow. He had declared Mikhail Gorbachev to be his successor, but on 12 February 1984 Andropov was instead replaced by Konstantin Chernenko.

Anglo-Iranian Oil Crisis (1951–1953)

The Anglo-Iranian oil crisis began on 26 April 1951 when Iran's new nationalist leader, Mohammed Mossadegh, moved to nationalize his nation's oil reserves. The crisis ended on 19 August 1953 when Mossadegh's government was overthrown in a U.S.-sponsored coup d'état. Mossadegh's nationalization measures came largely at the expense of the British-controlled Anglo-Iranian Oil Company, which had been exploiting Iranian oil reserves for years. The crisis highlighted the differing communist containment policies carried out by the British Foreign Office and the U.S. State Department in the Middle East. It can also be viewed as an early attempt by a developing nation to break free from Western imperialism and colonial control. The fact that the crisis involved oil also showcases just how critical cheap and abundant oil supplies were to the West.

During 1951–1953 there was an ongoing diplomatic crisis among Iran, Great Britain, and the United States over Mossadegh's actions. Beginning in November 1951, Mossadegh requested that Western nations that had purchased Iranian oil in the past confirm their current orders with the newly nationalized Iranian oil industry. The British took immediate action by pressuring purchasing nations not to cooperate with Mossadegh's request.

At first, the United States took a rather neutral stance in the crisis, siding completely with neither London nor Tehran. The Americans' chief concern was keeping Iranian oil out of Soviet control rather than saving the Anglo-Iranian Oil Company. U.S. Secretary of State Dean Acheson urged Britain to accept Iran's nationalization and instead aim at maintaining control over the technical aspects of oil production. Throughout much of 1951, the United States regarded Iran's continued alliance with the West as a priority over British economic interests.

Demonstrators in Tehran, Iran, most of them students, confronting police and soldiers during a protest rally against the British government in 1951. (Library of Congress)

President Harry S. Truman sought to broker a settlement between Tehran and London based on the acceptance of Iranian nationalization in return for British control over oil production and drilling. At the same time, British officials were divided over whether launching a war against Iran was a viable option to ending the standoff. The British Foreign Office seemed willing to entertain the idea of military force, while British Prime Minister Clement Attlee steadfastly opposed it.

Nevertheless, the British government refused to negotiate with the Iranians and instead opted to impose economic sanctions on Mossadegh's regime. On 10 September 1951, Britain took measures to prevent purchases of Iranian oil on the international market.

Meanwhile, the United States and Britain were moving closer together on ending the crisis. Throughout the autumn of 1951, the Truman administration became less neutral. As time went on, the U.S. State Department trusted Mossadegh less and less. From January 1952 on, the United States became increasingly concerned about Iran's internal economic stability. America maintained that Mossadegh was now increasingly likely to turn to Moscow

to stabilize Iran's economy. By the spring of 1952, these concerns led the Americans to view regime change as a viable path to ending the crisis. Between the end of 1951 and July 1952, the Americans hoped that this would happen as a result of the dispute between Shah Mohammad Reza Pahlavi of Iran and Mossadegh over which of the two would control the Persian Army. In the fall of 1952 Tehran broke diplomatic relations with London.

In January 1953 Dwight D. Eisenhower became president of the United States. The failure of diplomacy coupled with the Eisenhower administration's eagerness to end the crisis opened the door for the coup d'état of August 1953. The Eisenhower administration supported regime change in Iran in a coup organized by the Central Intelligence Agency (CIA). U.S. policymakers were particularly alarmed at the possibility that Mossadegh would bring the communists to power in Iran. Supported by the British government as well and carried out on 19 August of that year, the coup returned Shah Pahlavi to power. The British and American governments then established an Anglo-American oil consortium on 12 April 1954.

Antall, József

(1932–1993)

Historian, politician, and the first freely elected, post–Cold War prime minister of Hungary. Born on 8 April 1932 in Budapest to a politically active family, József Antall studied at the University of Budapest, went on to become a high school teacher, and participated with his students in the Hungarian Revolution in 1956. He was then involved in the Smallholders Party's negotiations with the Communist Party to help form a coalition government. When the negotiations broke down in 1957, Antall was arrested and removed from his teaching job. After working as a librarian for two years, he committed himself to the history of medical science and in 1964 became a researcher, then the deputy director, and finally director of the Semmelweis Museum of Medical Science.

In 1988 Antall returned to politics and became involved in the growing Hungarian reform movement, joining the newly created Hungarian Demo-

cratic Forum (HDF). He represented the party at the National Round Table Negotiations between the governing Socialist Party and the new reform parties. In October 1989 he assumed the presidency of the HDF and became its candidate for premier. The HDF won Hungary's first democratic elections in April 1990, and the Hungarian parliament elected Antall premier on 23 May 1990.

Antall's adherence to such values as democracy, conservatism, Christian morality, and social awareness were the by-products of his upbringing and education. Even in his teens, he was convinced of the necessity to abandon the communist system. At the Round Table Negotiations, his main objectives were the restoration of democracy and the rule of law. As premier, he moved swiftly to promote internal reform and took the first steps toward Hungarian membership in the North Atlantic Treaty Organization (NATO) and the European Union (EU). Antall died in Budapest on 12 December 1993 following a short illness.

The continent of Antarctica and the Arctic Ocean, both approximately 8.7 million square miles, cover the southern and northern polar regions, respectively, and have held economic and geopolitical interests for many countries. During the 1930s, scientific research and political rivalry in Antarctica began to supplant discovery and mapping operations. Argentina, Australia, Chile, France, and Great Britain established year-round national research stations there, both to maintain territorial claims and to conduct scientific research. In November 1946, the United States conducted Operation HIGHJUMP, the largest Antarctic expedition to date, involving intensive exploration by means of ships, aircraft, and temporary land stations. The main goal of the operation was to give U.S. military forces experience in polar conditions. Set against the backdrop of the Cold War, this was seen as a necessary means to prepare for a potential confrontation with Soviet troops in the northern Arctic region, the shortest distance between the United States and the Soviet Union.

Antarctica and Arctic

Ice covers the water and land of Antarctica. (Corel)

The Arctic Ocean was a contested place as well. However, it was less a question of territorial claims than of geopolitical dominance. The United States, Canada, Russia, and several northern European countries all border this polar region. Nuclear submarines of both superpowers played a dangerous game of cat and mouse beneath the shifting polar ice, while slight changes in water temperature disguised huge ships by diffusing enemy sonar. The proximity to each other's country was a source of constant concern during the Cold War. Security interests dominated in the Arctic, but economic activities also had a geostrategic component in terms of oil, natural gas, and mineral deposits. On a political level, the end to the Cold War has had a profound effect on the Arctic. Because of the radioactive contamination of the waters caused by leaking Soviet submarines and discarded reactors, the region has emerged as an area of environmental cooperation involving all Arctic-border nations.

The various territorial claims in Antarctica, however, created an atmosphere of tension that threatened scientific cooperation. The International Geophysical Year (IGY), from July 1957 to December 1958, was the first substantial multinational research program that coordinated geophysical research and proved a useful step in resolving political disputes. Twelve nations (Argentina, Australia, Belgium, Britain, Chile, France, Japan, New Zealand,

Norway, South Africa, the United States, and the USSR) agreed that their political and legal differences should not interfere with the research program. More than 5,000 scientists and support staff served at forty-nine international Antarctic stations. Research projects included studies of atmospheric physics, meteorology, oceanography, glaciology, seismology, and geology. The international cooperation and overall success of the IGY led the governments of the twelve nations to establish the Special (later Scientific) Committee on Antarctic Research (SCAR) in 1958, a group designed to coordinate additional research that exists to this day.

This was followed up with the Antarctic Treaty, signed on 1 December 1959 and entered into force on 23 June 1961. The treaty stipulates that Antarctica be used only for peaceful purposes, prohibits militarization and weapons testing, requires freedom of scientific investigation, provides for exchanges of scientific results, and allows mutual inspection of stations, ships, and aircraft. The treaty prohibits nuclear explosions and disposal of nuclear waste in the area south of latitude 60 degrees. The treaty also addressed long-standing territorial conflicts in Antarctica. It made no ruling on the validity of existing claims by seven nations (Argentina, Australia, Britain, Chile, France, New Zealand, and Norway) and stated that no member nation was required to recognize the claims of other nations. Although the United States and the Soviet Union reserved the right to stake future claims of their own, the indefinite freeze on territorial claims served to ease Cold War suspicions of each other's activities in Antarctica.

The nations that signed the treaty became Antarctica's governing body, the Antarctic Treaty System (ATS). The treaty also provides that any member state of the United Nations (UN) can attain membership in it. At the end of 2004, there were forty-five ATS member nations. The treaty has been recognized as one of the most successful international agreements in modern history. Differences over territorial claims have been effectively set aside, and as a disarmament agreement the treaty has been very successful. In 1991, ATS members recognized the enduring strength and relevance of the treaty by adopting a declaration proclaiming their determination to maintain and strengthen it and to protect Antarctica's environmental and scientific values.

Antiaircraft Guns and Missiles

Weapons designed to attack and destroy aircraft from the ground or sea, deployed throughout the Cold War. Such weapons were used in combat in Vietnam and elsewhere, although many were never fired in anger. Nonetheless, many countervailing technologies and changes to military doctrine were spurred by the development of such arms.

At the onset of the Cold War, the U.S. military was equipped with small numbers of antiaircraft guns remaining from World War II. When the Korean War began in June 1950, some of these weapons were dispatched to the war zone, but they ultimately encountered few targets. Others were hurriedly situated at strategic locations in the United States because American leaders feared that the Korean conflict might presage a surprise Soviet bomber attack, an especially disturbing possibility because the USSR had recently acquired nuclear weapons. Even after the Korean hostilities ended, concern about a Soviet strike grew with the advent of higher and faster jet aircraft requiring more capable antiaircraft weapons.

Initially, the United States fielded radar-aimed antiaircraft guns, which were better than previous antiaircraft weapons. However, a faster, self-propelled, maneuverable projectile capable of reaching high altitudes was necessary for defense against strategic bombers. Consequently, the U.S. Army oversaw the development of a relatively complex system that utilized radars, rudimentary computers, and other equipment to locate and track distant targets and to direct missiles at them. Because missiles received electronic guidance commands after launch and could alter their course as they flew, they were capable of reacting to a target's evasive actions. The Nike-Ajax missile's 25-mile range, high speed, and maneuverability made it considerably more capable than antiaircraft guns. Beginning in 1954, these missiles were deployed at 222 specially constructed locations across the United States, and within four years an improved version (dubbed Nike-Hercules), which flew farther and faster, replaced the earlier model at many sites.

The Nike-Hercules carried a relatively low kilotonage nuclear warhead meant to provide the greatest practical blast at the interception point, thereby obviating the need for a direct hit and ensuring destruction of all aircraft in the target area. After 1964, when the Nike-Hercules defenses were joined by two launch facilities for nuclear-equipped BOMARC antiaircraft missiles in Canada and six more manned by the U.S. Air Force, the substantial commitment to defending North America against bomber raids was most evident. Many of these weapons had been decommissioned by 1974, although some remained operational until 1979.

Other nations including the Soviet Union, Great Britain, and France developed similar surface-to-air (SAM) antiaircraft networks during the Cold War. The Soviet Union's elaborate antiaircraft effort was obviously influenced by the size and capability of U.S. strategic bomber forces and by persistent U.S. and British reconnaissance overflights of Soviet territory. After the Soviets developed sophisticated antiaircraft technologies—best demonstrated when a Soviet SA-2 missile downed an American U-2 reconnaissance plane

Two vehicle-mounted Soviet SA-2 surface-to-air missiles, 1 January 1977. (U.S. Department of Defense)

at high altitude in May 1960—the tactics and armaments considered for use in the event of nuclear attack on the Soviet Union changed accordingly. The British, by turning to submarine-launched ballistic missiles (SLBMs) in the early 1960s as the mainstay of their nuclear strike force, seemed to suggest that bombers were becoming obsolete. The Americans disagreed, however, and prepared to fly above or below the effective altitude of the antiaircraft weapons or to release payloads before coming within their range.

Alternatively, the Soviet Union never built large numbers of long-range bombers, but it is not entirely clear why this was so. More than likely, however, it was because the number and type of SAMs in North America discouraged the use of long-range bombers in a nuclear exchange.

In addition to defending against strategic bombers, Cold War adversaries equipped their naval and ground forces with antiaircraft guns and missiles for shipboard or tactical or field use. Some were mobile or seaborne versions of antibomber weapons. Others were sufficiently small and lightweight to be transported and operated by one or two soldiers. Generically termed MANPADS (for Man Portable Air Defense Systems), these small SAMs were typically guided by radio command or were drawn automatically to a target's hot exhaust. Like antiaircraft guns, MANPADS had a relatively short range, were simple to operate, and could be lethal when employed properly. This made them ideally suited for protecting troops on the battlefield and minimizing attacks by forcing the enemy to strike from greater distances and at higher speeds. In 1986, guerrillas fighting Soviet forces in Afghanistan began to use MANPADS provided by the United States and Britain. Within

An Afghan mujahideen demonstrates the firing of a surface-to-air missile in 1988. The United States supported the Afghan resistance against the Soviets, who had occupied Afghanistan. (U.S. Department of Defense)

The overwhelming majority of losses were inflicted by North Vietnam's arsenal of more than 7,000 radar- and optical-sighted guns.

months they had inflicted sufficient losses to retard helicopter gunship attacks and to reduce the efficacy of certain aerial resupply efforts.

Similar Soviet SA-7 portable MANPADS were used against the Americans years earlier during the Vietnam War with somewhat less significant results. In this and other ways, that conflict exemplifies the Cold War role of antiaircraft weapons and their influence on military doctrine. When the United States initiated sustained bombing of North Vietnam beginning in 1965, more than 1,500 airplanes were shot down. Many more helicopters were also lost, almost all of them in South Vietnam and most of these to small arms fire. The overwhelming majority of losses were inflicted by North Vietnam's arsenal of more than 7,000 radar- and optical-sighted guns, many surrounding the especially well-defended cities of Hanoi and Haiphong. The lethality of these weapons forced U.S. pilots to attack from higher altitudes and limited their time over a target. In July 1965, however, the North Vietnamese downed their first American aircraft with a Soviet-made SA-2 missile, causing planes to fly at lower levels where they became vulnerable again to antiaircraft guns. Between 1965 and 1972, more than 9,000 SAMs were launched, destroying 150 American aircraft, including 18 during the eleven days of the *LINEBACKER II* bombing campaign of December 1972.

In this and other engagements, however, some agile fighter aircraft managed to survive by outmaneuvering or outpacing the missiles. In other situations, planes emitted electronic signals, decoy flares, or metallic strips to jam

or confuse SAM guidance systems. SAM attacks were also thwarted by firing on an antiaircraft site when its radar signals or combat preparations were first detected but before a missile was launched. Regardless of these actions, the antiaircraft forces marshaled by the North Vietnamese caused the Americans to alter their tactics and design appropriate countermeasures throughout the conflict. Many aircraft, antiaircraft guns, and SAMs that were subsequently deployed during the Cold War reflected the lessons learned in Vietnam.

The term "anti-Americanism" developed during the Cold War period and was regularly used in public, political, and academic discourses. It refers to an encompassing critique and rejection of various aspects of American foreign and domestic policies. In those parts of the world that were within the American sphere of influence during the Cold War, anti-Americanism was expressed by collective entities such as intellectuals, political parties, religious groups, and, at times, ruling elites. In communist or nonaligned nations, by contrast, anti-Americanism was usually part and parcel of official state propaganda.

Anti-Americanism as a concept of historical and contemporary analysis, however, is not an uncontested one, and many authors have noted the dangers of the politically biased usage of the term. Anti-Americanism should be placed in a broader context and understood in terms of the American sense of exceptionalism, anti-European sentiments in the United States, and finally the allure of communist regimes such as those in the Soviet Union, Cuba, and the People's Republic of China (PRC).

Cold War anti-Americanism in Western Europe drew on older criticisms and rejection of the United States as a political, socioeconomic, and cultural model, although America's status as a world superpower after 1945 only

Anti-Americanism

reinforced these sentiments. In political terms, anti-Americanism corresponded with the diminution of West European power on a global level, due not only to the Cold War constellation but also to the end of the colonial era in which European powers such as France and Britain had been major players. In cultural terms, anti-Americanism resulted from the rapid and pervasive Americanization of West European societies and their economies in the aftermath of World War II. Criticized by some historians as American cultural imperialism, the American model for modernization was often lambasted for its overreliance on individualism and glorification of mass consumerism and attendant homogeneity.

Anti-Americanism was particularly strong within the political Left in Western Europe, especially in countries such as France and Italy. It interacted with a preference toward socialist or communist models of modernization, along Soviet, Maoist, or Trotskyist lines. This was at times actively supported by communist regimes, in particular the Soviet Union and China. Leftist anti-Americanism became increasingly widespread during the 1960s in the context of escalation of the Vietnam War. In the 1970s, however, East-West détente had been translated into arms limitation agreements and peaceful coexistence, which tended to take the wind out of the sails of anti-Americanism among the West European Left.

Anti-Americanism outside Europe frequently reflected and accelerated trends that predated the Cold War. In the nonaligned world, particularly Latin America, widespread animosity toward the United States across various strata of society frequently represented a reaction to American economic and military hegemony and exploitation that manifested itself well before 1945. Events of the Cold War that conformed to preexisting perceptions of the nature of American foreign policy, such as the 1954 CIA-backed coup in Guatemala, American opposition to Fidel Castro, or efforts by President Ronald Reagan's administration to overthrow the Sandinistas in Nicaragua, both reinforced and fueled anti-Americanism.

Even in Canada, traditionally a close American ally, the anti-Americanism that existed there was based on pre-Cold War concerns about American economic and cultural domination. Perceived American injustices, such as the Vietnam War, only served to reignite these feelings.

Soviet-American agreement limiting antiballistic missiles (ABMs). Developments in ABM technology in the 1960s prompted fears of a new arms race in defensive weapons that might undermine nuclear deterrence. Such concerns led to negotiations on their limitation. The ABM Treaty emerged from the first Strategic Arms Limitation Talks and was signed by President Richard Nixon and Soviet Premier Alexei Kosygin on 26 May 1972 during the Moscow Summit.

The agreement banned the nationwide deployment of ABM systems by either party but permitted each side a limited deployment of one hundred fixed ABM launchers at each of two sites: the national capital and one

Anti-Ballistic Missile Treaty (1972)

President Richard Nixon and a Soviet official sign the Anti-Ballistic Missile (ABM) Treaty on 26 May 1972. Soviet President Leonid Brezhnev stands in the background. The ABM Treaty was the first significant arms limitation treaty between the United States and the Soviet Union and represented a major, if temporary, thaw in the Cold War. (National Archives and Records Administration)

intercontinental ballistic missile (ICBM) base. These deployments were considered small enough to be insufficient to defend against a massive offensive strike, thus preserving deterrence. The treaty also banned ABM systems based on technologies other than interceptor missiles as well as ABM systems that were “sea-based, air-based, space-based, or mobile land-based.” It further forbade rapidly reloadable and multiple-missile ABM launchers and prohibited the upgrading of other air defense systems to ABM capability. The agreement also placed restrictions on nonsite radar systems to limit their utility in an ABM capacity.

Verification of the agreement was to be through national-technical means. Thus, compliance of one side would be determined through a variety of sensor systems, to include satellites, radars, and seismographs operated by the other party. This was necessary because of Soviet rejection of provisions for on-site inspection. Finally, the ABM Treaty established the Standing Consultative Commission in Geneva to oversee implementation of the agreement and resolve any disputes that may arise. The treaty was to be of unlimited duration, although either party could withdraw after six months’ notice should it deem the treaty a threat to its “supreme interests.”

The ABM Treaty was ratified by both signatories, and entered into force on 3 October 1972. A protocol to the ABM Treaty, signed in Moscow on 3 July 1974, reduced the number of ABM sites allowed each side from two to one, with a total of one hundred launchers. The site could protect either the national capital or an ICBM base, but not both. The USSR opted to keep its site outside Moscow. The United States maintained its site at Grand Forks, North Dakota, but later deactivated the site in 1976.

Compliance with the agreement was excellent, with the notable exception of the Soviet construction of a phased-array radar at Krasnoyarsk in 1983, which was ultimately dismantled after U.S. protests. President Ronald Reagan’s Strategic Defense Initiative (SDI) presented a serious challenge to the treaty’s ban on the development of ABM systems based on technologies other than missiles. As a result, the Americans reinterpreted the agreement to permit the development and testing, but not the deployment, of ABMs based on lasers, particle beams, and other “exotic” technologies. This approach was rejected by Congress, although Reagan and President George H. W. Bush continued to press for revision of the treaty to permit SDI technologies. Problems with many of these technologies combined with President Bill Clinton’s commitment to the ABM Treaty provided a reprieve throughout the 1990s, but President George W. Bush’s push for a National Missile Defense Program, an updated SDI, prompted U.S. withdrawal from the ABM Treaty effective 13 June 2002.

Antiballistic Missiles

Anticolonialism is defined as hostility toward the domination of one nation or territory by another, usually for exploitative purposes. The Cold War era, particularly from the mid-1950s on, witnessed an explosion of anticolonialism, resulting in the creation of a host of new and independent states, especially in Africa, Asia, and the Middle East. As many nations struggled to gain independence from European control during the Cold War, the two superpowers competed for their loyalty by proclaiming dedication to anticolonial principles. In practice, however, the superpowers often compromised their alleged principles by replacing European colonialism with new types of external control that limited the ability of developing-world nations to exercise self-determination.

Resistance to foreign rule by colonized peoples runs as far back as ancient history. In the eighteenth and nineteenth centuries, however, anticolonialism began to take shape as an element of Western political discourse. Enlightenment thought, with its emphasis on self-determination and mutual obligations between the government and the governed, gave rise to a liberal strand of anticolonialism that underpinned the American Revolution. In later years, Marxism inspired a more radical form of anticolonialism. The Russian Vladimir I. Lenin gave that view its fullest articulation in the early twentieth century, describing colonialism as a by-product of capitalism and calling for its destruction through communist revolution.

Both the liberal and radical variants gained strength following World War I. U.S. President Woodrow Wilson made self-determination a central part of his plan to establish a new global order rooted in democracy, free trade, and collective security. Meanwhile, nationalist leaders of colonial territories, frustrated by the unwillingness of the European powers to cede control, increasingly concluded that they could achieve their liberation only through protest, confrontation, and war. Anticolonial agitation gained considerable momentum

Anticolonialism

during the interwar years even as European empires reached their greatest geographical extent.

World War II marked a major turning point by opening new opportunities for the expression of anticolonialism. In part, the war itself played a role by severely weakening the European colonial powers. German victories over France and the Netherlands, combined with Japanese occupation of French, Dutch, and British territories in the Far East, disrupted or destroyed colonial administrations and emboldened nationalists by crushing the myth of colonial invincibility. Nationalists stepped into the vacuum and asserted themselves with unprecedented power and conviction.

In part, too, World War II sparked a surge of anticolonialism by pulling the United States into the forefront of international politics. Even before it joined the fighting, Washington revived old Wilsonian rhetoric and placed decolonization high among Allied war aims. At their meeting at Placentia Bay, Newfoundland, in August 1941, President Franklin D. Roosevelt convinced British Prime Minister Winston Churchill to sign the Atlantic Charter, which pledged respect for “the right of all peoples to choose the form of government under which they will live.” During the war, Roosevelt demanded steps toward the gradual dissolution of European empires, especially in South and Southeast Asia, and the establishment of a new world system based on self-determination and free trade.

Following the war, U.S. policymakers recognized powerful incentives to stick to the course of gradual anticolonialism charted by Roosevelt. Given the apparent inevitability of decolonization around the globe, it made good sense to position the United States on the side of nationalists who would one day control vast resources crucial to the U.S. economy. The emergence of the Soviet Union as a rival beyond the European theater only heightened Washington’s concern about maintaining friendly relations with nationalists in the developing world.

These anxieties were offset, however, by another dynamic that led the United States to back away from its avowed anticolonial principles in the first decade of the Cold War. While American leaders understood the desirability of cultivating partnerships in the developing world, they set a higher priority on the need to form robust coalitions among industrial nations to resist Soviet aggression. In this effort, Washington’s partners were precisely those countries that controlled colonial empires. Anxious to bolster Britain, France, and other colonial powers as alliance partners, the United States soft-pedaled its anticolonial agenda, advocating compromise solutions that stopped short of full independence for colonial territories. Such halfway solutions disappointed nationalist leaders, who often came to view the United States as a force of repression more than one of liberation.

Historians have suggested other reasons for America’s failure to translate anticolonial ideals into support for developing-world nationalism during the Cold War. Diplomatic historian William Appleman Williams argued that U.S. declarations of anticolonialism masked Americans’ own ambitions to control the destiny of other parts of the world in order to serve American interests. Since the nineteenth century, Williams argued, the United States had sought

to replace autarkic colonial relationships with the so-called open door, the notion of equal economic opportunity for all nations. While Americans congratulated themselves on the liberality of this agenda, in practice it often drove Washington to forge partnerships with authoritarian regimes willing to serve American interests rather than those of their own people.

Historian Michael H. Hunt stresses not economic but rather ideological limits on American anticolonialism. Surveying two centuries of American history, Hunt contends that U.S. support for decolonization abroad had always been tightly circumscribed by a racist skepticism about the abilities of non-European peoples to govern themselves and by a deep-seated fear of radicalism, which Americans often judged to be a likely consequence of giving free rein to the nationalist passions of foreign peoples.

Whatever the cause of American behavior, Washington showed little consistency in coping with colonial problems during the Cold War. In the late 1940s, Washington risked its relationship with the Dutch government by exerting pressure on The Hague to concede independence to Indonesia. More famously, in 1956 President Dwight D. Eisenhower used economic coercion to force the traditional colonial powers in the Middle East, Britain, and France to back down when they attempted to reassert control over the Suez

An Egyptian boy near a British tank amid the rubble of destroyed buildings at Port Said, Egypt, in November 1956 during the Suez Crisis. (Hulton-Deutsch Collection/Corbis)

Canal. At other times, however, the United States set its alliance obligations well ahead of its anticolonial ideals and distanced itself from colonial repression. In the 1970s, for example, Washington supplied military aid to Portugal despite knowledge that the Lisbon government would use that aid to suppress anticolonial agitation in Angola, Mozambique, and other Portuguese territories in Africa.

Communist propaganda routinely pointed out American hypocrisy and denounced the United States as the heir to the repressive practices of its European partners. But the Soviet Union had itself been slow to champion anticolonialism after World War II. Under Josef Stalin, Moscow backed away from Vladimir Lenin's earlier anticolonial enthusiasm and concentrated on European problems. In the 1950s and especially the 1960s, however, new Soviet leaders revalidated Lenin's interest in anticolonial revolution and sought closer relationships with developing-world nationalists. The Soviets and their allies gave political and economic support to Egypt, Indonesia, India, North Vietnam, and other young states. In the 1960s and 1970s, Moscow increasingly supported anticolonial movements in Africa.

Soviet enthusiasm for anticolonialism during the 1960s partly reflected pressure from the People's Republic of China (PRC), which repeatedly accused Moscow of halfhearted efforts to spread communist revolution. The PRC also launched rival efforts of its own to support anticolonial struggles in Asia and Africa. Ever since their 1949 triumph in the Chinese Civil War, PRC leaders had viewed their country's revolution as a model for other oppressed peoples around the world. For a decade thereafter, however, Beijing avoided a bold independent role in developing world affairs, insisting that Moscow was the leader of world communism. Only with the Sino-Soviet split in the early 1960s did China loudly proclaim its dedication to promoting anticolonial revolution. China sent matériel and other supplies to help sustain Left-leaning regimes and liberation movements in Africa, but its most spectacular efforts came in Southeast Asia, where North Vietnam and later Cambodia benefited from massive amounts of Chinese aid.

Soviet and Chinese efforts to position themselves as champions of anticolonialism achieved success in parts of Asia and Africa, where statist economic models and revolutionary politics held strong appeal. Over the long term, however, the communist powers were no more successful than the United States in seizing the high ground of anticolonialism. Just as in the American case, the Soviet and Chinese governments often proclaimed their hostility to European imperialism even as they established domineering relationships with postcolonial states, carried out under the banner of anticolonialism. Late in the Cold War, the Soviet Union and China propped up repressive political regimes in desperately poor states such as Cambodia, Cuba, Vietnam, Ethiopia, and Angola. On the communist side as on the capitalist side, developing-world nations may have been the biggest losers in the Cold War.

Anti-Semitism, or hostility and animosity toward Jewish people, played a significant role in the diplomacy and geopolitics of the Cold War. European anti-Semitism has its roots in medieval religion and culture; Jews suffered persecution and prejudice in Eastern and Western Europe right through the twentieth century. The Nazi extermination of 6 million Jews during World War II represents the most heinous expression of European antipathy toward Judaism. Revulsion at the atrocities of the Nazis resulted in a subsequent decline in anti-Semitism in Europe. However, the end of the Holocaust did not mean an end to anti-Jewish feeling in the world. The status of the Jewish population in the Soviet Union remained an important issue throughout the late twentieth century, and the establishment of Israel in May 1948 resulted in the growth of anti-Jewish sentiment throughout the Arab world and the global Muslim community, sentiments that remain strong today. Cold War anti-Zionism, the rejection of the Jewish claim to Israel/Palestine, often included elements of anti-Semitism and attacks on the Jewish people themselves.

The rise of modern European secular culture in the eighteenth and nineteenth centuries did not result in the disappearance of anti-Semitism. Indeed, it remained an ugly part of the European cultural landscape. In fact, Theodore Herzl's Zionist movement grew as a response to the continued exclusion of Jews from late nineteenth-century European culture. In the 1890s, Herzl's arguments for a separate Jewish state proceeded from his realization that Jews would always be regarded as alien in Europe. Fifty years later, the horrors of the Nazi Holocaust focused world attention on the plight of the European Jewish community, and the state of Israel was established in November 1948 as a Jewish homeland.

Anti-Semitism

Zionism was not the only response of European Jews to anti-Semitism. Many embraced socialism and communism as ideologies that held the promise of acceptance and equal treatment. Indeed, Zionism and socialism were often linked. In Russia, many Jews actively supported the Bolshevik Revolution of 1917 and embraced the resulting Soviet state. However, traditional Russian anti-Semitism often flared in the Soviet Union and was remolded in Soviet terms. During the late 1940s and early 1950s, Soviet dictator Josef Stalin grew frustrated with the support of Soviet Jews for Zionism and contemplated the creation of a separate enclave for them in eastern Siberia; he also acted to limit Jewish educational and professional opportunities. Soviet limitations on Jewish identity continued in the 1960s, and after the 1967 Arab-Israeli War many Soviet Jews—known as *refuseniks*—wished to emigrate but were denied permission, ostensibly because of their knowledge of state secrets. During the 1970s, the United States made Jewish emigration a priority in negotiations with the Soviet Union, and many Jews left Russia. Jewish dissidents such as Natan Sharansky continued to pressure the Soviet leadership in the late 1970s and 1980s, often to their peril. However, it was not until the advent of Soviet leader Mikhail Gorbachev that Soviet Jews received the freedom to depart.

The Zionist movement, begun by Herzl and his followers in the late nineteenth century, had sought to establish a Jewish homeland in Palestine through land purchases and emigration from Europe (to increase the Jewish community already present). The first Jewish kibbutzim, or collective farms, were established in the first decades of the twentieth century. Jewish immigration continued unabated as the region passed from Ottoman Turkish to British control after World War I. The increase in the Jewish population of Palestine resulted in considerable Arab resentment and anti-Jewish sentiment. From the Arab point of view, the Jewish presence would unjustly result in the displacement of Arabs and in the reduction of Arab power and influence in the region. Anti-Jewish riots took place several times in the 1920s, as the grand mufti of Jerusalem, Hajj Amin al-Husseini, encouraged action against Zionism. A general Arab uprising in 1936 contributed to a change in British policy, and in 1939 the British drastically cut Jewish immigration.

The establishment of Israel transformed the situation. While the global Jewish population viewed Israel as a haven in their ancestral homeland, the Arabs considered it an unjust seizure of Arab territory by the Western powers on behalf of European Jews. Arabs questioned why European atrocities against the Jews should result in a loss of Arab sovereignty over Arab land. None of the newly formed Arab states—Egypt, Syria, Iraq, Jordan, and Lebanon—voted for the United Nations (UN) resolution that created Israel. The state was created in the Middle East over Arab objections. When the new nation was proclaimed in May 1948, all five of these states immediately invaded Israel, initiating half a century of Arab-Israeli warfare.

As Israel fought successfully in the various conflicts of 1948, 1956, 1967, and 1973, anti-Jewish feelings among the Arabs increased. Anti-Zionism represented the core of the Arab position. Indeed, none of the Arab nations of the Middle East recognized the right of Israel to exist until the Egyptian-Israeli peace treaty of 1978. Anti-Zionism, however, was often combined with anti-Semitism, as Arab rhetoric attacked Judaism and the Jewish people. For example, Lebanese and Syrian cartoons at the time of the 1967 War depicted caricatured Jews being expelled from Israel and mounds of Jewish skulls in the streets of Tel Aviv. At the same time, Israeli rhetoric vilified the Arab people. The existence of Arab refugees fanned the flames. Such refugees, mostly Palestinian Arabs who had fled Israel during the 1948 War, lived in a number of large camps located in Syria, Gaza, Jordan, and the West Bank. Dispossessed by the Israelis and not accepted by any of the Arab states, the refugees seethed with anti-Jewish sentiment. The Palestinian Liberation Organization (PLO), founded in 1964, drew its members largely from their ranks.

While some anti-Jewish rhetoric during the Cold War had a religious overtone and called on Arabs to fight the enemies of Islam, the Arab governments largely adopted the socialist, anti-imperialist positions of Arab nationalism. Zionism and Judaism were attacked as racist and imperialist, and Israel was denounced as part of an American imperial plot for global domination. With the Israeli victory in the 1967 War and the seizure and occupation of Arab territories in the Sinai, the West Bank, and the Gaza Strip, such charges

intensified. Much of the developing world, recently liberated from European colonialism, responded to such Arab views; Muslim nations already had an obvious reason to sympathize with the Palestinian refugees and with the Arab cause in general. The Soviet Union cleverly fostered anti-imperialist arguments as a way to reduce American influence among developing nations. The trend resulted in the global isolation of Israel, best illustrated by the 1975 UN General Assembly's resolution defining Zionism as a form of racism and recognition of Yasir Arafat and the PLO. Global anti-Zionism and anti-Semitism continued to grow, and the Israeli invasion of Lebanon in 1982 accelerated its pace.

With the collapse of the Soviet Union in 1991 and the accompanying decline in global socialist movements, Islam has become an increasingly important source of identity in Arab resistance to Israel. Anti-Israeli and anti-Zionist views in the Middle East and around the world have acquired a more religious character in the years since the end of the Cold War.

Antonescu, Ion (1882–1946)

Romanian marshal and dictator (1940–1944). Born to a prominent military family at Pitești on 14 June 1882, Ion Antonescu graduated from Romanian military schools in Craiova (1902) and Iași (1904). A cavalry lieutenant during the 1907 Peasant Revolt, he fought in the second Balkan War and in World War I. From 1922 to 1927 he was military attaché in Paris, Brussels, and London. He was named chief of the General Staff in 1933, but his opposition to King Carol II's corrupt and sycophantic cabal led him to resign in December 1934. In 1937, Antonescu became minister of national defense in the short-lived government of Octavian Goga, a German-backed regime with strong links to the Romanian fascist organization the Iron Guard. When King Carol announced a royal dictatorship in 1938 and took action to squelch the Iron Guard, Antonescu retired from public life for two years.

In 1940, regional crises climaxed with the Soviet Union's seizure of Bessarabia and northern Bukovina, Bulgaria's retrieval of southern Dobruja, and, with the Vienna Award of 30 August 1940, Hungary's reannexation of northern Transylvania. Before abdicating in favor of his son, Michael, King

Carol was obliged to recall Antonescu to form a government. Initially, Antonescu's National Legionary regime was a coalition dominated by the Iron Guard, which, however, soon lost popular support through its incompetence and violence that culminated in an attempted coup in January 1941.

Antonescu then moved in, supported by Romanian and German military forces. The Iron Guard leaders fled to Germany, where they were interned. On Antonescu's invitation, German troops arrived on 10 October 1940, ostensibly to train the Romanian Army but, more important, to guard the Romanian oil fields and to launch the Balkan and Soviet campaigns the following spring.

Antonescu, convinced that Germany would win the war, hoped that German leader Adolf Hitler would revise the Vienna Award in return for Romania's military support. Viewing Operation BARBAROSSA (begun on 22 June 1941) as an opportunity to regain Bessarabia and northern Bukovina, he commanded Army Group Antonescu and reclaimed the territory in question within a month of the German invasion of the Soviet Union. He then commanded the Romanian Fourth Army's assault on Transnistria, a region that came under Romanian administration and to which some 100,000 Bessarabian and Bukovinian Jews were deported. Despite Antonescu's refusal to participate outright in the German Final Solution, at least 250,000 Jews and Gypsies died as a result of his policies.

Soon after the German defeat at the Battle of Stalingrad in early 1943, Antonescu authorized contacts with the Allies for Romania to leave the war. Their answer was clear: Romania would have to negotiate this with the Soviet Union. Soviet Foreign Minister Vyacheslav Molotov announced Soviet conditions on 2 April 1944. These called for Romania to switch sides and join the Allied war effort, relinquish Bessarabia and northern Bukovina, and pay reparations to the Soviet Union. The Vienna Award would be nullified, and northern Transylvania would be returned to Romania. Antonescu foolishly refused these conditions and resumed direct command of his troops shortly after the Soviet offensive along the Romanian border on 20 August 1944. Returning briefly to Bucharest, Antonescu was summoned to the royal palace on 23 August, where King Michael asked him to sign an armistice. Antonescu refused and was arrested. He was then transferred to the Soviet Union. Brought back to Romania, he was tried on war crimes charges during 4–17 May 1945 before a People's Court. Found guilty, he was executed at Jilava prison near Bucharest on 1 June 1946.

Ion Antonescu became prime minister of Romania in 1940. His fascist pro-German government was popular in the early years of World War II, but he was eventually deposed in a coup d'état and executed as a war criminal. (Library of Congress)

ANZUS Pact (1 September 1951)

Collective security agreement among Australia, New Zealand, and the United States (ANZUS). The ANZUS Pact was concluded on 1 September 1951 in San Francisco and went into force on 29 April 1952. This marked the first time that Australia and New Zealand participated in a security treaty in which the United Kingdom did not also participate.

At the time the pact was drafted, its aims were to prevent the expansion of communism into the region and to prevent the resurgence of Japan as a military threat (a specific concern of Australia and New Zealand). These anti-Japanese sentiments gradually diminished as time passed, and thus the main thrust of the pact was on the containment of communism. Australia and New Zealand, in alliance with the United States, participated in the Korean War, the Vietnam War, and the foundation of the Southeast Asia Treaty Organization (SEATO) in 1954.

The Australian commitment to ANZUS has been maintained in principle across various governments; however, New Zealand's commitment waxed and waned with internal political shifts. New Zealand's Labour government (1972–1975) adopted an antinuclear policy, which temporarily strained relations with the United States and called into question New Zealand's commitment to ANZUS. New Zealand's policies were reversed when the Labour Party lost power in 1975. However, Labour returned to power in 1984 and implemented its antinuclear policy again.

The New Zealand government, led by Prime Minister David Lange, banned nuclear-powered and nuclear-armed ships from entering New Zealand ports and in 1985 refused port access to the destroyer USS *Buchanan*, which was capable of carrying nuclear weapons. Diplomatic relations with the United States were greatly strained as a result of the Lange government's policies. In August 1986 the U.S. government finally suspended its ANZUS defense obligations to New Zealand.

This crisis wrought serious consequences on New Zealand, such as the restriction of intelligence information provided from the United States. However, New Zealand steadfastly maintained the antinuclear policy and adopted the Nuclear Free Zone and Disarmament and Arms Control Act in 1987. Although foreign and military relations between America and New Zealand have been gradually improving since the mid-1990s, New Zealand has yet to return to ANZUS.

The terrorist attacks against the United States on 11 September 2001 gave occasion for the first official invocation of the ANZUS Pact by Aus-

tralia, which stipulates mutual assistance when any signatory comes under attack.

Filipino politician and opposition leader during the dictatorship of President Ferdinand Marcos. Born on 27 November 1932 in Concepción, Tarlac Province, to a prominent family, Benigno “Ninoy” Simeon Aquino Jr. became the youngest mayor in Filipino history when he was elected to that post in his hometown in 1955. In the same year he married Corazon Cojuangco, a member of another powerful local family. Aquino’s political star continued to rise with his election as governor of Tarlac Province in 1961, his appointment in 1966 as secretary-general of the Liberal Party, and his 1967 election to the Senate. Aquino was the leading candidate to succeed President Marcos in 1973 when the latter’s second term was due to expire.

The Filipino constitution placed a two-term limit on the presidency. But, determined to stay in power beyond a second term, Marcos declared martial law in September 1972, imprisoning Aquino and other political opponents for their alleged involvement in a communist-inspired plot to overthrow the government. In November 1977, a military tribunal found Aquino guilty of subversion and sentenced him to death. Because of Aquino’s international reputation, however, Marcos stayed the execution and in 1980 allowed Aquino to go into exile in the United States, where he would receive badly needed heart bypass surgery.

In 1981 Marcos lifted the martial law decree, and by 1983 his deteriorating health had weakened his grip on power. At that point, Aquino decided to return to the Philippines to work on the 1984 legislative elections and prepare for a post-Marcos return to democracy. Immediately upon his arrival at the Manila International Airport on 21 August 1983, Aquino was gunned down and murdered by a member of his own military escort, probably not on the order of the ailing Marcos but certainly on the command of someone else in his regime. Massive public demonstrations followed Aquino’s assassination, as a growing number of Filipinos demanded an end to Marcos’s brutal and corrupt rule.

Aquino, Benigno, Jr.
(1932–1983)

In the wake of Aquino's murder, the administration of President Ronald Reagan, previously a strong Marcos proponent, began to withdraw support, calling for an investigation into the assassination, canceling a planned presidential trip to the Philippines, and urging free and fair elections. Although the United States never formally broke ties with Marcos, it allowed a popular rebellion to sweep him from power in February 1986 following his electoral defeat by Aquino's wife.

Aquino, Corazon (1933–)

First woman president of the Philippines (1986–1992). Born in Manila on 25 January 1933 into a family of wealthy landowners, Maria Corazon "Cory" Cojuangco was educated at the Ravenhill Academy in Philadelphia, the Notre Dame Convent School in New York, the College of Mount Saint Vincent in New York, and the Far Eastern University in the Philippines. She married Philippine opposition leader Benigno Aquino in October 1954.

Cory Aquino entered politics six months after her husband's assassination in August 1983. The military, media, and religious establishments all supported Aquino, who held President Ferdinand Marcos personally responsible for her husband's death. Popular Filipino opinion and U.S. government pressure forced Marcos to advance the national elections to February 1986. Aquino united the opposition to the Marcos regime, contesting the election as the presidential candidate of the United Nationalist Democratic Organization (UNIDO). Marcos, who had manipulated the election, claimed victory, prompting key military leaders to revolt. In these circumstances, Philippine Cardinal Jaime Sin broadcast an appeal for "people power." Although Marcos sought to crush the ensuing popular response, opposition to his rule was such that he was eventually forced to leave the country, and Aquino assumed the presidency on 25 February 1986.

As president, Aquino restored constitutional democracy to the Philippines after the long dictatorial regime of Marcos and also combated communist and Muslim insurgencies. Much was expected of Aquino, whom Filipinos viewed as morally upright and scrupulously honest. But Marcos's hopelessly corrupt regime had left a troublesome legacy, including an entrenched bureaucracy and landed gentry elite, graft, foreign debt, and communist and Muslim insurrections.

Aquino ruled by decree until a new constitution was ratified in a 1987 referendum. She immediately undertook steps to make public policy more democratic and less corrupt. Previously, Marcos had enjoyed a pivotal role in a unicameral parliament. A new, bicameral legislature came into being with a multiparty base instead of the two-party system of the Marcos period. Nonetheless, remnants of the old order largely prevented Aquino from pushing reform initiatives through the legislature.

In office, Aquino's personal reputation suffered because of financial malfeasance on the part of her relatives. She also had to face repeated military coup attempts. Aquino survived a December 1989 coup attempt only through U.S. intervention. She was faced with growing factionalism, entrenched cronyism, and political infighting, and her conciliatory stance projected her as a vacillating and indecisive leader. Aquino chose not to seek reelection and left office in June 1992.

Swept into power in 1986 following the assassination of her husband Benigno Aquino, Corazon Aquino was the first woman president of the Philippines. She survived a half dozen assassination attempts and public unrest related to the slow pace of political reform and economic change. (Embassy of the Philippines)

On 29 November 1947, the United Nations (UN) voted to partition the British mandate of Palestine into Jewish and Arab states. This arrangement could not be worked out peacefully and led to the first of four major wars between the Israelis and the Arabs. Fighting erupted in May 1948 upon the founding of the State of Israel. The three other conflicts ensued in 1956 (the Sinai War or Suez Crisis), 1967 (the Six-Day War), and 1973 (the October War, Ramadan War, or Yom Kippur War). In each of these four conflicts, Israeli forces eventually triumphed. Each threatened to bring about superpower intervention, and the four wars had profound implications throughout the Middle East and beyond.

The 1948 war began on the eve of the UN General Assembly's endorsement of Resolution 181 on 29 November 1947, which stipulated the partition of Palestine into Jewish and Arab areas and states. While the Jews endorsed

Arab-Israeli Wars (1948–1973)

ARAB-ISRAELI WAR, 1948

the resolution, the Arabs—both the Palestinians and the Arab League—rejected it. In response to the rejection, Arabs began attacking Jews throughout Palestine, and the incidents expanded so that from December 1947 to May 1948 an intercommunal war raged between the Jewish and the Arab residents of Palestine.

The Jewish community numbered some 600,000 people, while the Palestinian community consisted of more than 1.2 million. However, the Palestinian numerical advantage counted for little on the battlefield. The Palestinians had no national institutions of any kind, let alone a cohesive military. They were also fragmented and divided. The decision to go to war rested in the hands of one man, former Mufti of Jerusalem Hajj Amin al Husayni.

Most Palestinians, more than likely, did not want to go to war, preferring instead to seek peace and truce agreements with their Jewish neighbors. But al Husayni was able to use his religious authority to dictate a greater Palestine agenda. Without political institutions, the only way Palestinians could express their support of al Husayni's action was by individual action, and only 5,000 Palestinians took part in the fighting against the Jews. These essentially guerrilla forces were poorly trained and equipped and ineffectively organized. The Arab League pledged to support the Palestinians but, through its Military Committee, actually usurped the conflict from the Palestinians.

The Military Committee and the mufti argued over the conduct of the war, as each sought to control operations. The Military Committee failed to provide the Palestinians with the money and weapons that the Arab rulers had pledged, and it sent its commanders to Palestine to oversee the war. Such internal conflicts further weakened the Palestinian war effort.

The Jews, on the other hand, were much more organized and better equipped. Jewish society was both Westernized and industrialized, having all the institutions of a modern state. In fact, structurally, the establishment of the Jewish state required only the formal transformation of the prestatehood institutions to government entities: parliament, political parties, banks, and a relatively well-developed military, known as the Hagana. The Hagana was organized during the civil war as a full-fledged army, with nine brigades consisting of some 25,000 conscripts. By May 1948 there were eleven brigades, with nearly 35,000 men. Jewish forces took the offensive in early April 1948; the Palestinians had no chance to counterattack, and by early May they had been defeated.

During this time, and even before the Jews' final campaign, hundreds of thousands of Palestinians fled their homes and became refugees. By the end of the war, there were 750,000–1 million or more refugees. Many of them escaped from the battle zone, but others were expelled and deported by Jewish forces during the actual fighting.

With the official termination of British rule in Palestine on 14 May 1948, the next day David Ben-Gurion, Israel's first elected prime minister, declared the establishment of the State of Israel. This was followed by the advance of four Arab armies toward Palestine bent on a campaign to destroy Israel. On 15 May, Israeli forces secured control over all the territory allocated to the Jewish state by the UN, in addition to a corridor leading to Jerusalem and the

Jewish part of Jerusalem that, according to the Partition Resolution, was to have been internationalized.

The resulting war was, in many respects, primitive. Some 35,000 Israeli soldiers faced 35,000–40,000 Arab soldiers. Both sides were subjected to a UN Security Council arms embargo, but it was the Arabs who suffered most from this. The Arab armies had secured their weapons from Britain. Egypt, Jordan, and Iraq were forced into this arrangement under treaties with Britain and had no access to other markets. With the embargo in place, the Arabs were unable to replace damaged or destroyed weapons, and they had only limited access to ammunition. While the Israelis (at this point) received no military equipment from the West, they did manage in early 1948 to sign a major arms contract with the Czech government, thereby purchasing various weapons but mainly small arms and ammunition.

The strength of the Arab armies was infantry. Their few tanks were mostly Egyptian. Even then, only a few dozen were operational. Despite an initial effort to create a unified command structure, the movements of the four Arab armies toward Palestine were not coordinated. In April 1948 General Nur a-Din Mahmud, an Iraqi officer, was appointed by the Arab League to command the Arab forces. Mahmud then submitted a plan of action, the focus of which was to be northeastern Palestine, where the invading forces

Israeli forces in Galilee near the Arab village of Sassa during the Israeli War for Independence, 1 January 1948. (Israel Government Press Office)

would try to sever eastern Galilee from the Huleh Valley to Lake Kinneret (the Sea of Galilee) from Israel. That would be achieved through the coordinated advance of Syrian, Lebanese, Iraqi, and Jordanian forces in the northern part of Palestine, while the Egyptian Army would move northward to Ibneh, which was inside the designated Arab state. The Egyptians were not to advance into the Jewish state's territory, at least not in the first stage, but rather were to create a diversion that would lure Israeli forces into their sector and reduce Israeli pressure on the main Arab push in the north.

Jordan's King Abdullah had different plans for his army, however. He had no intention of fighting the Jews. Instead, he planned to occupy the area designated for the Palestinian Arab state, west of the Jordan River, and annex it into his kingdom. For that reason he rebuffed Mahmud's plan and ordered the commander of the Arab Legion to act independently and occupy the West Bank. That was done, with the Arab Legion completing its mission in a few days. With that, each Arab army acted in isolation, while at the last minute Lebanon refrained from participating in the war. Syrian and Iraqi forces fought in the northern part of Israel, the Jordanian Arab League in the central sector, and the Egyptian Army in the south.

The Egyptian government dispatched to Palestine 5,500 soldiers organized into two infantry brigades, accompanied by nearly 4,500 irregulars. The Iraqi Army sent to Palestine some 4,500 soldiers, while the Syrians dispatched 6,000. Jordan deployed almost all of its army, some 6,500 men. In addition, some 3,000 irregulars fought alongside the Arab armies.

At that time, Israel had fielded more than 30,000 soldiers. The fighting was divided into two parts: the first from 15 May to 10 June and the second from 9 July to the end of the war. The first stage saw the Jews on the defensive, while in the second half of the war they took the offensive. In the indecisive first phase, small Iraqi and Syrian forces invaded Israel in the north but were repelled following a few days of fighting. Jordanian forces concentrated on the occupation of the West Bank, while the main Egyptian expeditionary force moved northward along the coastline, reaching its final staging area near Yibne, within the area designated to the Arab state. Another part of the Egyptian force crossed the Negev Desert from west to east, moving toward Samaria through Hebron up to the southern outskirts of Jerusalem. Neither Egyptian force encountered any Israeli forces during their movements.

In this initial stage, the Israelis were concentrated along the road to Jerusalem. Both the Jordanians and the Israelis completely misread the other's intentions. The Israelis assumed that the Arab Legion planned to invade Israel, and the Jordanians feared that the Israelis intended to drive the Arab Legion from the West Bank. In fact, all the Israelis sought was to bring the Jewish part of Jerusalem under Israeli control and toward that end to gain control over the road from the coast to Jerusalem. The Israelis feared that the Arab Legion would cut the road to Jerusalem and occupy all of Jerusalem, and to prevent this from occurring they reinforced Jerusalem. The Jordanians interpreted the dispatch of Israeli troops to Jerusalem as an attempt to build up a force to take the offensive against them. This mutual misunderstanding was the cause of the fierce fighting between Israeli and Jordanian forces that

Belligerents of the Arab-Israeli Wars

<i>Year</i>	<i>War</i>	<i>Israel's Opponents</i>	<i>Force Strength</i>
1948	Israeli War of Independence	Palestine and Arab League	55,000 Arabs vs. 108,300 Israelis
1956	Sinai War	Egypt	300,000 Egyptians vs. 254,000 Israelis, British, and French
1967	Six-Day War	Egypt, Jordan, Syria, and Iraq	280,000 Arabs vs. 264,000 Israelis
1973	Yom Kippur War	Egypt, Syria, and Iraq	1,100,000 Arabs vs. 415,000 Israelis

ended with the Jordanians repulsing the Israeli troops and holding on to bases in the Latrun area, the strategic site along the Tel Aviv-Jerusalem road.

Israeli-Jordanian fighting ended when the Israeli government acknowledged its inability to drive out Jordanian forces that blocked the road to Jerusalem and when the two governments realized that the other posed no risk. In November 1948, Jewish and Jordanian military commanders in Jerusalem concluded an agreement that formalized the positions established with the de facto cease-fire of the previous July.

With the end of the fighting with Jordan, the Israelis launched the next and final phase of the war. In a two-stage operation in October and December 1948, the Israeli Army drove the Egyptian forces from the Negev. The Israeli effort to force out the Egyptians along the coast was only partially successful, however. The Egyptians remained in control of the Gaza Strip; indeed, it continued under Egyptian control until 1967.

Concurrent with the October operations in the south, other Israeli troops stormed the high ground in central Galilee, controlled by the Arab League's Arab Liberation Army. After brief fighting, the Israelis occupied all of Galilee. In early January 1949 a cease-fire came into effect, and shortly thereafter negotiations on armistice agreements began.

The second major confrontation between Israel and the Arabs was the Sinai War or Suez Crisis of October 1956. This time, only Israel and Egypt were involved in the fighting. The Israeli-Egyptian war, which in Israel was known as Operation KADESH, was only part of a larger picture, as Britain and France were also involved in the conflict. During 1949–1956, there was constant unrest along the Israeli-Egyptian demarcation lines. Infiltrators regularly crossed the border from the Egyptian-controlled Gaza Strip and from the Sinai. Some were Palestinian refugees wanting either to return to their homes or to visit relatives who remained inside Israel, some hoped to harvest their fields on the Israeli side of the border, some came to steal, and a few went to launch terrorist attacks against Israeli targets.

These infiltrations had an enormous impact on Israel. Economic damage mounted, and border-area residents, many of them newly arrived immigrants, were unprepared for the challenge. Israel feared the political implications of the infiltrations, as estimates of their numbers were thousands per month.

Consequently, Israeli security forces undertook harsh measures against the infiltrators, regardless of their motives for crossing the border. Israeli soldiers often ambushed infiltrators, killing them and launching reprisal attacks. As a result, tensions along the Israeli borders increased, chiefly along the frontiers with Jordan and Egypt.

While the cross-border tensions provided the background context, the war occurred for two main reasons. First, Egyptian President Gamal Abdel Nasser, a fervent Arab nationalist, aspired to lead and unite the Arab world, which deeply troubled Prime Minister Ben-Gurion. He attributed the Arab defeat in 1948 to a great extent to their divisions. Thus, he was fearful of a unified Arab world under Nasser's leadership. The second immediate reason for the war was the Egyptian-Czech arms deal announced in September 1955. The agreement assured Nasser of the modern weapons he would need to carry out an all-out attack against Israel.

The Israelis' fears were mitigated by an Israeli-French arms agreement that tilted the military equilibrium in their favor before September 1955. In June 1956, however, Nasser nationalized the Suez Canal, provoking an acute international crisis that culminated with the 1956 war. Shortly after the beginning of the crisis, France invited Israel to take part in planning a joint military attack on Egypt.

Tensions between Israel and Egypt had significantly diminished. In the summer of 1956, exchanges of fire along the armistice line had largely ceased. More important, expecting a fierce Anglo-French reaction to the nationalization of the Suez Canal, Nasser reduced the Egyptian troop deployment along the Israeli-Egyptian border to reinforce along the Suez Canal. Although Egypt had blockaded the Straits of Tiran, closing it to Israeli ships, this alone could not be reason for war, as there was no Israeli commercial maritime transportation along that route. Nevertheless, Ben-Gurion feared that Nasser was planning to unite the Arab world against Israel, and thus the invitation from a great power to take part in a joint war was too much to resist.

In a meeting at Sèvres during 22–25 October 1956, French and Israeli negotiators worked out the details of the war. The British also joined the endeavor. According to the plan, Israeli parachutists would land a few miles east of the Suez. France and Britain would then issue an ultimatum to both parties to remove their military forces from the canal. Expecting an Egyptian refusal, French and British forces would then invade Egypt to enforce the ultimatum. In the meantime, Israeli forces would storm the Sinai Peninsula. Their goal was to join up with the parachutists in the heart of the Sinai and open the Tiran Straits.

Israel deployed the 7th Armored Brigade, with two tank battalions; the 27th and 37th Mechanized Brigades; the 202nd Parachute Brigade; and the 1st, 4th, 9th, 10th, 11th, and 12th Infantry Brigades. The agreement with the British and French was the determining factor in the Israeli plan of attack. Instead of storming the Egyptian positions in front of them, a paratroop battalion was dropped on 29 October 1956 at the eastern gates of Mitla Pass, some 30 miles east of the Suez Canal. Simultaneously, the paratroop brigade, commanded by Lieutenant Colonel Ariel Sharon, moved into the Sinai to

Egyptian prisoners of war during the Suez Crisis, 3 November 1956. Their steel helmets are in the foreground. (Israel Government Press Office)

join with the battalion waiting deep in the Sinai. The other Israeli forces had to wait until the Anglo-French attack on Egypt began.

Israeli commanders in the field were unaware of the agreement with the British and the French. Fearing for the parachute brigade and seeking a resolute and decisive victory over Egyptian forces, Major General Assaf Simhoni, head of the southern command, ordered his forces to move ahead, with the armored brigade leading. The brigade stormed the Egyptian positions, with the remainder of the forces ensuring the defeat of the Egyptians. Israeli forces completed the occupation of the Sinai and the Gaza Strip within three days. During the fighting, nearly 170 Israeli soldiers were killed and 700 were wounded. The Egyptians sustained thousands of deaths, far more wounded, and more than 5,500 troops taken prisoner.

Israel did not enjoy for long the territorial achievements it gained in the war, however. Under enormous pressure from the United States and the Soviet Union, it was compelled to remove its forces from the Sinai and the Gaza Strip. However, the terms of the Israeli evacuation of the Sinai aimed to provide it with the security it was lacking: UN observers were deployed along the armistice demarcation lines to ensure that they would not be crossed by infiltrators. One result of the stationing of UN forces was the near-complete cessation of infiltration from the Gaza Strip to Israel. It was also agreed that the Sinai would be demilitarized, thus removing the threat of an Egyptian

surprise attack against Israel. President Dwight D. Eisenhower's administration provided assurances that it would no longer allow closure of the Tiran Straits. Finally, the performance of Israeli forces in the war marked a dramatic change in the history of the Israel Defense Forces (IDF). It went from being an unsophisticated, infantry-based army to an efficient, modernized, and mechanized military force. The lessons of the Sinai War certainly paved the way toward the Israelis' impressive achievement in the Six-Day War of 6–11 June 1967.

While the immediate cause of the Six-Day War may be unclear, the long-term catalysts are more obvious. On 15 May 1967, Nasser sent his army into the Sinai. This set the stage for a dramatic three weeks that culminated in an Israeli attack and the total defeat of Egyptian, Jordanian, and Syrian forces. It also resulted in the loss of territories by these three Arab countries.

Tensions along the Israeli-Syrian and Israeli-Jordanian borders provided the long-term cause of the war. There were three issues of contention. The first was the Israeli-Syrian struggle over the sovereignty on several pieces of land along their mutual border. According to the Israeli-Syrian armistice agreements, these areas were demilitarized. The Syrians insisted that sovereignty of the areas was still undecided, while Israel believed that because the areas were on their side of the international border, they were under full Israeli sovereignty. Consequently, Israel insisted that it had the right to cultivate the controversial pieces of land, to the Syrians' dismay. In a number of instances the Syrians tried, by armed force, to prevent Israeli settlers from farming the land.

The second point of controversy lay in Syrian attempts to prevent Israel from diverting water from the Jordan River. Encouraged by the Arab League, the Syrians had tried since 1964 to divert the headwaters of the Jordan River inside Syria. Israel reacted fiercely to this, and until the final Syrian abandonment of the project, many clashes took place between the two nations' armed forces.

The third issue was the revival of the Palestinian cause. After nearly two decades of silence, the Palestinians again were in the forefront of the Arab-Israeli conflict. In the late 1950s, Palestinian engineer and nationalist Yasir Arafat established al-Fatah, an underground organization dedicated to liberating Palestine, and in 1964 the Arab League established the Palestine Liberation Organization (PLO). Over the next few years, other militant Palestinian organizations were established. In January 1965 al-Fatah planted a bomb near an Israeli water-pumping station. The Israelis defused the bomb, but al-Fatah celebrated this as the first Palestinian terrorist attack. Palestinian attacks continued throughout 1965, 1966, and 1967.

Despite the relatively small scale of the attacks, Israel responded aggressively, blaming Jordan for hosting the terrorists and Syria for harboring and encouraging them. The extent and ferocity of Israeli-Syrian clashes increased in early 1967, culminating in an aerial battle between Israeli and Syrian forces in April 1967. Israeli pilots shot down six Syrian planes during one of the dogfights. In the course of a public address, IDF Chief of Staff Lieutenant General Yitzhak Rabin threatened war against Syria.

With a crewman on alert, an Israeli gunboat passes through the Straits of Tiran during the Six-Day War, 8 June 1967. (Israel Government Press Office/Yaacov Agor)

A month later, in May 1967, Nasser ordered his forces into the Sinai. The reasons for this action are unclear. The common assumption is that Moscow warned both the Egyptian and Syrian governments that Israeli military forces were deployed along the Israeli-Syrian border. Because Egypt and Syria were bound by a military pact signed on 4 November 1966, Nasser sent his army into the Sinai to force the Israelis to dilute their forces in the north and to forestall what he assumed was an imminent attack on Syria.

The Israelis responded to the entry of Egyptian forces into the Sinai by calling up IDF reserve forces. Nasser subsequently increased Israeli concerns when he ordered the UN observers along the Israeli-Egyptian border to concentrate in one location. UN Secretary-General U Thant responded by pulling UN forces out of the Sinai altogether. Next, Nasser again closed the Tiran Straits—yet another violation of the agreements that had led to the Israeli withdrawal from the Sinai in 1957. Besides that, Jordan and Egypt signed a military pact on 30 May 1967. This further increased the Israeli sense of siege.

Israeli military doctrine called for preemptive strikes in case of a concentration of Arab forces along its borders. All that was necessary was U.S. permission, and President Lyndon B. Johnson's administration gave that in early June. The war began at dawn on 5 June 1967, with Israeli air strikes first on Egyptian and then on Syrian, Jordanian, and Iraqi air bases. The purpose

of these attacks was to neutralize the Arab air forces and remove the threat of air strikes on Israel. This would also, at a later stage, allow the Israeli Air Force to provide close air support to its forces on the ground.

Catching the vast bulk of the Egyptian aircraft on the ground as their pilots were at breakfast, some 250 Israeli aircraft destroyed the backbone of the Arab air forces within an hour. By the end of the day they had been almost completely wiped out. More than 300 of a total of 420 Egyptian combat aircraft were destroyed that day. The Israelis then turned to destroy the far smaller Jordanian and Syrian air forces.

About an hour after the start of the air raids against Egypt, at about 8:30 A.M. Israeli time, the IDF launched its ground offensive. Three Israeli divisions attacked Egyptian forces in the Sinai, and within four days they had destroyed the Egyptian Army in the Sinai and occupied the peninsula. Israeli operational plans were initially restricted to the Egyptian front. The IDF high command had developed plans to take the fighting to the Jordanian and Syrian fronts, but on the morning of 5 June it had no wish to go to war with these two Arab states.

There were, however, unexpected developments. As the Israeli troops stormed into the Sinai, Jordanian artillery shelled the suburbs of Jerusalem and other targets in Israel. The Israeli government had hoped that Jordan's King Hussein would stay out of the fray and refrain from engaging in serious fighting. That did not happen. Jordanian troops stormed the UN Headquarters in Jerusalem, inducing fears that the next step would be an attempt to take over Israeli-held Mount Scopus, an enclave within a Jordanian-held territory that overlooked Jerusalem. To prevent that, Israeli forces moved ahead to secure a road to Mount Scopus, and the Jerusalem area became an unplanned battlefield. In addition, Israeli troops moved in northern Samaria, from which long-range Jordanian artillery was shelling Israeli seaside cities.

A full-fledged war was now in progress. It lasted two days and ended with the complete Israeli victory over Jordanian forces. Israel then occupied the West Bank of the Jordan River and eastern Jerusalem.

In the north, Syrian forces began to move westward toward the Israeli border but did not complete the deployment and, for unknown reasons, returned to their bases. For five long days the Syrians shelled Israeli settlements from the Golan Heights overlooking the Jordan River Valley. Hoping to avoid a three-front war, the Israelis took no action against the Syrians, despite the heavy pressure from the settlers who had come under Syrian artillery fire. It was only in the last day of the war, with the fighting in the south and center firmly under control, that Israeli troops stormed the Golan Heights, taking it after only a few hours of fighting.

The end of the war saw a new Middle East in which Israel controlled an area three times as large as its pre-1967 territory. Israel had also firmly established itself as a major regional power. It found itself in control of nearly 2 million Arabs in the West Bank, many of whom were refugees from the 1948 war. Militarily, the 1967 war marked a major military departure. First, it was a full-fledged armored war, in which both sides, but chiefly the Egyptians and Israelis, deployed hundreds of tanks. Second, Cold War imperatives were

The end of the war saw a new Middle East in which Israel controlled an area three times as large as its pre-1967 territory. Israel had also firmly established itself as a major regional power.

clearly evident on the battlefield, with Israel equipped with sophisticated Western weapons and enjoying the full political support of the United States, while the Egyptians and the Syrians had the military and political support of the Soviet Union.

The next major Arab-Israeli conflict occurred six years later: the 1973 October War, also known as the War of Atonement, the Yom Kippur War, and the Ramadan War. The years between 1967 and 1973 were not peaceful ones in the Middle East. Nasser refused to accept the results of the Six-Day War and rejected Israeli terms for negotiations in direct talks for a peace agreement in return for giving up the Sinai. The Jordanians and the Syrians, as well as the rest of the Arab world, also rejected Israel's terms, instead demanding compliance with UN Resolution 242 (22 November 1967) that called for the "withdrawal of Israeli armed forces from territories occupied in the recent conflict" and the "termination of all claims or states of belligerency and respect for and acknowledgement of the sovereignty, territorial integrity, and political independence of every state in the area."

UN Resolution 242 became the main reference for any agreement in the region but was missing two things, which made it a source of conflict. First, it called for the withdrawal of Israeli armed forces from "territories occupied" and not from "the territories occupied." This slight semantic difference was at the heart of Israel's claim that it was not called upon to return to all the pre-6 June 1967 lines, as the Arabs argued. Tel Aviv held that this was a matter for discussion with the Arab states involved. Second, the resolution did not call for the parties to begin direct peace talks, as Israel consistently demanded. The result was stalemate.

Israel launched settlement endeavors, seeking to perpetuate its hold on the occupied territories, by placing Jewish settlers in the territories, and the Arab side again resorted to violence. The first to endorse violence were the Palestinians. Disappointed by the Arab defeat, the Palestinians changed their strategy. Prior to 1967 they had used terror attacks as a trigger that might provoke war, which they hoped would end in an Arab victory. Now they decided to take their fate into their own hands and launch their own war of liberation against what they called the Zionist entity. That is, their struggle was not against Israeli occupation of Arab territories but rather against the very idea of Israel. The result was a sharp increase in both the extent and ferocity of Palestinian terrorist attacks on Israel.

In 1968 the Palestinians internationalized their struggle by launching terrorist attacks against Israeli and Jewish targets all over the world. Nasser now also decided on a path of aggression. Frustrated by his inability to bring about a change in Israel's position, he began a campaign under the slogan of "what was taken by force would be returned by force." Following low-level skirmishes along the Suez Canal and adjoining areas, from June 1968 Egyptian forces began shelling and raiding Israeli troop deployments across the Suez Canal. The Israelis responded with artillery fire and retaliatory attacks. The violence escalated as Israel struck deep inside Egypt with its air force.

With the growing intensity of Israeli air attacks on Egypt, pilots from the Soviet Union took an active part in the defense of Egypt. The increased

involvement of the Soviet military in the conflict deeply worried both the Israelis and the United States. Through the mediation of U.S. Secretary of State William Rogers, a cease-fire agreement was concluded in August 1970, and the fighting subsided. Shortly after the signing of the agreement, however, the Egyptians began placing surface-to-air missile (SAM) batteries throughout the canal area, paving the way for the next major conflict, the October War. During 1970–1973, Rogers and UN mediator Gunnar Yarring introduced peace plans that were rejected by both the Israelis and the Egyptians. Following Nasser's death in September 1970, his successor, Anwar Sadat, was determined to change the status quo. Toward that end he acted on two fronts: he called for a gradual settlement that would lead to Israeli withdrawal from the Sinai without a full peace agreement, and he expelled the Soviet advisors brought in by Nasser while resuming negotiations with the United States, which Nasser had ended in 1955.

The failure of Sadat's diplomatic efforts in 1971 led him to begin planning a military operation that would break the political stalemate along the Israeli-Egyptian front. Sadat believed that even a minor Egyptian military success would change the military equilibrium and force a political settlement that would lead to a final settlement. In devising his plan, he carefully calculated Israeli and Egyptian strengths and weaknesses. He believed that Israel's strength lay in its air force and armored divisions, well-trained for the conduct of maneuver warfare. Egyptian strengths were the ability to build a strong defense line and the new SAM batteries deployed all along the canal area and deep within Egypt. Sadat hoped to paralyze the Israeli Air Force by using the SAMs. He hoped to counter the Israelis' advantage in maneuver warfare by forcing them to attack well-fortified and well-defended Egyptian strongholds.

In an attempt to dilute the Israeli military forces on the Sinai front, Sadat brought in Syria. A coordinated surprise attack on both the Syrian and the Egyptian fronts would place maximum stress on the IDF. Above all, the key to the plan's success lay in its secrecy. Were Israel to suspect that an attack was imminent, it would undoubtedly launch a preemptive attack, as it had in 1967. This part of the plan was successful.

A combination of effective deceptive measures undertaken by Egypt combined with Israeli arrogance contributed to Tel Aviv's failure to comprehend what was happening. One deception consisted of repeated Egyptian drills along the canal, simulating a possible crossing. The Israelis thus became accustomed to large Egyptian troop concentrations at the canal and interpreted Egyptian preparations for the actual crossings as just another drill. Even the Egyptian soldiers were told that it was simply a drill. Only when the actual crossing was occurring were they informed of its true nature. Even during the actual attack, however, the real intent of Egyptian and Syrian forces remained unclear to the Israelis, and they initially refrained from action.

Beginning at 2:00 P.M. on 6 October 1973, Egyptian and Syrian artillery and aircraft, and later their ground forces, launched major attacks along the Suez Canal and the Golan Heights. On the Israeli-Egyptian front, Egypt amassed a force of nearly 800,000 soldiers, 2,200 tanks, 2,300 artillery pieces,

150 SAM batteries, and 550 aircraft. Egypt deployed along the canal five infantry divisions with accompanying armored elements, supported by additional infantry and armored independent brigades. This force was backed by three mechanized divisions and two armored divisions. Opposing this force on the eastern bank of the Suez Canal was one Israeli division, supported by 280 tanks.

This Israeli force was no match for the advancing Egyptian troops. The defenders lacked reinforcements, as reserves were called on duty only after the outbreak of the war. They also did not have air support, as Egyptian SAMs proved effective against Israeli aircraft.

The attacking Egyptians crossed the canal and swept over the defending Israelis. It took less than forty-eight hours for the Egyptians to establish a 3- to 5-mile-deep penetration on the east bank of the Suez Canal. They then fortified the area with more troops. Two divisions held the seized area, which was also defended by the SAM batteries across the canal. With that, the Egyptians had achieved their principal aims.

The Israelis rushed reinforcements southward and launched a quick counteroffensive on 8 October in an attempt to repel the invading Egyptians troops. Much to the Israelis' surprise, it was a failure. Undermanned, unorganized, and underequipped Israeli troops moved against a well-organized, well-equipped, and far bigger force protected by handheld, highly effective antitank missiles. The Egyptians crushed the Israeli counteroffensive.

Following this setback, the Israeli General Staff decided to halt offensive actions on the Suez front and give priority to the fighting to the north on the Golan Heights, where in the first hours of the war little stood between massive numbers of invading Syrian armor and the Jewish settlements. Syria deployed two infantry divisions in the first line and two armored divisions in the second. This force had 1,500 tanks against only two Israeli armored brigades with 170 tanks. The Syrian forces swept the Golan Heights, crushing the small Israeli forces facing them. The few Israeli forces here fought desperately, knowing that they were the only force between the Syrians and numerous settlements. They slowed the Syrians and bought just sufficient time for reserves of men and tanks to be brought forward. The Syrians also had an ineffective battle plan, which played to Israeli strengths in maneuver warfare. After seven days of fighting, Israeli troops thwarted the Syrian forces beyond the starting point of the war, across the pre-October 1973 Purple Line, then drove a wedge into Syrian territory. Only then did the IDF again turn to the Egyptian front. Here the goal remained that of driving Egyptian troops from the Sinai.

Sadat overruled his ground commander and continued the advance. This took his forces out of their prepared defensive positions and removed them from the effective SAM cover on the other side of the canal, working to Israel's advantage. Israeli troops also soon located a gap between the two Egyptian divisions defending the occupied area that had gone unnoticed by the Egyptian command. Israeli forces drove through that gap and crossed the canal.

The IDF hoped to achieve two goals. The first and immediate goal was to create a SAM-free zone over which Israeli aircraft could maneuver free

Israeli Centurion tank moving into position on the Golan Heights during the Yom Kippur War, October 1973. (Israel Government Press Office/Haris Eitan)

from the threat of missile attack. The second goal was to cut off Egyptian troops east of the canal from their bases west of the canal. After nearly a week of fighting, the Israelis had accomplished almost all their objectives. Nonetheless, Soviet and U.S. pressure led to a cease-fire before the Israelis could completely cut off the two Egyptian divisions in the east from their bases. The war ended with Egyptian forces on the eastern side of the canal and Israeli troops on Egyptian soil. Neither the Soviets nor the Americans wanted to see the Egyptians completely defeated. The leaders of the two superpowers also assumed that the Egyptian achievement would allow progress in the political process, just as Sadat had sought.

Syrian President Hafez Assad's chief motivation in joining Sadat in the war against Israel was to recapture the Golan Heights. Assad had no diplomatic goals and no intention of using the war as leverage for a settlement with Israel. The fighting in the north with Syria ended with the IDF positioned only about 25 miles from Damascus, while no Syrian forces remained within Israeli-held territory. It was only in 1974, after a disengagement agreement, that Israeli forces withdrew from Syrian territory beyond the Purple Line.

The 1973 war, in effect, ended in 1977 when Sadat visited Israel and set the stage for the 1979 Israeli-Egyptian peace treaty. Turmoil continued, however, chiefly over the Palestinian problem, which was at the root of the

Police clear the remains of shattered Bus No. 18, bombed by terrorists in Jerusalem, 6 December 1983. (Israel Government Press Office/Sa'ar Ya'acov)

Israeli-Arab conflict. Militant Palestinians refused to recognize the existence of the state of the Israel, while Israel refused to deal with the Palestinians. Terrorist attacks against Israel continued, and with a sharp increase in those against the northern settlements from Lebanon, the Israeli government ordered IDF invasions of southern Lebanon in 1977 and 1982. The twin goals of ending the terrorist attacks on Israel and eliminating the Palestinians as a political force failed, leading eventually to an Israeli-Palestinian agreement in 1993. Despite this, mutual Palestinian-Israeli violence continues, placing serious obstacles in the path of a general Arab-Israeli peace settlement.

Notion of unity among Arab states, sometimes referred to as Pan-Arabism, that became popular in the 1950s and 1960s, often combined with the advocacy of socialism and Islamic religious tenets. Arab nationalism rose as a response to European imperialism after World War II and stressed unity of purpose among the Arab countries of the Middle East. While respectful of Islam, Arab nationalist movements were mainly secular in tone and drew heavily upon socialist economic principles and anti-imperialist rhetoric. While the socialist, anti-Western character of Arab nationalism attracted Soviet political and military support and increased Soviet influence in the Middle East, Arab leaders avoided domination by the Soviet Union and found common cause with the nonaligned nations of the third world. Political and military opposition to the State of Israel served as a focal point of Arab nationalist movements, although repeated Arab military defeats contributed to the decline of such movements. Nevertheless, Arab nationalist parties continue to play a dominant role in the politics of Syria and, until recently, Iraq.

Arab nationalism has its roots in the late nineteenth century, when European ideas of nationalism affected the Ottoman Empire. After World War I, as the British and French acquired mandate authority over various Arab territories of the former Ottoman Empire, Arab nationalist sentiment was divided between unifying notions of Pan-Arabism and individual independence movements. Such thinking contributed to the formation of the Arab League on the one hand and the growth of numerous regional nationalist groups such as the Society of the Muslim Brothers in Egypt and the Étoile Nord-Africaine in Algeria on the other. These and similar groups combined nationalism with strong Islamic identity in their drive for independence from Britain and France.

In the years following World War II, most Arab states gained their independence yet were ruled by governments sympathetic to the interests of the European powers. Political crises in the late 1940s and 1950s, including the Arab defeat in the first war with Israel (1948), resulted in the overthrow of many of these governments and the establishment of new regimes willing to challenge the West, particularly in Egypt, Syria, and Iraq. These nations lay at the heart of the Arab nationalist movement during the Cold War. Ongoing

Arab Nationalism

Arab nationalism during the period of the Cold War stressed Arab unity, but not necessarily in the form of a single Arab state.

conflict with Israel would play a major role in the growth of Arab unity. The common Israeli enemy provided the Arab states with a greater cause that overshadowed their individual differences.

Opposition to Israel and support for Palestinian refugees also served to link the resources of the newly wealthy oil states of the Persian Gulf to the larger Arab cause. Finally, the conflict with Israel, combined with the importance of petroleum resources, made the Middle East a region of great strategic interest to the United States and the Soviet Union, and the two superpowers would have a substantial effect on the development and destiny of Arab nationalism.

Arab nationalism during the period of the Cold War stressed Arab unity, but not necessarily in the form of a single Arab state; different states could act in concert to achieve goals that would benefit the entire Arab world. In addition, Arab nationalist movements fit into a broader picture of post-colonial political ideologies popular in the developing world. Such ideologies stressed national or cultural identity, along with Marxist or socialist ideas, as a counter to Western influence. Promoted by the Soviets, socialism served as a reaction among developing nations to their former experiences with European imperialism.

The two most important Arab nationalist movements that took root were Baathism and Nasserism. The Baath (or Resurrection) Party became prominent in Syria after World War II. One of its founders, Michel 'Aflaq, a Syrian Christian, conceived of a single Arab nation embracing all the Arab states and recapturing the glory of the Arabian past. While the movement was respectful of Islamic tenets, its rhetoric and agenda were largely secular and socialist. This socialism grew partly as a response to Western imperialism and partly as a result of increasing Soviet political and military support of Baathist Arab states. The Baath Party increased in influence in Syria and Iraq throughout the late 1950s and early 1960s. In Syria, it came to dominate the country's turbulent politics by the early 1960s and continued to do so throughout the regime of Hafez al-Assad (1971–2001). In Iraq, the party rose to power in 1963 and remained the predominant political force until the overthrow of Saddam Hussein in 2003.

Nasserism reflected the agenda and the political prowess of Gamal Abdel Nasser, Egypt's leader during 1952–1970. Raised amid British domination in Egypt, Nasser combined his rejection of imperialist influence with socialist principles and progressive Islam. Although he used religious rhetoric to appeal to the Egyptian people, his outlook, like that of the Baathists, was primarily secular. Nasser stressed modernization, state ownership of industry, and Egypt's role as the "natural" leader of the Arab world. His suspicion of the West, socialist economic prescriptions, and acceptance of Soviet military aid after 1955 drew him toward the Soviet sphere, but he nonetheless avoided subservience to Moscow and supported the Non-Aligned Movement among developing nations. Nasser actively sought the leadership of a unified Arab world. The temporary union of Egypt and Syria in the United Arab Republic (1958–1961) illustrated his nationalist vision and the overlap of Nasserist and Baathist ideologies.

Cheering crowds surround the car carrying Egyptian President Gamal Abdel Nasser (*right*) and Syrian President Shukri el-Quwatli (*left*) on their way to signing the papers to finalize the merger of Egypt and Syria into the United Arab Republic. (Bettmann/Corbis)

Israel, of course, served as a focal point for Nasser's brand of Arab nationalism; he viewed the defeat of Israel (never achieved) as an expression of Arab unity and a rejection of imperialist interference in the Middle East. In addition, Egyptian leadership in the struggle with Israel contributed to his stature in the Arab world as a whole. Nasser's position in Egypt and among Arab nations was further enhanced by the 1956 Suez Crisis. However, Egypt's attempted military intervention in Yemen (1962–1967) brought Nasser's vision of Arab nationalism into conflict with the royalist, Islamic views of Saudi Arabia and demonstrated the limits of his influence. Further, Egypt's disastrous defeat in the Six-Day War with Israel in June 1967 dealt a crippling blow to his power and prestige. Nasser's authority survived the 1967 War, and the overwhelming popular rejection of his resignation testified to the scope of his popular appeal, but the 1967 defeat ultimately signaled the end of the Nasserist vision of Arab unity. From that point onward, Baathism remained as the strongest single force of Arab nationalism.

Arafat, Yasir (1929–2004)

Palestinian nationalist and leader of the Palestine Liberation Organization (PLO) (1969–2004). Born Mohamed ‘Abd ar-Ra’uf al-Qudwa al-Husayni on 24 August 1929 in Cairo, Egypt, Yasir Arafat as a teenager in Cairo became involved in smuggling arms to Palestinians who were fighting the British and the Jews. He fought against the Jews in Gaza in 1948, a struggle that the Arabs lost.

Arafat studied briefly at the University of Texas before completing his engineering degree at the University of Faud I in Egypt, from which he graduated in 1956. As a student, he served as president of the Union of Palestinian Students; in 1952 he joined the Muslim Brotherhood. After a brief stint in the Egyptian Army during the 1956 Suez Crisis he moved to Kuwait, where he formed his own contracting company.

In 1958 Arafat founded al-Fatah, an underground guerrilla group dedicated to liberating Palestine. In 1964 he left his job, moved to Jordan, and devoted all his energies to organizing raids against Israel. That same year, the PLO was formed. Arafat fought in the 1967 Six-Day War, allegedly escaping from Israel disguised as a woman. Gradually, al-Fatah came to dominate the PLO, and in February 1969 he became chairman of the PLO.

After skirmishes with Jordanian authorities, Arafat was forced to relocate the PLO to Lebanon in 1970. During much of the 1970s he spent considerable time reorienting the PLO’s emphasis from Pan-Arabism to Palestinian nationalism. During the Lebanese Civil War that witnessed brutal fighting between Lebanese Muslims and Lebanese Christians, the PLO sided with the Muslims. Arafat moved the PLO to Tunisia in 1982. In the 1980s he regrouped his organization, which had sustained heavy losses during the fighting in Lebanon. The PLO received important monetary aid from both Iraq and Saudi Arabia during the 1980s, and in 1988 Palestinians declared a formal State of Palestine. With that, Arafat announced that the PLO would renounce all forms of terrorism and would recognize the State of Israel, a radical departure in the organization’s philosophy.

In 1993 the PLO participated in the Oslo Accords and hammered out a peace deal with Israeli Prime Minister Yitzhak Rabin. The PLO located to

the West Bank in 1994, an important first step toward the creation of an autonomous Palestinian state. In 1996 Arafat was elected head of the new Palestinian Authority, which was to provide governance, security, and other services to Palestinians in the West Bank and the Gaza Strip. However, Israeli-Palestinian relations deteriorated rapidly upon the 1996 election of the rightist Israeli Prime Minister Benjamin Netanyahu.

Despite efforts by President Bill Clinton to preserve peace between Israel and the PLO in the summer of 2000, negotiations broke down, and radical groups such as Hamas and the Islamic Jihad commenced a second Intifada. This began four years of violence in Israel and the Occupied Territories. Arafat was increasingly marginalized, and in 2004 President George W. Bush declared that the PLO leader was ineffective and that it was impossible to negotiate with him.

Arafat developed a mysterious illness and went to Paris for medical treatment, where he died on 11 November 2004. As of this writing, the future of the Palestinian cause remains very much in question, although Arafat's successor, Mahmoud Abbas, has taken tentative steps toward reaching some common ground with Israel.

President of Guatemala (1951–1954). Born in Quetzaltenango, Guatemala, on 14 September 1913, Jacobo Arbenz graduated from the Guatemalan National Military Academy in 1935 and subsequently taught science and history there. He took part in the 1944 overthrow of dictator Jorge Ubico, which inaugurated a period of democratization and social reform. During 1944–1950, Arbenz served as minister of defense under Juan José Arévalo.

In November 1950 Arbenz was elected president of Guatemala, ushering in four years of continued reform. Agrarian reform was the linchpin of

**Arbenz, Jacobo
Guzmán**
(1913–1971)

Arbenz's agenda. Enacted in 1952, this saw more than 100,000 peasants receive land confiscated mainly from Guatemalan hacendados (large land-owners) and, most significantly, from the American-owned United Fruit Company (UFCO). Arbenz also encouraged unionization among agricultural workers.

Only a few communists played a part in the reform process, and the Arbenz government saw itself as merely bringing a semifeudal society into the twentieth century. Seen through the prism of the Cold War, however, it appeared to Washington that Arbenz was flirting with socialism, if not communism. Early in the Arbenz presidency, Guatemala became the first major laboratory for what would later become known as political destabilization. The U.S. Central Intelligence Agency (CIA) and State Department, headed by Allen W. and John Foster Dulles, respectively, brothers who had ties to UFCO, undertook a disinformation campaign that undermined Arbenz's legitimacy among the country's upper and middle classes and, especially, the armed forces.

A shipment of Czechoslovak arms to Guatemala in May 1954 provided the United States with "evidence" that Arbenz was tilting toward the Soviet bloc and, therefore, had to be removed from power. The United States helped train a contingent of Guatemalan exiles in Honduras who, in June 1954, invaded Guatemala and forced Arbenz's resignation on 27 June. A pro-American military regime led by Colonel Carlos Castillo Armas then came to power. Arbenz left Guatemala, eventually settling in Mexico. He died in Mexico City on 27 January 1971.

Argentina

South American nation with an area of 1.068 million square miles. Argentina borders Chile to the west, Bolivia and Paraguay to the north, Brazil and Uruguay to the northeast, and the Atlantic Ocean to the east and south. Its 1945 population was approximately 17 million people. It is predominantly of European descent—principally Spaniards and Italians—and Roman Catholicism is the preponderant religion. Argentina is home to the largest Jewish population in Latin America.

Argentina pursued a policy of neutrality during World War II. However, the military government at the time tilted more toward the Axis than the Allied powers. In fact, during the war the country maintained relations with Nazi Germany. Argentina's reluctance to declare war on the Axis had negative consequences, as the United States imposed an economic boycott against the country that lasted until 1949. This did not prevent Argentina from receiving a number of Nazi war criminals.

With the advent of the Cold War, Argentina inaugurated the new political phenomenon of Perónism. The government of Argentine Army General President Juan Perón (1946–1955) sought to maintain an independent foreign policy, the so-called third position between capitalism and communism. Perón's third position was exemplified by his decision to support the United States in the event of a hemispheric threat while at the same time resuming relations with the Soviet Union and concluding important trade agreements with the Soviets. Argentina had not signed the Rio Pact by 1950, but the outbreak of the Korean War that June and a new \$125 million loan from the Export-Import Bank led Perón to do so. Scholars have suggested that the ratification of the Rio Pact was a U.S. condition for the approval of the loan.

After 1950 Perón's foreign policy became openly anti-American and focused on criticizing American economic imperialism, the negative consequences of the Marshall Plan for the Argentine economy, and the anti-Argentina campaign in the U.S. media (especially after Perón shut down the newspaper *La Prensa*). Perón's government came to an end in 1955, overthrown by a military coup. For the next thirty years, Argentina's politics would be bitterly divided between Perónists and anti-Perónists. In that same time frame the nation would have a succession of civilian and military governments, the latter seeing themselves as the guardians of constitutional order.

After the 1959 Cuban Revolution, the government of Arturo Frondizi (1958–1962) attempted to maintain a neutral position toward the island nation. At the 1962 Punta del Este Conference, Argentina abstained from the vote to suspend Cuba from the Organization of American States (OAS). Under pressure from the military, however, Frondizi broke diplomatic relations with Cuba in February 1962.

Relations between the United States and the government of Arturo Illia (1963–1966) had two dynamics. First, Illia decided to cancel oil contracts granted by Frondizi. That infuriated the United States, which eventually decided to suspend its economic aid to Argentina. Illia's oil policy generated sufficient backlash that both the World Bank and the U.S. Agency for International Development (USAID) refused to grant credits to Argentina for two years.

Second, bilateral relations improved in the military arena. In 1964, Argentina signed a memorandum of understanding with the United States in which both countries agreed to cooperate in defense of the hemisphere. Along with Peru, Bolivia, the United States, Colombia, Paraguay, and Venezuela, Argentina participated in a joint military exercise that simulated a counterinsurgency war. Despite the military agreements, however, Argentina did not send troops to the Dominican Republic in 1965. During this

time, Argentina continued its commercial agreements with the Soviet Union, although it condemned the Soviet-Cuban attempt to “export revolution.”

The 1960s and early 1970s were characterized by the emergence of guerrilla movements. The Montoneros and the Revolutionary People’s Army (ERP) were the most important of these. Clashes between the guerrillas and the military government during 1966–1973 put Argentina on the edge of civil war. The return of Perón in 1973 polarized the Argentine society even more, and upon his death in 1974 the country witnessed the installation of one of the most repressive regimes in Latin America.

The military junta that took power in 1976 was determined to eradicate alleged subversion, and toward that end thousands of people simply disappeared. The magnitude of human rights violations was condemned worldwide, and in 1978 U.S. President Jimmy Carter ordered an arms embargo against Argentina.

Until 1981, Argentina continued its nonaligned foreign policy, more for convenience than anything else. But when Ronald Reagan assumed the U.S. presidency, the Argentine military turned its attention to the United States. Argentina cooperated with the United States in training the Nicaraguan Contras and the Salvadoran army in counterinsurgency techniques.

By 1982 Argentina’s economy had all but collapsed, and the military regime was completely discredited. On 2 April 1982, Argentine troops disembarked on the British-controlled Falkland (Malvinas) Islands located off the coast. The dispute over the islands dated back to 1833, when Great Britain had taken them by force. In the 1960s, the United Nations (UN) recognized Argentine sovereign rights over the islands. But diplomatic talks between Argentina and Great Britain at the UN came to a halt in 1982, and President Fortunato Galtieri approved the use of force to occupy the islands. Argentine military leaders believed that Britain would not react with force, and they saw playing this nationalist card as a means to boost their sagging popularity. The UN, Peruvian President Fernando Belaúnde Terry, and the U.S. government tried to mediate a peaceful solution, but the war was already being fought in the South Atlantic. On 14 June 1982, Argentine forces in the Falklands surrendered to British forces. With this defeat, the Argentine military regime collapsed.

The democratic government of President Raul Alfonsín (1983–1989) opted for an independent foreign policy. At least three areas of tension marked U.S.-Argentine relations: the negotiation of the foreign debt, tension in Central America, and the Argentine nuclear program. Alfonsín believed that the foreign debt should be decided at the multinational level between creditor and debtor nations, while the United States wanted negotiations between the debtor nation and creditor institutions. After a failed effort to create a debtor club, Argentina finally accepted the U.S. position. Alfonsín was also at odds with the United States over Nicaragua, where he supported the Contadora Group’s peace efforts. A final source of tension between Washington and Buenos Aires was the decision of the Argentine government to continue development of the Condor II intermediate-range ballistic missile in association with Egypt and Iraq. Argentina also continued in its refusal

to sign the Nuclear Non-Proliferation Treaty. With regard to Chile and Brazil, in 1984 Alfonsín initiated talks with Brazil that led to cooperation in nuclear and economic development. Under President Saul Menem's administration (1989–1999), Argentina aligned its foreign policy with that of the United States.

Oft-overthrown president of Haiti. Born in 1953 in Port Salut, Haiti, Jean-Bertrand Aristide studied theology and was ordained in 1983. He became the first freely elected president of Haiti in 1990 after the end of military rule that followed the fall of the Duvalier dictatorship in 1986. Aristide's term in office lasted less than a year before the generals seized power again in September 1991. With the help of the U.S. government, he was returned to power in 1994 and General Raoul Cedras was exiled. Aristide left the priesthood in 1995 and the next year married Mildred Trouillot, a U.S. citizen.

Aristide served as president until 1996, when he stepped aside after losing his claim that the years spent in exile should not count as part of his five-year term. (The 1987 Haitian constitution prohibits the president from running for consecutive terms.) His handpicked candidate, René Preval, succeeded him in the presidency. Aristide ran again for president in 2000, won, and was sworn in for the third time. Unrest over his failure to reform Haiti's economy and allegations of corruption led to his second exile in 2004.

As an advocate of liberation theology, the controversial Catholic doctrine advocating advancement for the poor and fighting oppression, Aristide naturally came into conflict with the Duvalier government. Liberation theology was equated with communism throughout the 1980s and was therefore suspect to allies of the United States. Aristide promised to reform the nation and aid the poor, which led to grassroots support for his first election in 1990. He did not keep his promises and, in fact, proved to be as addicted to cronyism and the amassing of personal power as any of his predecessors. The failure to

Armenia

A Soviet republic since 1920, when Russian troops invaded and annexed it, Armenia declared its independence from the Soviet Union on 23 September 1991. Located in Transcaucasia, at the geographic crossroads of Europe and the Middle East, landlocked Armenia has borders with Azerbaijan, Iran, Turkey, and Georgia. It was the smallest of the Soviet republics, comprising roughly 11,506 square miles and a population of approximately 1.3 million in 1945. Throughout its history, Armenia's position as a frontier region has resulted in numerous invasions and shifting borders, while competing cultural influences have left their mark on Armenian society. The most enduring historical legacies include Armenia's distinction of being the first nation to adopt Christianity (in the early fourth century) and the unique Armenian alphabet, both of which helped Armenians maintain a distinct national identity. Throughout the Cold War, the Armenian Apostolic Church and its spiritual head, the Catholicos of All Armenians, played a leading role in the country, despite the Soviet Union's official opposition to organized religion.

The pre-Cold War history of Armenia and its strategic geographic position on the southern border of the Soviet Union conditioned its role during the Cold War. Although Armenia was not a direct theater of operations during World War II, Armenians were concerned with the possibility of Turkish intervention against the Soviet Union. When the war ended, Soviet leader Josef Stalin laid claims, on behalf of Armenia and Georgia, against Turkey for the return of the eastern Turkish provinces of Kars and Ardahan to Soviet jurisdiction. These claims were enthusiastically embraced by Armenians both in Soviet Armenia and in Armenian diaspora communities worldwide, largely because of the still-fresh memories of the massacres of Armenians by the Turkish government a generation before. Soviet pressure on Turkey combined with Soviet aid to communist guerrillas in Greece and the continuing Soviet occupation of northern Iran, however, prompted a strong response

from the United States in the form of the Truman Doctrine, which called for extensive aid to Turkey and Greece in their struggle against communist aggression. While the attempt to reclaim Kars and Ardahan was not successful, it did lead to a large-scale repatriation of Armenians from around the world to Soviet Armenia.

Beginning with the death of Stalin in 1953 and continuing throughout the 1950s and early 1960s, Armenia saw significant economic, social, and political changes, including the rise of a new generation of intelligentsia to replace those killed in the 1930s during Stalin's Great Terror. In 1965, Armenian intellectuals raised the issue of commemorating the fiftieth anniversary of the 1915 Armenian genocide in Turkey. Demonstrations took place but were dispersed with water cannon and repressive police actions. In response to this unprecedented action, Soviet authorities acquiesced to Armenian demands to acknowledge the genocide and agreed to erect a monument in Erevan to the victims of 1915.

These unsanctioned political activities in Armenia led to the formation of an organized Armenian dissident movement in the late 1960s and 1970s. Soviet authorities broke up several organizations advocating Armenian independence and imprisoned their members in gulags. The most prominent incident took place in 1977 when a bomb exploded in the Moscow subway. Although there was no clear evidence of their involvement, several Armenians were arrested, tried, and executed. Among those protesting this Soviet action was the human rights activist and dissident Andrei Sakharov. In 1978 when Soviet leader Leonid Brezhnev suggested changes to the Soviet Armenian constitution that would have eliminated the protected status of the Armenian language, Armenians took to the streets in protest, and intellectuals decried the proposed measure. Brezhnev dropped the idea, and the Armenian language maintained its official status in Armenia.

Armenian political activism during the Brezhnev era took place within the context of improving standards of living and rising expectations. These expectations further increased when Mikhail Gorbachev became general secretary of the Communist Party in 1985. Soon after assuming power, Gorbachev embarked on an ambitious program of rehabilitating Soviet society and the economy through his glasnost and perestroika reforms. By 1987 Armenians, fearful of a repetition of the Chernobyl nuclear reactor accident at the Armenian nuclear reactor located at the convergence of several fault lines, began to raise questions about the state of the environment.

Within a short period of time, however, environmental concerns were overshadowed by the struggle over Nagorno-Karabakh, an ethnically Armenian enclave situated within the borders of the neighboring Azerbaijan Soviet Socialist Republic. In February 1988, the local legislature of Nagorno-Karabakh voted to secede from Azerbaijan and join Armenia, a move condemned by Moscow and Baku. A pogrom against Armenians in the Azerbaijani industrial city of Sumgait followed. For several days, mobs hunted down and killed Armenians until Soviet forces reestablished order. This led to escalating violence in and around Nagorno-Karabakh and to hundreds of thousands of refugees fleeing from both republics.

Collapse of an old stone masonry Armenian church in Leninakan, Armenia, following a catastrophic earthquake on 7 December 1988 that killed between 25,000 and 50,000 people. (C. J. Langer, U.S. Geological Survey)

The shock of Sumgait reverberated throughout Armenia, with massive protest demonstrations taking place in Erevan. These spontaneous demonstrations soon became coordinated and led by the Karabagh Committee, a group of intellectuals who articulated the Armenian people's dissatisfaction with the existing situation. The Karabagh Committee transformed itself into the Armenian National Movement (ANM) in 1989 and became a driving political force in the republic, challenging the hegemony of the Communist Party. In the Supreme Soviet elections of summer 1990, the ANM succeeded in dominating the legislature and in having its leading activist, Levon Ter-Petrosyan, elected to the chairmanship.

The conflict over Nagorno-Karabakh was briefly overshadowed on 7 December 1988 when a massive earthquake struck northern Armenia, flattening the country's second largest city and killing between 25,000 and 50,000 people while leaving half a million homeless. Gorbachev, who was in the United States at the time, rushed back home and allowed foreign humanitarian assistance into the affected areas of Armenia. This marked the first time since World War II that such large amounts of Western aid were permitted inside the Soviet Union and was a major turning point in the Cold War.

By the end of 1990 democratic reforms had progressed considerably in Armenia to include agriculture, politics, and the economy. The Armenian Supreme Soviet decided not to participate in Gorbachev's March 1991 refer-

endum on the future of the Soviet Union and instead scheduled a referendum on Armenia's political future for September 1991—all in accordance with the Soviet constitution. In the intervening time period, the August 1991 coup against Gorbachev failed, and when Armenia went ahead with its referendum on 21 September 1991, the result was an overwhelming vote for independence. Independence was declared two days later, and in October 1991 Levon Ter-Petrosyan was elected the first president of an independent Armenia.

Disarmament evolved over the ages to imply the entire range of efforts, both cooperative and imposed, to limit military capabilities. Early practices began largely as postconflict impositions of limitations on military force by the victor upon the vanquished. There were also examples of efforts to avoid conflict by cooperating to demilitarize likely regions of contact and to restrict the use of new and destructive technologies. Arms control was adopted to capture cooperative efforts to contain the nuclear dangers of the Cold War, and it subsequently became more narrowly focused to describe the drawn-out negotiation process addressing superpower strategic nuclear weapons. Against that concept of bilateral arms control, broader efforts continued in the multilateral arena and were aimed at limiting and sometimes banning other weapons and systems, ranging from biological and chemical weapons to antipersonnel land mines.

Efforts to impose some degree of order on international conflict have always been a feature of international relations. The AD 989 Peace and Truce of God proclaimed in the Synod of Charroux established noncombatant status for civilians. The 1675 Strasbourg Agreement between France and Germany outlawed poison weapons. Efforts to demilitarize colonial forces and avoid distant conflicts included the 1814 agreement between Great Britain and Spain restricting trade with rebels in Spain's American colonies.

The period of the late nineteenth and early twentieth centuries was marked by dramatic increases in the lethality of warfare and concomitant efforts to ban the use of certain munitions, to limit the number of advanced

Arms Control

systems deployed, and to restrict the geographic employment of forces. The 1868 St. Petersburg Declaration prohibited explosive projectiles such as dum-dum bullets, and the 1899 Second Hague Convention outlawed chemical, bacteriological, and biological weapons. The 1922 Washington Naval Treaty limited the size of naval fleets of signatory nations.

The impact of destructive technologies and practices during World War I spurred a flurry of activity across the interwar period to limit or prohibit certain weapons. Part of this activity was undertaken in the League of Nations. Much of the focus fell on limiting battleships and other major naval combatants and on outlawing poison gas. While the overall effectiveness of many of these efforts can be questioned, the establishment of an international process for disarmament negotiations left a strong legacy as the foundation for Cold War efforts.

Traditionally, the term “disarmament” was used to indicate the full range of historical endeavors to reduce and restrict military weapons and forces. The concept was broadly used as an umbrella under which multiple and varied arrangements and means of implementation could reside. The centrality of the concept of disarmament was supplanted by the term “arms control” early in the nuclear age. In the mid-1950s policymakers began rethinking an approach that had emphasized general and complete disarmament and instead considering limited, partial measures that would gradually enhance confidence in cooperative security arrangements. Thus, more modest goals came to replace the propaganda-laden disarmament efforts of the late 1940s and early 1950s. International security specialists began using the term “arms control” in place of “disarmament,” which they believed lacked precision and smacked of utopianism. The fundamental books on the subject published in the early 1960s all preferred “arms control” as a more comprehensive term.

Just as advances in military technologies and lethal practices had spurred an increased focus on disarmament following World War I, World War II saw the introduction of what many considered the ultimate weapon as well as a near-global means of delivery. With the failure of early proposals to eliminate or internationalize control over atomic weapons, the focus shifted toward limiting their development and spread and controlling their use and effects. Western academics and policy analysts soon realized that disarmament in the literal sense of eliminating nuclear weapons was not going to happen; these weapons had become a long-term reality of the international system. Thus, as they began examining these weapons and nuclear strategy, they adopted a preference for terminology that captured efforts to control these weapons and prescribe their use.

This perspective was perhaps best expressed by Thomas Schelling and Morton Halperin in their seminal 1961 book *Strategy and Arms Control*: “We believe that arms control is a promising . . . enlargement of the scope of our military strategy. It rests essentially on the recognition that our military relation with potential enemies is not one of pure conflict and opposition, but involves strong elements of mutual interest in the avoidance of a war that neither side wants, in minimizing the costs and risks of the arms competi-

tion, and in curtailing the scope and violence of war in the event it occurs.” These three goals—avoiding war, minimizing the cost of preparing for war, and reducing the consequences if a war occurred—became the shorthand definition of the term “arms control” during the Cold War.

Arms control in the nuclear age was framed first as a component part of an overall military and national security strategy—as an instrument of policy and an adjunct to force posture rather than a utopian or moral crusade. It captured the more cooperative side of policy, focusing not on imposition but on negotiation and compromise, recognizing a shared interest in avoiding nuclear conflict. It was also goal-oriented: avoiding war, limiting the political and economic costs of preparing for war, and minimizing the consequences of any conflict.

Multilateral efforts early in the Cold War sought to control nuclear weapons by limiting the number of delivery systems, restricting testing, and hindering further technological development and proliferation. Multilateral agreements in the nuclear arena prior to the 1970s banned placing nuclear weapons in Antarctica, in outer space, and on the seafloor. Regional nuclear weapon-free zones were also established during this period in Latin America, the South Pacific, Africa, and Southeast Asia. Early restrictions on atmospheric testing were supplemented by efforts to ban all atmospheric tests and eventually underground weapons test explosions. These efforts were capped by the 1968 Nuclear Non-Proliferation Treaty (NPT) that sought to prevent future additions to the nuclear club. These campaigns framed nuclear control issues for further attention on a bilateral basis and established a structure for multilateral efforts extending to other arenas of arms control.

With the completion of the NPT, the primary arms control focus of the Cold War became centered on bilateral strategic controls between the United States and the Soviet Union. The formal arms control negotiating process was characterized by preliminary steps that set the agenda for negotiations: establishing a level of mutual confidence and inspiring self-assurance of the ability to achieve an adequate level of verification to allow strong consideration of a formal, binding agreement. This was followed by a staged four-part negotiation and implementation strategy.

The agenda was often set by progress in other negotiations—either multilateral nuclear efforts or bilateral relations outside of the nuclear arena—or by triggering events such as international crises that created a sense of urgency to pursue heightened cooperation in the nuclear relationship. In all cases, issues to be addressed in the formal process were defined and narrowed to a range that both sides found it comfortable to address. Formal negotiations were supplemented by a series of confidence-building efforts and agreements that established a cooperative base from which to proceed. The essential enabler for all nuclear control agreements was the guarantee of adequate verification means.

Once the preliminary steps were taken (a process that could take years for a major round of agreements), the negotiation process began. Formal talks were established with large delegations representing the full range of affected agencies and functions on each side. These negotiations focused on

Multilateral agreements in the nuclear arena prior to the 1970s banned placing nuclear weapons in Antarctica, outer space, and the seafloor.

both the substance of the agreement—with a central focus on equitable and stabilizing controls—and on its implementation. Years of effort and many technical sidebar discussions were necessary in most cases to ensure that the eventual agreement and its implementation would hold no surprises for either side. Predictably, the talks would often hang up on a final series of points of contention, and a summit between very senior officials on each side would be needed to reach final agreement. The third stage, the endgame (including the formal signing of the agreement), would be characterized by elevation to the highest government officials, much pomp and ceremony, and formal staging for both international and domestic political effect. The final stage consisted of implementation, compliance verification, and monitoring. Formal mechanisms, often including elaborate procedural and even organizational structures, characterized the last stage, supplemented by unilateral verification mechanisms as the ultimate guarantor of compliance.

The first bilateral U.S.-Soviet nuclear arms control endeavor established the process that led to the Strategic Arms Limitations Talks (SALT) and ultimately resulted in the SALT I Interim Agreement—with its adjunct Anti-Ballistic Missile (ABM) Treaty—and the SALT II Treaty. Cold War tensions and a dangerous and expensive nuclear arms race spurred both sides in the 1960s into a series of small cooperative measures and internal organizational steps toward bilateral cooperation on limiting future strategic systems. With the culmination of the NPT and the almost simultaneous attainment of suf-

ficient capabilities in national technical means for unilateral verification, formal bilateral negotiations on SALT began in 1969 within the framework laid out at the 1967 Glassboro Summit.

SALT I, signed in 1972, froze the total number of deployed intercontinental ballistic missiles on both sides and limited the total number of maritime strategic systems that each side could deploy. It also limited the development and deployment of future antiballistic missile systems and restricted other defense technologies. The two sides agreed on the outline of a follow-on agreement at the Vladivostok Summit in 1974. Subsequent detailed negotiations led to the culmination of SALT II in 1979, which placed an aggregate limit on deployed strategic launch vehicles and also limited the numbers of systems that could be equipped with multiple launch systems.

The second series of arms control negotiations between the United States and the Soviet Union (and, after 1991, Russia) addressed force reductions through the Strategic Arms Reduction Talks (START)—leading to the START I and START II treaties—and the elimination of an entire class of weapons through the Intermediate-Range Nuclear Forces (INF) Treaty. Beginning simultaneously with the first series of bilateral U.S.-Soviet Union negotiations, a broader series of East-West efforts addressed the reduction

Test flight of an LGM-118A Peacekeeper intercontinental ballistic missile at Vandenberg Air Force Base, California, 13 November 1985. (U.S. Department of Defense)

Brigadier General Walter T. Worthington (third from right), 186th Air Division commander, watches with members of a Soviet inspection team as a worker cuts a wire harness in a BGM-109G Tomahawk ground-launched cruise missile (GLCM), Davis-Monthan Air Force Base, Arizona, 18 October 1988. Forty-one GLCMs and their launch canisters and seven transporter-erector-launchers will be disposed of at the base in the first round of reductions mandated by the Intermediate Range Nuclear Forces Treaty. (U.S. Department of Defense)

of tensions between the North Atlantic Treaty Organization (NATO) and the Warsaw Pact in Europe. While this work addressed trans-European confidence-building measures and conventional force limitations, it also focused attention on the bilateral-theater nuclear systems of the superpowers. By 1987, with the deployment of modern U.S.-theater nuclear weapons under way in Europe (matching earlier Soviet deployments), the INF treaty negotiations came to fruition, and both sides withdrew and destroyed their missiles. A key legacy of this agreement, in addition to its precedent for elimination of an entire category of weapon systems, was its reliance on on-site inspection teams to verify missile removal and destruction on the other side's territory. With on-site inspection as a supplement to national technical means, strategic reduction negotiations could proceed.

The START talks began in 1982 and proceeded throughout the 1980s alongside an extensive series of nuclear confidence-building measures addressing risk reduction and data sharing. The 1992 START I treaty was significant in that it required measured reductions in both nuclear weapons and delivery vehicles, with intrusive verification provisions to ensure compliance. The bilateral nuclear arms control process was so firmly established by the time of the dissolution of the Soviet Union in 1991 that a brief series

of unilateral initiatives, begun by President George H. W. Bush and reciprocated, in turn, by outgoing Soviet leader Mikhail Gorbachev and incoming Russian President Boris Yeltsin, allowed the START process to continue. The START II treaty was signed in 1993. In this agreement both sides agreed to further reduce their nuclear arsenals. In addition, cooperative efforts succeeded in consolidating control and returning Soviet nuclear systems to the Russian Republic and initiating a broad effort to check the proliferation of former Soviet nuclear capabilities. At the 1997 Helsinki Summit, both countries committed themselves to continue the strategic arms reduction process to even lower levels of nuclear warheads through a START III round. This negotiation never took place; instead, the two sides signed the 2002 Moscow Treaty (officially the Strategic Offensive Reductions Treaty).

Arms control was not solely focused on bilateral U.S.-Soviet strategic arms during the Cold War, however. At the same time, there was a parallel multilateral effort under way in other fields, often led by the United Nations Conference on Disarmament or by regional organizations. These discussions were usually not as highly charged politically as the bilateral efforts, but they did achieve several notable accomplishments. In 1972 the world agreed to ban the production, stockpiling, and use of biological and toxin weapons, for example, and in 1993 it agreed to a similar convention on chemical weapons. NATO and the Warsaw Pact came to an agreement on conventional force levels, composition, and disposition in the Conventional Forces in Europe (CFE) Treaty in 1990. A Comprehensive Test Ban Treaty (CTBT) was signed in Geneva in 1996 (although it had not yet entered into force as of mid-2005), and discussions are still ongoing regarding a Fissile Materials Cutoff Treaty. Nuclear weapon-free zones essentially denuclearized the entire Southern Hemisphere, and a coalition of states and nongovernmental organizations led the effort to ban land mines in 1997. Also, several informal groupings of states, among them the Zangger Committee, the Australia Group, the Wassenaar Arrangement, and the Nuclear Suppliers Group, were created to prevent the proliferation of weapons of mass destruction technologies.

The agenda for arms control remains extensive. The United States and Russia each retain significant nuclear arsenals. There are nine nuclear-armed states in today's world. Remaining nuclear weapons arsenals and the potential for nuclear proliferation—whether materials, components, systems, weapons, or expertise—will keep nuclear arms control on the agenda. In addition, a whole range of conventional arms remains outside of any effective controls. Other weapons with catastrophic potential—particularly biological and chemical—remain a threat for development and proliferation. Far-reaching technological developments have opened up entire new arenas of potential and actual military development and of concomitant arms control interest. Ongoing efforts—unilateral, bilateral, and multilateral; formal and informal; between nations and also including nonstate parties and interests in some cases—are addressing this wide agenda.

In the post-Cold War world, arms control is seen in slightly altered but no less important forms. First, there is likely to be at least another two or

more decades of the U.S.-Russia nuclear reductions implementation process. The cooperative effort to dismantle, control, and destroy the weapons-grade materials from thousands of weapons will be a difficult, expensive, and often contentious process, and it will be compounded and extended with each new round of cuts. The added factor of dealing with strategic defenses will complicate this bilateral endgame, at least in the short term, but it also holds the potential—at least to some observers—of being the only route justifying the continued drawdown of the two strategic nuclear arsenals. In addition, the United States and Russia have yet to address the nonstrategic nuclear weapons that are included in their arsenals. This will even further complicate bilateral arms controls. Finally, similar cooperative efforts to dismantle, control, and destroy former Soviet chemical and biological weapons and capabilities extend the scope and horizons of the bilateral strategic arms control effort. The highly formal bilateral arms control process will certainly be altered, but this series of arms control is far from over.

Second, there is likely to be a continuation of multilateral arms control and disarmament efforts, particularly toward halting and reversing the proliferation and development of nuclear, biological, and chemical weapons. Work remains to be done in fully implementing the NPT and the CTBT and in creating an implementation protocol for the Biological Weapons Convention. New and emerging arenas for arms control may include efforts to control or ban small arms and land mines, discussion of controls on advanced conventional weapons, and emerging venues of interest in space and cyberspace.

Further, major regional arms control and disarmament efforts are just emerging. Europe has long addressed security cooperation, confidence building, and conventional arms control issues, and that effort will no doubt continue. Other regions have adopted nuclear weapon-free zones, and some have established regional and subregional cooperative programs on a range of economic, political, and security issues. Today, with the emergence of new nuclear states in South Asia and with heightened proliferation concerns ranging from East Asia to the Middle East, efforts will be initiated and intensified to establish regional mechanisms for transparency and security.

International events beginning in late 2001 have had a profound effect on all dimensions of international relations. Global terrorism and actions well outside accepted norms of international behavior by rogue and failing states raise critical challenges to the foundations of cooperation and diplomacy that lie at the heart of arms control. In the short term there is an increased emphasis on strengthened nonproliferation as well as an expressed willingness to pursue active counterproliferation or preemption. At the same time, there is also the ongoing and active agreement on the part of the United States and Russia to enact strategic nuclear weapons cuts to 2,000 or fewer warheads on each side. Given the historical record and the net effect of all of these trends, there is reason to believe that arms control and disarmament will remain relevant into the foreseeable future.

Arms Sales, International

The sale of weapons has been an important political and economic activity for centuries, but it may have reached its height during the Cold War. In this period the United States and the Soviet Union competed for influence around the world, and both countries utilized arms sales to maintain the support of allies and to bring new supporters into their respective spheres of influence. In the 1980s alone, it is estimated that arms transfers amounted to a total of \$490 billion. The majority of the arms sold came from the two superpowers, which together accounted for nearly two-thirds of all arms transactions during this time. Most of these sales were directed toward nations of the developing world.

The United States and the Soviet Union regarded arms sales as a primary tool for firming up alliances, acquiring military bases, increasing influence in recipient nations, and maintaining the international balance of power. Both nations sold a variety of weapons to their allies, potential allies, insurgents, and lesser-developed and nonaligned countries. American tanks and jet fighters were sold to Egypt and South Korea, for example, while the Soviets placed tanks in Syria and fighter jets in North Korea.

The U.S. government justified its arms sales by emphasizing the need to halt the spread of communism. Using the rationale that pro-Western, autocratic rulers were better than communists, the United States provided an assorted mix of dictators such as Suharto in Indonesia, Ngo Dinh Diem in South Vietnam, Mobuto Sese Seko in Zaire, and Shah Mohammad Reza Pahlavi in Iran with small arms, missiles, tanks, and jet aircraft in order to keep their support. Members of key regional alliances such as the North Atlantic Treaty Organization (NATO) and the Southeast Asia Treaty Organization (SEATO) were also recipients of American arms, as were important regional allies such as Japan and Israel.

During the 1950s and 1960s, the Soviets supplied arms to anticolonial and independence movements in Asia and Africa, using weapons exports to establish themselves as the leading enemy of imperialism in the developing world. The Soviets provided armaments to a variety of client states including Afghanistan, Angola, Cuba, Ethiopia, India, Iraq, Libya, and Syria as well as to Warsaw Pact nations. The Chinese, North Koreans, and North Vietnamese also received Soviet arms. By the mid-1980s, Soviet weapons exports averaged between \$15 billion and \$20 billion annually.

The governments of neutral nations such as Egypt often took advantage of weapons sales during the Cold War to play the two superpowers off each other. During Dwight Eisenhower's presidency, the ideological implications of the Cold War led to a certain level of frustration with those nonaligned nations that would not take a stand against communism. While the United States did not refuse to sell arms to Egypt in 1955, it proposed terms of payment that were so high that Egypt could not accept them. Cairo then turned to the Soviets, who were more than willing to circumvent the Baghdad Pact and provide weapons to the Egyptians, thereby extending Soviet influence in the Middle East. Countries in the Middle East thus learned that they no longer had to rely on the American-British-French triumvirate as their sole source of weapons. By playing the Russian card, these states could assert their independence from the West. On the other hand, the purchase of Soviet arms by various Middle Eastern nations undoubtedly fueled the increase in American arms sales to Israel. Other nonaligned nations around the world followed suit by soliciting arms from each of the superpowers.

Arms sales by both sides in the Cold War certainly contributed to or extended conflicts around the globe. Weapons supplied by both the superpowers and their proxies to one side or the other (and sometimes both) were used in a variety of wars of liberation as well as in the Arab-Israeli wars, the Korean War, the Vietnam War, the Iran-Iraq War, and the Afghanistan War. The Soviet shipment of nuclear-tipped missiles to Cuba ultimately led to the most dangerous moment of the entire Cold War, the 1962 Cuban Missile Crisis.

For the United States, arms sales also led to a serious political crisis, the Iran-Contra Affair, that occurred during the second term of President Ronald Reagan. In an effort to persuade Iran to use its influence to help win the freedom of American hostages held in Lebanon, the Reagan administration agreed to sell weapons to Iran, which had been at war with Iraq for nearly five years. The proceeds from the sales were then funneled to a Nicaraguan insurgency group, the Contras, who were attempting to overthrow the leftist Sandinista

Israel provided training and weaponry to Honduras. Israeli advisors trained the Cobras, an elite counterinsurgency unit. Shown here is a Honduran soldier with his Israeli-manufactured Uzi submachine gun. (U.S. Department of Defense)

government, which was supported by the Soviets and Cuba. In agreeing to the deal, the administration violated its own stated policy regarding weapons sales and specific congressional legislation that prohibited funding the Contras. The discovery of the arrangement in November 1986 precipitated a serious scandal. It also raised constitutional issues regarding the separation of powers and the president's prerogative in the conduct of foreign policy.

Since the end of the Cold War, arms sales have declined significantly. Transfers of arms during the period 1997–2001 dropped from approximately \$46 billion to \$25 billion. Despite the general decline of arms sales over the past the twenty years, the movement of weapons between nations remains considerable. Asian nations in particular account for a high percentage of arms purchases, buying some 40 percent of all weapons exports. The Middle East is another significant regional buyer of arms, taking in about 13 percent of exported armaments. Saudi Arabia led the world in arms imports in 2001, followed by China, Taiwan, South Korea, Egypt, Israel, India, Kuwait, Pakistan, and Sri Lanka.

Among arms exporters today, the United States is the leading arms merchant by far. American arms sales in 2001 alone accounted for almost 46 percent of all weapons transfers made in that year. Since 1992, the United States has exported more than \$142 billion worth of armaments worldwide. Other leading arms suppliers are Russia, France, Great Britain, China, Israel, the Ukraine, Slovakia, Belgium, Greece, and South Korea.

Artillery

Between the end of World War II and the end of the Cold War, artillery went through the most dramatic series of changes in its entire history. In the middle of the Vietnam War, a World War II-era field artilleryman would still have been able to recognize most of what he saw in a typical field artillery

battalion. By the Persian Gulf War in 1991, he would have been totally lost. For the other branches of artillery, the changes were faster and even more drastic.

By 1948 the United States had abandoned coastal artillery completely, and Britain followed suit in 1956. As early as the late 1930s, it was obvious that carrier-based aircraft were making conventional gun battery coastal defenses obsolete, and in reaction many coastal artillery units started to convert to air defense (antiaircraft artillery, or AAA) missions. Most American air defense artillery (ADA) units today carry the lineage of older coastal artillery units. ADA weapons also went through rapid and radical changes following World War II. Most large-caliber AAA guns were phased out in favor of guided missiles, although some armies still retained machine gun-based systems for low-flying aircraft. Two of the most prominent still in service in the early twenty-first century include the American 20mm Vulcan and the Soviet 23mm ZSU-23-4. Both systems are radar controlled and are mounted on self-propelled tracked carriages.

In the 1960s many armies started introducing shoulder-fired, man-portable air defense systems (MANPADs) to extend air defense coverage to lower-level maneuver units in the field. Unfortunately, too many of these weapons were poorly accounted for and were controlled by many armies. During the 1980–1988 period alone, the Soviets delivered 32,210 surface-to-air missiles (SAMs) of all types to third world countries; during the Soviet war in Afghanistan, the United States supplied the mujahideen resistance with Stinger MANPADs. All too many MANPADs ended up on the black market, and at the beginning of the twenty-first century MANPADs in the hands of terrorists had become one of the worst-case nightmare scenarios.

Antitank artillery units were virtually unique to World War II, and most armies abandoned them completely by the mid-1950s, although conventional Soviet field artillery retained an antitank role in the direct-fire mode. Most antitank guns were phased out in favor of wire-guided antitank missiles, either employed directly by the lower-level maneuver units or later fired from helicopters. When the armed helicopter first appeared in Vietnam firing 2.75-inch unguided rockets, those units initially were designated as aerial field artillery (AFA) because the U.S. Army at that time did not have an aviation branch. As helicopter ordnance became more sophisticated and the first purpose-built attack helicopter, the AH-1 Cobra, was introduced, such units quickly were redesignated as attack aviation. Shortly after the end of the Vietnam War, the U.S. Army reintroduced the Aviation Branch that it lost when the U.S. Air Force became a separate service in 1947.

At the start of World War II, the standard divisional support gun in most armies was 75mm. From the latter half of World War II through Vietnam, it was 105mm. In the years since Vietnam it has been 155mm. Although the self-propelled (SP) gun became a standard weapon system in World War II, most field artillery then was still towed. Today most of the artillery of the major armies is SP. The weight of the SP guns, however, restricts their air transportability, and for that reason most armies still have a number of the lighter towed guns, particularly the 105mm, that can be transported by helicopter.

In the early 1960s the United States introduced an entire family of SP guns. The venerable 155mm SP howitzer M-109 was adopted by at least twenty countries. It has undergone constant modification and improvement and still remains in service. The 8-inch (203mm) howitzer M-110 was essentially a World War II weapon mounted on new SP chasses. With a range of 16,800 meters, it reputedly was the most accurate field artillery weapon in history. In the 1970s a longer barrel gave it even more range, but many maneuver commanders disliked it because of its slow speed. It was phased out of the U.S. inventory immediately after the Persian Gulf War, a decision that many artillery experts still believe was a serious mistake because of the weapon's accuracy and unparalleled hitting power. The 175mm SP M-107 was mounted on the same chassis as the M-110. Firing out to 32,700 meters, it had the longest range of any American cannon system. Unfortunately, it was very inaccurate and suffered from the same mobility problems as the M-110. The 175mm SP was phased out in the early 1980s.

The standard artillery calibers used by the Soviet Union, its client states in the third world, and the Warsaw Pact states included 122mm, 152mm, and 203mm, which were first adopted by the emperors' armies and have been used by the Russians up to the present. Initially, the Soviets did not follow the trend toward SP field artillery. From the mid-1970s through the mid-1980s, however, the Soviets conducted an aggressive program of introducing the new 2S family of SP artillery. These included the 122mm SP howitzer 2S-1, the 152mm SP howitzer 2S-3, the 152mm SP gun 2S-5, the 203mm SP gun 2S-7, and the 240mm SP mortar 2S-4.

It is an old adage of the British Royal Artillery that the real artillery weapon is the projectile and that the gun is merely the means of sending it to the target. During World War II, the most common types of artillery ammunition were high explosive (HE), illumination, and smoke. Chemical artillery rounds had been widely used during World War I; all sides still had them in their arsenals during World War II, but they were never used. Nonetheless, most armies during the Cold War stockpiled chemical artillery rounds and trained in their delivery. Chemical agents carried in the artillery rounds included the GB (nonpersistent) and VX (persistent) nerve agents and the HD blistering agent.

During the Cold War period, a wide range of new and innovative artillery projectiles came into service. During the Vietnam War, the United States introduced the antipersonnel round (APERS), commonly called the Beehive round. Designed to defend isolated firebases from human-wave attacks, the Beehive round fired thousands of tiny *fléchettes* (essentially small nails with

fins) at point-blank range. The Beehive was a return to the concept of the old canister round of muzzle-loading artillery. Also introduced in Vietnam, the Improved Conventional Munition (ICM) was a cargo-carrying round that dispersed antipersonnel submunitions (bomblets) above the target. After the Vietnam War, the United States introduced the Dual-Purpose ICM (DPICM) round, containing a mixture of antipersonnel and antiarmor submunitions. In the 1980s the United States also introduced a laser-guided antitank round, the M-712 Copperhead. Developed to counter the massive Soviet armored formations, the Copperhead was the first field artillery round specifically designed to be fired against a point target rather than an area target.

Another variation on the cargo-carrying round was the late-1970s U.S. introduction of the Field Artillery Scatterable Mines (FASCAM) system, designed to lay minefields deep into enemy territory. FASCAM rounds carried either antipersonnel or antiarmor mines. Each of the mines has a variable active period that can be set prior to firing the round. At the end of the maximum active period the mines automatically disarm, thereby rendering them harmless to friendly troops who might advance through the area in the future.

Fuel Air Explosives (FAE) are powerful conventional explosives, sometimes called the poor man's nuke. The round operates on the same principle as a grain elevator explosion. A preliminary explosion first disperses a cloud of petroleum-based droplets over a large area while the main charge detonates the vapor cloud, producing a huge fireball. The Soviets reportedly used FAE artillery rounds and missile warheads in Afghanistan.

The most defining characteristic of Cold War field artillery was its ability to fire a nuclear round, the so-called battlefield nuclear weapon, also erroneously called the tactical nuclear weapon. The first and only cannon firing of a nuclear round occurred on 25 May 1953 at Frenchman's Flats, Nevada, as part of Operation UPSHOT-KNOTHOLE. An 803-pound T-124 projectile with a W-9 warhead was fired to a range of 10,000 meters and detonated 160 meters above the ground, producing a yield of fifteen kilotons. The weapon that fired the round was the superheavy 280mm M-65 gun. Originally designed late in World War II, the weapon was never put into production as originally intended. In the late 1940s the design was resurrected specifically as a nuclear weapon. In battery, the gun weighed 93,800 pounds and fired from a box-trail platform. It was suspended between two specially built tractors. In addition to the nuclear round, it could also fire a 598-pound HE round out to a range of 28,700 meters. Nicknamed "Atomic Annie," the M-65 remained in service a little more than ten years.

The mainstays of the U.S. nuclear field artillery arsenal were the 155mm M-109 and 8-inch M-110 howitzers. Both weapons also fired conventional ammunition and fired many thousands of HE rounds during the Vietnam War and later during the Persian Gulf War. The M-109 was capable of firing the M-454 nuclear round. At 120 pounds, the round's W-48 fission warhead produced a mere 0.1-kiloton blast. It was the smallest U.S. nuclear warhead ever fielded.

Approximately 1,060 M-454 rounds were procured. The other nuclear shell produced in large numbers was the M-422 with the W-33 warhead, fired

The first and only test of the M65 atomic cannon, nicknamed “Atomic Annie,” at Frenchman’s Flat, Nevada, 25 May 1953. (Library of Congress)

The logic and even the basic sanity of nuclear weapons with such a short range was debated continually throughout the Cold War.

by the 8-inch M-110 howitzer. Three types of the W-33s produced yields between five and ten kilotons. A fourth type produced a forty-kiloton yield. Some 2,000 W-33s were produced between 1957 and 1965. Late in the Cold War the M-753 round with the W-79 warhead was also produced in small numbers for the 8-inch M-110 howitzer. It had only a one- to two-kiloton yield, but its enhanced radiation effect was designed to produce greater human killing with less blast damage.

American officers specially trained as nuclear target analysts carried the additional skill indicator personnel code of 5X. The logic and even the basic sanity of nuclear weapons with such a short range was debated continually throughout the Cold War. In the event of an all-out attack by the Soviet Union and the Warsaw Pact nations, units such as the 2nd Battalion, 92nd Field Artillery, stationed in Giessen, the Federal Republic of Germany (FRG, West Germany), were supposed to deploy to predesignated positions near the Fulda Gap. Once in position, their mission was to fire a single nuclear round from each of the battalion’s twelve 8-inch M-110 howitzers. Most American artillerymen who served in Germany during the Cold War understood only too well that it was basically a suicide mission.

An M198 155mm howitzer firing during the multinational joint service Exercise BRIGHT STAR in Egypt, 1 August 1985. (U.S. Department of Defense)

President George H. W. Bush made the unilateral decision to eliminate nuclear field artillery in 1991, withdrawing some 1,300 nuclear shells from Europe. The Soviet Union followed suit in 1992. The United States destroyed its last nuclear artillery round, a W-79 warhead, in late 2003.

Britain's Royal Artillery employed the U.S. M-109 and M-110 howitzers, and as a nuclear power, British forces had nuclear rounds for both weapons. The West German Bundeswehr also used the M-109 and M-110 but as a nonnuclear power did not have nuclear rounds. There was, however, a system in place to issue such rounds to the Bundeswehr in time of war. U.S. Special Weapons units, sometimes called caretaker units, were aligned with and based near designated Bundeswehr artillery units. The American units maintained physical control over the nuclear rounds. Upon receipt of the release authority of the president of the United States and the approval of the West German chancellor, the nuclear rounds would be released to the German units. Fortunately, this mechanism was never tested.

Artillery rockets have been in use since at least the War of 1812, but they only became significant battlefield weapons during World War II. The German V-1 Buzz Bomb was the world's first practical cruise missile. The German V-2 was the first guided missile used as a weapon and the forerunner of today's intercontinental ballistic missiles (ICBMs). The German Nebelwerfers and the Soviet Katyushas were the first practical multiple rocket launchers.

During the 1950s the United States fielded a succession of battlefield rocket and missile systems, including the Corporal, the Sergeant, and the Little John. Introduced in 1962, the Honest John had both nuclear and HE warheads. The 762mm rocket was launched from a rail on the back of a truck and had a range of 37,000 meters. As an unguided, free-flight rocket, it was aimed before firing using fire direction calculations similar to those used for tube artillery. In 1972 the United States replaced the Honest John with the Lance. Designed as a nuclear delivery system only, the 557mm inertial-guided missile had a range of 112 kilometers.

The Pershing, first introduced in 1962 and fielded in Europe in 1964, was the premier U.S. field artillery missile system. An inertial-guided, two-stage missile with a nuclear warhead and a range of up to 750 kilometers, it became the backbone of the nuclear deterrent against attack by the Soviet Union and the Warsaw Pact nations. In March 1964 the West German Air Force's first Pershing wing began unit training at Fort Sill, Oklahoma. The control system for the warheads in Germany was the same as for the nuclear artillery shells.

The upgraded Pershing Ia, introduced in 1969, had a W-50 warhead with yields of 60, 200, or 400 kilotons. The far more capable and accurate Pershing II, with a range of 1,800 kilometers, was introduced in 1983. Fired from West Germany, the P-2, as it was called, could hit targets with pinpoint accuracy deep in the Soviet Union. Its W-85 warhead produced a 40-kiloton airburst. Basing the P-2 on German soil caused a major political crisis for the government of Chancellor Helmut Schmidt, but the administration of President Ronald Reagan forced the issue. Some historians have since argued that the deployment of the P-2 was one of the most significant elements of pressure that led to the collapse of the Soviet Union. Under the control of the

56th Field Artillery Command, eighty-six P-2 launchers and ninety-one warheads were deployed in Germany as of 1989. Before the Pershings were eliminated in 1991, the U.S. Army had 169 Pershing 1a and 234 Pershing II missiles.

The Soviet 2S family of guns 152mm and larger were all chemical- and nuclear-capable, but the Soviets generally showed less interest than the West in using tube artillery to fire nuclear weapons, preferring instead to rely on rockets and missiles to deliver warheads of mass destruction. The Soviet equivalent of the Honest John was known to NATO as the FROG (for Free Rocket Over Ground). The last model, the FROG-7, had HE, chemical, and nuclear warheads and a range of 42 miles. The SS-1C, known to NATO as the SCUD-B, was a guided missile with a range of 180 miles. During the Persian Gulf War, Iraqi-made crude versions of the SCUD proved widely inaccurate but were a tremendous nuisance to the Coalition, especially when Iraq fired them at Israel in a failed attempt to broaden the conflict. The Soviet SS-21 guided missile was a divisional-level system with a range of only 60 miles.

Soviet FROG-7 tactical nuclear surface-to-surface missile and crew, 1 August 1982. (U.S. Department of Defense)

The SS-23 was an army-level system with a range of 300 miles. The SS-12 was a theater-level system with a range of 540 miles. All these Soviet systems carried nuclear warheads. Under the provisions of the Intermediate-Range Nuclear Forces (INF) Treaty, the United States agreed to eliminate the Pershing and the Soviets agreed to eliminate the SS-12 and SS-23.

As with the Soviets, the French relied primarily on their Pluton guided missile as their primary delivery system for battlefield nuclear weapons. Although Israel is not an officially declared nuclear power, most Western intelligence organizations have assumed since the 1970s that their Jericho missile has a nuclear warhead.

Except in the Soviet Union, multiple rocket launching systems went into an eclipse for almost four decades following World War II. Such weapons never went out of service in the Warsaw Pact armies, and in 1964 the Soviets introduced the BM-21. Basically an upgraded version of the World War II Katyusha, the BM-21 was a truck-mounted system with forty launching tubes that salvoed 122mm free flight rockets to a range of 20,000 meters. The system was not very accurate, but the NATO armies respected and feared its area-saturation power.

In 1985 the United States introduced the Multiple Launch Rocket System (MLRS), which was quickly adopted by many NATO armies. Based on the fully tracked chassis of the Bradley armored fighting vehicle, the MLRS was a quantum technological improvement over the Soviet BM-21. The MLRS carries twelve 227mm rockets and can fire them by salvo, by ripple, or individually. Although the rockets are unguided, they are essentially as accurate as cannon artillery because each SP launcher system carries its own onboard computer and a Global Positioning System (GPS). This also means that each launcher in a battery can position itself independently in diverse locations yet still mass its fire on a designated target. Each rocket has a range of 32,000 meters and delivers a 320-pound warhead containing 644 DPICM submunitions, capable of defeating 100mm of armor. Once the launcher expends its load, the onboard automatic loading system allows the three-man crew to reload the system in a matter of minutes. The MLRS was used with devastating effect during the Persian Gulf War.

Electronics and computers have also changed artillery in ways undreamed of during World War II. By the latter half of the Cold War, all the NATO and Warsaw Pact armies had sophisticated counterbattery radar systems that could instantly pinpoint the map coordinates of hostile mortars or artillery. (Because of the different angles of fire involved, separately designed radar systems are still needed to locate mortars and artillery.)

Up through the end of the Vietnam War, fire direction calculations were still done manually, using firing charts and graphical firing tables (specially designed slide rules). A well-trained Fire Direction Control (FDC) section could calculate initial firing data in a matter of minutes and subsequent correction data in a matter of seconds.

In the late 1960s the U.S. Army introduced its Field Artillery Digital Automatic Computer (FADAC). The new computer was not really faster than a well-trained FDC section using manual methods, but FADAC's advantages

were that it was more accurate and could compute firing data for up to five different batteries simultaneously. FADAC's main drawback was its poor reliability. It was almost always down for maintenance. The equivalent British system was called Field Artillery Computing Equipment (FACE).

With the widespread commercial introduction of inexpensive handheld calculators in the early 1970s and programmable calculators shortly thereafter, many enterprising FDC crewmen bought their own calculators and programmed them for the gunnery solution. The results were almost as fast and accurate as FADAC and were much more reliable. The U.S. Army eventually bought and preprogrammed the Texas Instruments TI-59 calculator. Meanwhile, the much more reliable and flexible TACFIRE system replaced FADAC in all U.S. artillery units by the 1980s. The system is still in use today, and only a few very old artillerymen at the start of the twenty-first century still remember how to compute the gunnery solution manually.

Accurate artillery fire is absolutely dependent on accurate positioning data for the guns and at least the registration point, if not all the targets. Up through the end of the Vietnam War, artillery survey was still conducted the same way the early colonial surveyors laid out the Mason-Dixon Line, with a tape measure and a transit. In the early 1970s the time- and labor-intensive tape measure gave way to the infrared Distance Measuring Equipment (DME). Shortly thereafter the entire surveying system was completely automated with the introduction of the Position and Azimuth Determining System (PADS). Once initialized, the gyro-based PADS could be transported in a ground vehicle or a helicopter to any location, there to produce precise digital readout of the location. When the constellation of GPS satellites was put in orbit, the GPS was able to produce accurate location data anywhere in the world. As with the MLRS, other SP artillery systems have been fitted with their own onboard GPS, allowing the guns of a single battery to be widely dispersed on the ground yet mass their fires on a single target. The widely dispersed guns, of course, offer a far more difficult counterbattery target to the enemy and improve battlefield survivability.

Although conventional tube artillery is nowhere near as technically sophisticated as guided missiles, jet fighter-bombers, or helicopter gunships, it will remain a key element on the battlefield well into the twenty-first century and most probably beyond. Within the arc of its range, field artillery is still the only all-weather, twenty-four-hour, instant-response, close-fire support system that cannot be interfered with by electronic means. As long as the ammunition supply remains constant, artillery also has far greater duration than any of the airborne systems. Those characteristics make field artillery still indispensable to infantrymen in contact.

Prior to World War II, the United States based its armed forces in Asia on its own territories in the Philippines, in Guam and Hawaii, and also in some other small islands in the Pacific acquired during the late nineteenth century. Following World War II, U.S. forces in Asia maintained army, air force, and navy installations on these Pacific islands as well as in Japan and southern Korea, which the United States occupied. Additionally, the United States had military personnel in China to assist the Guomindang (Nationalist) government. Most of these latter were withdrawn during the civil war with the communists by mid-1948.

The 1947 Truman Doctrine, which pledged the United States to preventing the spread of communism around the world, played a large role in the basing and use of U.S. forces in Asia. The intensification of the U.S.-Soviet rivalry during the late 1940s, the communist victory in China in October 1949, and the outbreak of the Korean War in June 1950 triggered a sizable Cold War buildup of U.S. military personnel and facilities throughout Asia. During the Cold War, the primary goals of U.S. forces in Asia were to prevent the expansion of communist powers, specifically the Soviet Union, the People's Republic of China (PRC), the Democratic People's Republic of Korea (DPRK, North Korea), and later the Democratic Republic of Vietnam (DRV, North Vietnam), and to ensure American political influence in and economic access to Asia.

During the early 1950s, the Americans greatly augmented their military presence in Asia. By 1953, the last year of the Korean War, American military personnel in the Far East had grown to nearly 630,000, up from 150,000 in 1950. Another 26,000 personnel (an increase from just 21,000 in 1950) were based in the central and southwest Pacific, mostly in the Marianas and Marshall Islands. Although the Philippines achieved independence in 1946 and the occupation of Japan ended in 1952, the United States made agreements with these nations to maintain

military bases there. In 1954, the United States formalized a security agreement with the Republic of China (ROC) on Taiwan to provide military assistance and advice to enable it to repel a takeover by the PRC. By the end of the decade, the number of U.S. personnel in Asia and the Pacific stood at 209,000.

The expansion of forces in Asia transformed the areas surrounding U.S. bases and brought with it tens of thousands of dependents of armed forces personnel. According to the 1960 census, 81,540 military dependents lived in Asia. Many bases became entirely American communities, complete with housing units, commissaries, post exchanges, churches, hospitals, schools, movie theaters, and recreational facilities. But in and around these “little Americas,” Americans and Asians interacted quite regularly. Asians worked on American military bases and in American homes, while Americans ventured into off-base communities, spending money in local establishments. Naval personnel also routinely visited port cities on ship visits to numerous countries throughout Asia and the Pacific.

Off-base, Asian-owned businesses offered services and products that they knew would attract American spending. Besides the requisite souvenir shops and eateries, local businesspeople opened bars, nightclubs, and clothing shops, many of which catered specifically to American tastes and proclivities. In some places, even brothels were opened to attract American patrons. While some host nationals welcomed the economic opportunities generated by the U.S. bases, many decried the commercial districts and sex-oriented tourism that sprang up around bases in Okinawa, the Philippines, and South Korea. Servicemen’s undesirable and sometimes criminal behavior, which included drunkenness, brawling, vehicle accidents, robbery, sexual assault, and even murder, fueled host nationals’ resentment of American bases. Asian sex workers risked venereal diseases, unwanted pregnancies, and ostracism from families and communities. Host societies also struggled with the effects of marriages between American servicemen and Asian women and the attendant births of mixed-race children, some of whom were abandoned. In addition, the social and even legal stigmatization of mixed-race relationships followed American servicemen and their Asian families when they moved back to the United States, especially in states with antimiscegenation laws.

Many such families requested tours of duty in Hawaii, where they believed they would find greater acceptance.

The sharp escalation of the Vietnam War beginning in 1965 brought a huge influx of U.S. forces to Southeast Asia. Major preparations for Vietnam operations were often staged at bases in the Philippines and Okinawa. In 1964, when U.S. military personnel in Vietnam were still designated “advisors,” the number of U.S. troops in Asia and the Pacific numbered almost 240,000. By September 1967, with the deployments of combat troops to South Vietnam, American forces in Asia had risen to 759,270. This buildup included more than 37,000 American soldiers in Thailand, where the U.S. Air Force maintained several large bases for bombing missions in North Vietnam. Additionally, the United States deployed B-52s from Taiwan for attacks on Vietnamese communists. Despite several Asian governments’ assistance to the United States in Vietnam, the Vietnam War provoked strong anti-Americanism among many Asians. Asians had protested the U.S. military presence since the 1950s—for example, on Okinawa when the U.S. military seized farmlands to construct bases. But opposition to the Vietnam War in the 1960s and early 1970s manifested itself in more vociferous demonstrations against the U.S. military in Asia.

Upon coming to office in 1969, President Richard Nixon gradually withdrew combat troops from Vietnam. The decrease in U.S. forces in Asia continued into the 1970s. As part of the normalization of relations with the PRC, President Jimmy Carter withdrew all U.S. military forces from Taiwan in the late 1970s. In 1980, just under 115,000 U.S. personnel were stationed in East Asia and the Pacific, mostly in Japan and South Korea, where there was—and remains—a contingent of some 36,000 U.S. troops, most of whom are based near the demilitarized zone. The Soviet invasion of Afghanistan in 1979, the subsequent rise in tensions between the United States and the Soviet Union, and the increase in Soviet nuclear arms in Asia and naval forces in the Pacific caused American military analysts to worry that the Soviets intended to expand their influence in the region. Also in the 1980s, rising nationalism and political turmoil in the Philippines resulted in a movement to ban nuclear weapons on the islands and an agreement that the United States would remove its bases by the early 1990s, by which time the Cold War had ended.

Assad, Hafez

(1930–2000)

Syrian military officer, defense minister (1966–1970), and president of Syria (1971–2000). Born on 6 October 1930 in Qardaha, Syria, to an impoverished family, Hafez Assad was an Alawite, part of a small sect of Shia Islam. At age sixteen he joined the secular Baath Party, to which he remained loyal throughout his life. In 1955 he graduated from the Syrian (Hims) Military Academy and was commissioned as an air force lieutenant pilot. When Assad openly criticized the union of Egypt and Syria (briefly forming the United Arab Republic), he was forced into exile in Egypt during 1959–1961. Along with other military officers, mainly Baathists, Assad participated in a coup against the Syrian government in March 1963 popularly known as the Eighth of March Coup. The conspirators moved quickly to consolidate power and outlawed all political parties except for the Baath Party. The following year Assad assumed the post of commander of the air force.

Yet another military junta launched a second coup in 1966, this one led by a group of Alawite military officers that included Assad. The new ruling junta purged much of the Baath old guard. During 1966–1970, Assad served as minister of defense. The loss of the Golan Heights in the 1967 Six-Day War seriously undermined Assad's political clout. This resulted in a protracted struggle with his mentor and rival Salah al-Jadid, chief of staff of the Syrian armed forces.

A split in the Baath Party between nationalists and progressives provided Assad the opportunity to seize control of the government in November 1970. The prime minister, part of the progressive wing, was arrested along with other key government officials. Assad had engineered a bloodless coup. He took the post of prime minister himself and in 1971 was elected president for the first of five times. To be sure, Assad's reign had a dark side. Under his rule, political rivals and dissidents were subjected to summary arrest, torture, and execution.

On 6 October 1973 Assad and Egyptian President Anwar Sadat launched a joint Syrian-Egyptian sneak attack against Israel (known as the Yom Kippur War). Their goal was to recapture territories lost in the 1967 Six-Day War. Egypt wanted the Sinai back, and Syria sought return of the Golan Heights. After early setbacks, the Israelis were winning the war when a United Nations' cease-fire went into effect on 22 October, but Assad was furious with Sadat, claiming that he had botched the operation.

Assad sent troops to Lebanon in 1976 during the civil war there. Syrian troops thus took up a permanent presence in Lebanon under the auspices of the Arab League, remaining there until 2005.

Hafez Assad, president of Syria from 1971 until his death in 2000. Assad was considered a key figure in Middle East politics. (Embassy of the Syrian Arab Republic)

The only significant internal threat to Assad's iron-fisted rule came in 1982 when the fundamentalist Muslim Brotherhood rebelled in Hamah. Assad responded with brutal force, ordering security forces to suppress the unrest by using poison gas that may have killed as many as 35,000 civilians.

Assad was a shrewd and ambitious man who made Syria a political and military leader in the Arab world. He died in Damascus on 10 June 2000. His son, Bashar Assad, succeeded him in power.

An explosive device employing certain radioactive isotopes (uranium-235 and plutonium-239) to achieve a critical mass leading to a chain reaction in which neutrons split the nuclei of atoms. This process, known as nuclear fission, releases mass in the form of tremendous heat energy equivalent to several tons of TNT.

In 1938, German scientists were the first to achieve the fission of uranium, and physicists realized that this process might be used to create a weapon of mass destruction. A number of prominent scientists including Albert Einstein, Enrico Fermi, and Leo Szilard had left Europe to live in the United States. Szilard and Fermi convinced Einstein to send a letter to President Franklin D. Roosevelt in August 1939 in which he warned that the Germans could produce an atomic weapon. That same year Roosevelt provided modest research funding, and scientists at five U.S. universities began to conduct experiments related to nuclear energy. On 6 December 1941, Roosevelt authorized \$2 billion for the Manhattan Engineering District (Manhattan Project), earmarked for the specific purpose of creating an atomic bomb. U.S. Army Brigadier General Leslie Groves had charge of the project, while physicist Robert Oppenheimer was its scientific leader.

In December 1942 at the University of Chicago, a team of nuclear physicists led by Fermi produced the first controlled and self-sustaining nuclear fission reaction. Project facilities were subsequently constructed in Oak Ridge, Tennessee; Hanford, Washington; and Los Alamos, New Mexico. Ultimately, the project involved some 120,000 individuals including scientists, engineers, machinists, and other skilled craftsmen. Oppenheimer and his team successfully constructed and then detonated the world's first atomic bomb on 16 July 1945 at Los Alamos, New Mexico.

Atomic Bomb

Smoke rises more than 60,000 feet into the air over Nagasaki, Japan, on 9 August 1945 from the explosion of the second atomic bomb. (National Archives and Records Administration)

Roosevelt died in April 1945, and his successor, President Harry S. Truman, authorized the employment of the atomic bomb against Japan. The first bomb fell on Hiroshima on 6 August 1945, and a second bomb was dropped on Nagasaki three days later. While the decision to employ the atomic bomb is now a controversial issue and at the time some U.S. leaders opposed the bomb's use, the American people did not regard it as such in August 1945. Historians now point out that Truman employed the bomb to end the war quickly, and there is every indication that as costly as the two bombs were in terms of human lives lost, their use may actually have saved Japanese lives by giving Japanese Emperor Hirohito the excuse to order his armed forces to surrender. This decision prevented the certain starvation of hundreds of thousands of Japanese and the high cost in casualties of a U.S. land invasion of the Japanese home islands. Needless to say, the decision for peace also saved American lives in regard to an invasion of Japan. Historians estimate that an invasion of the Japanese home islands might have cost 40,000 American lives. Other historians point out that Truman was in part motivated by a desire to warn the Soviet Union against additional territorial expansion and to avoid having to share the occupation of Japan with the Soviet Union.

Atomic weapons took on increased significance in the Cold War period. For four years the United States enjoyed a nuclear monopoly, and some European leaders have expressed the view that this alone prevented the Soviet Union from taking over Western Europe. Efforts to place atomic weapons under the control of the United Nations were unsuccessful.

Truman not only authorized the use of the atomic bomb against Japan but also had a significant impact on American atomic policy in the late 1940s and 1950s. As tensions increased between the United States and the Soviet Union, the U.S. monopoly of the atomic bomb became the cornerstone of American policy designed to contain Soviet expansion. The first U.S. war plan that included the use of atomic weapons was completed in August 1947. Approved by the U.S. Joint Chiefs of Staff, it was code-named *BROILER* and called for the dropping of atomic bombs on specific key governmental and other targets within the Soviet Union. The planners assumed that bombs dropped on several high-profile targets would have such a profound psychological impact that the Soviets would surrender.

The United States employed the threat of atomic weapons during the Berlin Blockade of 1948–1949. Although Truman met the challenge by ordering the airlifting of necessary food and supplies into West Berlin, he also deployed sixty B-29s to airbases in Great Britain. This deployment clearly implied that Washington was considering their use, although no atomic bombs actually left the United States.

By the end of 1948, the United States had produced about a hundred atomic bombs. It also developed a war plan, FLEETWOOD, that called for a preemptive atomic attack during which the United States would deliver approximately 80 percent of its stockpile of atomic weapons in a single strike. In this Washington planned for a first-strike atomic response to any surprise Soviet attack. The assumption behind this was that employment of atomic weapons would give the United States time to mobilize and deploy its conventional forces. This emphasis on nuclear weapons led to a decision in Washington to invest only minimal sums in conventional forces.

The Soviet Union, meanwhile, was frantically working to develop its own atomic bomb, an effort accelerated by the activities of its spies in the United States. The USSR detonated its first atomic bomb on 29 August 1949. This development shocked Washington and ultimately led to a nuclear arms race between the two Cold War superpowers. Both sides developed ever more powerful atomic weapons and finally the hydrogen bomb. The United States detonated a hydrogen bomb on 1 November 1952 at Enewetak, and the Soviets exploded a similar device on 12 August 1953. The Soviet hydrogen bomb was twenty times more powerful than the atomic bomb that the United States had dropped on Hiroshima. The nuclear arms race that ensued included tactical nuclear weapons.

Unfortunately for world security, agreements between the United States and the Soviet Union limiting nuclear weapons did not prevent other countries from developing such weapons. During the Cold War, other powers including Britain, France, and the People's Republic of China joined the nuclear club. The dangers of nuclear proliferation continue to pose a significant threat to world stability. Especially worrisome is the threat of a nuclear device in the hands of a terrorist organization.

Atomic Energy Commission, United Nations

Agency established by the United Nations (UN) that undertook the first efforts toward nuclear disarmament. Created on 24 January 1946, the UN Atomic Energy Commission (UNAEC) was charged with developing a plan for the control of atomic energy. Early negotiations on this matter revealed sharp disagreements between the United States and the Soviet Union.

On 14 June 1946 at the first meeting of the UNAEC, U.S. representative to the UNAEC Bernard Baruch presented what became known as the Baruch Plan. It called for the creation of an international atomic development agency that would control all military-related atomic work. The agency would survey nuclear raw material worldwide and assume control of all fissionable materials and production plants. Resources would be made available for peaceful use, with the agency to license and inspect all nuclear activities. The agency would also report to the UN any attempt to build atomic bombs, which would result in immediate UN action.

Baruch pledged that the United States would hand over all its atomic weapons and research to such an authority and would halt production of atomic weapons as soon as adequate controls were in place and the information's privacy from the public could be assured. The Baruch Plan specified that members of the UN Security Council not be allowed to use their veto in matters regarding atomic energy and that fixed penalties be adopted for nations violating the prohibition on possession of atomic bombs or fissionable materials.

The Soviet Union opposed the Baruch Plan, calling instead for unilateral atomic disarmament by the United States prior to any agreement. The Soviets also adamantly refused to allow atomic inspectors within their borders, a precondition of the Baruch Plan. The Soviets were, at the time, hard at work developing their own atomic weapons. Despite Soviet opposition, the UNAEC endorsed the Baruch Plan and reported it to the General Assembly, which then voted overwhelmingly to present it to the Security Council, where the Soviet Union promptly vetoed it.

Although other compromise proposals were presented in 1947 and 1948, they too met with Soviet opposition, and at the end of 1948 the UNAEC reported to the Security Council that it had reached a stalemate. In 1952 the UNAEC and the Commission for Conventional Armaments merged into the UN Disarmament Commission. The latter became the chief UN vehicle for pressing nuclear disarmament but had little influence, for nuclear weapons continued to proliferate.

Government agency established in 1946 to supervise the development and control of nuclear energy in the United States. The Atomic Energy Commission (USAEC) was formally created by the 1946 Atomic Energy Act during a time in which a debate was raging over whether the commission should be run by civilian or military authorities. As it turned out, the USAEC became a five-person body, appointed by the president, that worked in tandem with a separate military board, which dealt strictly with atomic energy as it related to military purposes.

During 1946–1952, a civilian advisory board to the USAEC was chaired by Robert Oppenheimer, lead scientist on the Manhattan Project and an opponent of the hydrogen bomb. Oppenheimer's opposition to the development of more powerful nuclear weapons led to his suspension as a consultant to the commission in 1953. In 1954, amid a storm of controversy, Oppenheimer was refused a renewal of his government security clearance after fellow atomic scientist Edward Teller testified against him at USAEC hearings.

The USAEC's purview was largely that of nuclear weapons design, deployment, and control. However, the commission also supervised the extraction and development of fissionable materials, the development of nuclear reactors, and the use of nuclear energy in such applications as medicine and the hard sciences, such as chemistry, biology, and certain engineering fields. Following the controversy that swirled around the USAEC in the early 1950s, the agency performed diligently—and quietly—as it oversaw myriad projects involving nuclear energy.

The USAEC was organized out of existence in 1974 when it was absorbed into the Energy Research and Development Administration. Since then, further bureaucratic changes resulted in the original USAEC's work being handled by the Nuclear Regulatory Commission and the Department of Energy.

Atoms for Peace Proposal

(8 December 1953)

Atomic energy policy and nuclear arms control proposal presented by U.S. President Dwight D. Eisenhower in a United Nations (UN) speech on 8 December 1953. Eisenhower's initiative was an effort to shape the international environment, create an opportunity for limiting the development and spread of nuclear weapons, and establish the potential for the peaceful use of nuclear science. He stressed the dangers of nuclear weapons to set the tone for his proposal and to create a general awareness of the realities of the international security situation. His warnings built on his already-established domestic public education program known as Operation Candor.

U.S. President Dwight D. Eisenhower delivers his “Atoms for Peace” speech to the United Nations on 8 December 1953. (Corel)

A key element of Eisenhower's Atoms for Peace proposal was the pooling of fissionable nuclear materials under a UN organization for atomic energy. This transfer of control would result in a reduction of scarce materials needed to produce nuclear weapons. The collaboration of the United States, the United Kingdom, and the Soviet Union in this material transfer would also provide an opportunity to open communications with the Soviets in the area of nuclear issues.

Eisenhower also proposed that the new UN atomic agency retain the responsibility of pursuing peaceful uses of the technology in areas such as agriculture, medicine, and especially electric power generation. The International Atomic Energy Agency (IAEA) was created in 1957 as a direct result of the Atoms for Peace proposal. The development of peaceful uses of nuclear technology did indeed advance after the speech, but arms control and the reduction of available fissile materials did not meet expectations. Yet the initiative paved the way for subsequent discussions related to nuclear issues. The Atoms for Peace plan has been criticized as a cynical response to the Soviets' recently acquired thermonuclear bomb capability and an effort to place the Soviets in a situation in which they would likely reject the very public American initiative. The United States certainly expected to benefit politically regardless of the Soviet reaction. Eisenhower's intent seemed to include a sincere desire to encourage positive uses of nuclear technologies and to constrain the nuclear arms race.

British politician and prime minister. Born in London on 3 January 1883, Clement Attlee was educated at Haileybury College and University College, Oxford, and was called to the bar in 1905. Thereafter, he became a socialist. Abandoning his legal career in 1908, he undertook political work before becoming a lecturer in social administration at the London School of Economics in 1913. Unlike many Labour Party leaders, Attlee saw active service in World War I. Elected to the House of Commons in 1923, he became leader of the Labour Party in 1935. During World War II he held several cabinet positions and was also deputy prime minister.

Attlee led the Labour Party to its landslide July 1945 victory, taking over immediately from defeated British Prime Minister Winston Churchill as his country's chief representative at the ongoing Potsdam summit conference. Attlee and Foreign Secretary Ernest Bevin, an anticommunist labor leader, soon became strong proponents of a policy of firm resistance to Soviet expansion in Europe. They did so, however, from a position of relative weakness, as Britain ended the war nearly bankrupt and was faced with heavy and expensive military commitments in Germany, Japan, and Greece and around its far-flung empire. In addition, the new Labour government sought to provide old-age pensions, unemployment benefits, free or heavily subsidized housing, health care, and education for all.

Given the Labour Party's long-standing anti-imperialist outlook and India's strong nationalist movement, in February 1946 Attlee announced plans to grant India full independence in the near future. This occurred in August 1947, with the largely Muslim northwestern and northeastern

provinces choosing to separate from the predominantly Hindu remainder in what became Pakistan. Within a few years Burma followed suit, although Britain temporarily retook and retained its Asian colonies in Malaya, Singapore, and Hong Kong, whose continued possession and administration remained economically profitable.

Conscious of British weakness, Attlee sought to encourage the United States to maintain a close Anglo-American alliance. By late 1946 budgetary problems left British leaders little alternative to reducing expensive military commitments. Attlee chose to do so in Greece and Turkey. Greece was facing a major internal communist insurgency, and Turkey was under heavy pressure from the Soviet Union to grant it rights to the strategic Dardanelles Straits. Attlee and Bevin privately informed President Harry S. Truman and Secretary of State George Marshall of their intention to withdraw sometime before the public announcement, which became the occasion for Truman's February 1947 speech known as the Truman Doctrine, placing U.S. aid to Greece and Turkey in the broader context of a worldwide anticommunist strategy.

The harsh winter of 1946–1947 caused economic hardship and generated unrest across Western Europe, bringing further British pleas for U.S. aid and helping to generate the Marshall Plan, a coordinated program for European economic recovery. Attlee and Bevin were also instrumental in establishing a Western European Union defense pact that led to the North Atlantic Treaty Organization (NATO) in April 1949.

By 1950 major differences existed between the Truman administration and Attlee's government on Asian policy concerning Hong Kong, Indochina, anticolonialism, Korea, and the new People's Republic of China (PRC). Britain, unlike the United States, pragmatically accorded the PRC almost immediate recognition and traded extensively with it. The Korean War gave British leaders an opportunity to demonstrate their continuing loyalty and regain the international status that Britain's economic problems had eroded. Due to Bevin's poor health and eventual death, Attlee played a central role in British policy during the Korean War. Urged on by British ambassador in Washington Sir Oliver Franks, in July 1950 Attlee overrode his reluctant chiefs of staff and committed British troops to the American-led United Nations (UN) Command.

British officials welcomed the massive American enhancement of NATO forces that quickly resulted from the Korean conflict. Even so, Attlee was anxious to restrain the United States, fearing that American leaders might escalate the Korean intervention into full-scale war with China and perhaps even the Soviet Union.

Attlee supported the UN decision to cross the 38th Parallel, believing that neither the Soviets nor the Chinese would intervene. When the Chinese did so in November 1950, British leaders feared an expanded conflict and especially the potential employment of atomic weapons. In early December, Attlee flew to Washington seeking to reassure the British public, restrain the United States, and reaffirm Britain's status within the Atlantic alliance. Upon his return to Britain he exaggerated his success, and the belief

became widespread that he had prevented further American escalation of the war.

The Chinese intervention in the Korean War split the Labour Party. Many on the Left argued that the war was misguided and that Attlee's government was overly deferential to the United States. The heavy budgetary strains imposed by the Korean intervention and rearmament, which brought higher taxes, cutbacks in social spending, inflation, and an unfavorable balance of payments, played a major role in the Labour Party's October 1951 electoral defeat. After a second election loss in 1955, Attlee resigned as party leader and entered the House of Lords. He died in London on 8 October 1967.

Burmese political opposition leader and founder of the National League for Democracy (NLD) party. Born in Rangoon on 19 June 1945, Aung San Suu Kyi was the daughter of Burmese national hero of independence General Aung San (1915–1947). In 1960, she left Rangoon and moved to Delhi, where her mother served as Burmese ambassador to India. Aung San Suu Kyi went to England in 1964, enrolled at Oxford University, and graduated in 1967. She went on to work briefly for the United Nations Secretariat in New York before returning to England, where she lived until April 1988 when she returned to Rangoon to care for her ailing mother.

Upon her return to Burma, Aung San Suu Kyi became politically active and took part in the August 1988 mass demonstrations against the nation's authoritarian socialist regime. After the armed forces crushed the prodemocratic

Aung San Suu Kyi
(1945–)

As leader of the National League for Democracy, Aung San Suu Kyi was placed under house arrest by the Burmese government in 1989. Aung San Suu Kyi was awarded the Nobel Peace Prize in 1991, but the resultant international attention failed to win her release. (Reuters/Corbis)

movement and formed a junta in September, Aung San Suu Kyi and other reform-minded politicians founded the NLD. As general secretary of the NLD, Aung San Suu Kyi was deemed a danger to the state and detained by the military junta in July 1989. During her detention, the NLD won a landslide mandate in the 1990 general elections, which the junta promptly nullified.

Aung San Suu Kyi was awarded the Nobel Peace Prize in 1991 for her contributions to the nonviolent, prodemocracy struggle. The junta released her in July 1995 but refused to open a dialogue with her or the NLD. In September 2000, Aung San Suu Kyi was again detained. She was released in May 2002, but her political activities were severely restricted. On 30 May 2003, a mob allegedly supported by the junta attacked Aung San Suu Kyi and several hundred other NLD members during a rural canvassing drive in Upper Burma, and Aung San Suu Kyi was detained for a third time. As of early 2007, Aung San Suu Kyi remains under house arrest.

Auriol, Vincent

(1884–1966)

French socialist politician and first president of the Fourth Republic (1947–1954). Born on 27 August 1884 in Revel, Haute-Garonne, France, Vincent Auriol studied at the University of Toulouse and earned both a doctorate in law and a license in philosophy. He practiced law for a time and joined the Socialist Party in 1905. He won election to the French Chamber of Deputies in 1914 and sided with socialist Léon Blum when the communists split off in 1920. During the Popular Front government of the mid-1930s, Auriol served as minister of finance under Premier Blum in 1936 and as minister of state in 1938.

Auriol was one of eighty deputies who refused to cede executive authority to Henri Philippe Pétain in June 1940. Briefly imprisoned, Auriol escaped

in 1942 and joined the Resistance. A year later he made his way to London to join the Free French of General Charles de Gaulle. Auriol then held a number of government posts in the provisional government.

With his strong reputation as a mediator, Auriol was elected president of both the first (1945) and second (1946) constituent assemblies. He easily won election in January 1947. Although he had earlier advocated abolition of the office of president, he now worked to give it more than a ceremonial function. He used his few powers to the utmost, aided by the considerable factionalism in the National Assembly. He was obliged during his term of office until 1954 to deal with frequent changes of premier for which he solicited replacements. Auriol traveled widely and spoke out on matters of policy, especially foreign affairs. He strongly opposed Soviet expansionism and supported the North Atlantic Treaty Organization (NATO), although at the same time he wished for France to pursue an independent policy. A strong supporter of the French Union, he nonetheless opposed independence for French overseas possessions.

Auriol decided not to seek reelection in 1953. He served briefly on the Constitutional Council of the Fifth Republic but resigned in 1960 because of concerns over the concentration of authority in the hands of Charles de Gaulle. Auriol died in Paris on 1 January 1966.

Large, primarily English-speaking nation located due south of Indonesia, surrounded by the Indian Ocean to the west and the South Pacific to the east. Australia, including the island state of Tasmania, is roughly the size of the continental United States and comprises more than 2.97 million square miles. In 1945, it had a population of approximately 7 million people. Australia was founded as a penal settlement for Great Britain in the eighteenth century. In 1901, the six former colonies on the continent united to form the Commonwealth of Australia with a constitution modeled after that of the United States. It remained closely tied to the British Commonwealth through the first half of the twentieth century, after which Cold War realities pushed

Australia

the Australians away from their Commonwealth obligations and toward alliance with the United States.

Following World War II, Australia sought to rank among the leading nations in Asia, which sometimes resulted in conflict with U.S. policy. Throughout the Cold War, Australia played a delicate balancing act that allowed it to pursue its own interests while still remaining a key U.S. Cold War ally. Australia was one of the original signers of the United Nations (UN) Charter and greatly contributed to the economic, social, and humanitarian efforts of that organization, including peacekeeping activities, human rights investigations, drug control, and the World Trade Organization. It was also a founding member of the Colombo Plan for the Cooperative Economic and Social Development of Asia and the Pacific and used its economic prosperity to aid in the advancement of its regional neighbors.

The 1951 Australia–New Zealand–United States (ANZUS) Treaty was the cornerstone of Australia’s Cold War policy. The treaty held that an attack on one of the member nations would be considered an attack upon the other two. While ANZUS linked Australia with the United States, thus fulfilling Australia’s security needs, it also allowed the nation to pursue its other foreign policy goals. Oftentimes, Australia’s objective of being a leader in Asia was intertwined with Cold War conflicts such as the Korean War and the Vietnam War.

The Cold War helped to shape Australian politics and society as well. The Liberal Party, founded in 1945, had as part of its political platform a deep antipathy toward communism. In 1949, it joined with the Country Party (renamed the National Party in 1982) to decentralize the wartime economy and attempted unsuccessfully to ban the Communist Party. A Liberal-Country coalition ruled Australia for a majority of the Cold War.

Australian Cold War domestic events generally paralleled those of the United States. When Soviet diplomat Vladimir Petrov defected to Australia before the 1954 federal election, Prime Minister Robert G. Menzies used the affair to rekindle anticommunist sentiment. The subsequent Royal Commission that investigated communist influence in Australia, including the leader of the Australian Labour Party, Hebert Vere Everett, took on a conspiratorial atmosphere similar to the McCarthy hearings in the United States.

Australia was never directly threatened during the Cold War. Its Cold War policy was, therefore, one of forward defense. It was an Australian objective to fight communism as far away from its borders as possible. For example, Australia was among many nations that committed troops, via the UN, to the defense of the Republic of Korea (ROK, South Korea) when that country was invaded by the Democratic People’s Republic of Korea (DPRK, North Korea) in June 1950. Australia sent approximately 17,000 men to Korea, of whom 339 were killed in action. The Korean War not only solidified Australia’s relations with the United States but also proved its mettle in the Cold War.

In 1955, Australia joined the Southeast Asia Treaty Organization (SEATO) and bound itself to a regional security organization, even though it objected

to the fact that SEATO did not have the same guarantees as the North Atlantic Treaty Organization (NATO). From the Australian perspective, a flawed treaty was better than none provided it reaffirmed America's presence in Asia. Following the Korean War and during the formation of SEATO, Australia turned its attention to the West New Guinea controversy that pitted Indonesia against the Netherlands.

While the American containment policy would have sacrificed West New Guinea to save Indonesia from communism, Australia supported the Dutch because they stood between the Australian continent and Indonesia. Australia remained a staunch supporter of the Netherlands until the United States guaranteed protection against future Indonesian aggression in West New Guinea. When the United States offered such assurances, Australia reversed its policy, and West New Guinea was integrated into Indonesia. Once more, agreement with the United States meant compromise on the part of Australian foreign policymakers.

When Indonesia threatened the newly formed country of Malaysia in 1963, Australia found itself on the receiving end of military aid requests from the United Kingdom. Australia held off these appeals, however, opting to support the United States in the Republic of Vietnam (RVN, South Vietnam). Australia tried valiantly to conduct an autonomous foreign policy, but more often than not it subordinated its interests to broader Cold War objectives. Australia's most significant Cold War contribution was in fact its involvement in the Vietnam War.

Australia established diplomatic relations with South Vietnam in 1952 when it opened a legation in Saigon. The exchange of diplomatic missions marked the beginning of a twenty-year involvement in an Asian conflict that would alter the scope and focus of Australian foreign policy and its Cold War experience. The first decade in South Vietnam involved an intense effort of nation building. In 1962, Australia began providing military advisors to the fledgling RVN. Three years later Australia sent the first of three battalions of combat troops. By the end of the war in 1975, Australia had rotated nearly 50,000 troops through Vietnam, with a maximum troop strength of 8,000 in 1968. During the war, 423 Australian lives were lost.

Not all of Australia's Cold War experiences occurred overseas. Australia played an important role in U.S. defense strategy by establishing, in its interior, American-run communications facilities that would warn of nuclear attack or unannounced missile launches from Pacific Rim nations. The United States operated low-frequency transmitter facilities in Australia for communicating with nuclear submarines in the Indian Ocean and a high-frequency transmitter linked to a defense satellite communications system. Australia's Pine Gap facility, maintained by American intelligence agencies, also gathered data on Soviet, Chinese, and other Pacific nations' communications.

Upon the establishment of a Labour government in 1972 and the end of the Vietnam commitment, Australia still remained aligned with the West but became a slightly less dependable U.S. ally. Upon the outbreak of the Iraq-Iran War in 1980, Australia refused to participate in naval exercises with the United States and the United Kingdom in the Arabian Sea. In the 1980s,

Australia reestablished itself as a preeminent middle power in world affairs. It would not employ its forces in a foreign conflict if other world powers could handle the situation themselves. Australia responded well to President Ronald Reagan's administration and Prime Minister Robert James Hawke (1983–1991), unlike his Labour predecessor Prime Minister Edward Gough Whitlam (1973–1975), reemphasized Australia's partnership with the United States.

As the Cold War waned, Australia began to reexamine its alliances. In 1985 when New Zealand protested the harboring of American naval vessels that carried nuclear weapons or were nuclear-powered, Hawke supported America's position. In August 1986, the United States and Australia agreed to suspend New Zealand from ANZUS. Although the importance of ANZUS had diminished, the American-Australian relationship remained strong.

Upon the end of the Cold War, Australia developed a tripartite strategy designed to realign itself with the new world order. Australia's objectives were to create a stable and secure region in which to live, to continue to fulfill its treaty obligations to the United States and New Zealand, and to develop a military force capable of independent defense of the country and its international interests.

Austria

Central European state comprising 32,377 square miles, making it slightly larger than the U.S. state of South Carolina. Austria is bordered by Germany and the Czech Republic to the north, Slovakia and Hungary to the east, Italy and Slovenia to the south, and Switzerland to the west. As with Germany, at the end of World War II Austria found itself between East and West. While

Germany was divided into two states during the Cold War, Austria, a nation of some 7 million people in 1946, remained intact. Through cautious diplomacy, the renewed Republic of Austria managed to establish itself between the two blocs of the Cold War, beholden to neither side. Nevertheless, the Austrian position was precarious.

In 1938, through the infamous Anschluss, Germany had annexed Austria. Austrian soldiers fought with the German Army, the Austrian economy contributed significantly to the German war effort, and Austria's population had offered little resistance to German occupation. There were, therefore, solid reasons for treating Austria as a defeated nation at war's end.

Early Anglo-American plans called for Austrian war reparations and marked the country for dismemberment. By 1943, however, fears of Soviet expansion changed those plans. In the Moscow Declaration of 1 November 1943, the Allies committed themselves to the reestablishment of an independent Austria. Reparations would be allowed under a complicated formula, but the Allies now agreed that Austria had been the "first victim" of Hitler's aggression and should be treated accordingly.

Austria's restoration proved difficult. The Soviets treated Austria as a conquered nation, although they had no plans to annex it. Upon entering Austria, Soviet soldiers raped and looted with impunity, while Soviet officials concentrated on extracting as much industrial production and wealth as possible from the country. In April 1945 Soviet forces installed Karl Renner, a prewar advocate of Austro-Marxism, as head of an interim government. With no representatives in Austria, the Allies suspected Renner of being a Soviet puppet and refused to recognize the government. Meanwhile, the Soviets pressed Renner to legitimize their plundering of Austrian economic resources, in accordance with their interpretation of the Moscow Declaration. Renner's government resisted, invoking the Allies' interest.

This delicate balancing act became the hallmark of Austrian statecraft during the Cold War. Continued Soviet pressure for reparations—they demanded a sum of \$250 million at the Allied Potsdam Conference in July and August 1945—brought an increasing Westward tilt, however. Free elections held in November 1945 returned a solid democratic majority. The conservative People's Party captured almost 50 percent of the vote while the Social Democrats took about 45 percent, leaving the Austrian communists with just over 5 percent.

With the avenue to power apparently closed to the Austrian communists, the United States began to fear that Austria would be the target of a pre-emptive, external communist takeover. Austria was therefore singled out by President Harry S. Truman's administration as a priority aid recipient in the 1947 European Recovery Program (Marshall Plan). Although the Soviets tried to block Marshall Plan payments to Austria, the country nonetheless received some \$1.5 billion in aid from the United States.

When communist-led strikes in Austria coincided with the invasion of South Korea during the summer of 1950, the United States agreed to secretly arm Austria as a preventive measure. The Soviets were in any case covertly arming their own adherents in Austria in similar fashion. The result was a

For most of the Cold War, Austria remained inconspicuous and prosperous while scrupulously maintaining its neutrality.

stalemate in Austria's full reconstitution plan through 1952, as each side suspected the other of attempting to draw Austria into its sphere of influence.

The death of Soviet dictator Josef Stalin in March 1953, however, opened a new chapter in Austrian history. The Soviet Union's new collective leadership formulated a more flexible foreign policy known as peaceful coexistence, wherein Austria emerged as a test case. Soviet policy now advocated the creation of a neutral, independent Austrian state as a means of preventing it from joining the Western bloc. The United States initially resisted the idea but eventually embraced it on the conditions that neutrality not be linked to demilitarization and that the Austrian settlement not be linked to a German settlement.

This position, after nearly two years of complex negotiations, came to form the basis of the Austrian State Treaty. As part of their peace offensive, the Soviets agreed to accept greatly reduced reparations payments. Signed on 15 May 1955, the treaty established Austria as an independent state with the understanding that it would remain neutral. The Austrian parliament duly passed a measure on 26 October 1955—one day after the last Allied soldier left Austrian territory—making permanent neutrality part of the constitution.

Austria's moment in the spotlight faded as quickly as peaceful coexistence. For most of the Cold War, Austria remained inconspicuous and prosperous while scrupulously maintaining its neutrality. Its location between East and West, together with its official neutrality, made it a convenient meeting spot for spies and diplomats. Vienna, the Austrian capital, hosted a summit meeting between Soviet Premier Nikita Khrushchev and U.S. President John F. Kennedy in June 1961, and the United Nations opened a third International Center in Vienna in 1980.

Austria's domestic politics were carefully balanced between the Social Democrats and the conservative People's Party, but economically and culturally Austria clearly leaned to the West. When Soviet tanks rolled into Budapest, Hungary, to suppress the 1956 revolution there, Austria opened its borders to some 150,000 refugees, much to the displeasure of the Soviet Union. Not coincidentally, it was also the opening of the Austro-Hungarian border on 2 May 1989 that signaled the beginning of the end of the Cold War. The Republic of Austria subsequently joined the European Union and became a member in the Partners for Peace program of the North Atlantic Treaty Organization (NATO) in 1995 but is not a full-fledged member of NATO.

Although it never quite served as the bridge between East and West that the founders of the Second Republic envisioned, Austria prospered as a tourist destination and a symbol of mutual cooperation between East and West.

Formal treaty establishing the Second Austrian Republic as an independent state. Despite Austria's participation on the German side during World War II, the Allies decided at the Yalta Conference in February 1945 to treat Austria as a liberated nation and not a defeated one when the war was over. It took more than a decade, however, to decide exactly what that meant. During that period, Austria remained divided and occupied among the four victorious Allied powers.

Although the Soviets demanded war reparations from Austria, they never considered Austria to be a necessary part of their postwar sphere of influence. The other Allies, on the other hand—and the United States and Britain in particular—viewed Austria's geopolitical position as an essential outpost in the Cold War. They accordingly made massive financial and military investments in the state during the decade of occupation. The Austrian government, led by Dr. Karl Renner and Leopold Figl, carefully and cleverly played upon the East-West divide to gain independence in return for a promise of neutrality in 1955.

The Austrian State Treaty, signed at the Belvedere Palace in Vienna on 15 May 1955, was one of the great achievements of Cold War diplomacy. It resolved a decade-old political and economic standoff among the Austrians, Soviets, and the remaining Allies through a series of resourceful compromises and demonstrated that peaceful coexistence between the Soviets and the West was indeed possible.

It was at the initiative of Soviet leader Nikita Khrushchev that the Austrian State Treaty took form. Once West German forces were incorporated in the North Atlantic Treaty Organization (NATO), Khrushchev saw little point in haggling over a divided Austria and instructed his foreign minister, Vyacheslav Molotov, to settle the issue for good. Austrian Chancellor Julius Raab was therefore invited to Moscow on 24 March 1955 to discuss the terms of independence.

Britain and the United States, however, feared that the Austrians would be lured or pressured into becoming a Soviet satellite or that a pending settlement in Austria would be used to draw the Germans out of NATO. But the Soviets were more interested in keeping Austria out of NATO and made generous concessions in return for an Austrian promise of armed neutrality. Without waiving reparations entirely, the USSR accepted a staggered payment schedule of \$150 million, a ten-year agreement for oil deliveries from Austria, and a lump sum for the return of Austrian shipping installations.

Austrian State Treaty (15 May 1955)

Western diplomats made few changes to the Austro-Soviet proposal but convinced the Austrians to sign secret agreements protecting Western oil companies prior to the conclusion of the treaty. At the last minute, Figl maneuvered the Allied powers into deleting a clause holding Austria partly responsible for World War II. The treaty thus enshrined the myth of Austrian victimization that would persist until the 1986 Waldheim Affair forced a reexamination of Austria's past. It did not, however, necessarily enshrine Austrian neutrality, nor did the Allied powers guarantee it. Instead, on 26 October 1955, one day after the last Allied soldier left Austrian soil, the Austrian parliament passed a law making permanent neutrality a part of the constitution of the Second Republic.

Ayub Khan, Muhammad (1907–1974)

Military leader, Pakistani defense minister (1954–1956), and president of Pakistan (1958–1969). Born on 14 May 1907 in Rehana, Hazara District, India, Muhammad Ayub Khan attended the Royal Military Academy, Sandhurst, in Britain and was commissioned in the Indian Army in 1928. During World War II he saw action in the British Army.

Upon Indian independence and the creation of Pakistan in 1947, Ayub Khan assumed command of military forces in East Pakistan (now Bangladesh) with the rank of brigadier general. In January 1951 he was appointed commander in chief of the Pakistani Army. During 1954–1956 he served as minister of defense and as such was a key player in Pakistan's decision to join the Central Treaty Organization (CENTO) and Southeast Asia Treaty Organization (SEATO) alliances.

After a military coup overthrew the government, the junta declared martial law on 7 October 1958, and Ayub Khan was appointed president. His regime was acceptable to many Pakistanis because it brought a degree of internal stability after years of unrest that followed the partitioning of India. In February 1960 he won a popular referendum as president.

On 8 June 1962, Ayub Khan lifted martial law. A new constitution was also drawn up, giving the executive vast powers. Having instituted an electoral presidential form of government, Ayub Khan continued in office. In the 1965 presidential elections he handily secured victory amid charges of rigged voting. Ongoing tensions with India over the contested Kashmir region led to war between India and Pakistan during 5 August–22 September 1965. Ayub Khan then negotiated with India and agreed to the January 1966 Tashkent Declaration, which many Pakistanis saw as a sellout to India.

Ayub Khan then implemented a new security and diplomatic arrangement dubbed the “triangular tightrope,” which consisted of a delicate balancing act with China, the Soviet Union, and the United States. By 1968, public discontent with limited civil liberties had begun to threaten Ayub Khan’s hold on power. In March 1969, as public opposition to his regime mounted, he resigned the presidency. He proclaimed martial law and designated General Agha Mohammad Yahya Khan its administrator. Ayub Khan died on 19 April 1974 in Islamabad, Pakistan.

Soviet-controlled republic that gained its independence upon the collapse of the Soviet Union in December 1991. Located in eastern Transcaucasia, Azerbaijan borders Russia, Georgia, Armenia, Iran, and the Caspian Sea and had a 1945 population of approximately 3.3 million people. With a land mass of 33,436 square miles, it is roughly the size of the U.S. state of Maine. Frequently invaded and divided among stronger powers, Azerbaijan’s position as a frontier region has resulted in the development of a unique national identity, incorporating various influences—most notably the enduring historical legacies from the Turkic and Iranian worlds—as reflected in its language, religion, and culture. Throughout the Cold War, however, it was the Soviet Union that had the most powerful impact on Azerbaijan.

Azerbaijan’s role in the Cold War was the result, in part, of its geostrategic position on the southern frontier of the Soviet Union, bordering Turkey and Iran. The large oil deposits in Azerbaijan were also a key strategic interest. During World War II, the Soviets and British occupied Iran. Azerbaijan was

Azerbaijan

Road to Baku and oil rigs, Azerbaijan, 1957. (Yevgeny Khaldei/Corbis)

an important transit point and communications center for Soviet involvement in Iran.

Despite pledges to withdraw from Iran at the end of the war, Soviet leader Josef Stalin supported the creation of a puppet state in Iranian Azerbaijan as well as one in Iranian Kurdistan. The Soviet Azerbaijani leadership in Baku, with the encouragement of the central authorities in Moscow, undertook a propaganda campaign, portraying Iranian Azerbaijan as lost territory that eventually would be reunited with Soviet Azerbaijan. Soviet Azerbaijani Communist Party officials and security personnel were dispatched to Iranian Azerbaijan to help set up the new pro-Soviet government. The presence of large oil deposits in northern Iran also drew Soviet attention to the area.

Continued Soviet occupation of Iranian Azerbaijan as well as Stalin's demands against Turkey and his involvement in the Greek Civil War became important factors in the U.S. decision to announce the 1947 Truman Doctrine, designed to aid countries struggling against communist aggression. As a result of Western pressure and the Soviets' own political calculations, Soviet forces withdrew from Iranian Azerbaijan in 1947, which was soon reoccupied by Iranian forces and reintegrated into the Iranian state.

With the end of the Soviet occupation of Iranian Azerbaijan, this chapter of its history closed, and Soviet Azerbaijan underwent critical political, economic, and social changes, along with the rest of the USSR. The republic was ruled for twenty years (1933–1953) by Mir Jafar Bagirov. He was removed upon Stalin's death in 1953 and subsequently tried and executed in 1956.

During Soviet Premier Leonid Brezhnev's reign, the most prominent Azerbaijani figure was Haidar Aliev, a former Komitet Gosudarstvennoi Bezopasnosti (KGB) general who rose to the position of first secretary of the Azerbaijani Communist Party and eventually to the Politburo of the Communist Party of the Soviet Union (CPSU). Aliev ruled Azerbaijan until 1982 and was intimately involved in all aspects of official life in the republic, especially in his native province of Nakhichevan. In general, there was little opposition to Soviet rule during the Brezhnev years. When Mikhail Gorbachev became general secretary of the CPSU in 1985, he embarked upon an ambitious program of renovating Soviet society and the economy through his glasnost and perestroika reform programs, which were slow to reach Azerbaijan and did not, initially, have a great impact on the republic.

That situation changed abruptly in February 1988 when the local legislature of the Nagorno-Karabakh Autonomous Oblast, populated mainly by Armenians but administratively attached to Azerbaijan, voted to secede from Azerbaijan and join Armenia. Moscow and Baku condemned this move, and shortly thereafter a pogrom against Armenians living in the Azerbaijani industrial city of Sumgait took place. For several days, mobs hunted down and

killed Armenians until Soviet police reestablished order. This event led to a crescendo of violence in and around Nagorno-Karabakh, forcing hundreds of thousands of people from both republics.

Beginning in the autumn of 1989, the nationalist opposition organization, the Azerbaijani Popular Front (APF), put increasing pressure on the communist leadership in Azerbaijan to effectively deal with both the Nagorno-Karabakh question and the other major problems facing the country. In September 1989, the Supreme Court of Azerbaijan declared the country sovereign, a move that was rejected by Moscow that November. At the same time, important developments were taking place in the southern part of the country, along Azerbaijan's border with Iran. Demonstrators moved into the restricted border zone and tore down the border posts along the Aras River. They were protesting their separation from Iranian Azerbaijan and were demanding greater access to family members in neighboring Iran.

Azerbaijani intellectuals began comparing the division of their country to the division of Germany and Korea. In January 1990, while disturbances continued along the border with Iran, the large Armenian minority in the Azerbaijani capital of Baku and in other cities and towns became the target of organized violence. The unrest led to many deaths and injuries and to the emergency evacuation of the remaining Armenian population to safe havens in other parts of the Soviet Union. The APF declared its intent to overthrow communist rule in the country, resulting in Soviet armed intervention. Although Gorbachev claimed that the intervention was in response to pogroms against Armenians, violence against the Armenians had ended days earlier. Soviet armed forces assaulted Baku, shooting indiscriminately and in the process killing and wounding hundreds of innocent civilians. They also moved into other parts of Azerbaijan and took control of the southern border with Iran.

Moscow declared martial law, removed the Azerbaijani Communist Party chief, and cracked down on the opposition. These actions, however, served only to further exacerbate relations between Azerbaijan and Moscow. In May 1990, the Azerbaijani Supreme Soviet elected the communist leader Ayaz Mutalibov as president. Despite these changes, the conflict over Nagorno-Karabakh continued, with no immediate end in sight.

In August 1991, during the failed coup against Gorbachev, Mutalibov initially supported the plotters but then quickly reversed his opinion when it became clear that the coup would fail. He promptly arranged to have himself elected president in September 1991 and then moved the country toward independence, which the Azerbaijani Supreme Soviet had declared in the midst of the coup. Independence was formally secured when the Soviet Union was dissolved on 31 December 1991.

B

U.S. politician, influential Republican advisor, secretary of the treasury, and secretary of state. Born on 28 April 1930 in Houston, Texas, to a wealthy local family, James Baker III studied classics at Princeton University, graduating in 1952. After two years in the U.S. Marine Corps, he went on to earn a law degree from the University of Texas at Austin in 1957. That same year he began his law career with a corporate law firm in Houston, where he practiced until 1975.

Baker first entered politics in 1970, working for George H. W. Bush's U.S. senatorial campaign—a contest that Bush did not win. Beginning in 1975, Baker spent a year as undersecretary of commerce in President Gerald Ford's administration. Baker then managed Ford's unsuccessful 1976 presidential campaign. After managing Bush's unsuccessful bid for the Republican presidential nomination in 1980, Baker became a senior advisor to President Ronald Reagan's 1980 campaign after Bush withdrew from the race.

From 1981 until 1985, Baker served as White House chief of staff. In 1984, he successfully engineered Reagan's reelection campaign. Reagan subsequently appointed him secretary of the treasury in 1985. In 1988, Baker managed Vice President Bush's presidential campaign and was rewarded by being appointed secretary of state in 1989. In that role, Baker helped reorient U.S. foreign policy as the Cold War ended. He was involved in negotiations that led to the reunification of Germany and the dismantling of the Soviet Union. He also presided over negotiations before and after the Persian Gulf War. In 1992, Bush named Baker White House chief of staff and manager of his reelection campaign, which Bush lost.

After leaving government service in 1993, Baker joined the Houston-based law firm of Baker Botts and become

A prominent Republican strategist, James Baker III served as chief of staff and secretary of the treasury under President Ronald Reagan and as secretary of state under President George H. W. Bush. (U.S. Department of State)

senior counselor to The Carlyle Group, a corporate banking firm in Washington, D.C. In 2000, he served as President-elect George W. Bush's transition advisor during the controversial Florida ballot recount. Beginning in March 2006 Baker cochaired, along with Democrat Lee Hamilton, the ten-person bipartisan Iraq Study Group, charged with recommending changes to deal with the deteriorating situation in the Iraq War. The group presented its report to President George W. Bush and Congress in early December 2006.

Balaguer Ricart, Joaquín Antonio (1906–2002)

President of the Dominican Republic during 1960–1962, 1966–1978, and 1986–1996. Born on 1 September 1906 in Navarrete, Dominican Republic, Joaquín Balaguer Ricart earned a law degree from the Universidad Autónoma de Santo Domingo in 1929. A prominent government official during the dictatorship of Generalissimo Rafael Trujillo, Balaguer held positions in both the Ministry of Education and Ministry of Foreign Relations. He ascended to the presidency in 1960 upon the resignation from that office of Trujillo's brother, Héctor, who bowed to U.S. pressure for democratization in the aftermath of Fidel Castro's 1959 revolution in Cuba.

After Rafael Trujillo's assassination on 30 May 1961, Balaguer began a reluctant transition to democracy in the Dominican Republic. He was known for his strong support of U.S. Cold War policies. Following political unrest in early 1962, however, he was forced to resign and went into exile in the United States.

In April 1965, a leftist-inspired insurrection in the Dominican Republic, led by Francisco Caamaño Deñó, threatened U.S. foreign policy interests in the Caribbean. To forestall a potential "second Cuba," President Lyndon B. Johnson ordered 22,000 Marines to intervene. In June 1966, Balaguer won election to the presidency, a process supervised by the Organization of American States (OAS). Balaguer governed until 1978, when he lost a reelection bid to Antonio Guzmán Fernández. Balaguer returned to office in 1986 and left again in 1996.

As president, Balaguer relied more on persuasion than force. He maintained order and stability and simultaneously protected American interests

in the Dominican Republic. Although he had an insatiable appetite for power and often resorted to undemocratic practices, unlike many of his contemporaries he did not use public office to enrich himself. As the leader of the Partido Reformista Social Cristiano (PRSC), Balaguer played a prominent role in Dominican politics until his death in Santo Domingo on 14 July 2002.

Though frail and blind, Joaquín Balaguer Ricart of the Social Christian Reformist Party returned as the president of the Dominican Republic in 1986, at age seventy-nine, and served until 1996. (AP/Wide World Photos)

Prominent Democratic Party operative, diplomat, and presidential advisor. Born on 21 December 1909 in Des Moines, Iowa, George Ball attended Northwestern University, where he received a BA degree in 1930 and a law degree in 1933. Following law school, he alternated between the private sector and government service. During 1942–1944 he served in the Lend-Lease Administration, and in 1944 he was appointed director of the U.S. Strategic Bombing Survey in London. Throughout his life, Ball maintained a keen interest in foreign affairs, and he wrote prolifically on foreign policy issues.

Following World War II, Ball became a founding partner of a Washington, D.C., law firm and became active in the Democratic Party. From 1961 to 1966, he was undersecretary of state, served as the permanent U.S. representative to the United Nations (UN), and became a close advisor to Presidents John F. Kennedy and Lyndon B. Johnson on matters ranging from the Cuban Missile Crisis to European integration.

Ball is well remembered as one of the lone voices among Johnson's foreign policy advisors who argued against the escalation of the war in Vietnam in 1965. Ball served briefly as U.S. ambassador to the UN in 1968. He

Ball, George Wildman
(1909–1994)

returned to civilian life and became a senior partner at Lehman Brothers Investors until he retired in 1982. Nonetheless, he remained a respected elder statesman in foreign policy circles. He was highly critical of President Richard M. Nixon's handling of the Vietnam War. In 1978, President Jimmy Carter sought Ball's advice on the revolution in Iran. Ball died in New York City on 26 May 1994.

Ballistic Missile Early Warning System

Network of three radars designed to provide advanced warning of a ballistic missile attack. The Ballistic Missile Early Warning System (BMEWS) is operated by the North American Air Defense Command (NORAD) for the air defense of Alaska, Canada, and the continental United States. Although NORAD deploys various warning systems, the BMEWS is the northernmost. The U.S. Air Force had sought such a system from 1955, but the impetus for its construction came in the first Soviet intercontinental ballistic missile (ICBM) test in August 1957.

Construction on the first site, at Thule, Greenland, began in 1958, and the site became operational in 1960. The two other sites are at Clear, Alaska, and Flyingdales Moor, Yorkshire, England. BMEWS was made possible by electronics advances. BMEWS employs large football field-size radars that can detect a missile at a distance of 3,000 miles. The detection system consists of a combination transmitter-receiver sending out extremely brief bursts of energy many times per second in narrow fans of radio frequency energy. An ICBM passing through the fans reflects energy back to the station, allowing the plotting of coordinates and tracking of the missile to include calculations as to point and time of impact. Estimated warning time under BMEWS for an ICBM launched against the United States via a polar route is approximately fifteen to twenty minutes.

Obviously, the BMEWS sites would be a priority target in a nuclear war. They are also considered highly vulnerable to a nuclear air burst and its resulting electromagnetic pulse emissions. In addition, BMEWS protects only against missiles coming at North America from the north and cannot detect ICBMs approaching from the south. The growing sophistication of infrared

satellites offered a number of advantages over BMEWS for the detection of ICBMs.

In addition to BMEWS and satellites, early warning systems include aircraft radar planes, picket ships, and the Distant Early Warning (DEW) Line of radars. All are linked by a communications network terminating in the NORAD Combat Operations Center at Colorado Springs, Colorado.

Ballistic Missiles

Sri Lankan political leader and prime minister (1960–1965, 1970–1977, 1994–2000). Born Sirimavo Ratwatte on 17 April 1916 in Ratnapura in southern Ceylon (now Sri Lanka), Sirimavo Bandaranaike was the oldest of six children of a wealthy landowning family. A Buddhist, she was educated by Roman Catholic nuns at St. Bridget's convent in Colombo. In October 1940, she was given away in an arranged marriage to Solomon West Ridgeway Dias Bandaranaike, seventeen years her senior. An Oxford-educated attorney, he founded the Sri Lankan Freedom Party in 1951, the year Ceylon was granted its independence.

Sirimavo Bandaranaike was suddenly thrust into political leadership when her husband, then prime minister, was assassinated by a Buddhist monk in September 1959. Known as the “weeping widow” by her opponents and critics, she nevertheless proved both skillful and determined as a politician.

When Bandarnaike led her husband's party to general election victory, she became the world's first woman prime minister on 21 July 1960 and pledged to continue her husband's socialist policies. A woman of fierce determination, she rode the tide of nationalism throughout her first two terms in office (1960–1965 and 1970–1977). She emphasized Buddhist and Sinhalese national policies and promoted a new constitution in 1972. She also introduced many social reforms and proclaimed Ceylon a republic. Under her

Sirimavo**
(1916–2000)

Sirimavo Bandaranaike was prime minister of Sri Lanka three times. When she first assumed that office in 1960, she was the first woman in modern history to lead a nation. (Embassy of Sri Lanka)

leadership, the state's name was also changed from Ceylon to Sri Lanka, meaning "resplendent island."

Although Bandaranaike took strong steps to control economic problems and ideological differences during her second term, she nonetheless failed to address ethnic unrest. In 1973 her government was almost toppled by a left-wing insurgency that was repressed only with the aid of foreign neighbors. She was defeated in 1977 elections and in 1980 was stripped of her civil rights and expelled from parliament for alleged abuse of power. In 1994 her daughter Chandrika Kumaratunga was elected president, and Bandaranaike again became prime minister, although in a largely ceremonial capacity.

Bandaranaike held office until health problems forced her to resign in August 2000. She died in Colombo on 10 October 2000.

Bandung Conference

(18–24 April 1955)

Meeting of twenty-nine Asian and African nations held in Bandung, Indonesia, during 18–24 April 1955. The end of World War II fostered increased nationalist fervor in the developing world, which sought liberation from the Western colonial powers. In December 1954, Burma, Ceylon (from 1972 Sri Lanka), India, Indonesia, and Pakistan jointly proposed an Asian-African conference aimed at fostering unity among Asian and African peoples and dialogue addressing nationalist sentiments.

The Bandung Conference included the People's Republic of China (PRC), the government of which was eager to augment its status in the third world. Led by Chinese Foreign Minister Zhou Enlai, the PRC's delegation would play an important role in reinforcing China's ties with Asia and Africa. On the second day of the conference, Zhou advocated the Five Principles of Peaceful Coexistence, which outlined the PRC's foreign policy blueprint. The five principles called for the respect of national sovereignty and terri-

torial integrity, nonaggression, nonintervention in internal affairs, equal and mutual opportunity, and peaceful coexistence. Zhou specifically indicted the United States for hindering peaceful coexistence, citing America's "aggressive" actions in the ongoing Taiwan Strait Crisis. His principles were well received, and they successfully cemented Chinese leadership in the developing world.

The conference concluded on 24 April 1955 with a ten-point declaration on the promotion of world peace and cooperation, which was adopted by all participants. The declaration advocated closer political, economic, and cultural ties among the signatories, mutual opposition to imperialism and colonialism, and the promotion of world peace and friendship. These tenets, collectively known as the Bandung Spirit, helped guide politics in the developing world for many years.

The Bandung Conference also eased tensions in the Taiwan Strait. On 23 April 1955, Zhou declared that the PRC was prepared to discuss Asian matters with the United States, including resolution of the First Taiwan Strait Crisis. To show its good faith, the PRC stopped shelling the contested offshore islands, which effectively ended the crisis in late April 1955. This led ultimately to the Sino-Ambassadorial Talks, first convened in Warsaw, Poland, on 1 August 1955, that provided the first direct channel for Sino-American communications since the PRC's birth in October 1949.

Southeast Asian nation on the northern coast of the Bay of Bengal, surrounded on all sides by India with the exception of a small common border with Myanmar (Burma) to the southeast. In 1945, Bangladesh had a population of 14 million people. It is a new nation with an old history. The sultanate of Bangala (Bengal) was a wealthy area of the Indian subcontinent for centuries prior to the time it was annexed by the Moghul Empire in 1576. The area remained prosperous as a crossroads of trade and culture under the Moghuls. During 1703–1765, in the years after the decline of the Moghuls

Bangladesh

and before Britain consolidated its control in India, Bangladesh enjoyed nominal independence.

From 1765 until 1947, Britain controlled the region. The British presence altered the agricultural and social structure of the province and exacerbated Hindu-Muslim tensions, as the Hindus participated in British educational and cultural opportunities while the Muslims steadfastly resisted English influence, sometimes violently. With the end of World War II, the new Labour government of Britain promised to grant independence to India. In Bengal, Muslim-Hindu conflict was so intense that Britain partitioned the subcontinent into two states—one Hindu and the other Muslim. Upon the 1947 partitioning, millions of refugees fled to both India and Pakistan.

During 1947–1971, East Bengal was part of Muslim-dominated Pakistan. More than 1,000 miles of Indian territory separated Pakistan's major cash crop, jute, from its processing and shipping facilities in the Hindu city of Kolkata. West Pakistan lacked economic ties to East Pakistan, and the western government ignored eastern needs. Such adversity sparked Benghal nationalism, especially when the western government banned Bangla in favor of Urdu as the nation's language. The controversy over language soon developed into a demand for self-government, and the nationalist Awami League (AL) won the 1971 national elections in East Pakistan. The government of Pakistan refused to open the national assembly, causing riots and strikes followed by rebellion.

On 26 March 1971 the People's Republic of Bangladesh declared independence. Pakistan dispatched troops to reverse the secession, resulting in a bloody nine-month war. At the same time, Pakistan attacked India, forcing it to side openly with Bangladesh. Pakistan finally recognized Bangladesh's independence on 24 February 1974.

Bangladesh's first two decades as an independent nation were plagued by martial law, coups, assassinations, social instability, and economic chaos. The first leader of independent Bangladesh was Sheikh Mujib, a founder of the AL. He was assassinated on 15 August 1975. In 1979 Bangladesh experimented with democracy and elected President Zia (Ziaur Rahman), who established cordial ties with the West and the oil-rich countries of the Middle East. Zia was assassinated on 30 May 1981, and the country returned to military rule until 1991, when a combination of the AL and the Bangladesh Nationalist Party (BNP) forced the resignation of General Hossain Mohammad Ershad. On 17 February 1991 Begum Khaleda Zia, widow of the assassinated Zia, was elected prime minister under a parliamentary system. This change did not bring increased political stability, because the BNP and the AL continued their bitter—and often violent—rivalry.

By 1991, Bangladesh had the greatest population density of any country in the world. Bangladesh is 86.5 percent Muslim and 12.2 percent Hindu with a tiny minority of Buddhists and Christians. One of world's poorest nations, its tribal peoples subsist mostly in the country's southeastern hill region. In 1995 approximately half its population was in poverty, with half of these in extreme poverty. In 2000 Bangladesh ranked 132nd of 192 states in the world in quality of life factors such as nutrition, education, life expectancy, hous-

ing, security, and health and sanitation. Its perennial poverty has been largely the result of overpopulation, insufficient natural resources and arable land, lack of educational opportunities, poor government, and an undiversified economy. Regular natural calamities, mainly in the form of flooding monsoonal rains and typhoons, have only added to the nation's deprivation.

Bangladesh has experienced difficulties with three countries: Pakistan, Myanmar, and India. It has established fairly stable relations with Pakistan since 1976 but has experienced two decades of conflict with Myanmar because of Myanmar's treatment of its Muslim minority, most of whom were forcefully expelled in the early 1990s. In 2003, talks with Myanmar eased tension somewhat and produced tentative plans to establish trade and transportation links. Tensions have persisted with India, with Indian rebels in the Chittagong Hill Tracts using Bangladeshi bases in their campaign for autonomy. That crisis has recently abated, but territorial disputes with India persist, and security forces clashed several times into April 2003. Bangladesh played no appreciable role in the Cold War, as the superpowers focused their sights on areas of geostrategic importance and ideological battlegrounds.

Founder of the Somali Revolutionary Socialist Party and Somali dictator from 1969 to 1991. Mohammed Siyad Barre was born around 1919 to nomadic parents, probably in what was then Italian Somaliland. He joined the Somali police force in 1941, achieving the rank of chief inspector in 1950, the highest rank attainable for a Somali. In 1952, he joined the army and attended the Military Academy in Italy. By 1960, Barre was a colonel and second-in-command of the Somali Army; in 1964 he became commander in chief and in 1966 attained the rank of major general.

Seizing power in 1969, Barre established ties with the Soviet Union and founded the Somali Revolutionary Socialist Party in 1976. In 1977, however, he broke relations with Moscow because of Soviet displeasure with his invasion of the Ogaden region of Ethiopia and soon began to court the United States. Washington provided modest economic and military aid to Barre's regime, but his iron-fisted rule and deplorable human rights record prevented a closer relationship between the two nations.

**Barre, Mohammed
Siyad**
(1919?–1995)

Mohammed Siyad Barre, Marxist dictator of Somalia during 1969–1991. (Corbis/Kevin Fleming)

The United States kept its distance as opposition to Barre's regime increased, exacerbated by the brutality of his rule, the failed Ogaden campaign, government corruption, clan rivalries, and economic crises. By 1988 the nation was plunged into a bloody civil war. The war raged on as starvation and mass killings increased. With no external support and with opposition forces closing in, Barre fled the country in January 1991. Further chaos ensued as the nation was riven by brutal warfare among its chief warlords. In 1992, the United Nations mounted a multinational relief effort to Somalia, which ultimately backfired when U.S. forces came under attack and soldiers were killed in the Somali capital. In 1993, President Bill Clinton pulled U.S. forces out of Somalia, and the nation has struggled under on-again, off-again civil war ever since. Barre died in exile in Lagos, Nigeria, on 2 January 1995.

Batista y Zaldivar, Fulgencio (1901–1973)

Authoritarian Cuban president (1940–1944, 1952–1958). Born in Banes, Cuba, on 16 January 1901, Fulgencio Batista joined the army in 1921, eventually becoming a military stenographer. He first emerged on the national scene during the 1933 revolution that deposed the Gerardo Machado dictatorship. During the short-lived Ramón Grau San Martín government (September–January 1934), Batista was the military strongman behind the scenes and was ultimately responsible for the collapse of the Grau government.

Batista was the power behind the throne during a series of puppet governments during 1934–1940. In 1940 he was elected president, and his four-year term was noted for its progressive social reforms, links with the Communist Party, and support for the Allied side in World War II. Batista provided the United States with access to naval and air bases and sold to it nearly all of Cuba's sugar production.

Batista was succeeded by another democratically elected leader, Ramon Grau San Martín, the man he had helped overthrow in January 1934. The increasing corruption of the Grau government and its successor facilitated Batista's return to power in 1952. In March 1952, Batista and elements of the army seized power. The new regime suspended the constitution and declared its loyalty to the United States. Batista now backed away from his earlier reformism and consolidated the anticommunist measures introduced by his predecessors. In the mid-1950s, with support from the U.S. Federal Bureau of Investigation (FBI), Batista established a repressive anticommunist political police force.

Rapid successes in anti-Batista movements, especially among middle-class students and including Fidel Castro's 26th of July Movement, led to Batista's fall at the end of 1958. On 1 January 1959, he fled Cuba for the Dominican Republic as Castro's forces closed in on Havana. Batista died on 6 August 1973 in Estoril, Portugal.

King of Belgium from 1951 to 1993. Born on 7 September 1930 in Kasteel Stuyvenberg, Laeken, Belgium, to King Leopold III and Queen Astrid (formerly Princess Astrid of Sweden), Baudoin Albert Charles Leopold Axel Marie Gustave was educated both privately and at the Collège of Geneva. Following the May 1940 German invasion of Belgium, King Leopold III surrendered the army in violation of pledges made to Britain and France. He also refused to follow his ministers into exile, and during the long German occupation the royal family lived at the royal castle in Laeken. Not popular with his people because of presumed pro-German sympathies and autocratic ways, Leopold compounded the situation by marrying a commoner in 1941 (his first wife had died in an automobile accident). Leopold was removed to Germany in 1944 but, because of his unpopularity, did not return to Belgium and instead took up residence in Switzerland after the war until 1950, when a national referendum allowed him to resume the throne.

Because of continued unpopularity, Leopold formally decided in August 1950 to delegate his powers to his son, who formally became king on 17 July 1951. In 1960 Baudouin married Dona Fabiola de Mora y Aragón of Spain.

**Baudouin,
King of Belgium**
(1930–1993)

Baudouin was king of Belgium from 1951 until his death in 1993. Deeply committed to Catholicism and social justice, he served as an important unifying factor during the often difficult times that marked his reign. (Belgian Embassy)

Although one of the most reclusive of European monarchs, Baudouin remained popular with the Belgian population as a unifying force in an often fractious country. He was also deeply committed to the Catholic religion and to social justice, which was reflected in many policy decisions during his long reign. In March 1990, Baudouin stepped down from the throne for two days to protest parliament's passage of pro-choice abortion legislation, which he steadfastly refused to sign. Even though the monarch's signature was a mere formality, this was the first time that a Belgian monarch had ever refused to sign a parliamentary bill. His ethical views also led him to ease the process for immigrants to become citizens and to fight to stamp out the sex trade in Belgium.

Baudouin's reign was also marked by a number of other key internal and external developments. The most crucial decision in foreign affairs was granting independence to the Belgian Congo in 1960. Internal developments included the transition from a unitary to a federal governmental structure.

Baudouin has been credited with unifying a state riven by ethnic and linguistic factions. Among his other key legacies were the establishment of a charitable organization, the King Baudouin Foundation, and the King Baudouin Prize for International Development to reward organizations and individuals working to ameliorate inequities between developed and developing nations. Baudouin died on 31 July 1993 in the Villa Astrida in Motril, Spain, and was succeeded by his brother, King Albert II.

Bay of Pigs

(17 April 1961)

An unsuccessful 1961 invasion of Cuba led by Cuban exiles, covertly supported by the U.S. government. Trained since May 1960 in Guatemala by the Central Intelligence Agency (CIA) with the approval of President Dwight D. Eisenhower and supplied with arms by the U.S. government, the rebels of Brigade 2506, as they were called, intended to foment an insurrection in Cuba

BAY OF PIGS INVASION, 1961

and overthrow the communist regime of Fidel Castro, who had deposed the U.S.-backed dictator Fulgencio Batista in 1959.

Planning for the ill-fated operation began during the last days of the Eisenhower administration in 1960. President Eisenhower had soured on Castro after the latter nationalized a number of Cuban companies and began leaning toward the Soviet orbit of influence. There were also rumors of Cuban involvement in attempts to invade Panama, Guatemala, and the Dominican Republic. In 1960, the United States turned down Castro's request for economic aid and broke off diplomatic relations with Cuba. After the American rejection, Castro met with Soviet Foreign Minister Anastas Mikoyan to secure a \$100 million loan from the Soviet Union. U.S. policymakers thus decided that Castro was becoming too close to the Soviets and should be overthrown.

In the spring of 1960, President Eisenhower approved a covert operation to send small groups of American-trained Cuban exiles to work in the Cuban underground as insurgents to overthrow Castro. By the fall, the plan, now called Operation PLUTO, had evolved into a full-fledged invasion by exiled Cubans and included U.S. air support. The invasion forces deployed to Guatemala to train for the operation.

When President John F. Kennedy assumed office in January 1961, he could have called off the invasion but chose not to do so. During the 1960 presidential campaign, Kennedy had criticized Eisenhower's handling of the Cuban situation and so did not find it politically expedient to back down from

Cuban artillery fires on CIA-trained Cuban rebels as they assault a beachhead in Cuba, 17 April 1961. (Bettmann/Corbis)

the invasion. Kennedy was also anxious to prove his hawkish stance toward the Soviets during a period of heightened Cold War tensions. But the new president was not well served by the CIA or its director, Allen W. Dulles, whom he inherited from the Eisenhower administration. Despite evidence that Kennedy was leery about the Bay of Pigs operation, the CIA built a convincing case in support of it that was later determined to be highly suspect. The agency grossly underestimated the effectiveness of Castro's forces and overplayed the extent to which Cubans would rally behind the invasion force.

On 17 April 1961, an armed force of approximately 1,500 Cuban exiles landed in the Bahía de Cochinos (Bay of Pigs) on the southern coast of Cuba, although the invasion had technically commenced two days earlier when American B-26 medium bombers with Cuban markings bombed four Cuban airfields. On 17 April, the assault began at 2 A.M. when a team of frogmen went ashore with orders to set up landing lights to guide the main landing force. Between 2:30 and 3:00 A.M., two battalions of exiles armed with American weapons came ashore at Playa Giron while another battalion landed at Playa Largas. They hoped to find support from the local population, intending to cross the island to attack Havana. Cuban forces reacted quickly, and Castro ordered his air force to halt the invaders. Cuban aircraft promptly sank the invading force command-and-control ship and another supply vessel carrying an additional battalion. Two other ships loaded with supplies, weapons, and heavy equipment foundered just offshore. In the air, Cuban T-33 jets shot down ten of the twelve slow-moving B-26 bombers that were supporting the invaders. President Kennedy, on the recommendation of Sec-

retary of State Dean Rusk and other advisors, decided against providing the faltering invasion with official U.S. air support.

Lacking supplies or effective air cover, the invaders were hammered by Cuban artillery and tank fire. Within seventy-two hours, the invading force had been pushed back to its landing area at Playa Giron, where the troops were soon surrounded by Castro's forces. A total of 114 exiles were killed, while the remainder of the invasion force either escaped into the countryside or was taken captive. In all, 1,189 captured exiles were tried in televised trials and sentenced to prison.

Cuban exile leader José Miro Cardona, president of the U.S.-backed National Revolutionary Council, blamed the failure on the CIA and Kennedy's refusal to authorize air support for the invasion. In December 1962, Castro released 1,113 captured rebels in exchange for \$53 million in food and medicine raised by private donations in the United States.

The Bay of Pigs invasion provoked anti-American demonstrations throughout Latin America and Europe and further embittered U.S.-Cuban relations. The poorly planned and executed invasion greatly embarrassed President Kennedy and subjected him to heavy criticism at home. More important, it led directly to increased tensions between the United States and the Soviet Union. During the invasion, Kennedy and Soviet Premier Nikita Khrushchev exchanged messages regarding the events in Cuba. Khrushchev accused America of being complicit in the invasion and warned Kennedy that the Soviets would help defend Cuba if necessary. Kennedy replied with an equally strong warning against any Soviet involvement in Cuba. Although the crisis quickly passed, it set the stage for increased Soviet military aid to Cuba, which led ultimately to the Cuban Missile Crisis in October 1962.

The failure of the invasion led to the resignation of Dulles and opened the way for closer scrutiny of U.S. intelligence gathering. Some historians have speculated that the aborted operation made the White House highly suspicious of the intelligence community and therefore more willing to question the experts, contributing to Kennedy's successful handling of the Cuban Missile Crisis that followed.

Beatles

For the next six years, the Beatles were considered the vanguard of the so-called “British invasion” of the American music charts.

Arguably the most successful rock-and-roll group in history and a major influence on popular culture of the 1960s. The musical origins of the Beatles were rooted in working-class Liverpool in the 1950s, which as a major Atlantic seaport offered a fast and cheap conduit for records by pioneering American rock-and-roll artists such as Bill Haley, Chuck Berry, and Elvis Presley. Among the local teenagers who eagerly devoured this new and exciting sound were John Winston Lennon and James Paul McCartney, who met in 1957 and were soon collaborating in writing and performing rock music. Their partnership eventually expanded into a foursome with the addition of George Harrison and Richard Starkey (Ringo Starr) under the keen management of Liverpool businessman Brian Epstein. The band eventually signed a recording contract with EMI’s Parlophone label under the direction of George Martin, who subsequently became their producer.

The Beatles’ first original recording, *Love Me Do*, was released on 5 October 1962, and the group’s premier album, *Please Please Me*, was released in March 1963. The Beatles quickly achieved mass acclaim in Britain, and this success was transformed into international stardom on 9 February 1964 when they performed live in the United States for the first time on *The Ed Sullivan Show* television program. For the next six years, the Beatles were considered the vanguard of the so-called British invasion of the American music charts. The teenage hysteria that accompanied their every public engagement, appropriately named Beatlemania, puzzled the older generation, who had grown up on bland pop music and earlier swing music.

Stylistically the band went through two stages. Until 1966 it churned out catchy but largely anodyne boy-meets-girl love songs such as “She Loves You” and “I Want to Hold Your Hand,” while the Beatles’ reputation was that of a cheeky but essentially harmless group of scamps. The more sophisticated orchestrations of their album *Revolver* portended a shift in mood, however, and this was solidified in 1967 by the revolutionary conceptual work *Sergeant Pepper’s Lonely Hearts Club Band*, which signaled the Beatles’ emergence as a major player in the youth-oriented anti-Vietnam War and counter-culture movements. Epstein’s 1967 death and increasing friction among the band members took their toll, however, and after five more studio albums they split up, somewhat acrimoniously, in 1970.

Each former member went on to a solo recording career, but hopes for an eventual reunion ended on 8 December 1980 when Lennon was gunned down in New York City by a deranged fan. Harrison died in 2001 of cancer. To this day, the Beatles have career accomplishments unparalleled by any other musical group. In the United States alone they boasted twenty singles and nineteen albums that reached the top of the Billboard charts.

Born on 31 January 1938 in Palace Soestdijk in Baarn, the first daughter of Queen Juliana and Prince Bernhard zu Lippe-Biesterfeld, Beatrix Wilhelmina Armgard passed her early childhood in Canada with her mother and sister as a World War II refugee. She graduated with a degree in law from Leyden University in the Netherlands in 1961.

In March 1966 Beatrix wed Claus-George von Amsberg, a minor German prince and diplomat. Claus's German heritage and questionable activities in

**Beatrix, Queen
of the Netherlands**
(1938–)

Nazi Germany caused considerable public unrest. Following the birth of their son, Prince Willem-Alexander, in 1967, popular distaste for the monarchy diminished, and Claus was accepted—if not embraced—as a member of the royal household.

On 30 April 1980, Beatrix was crowned queen amid violent protests by squatters angry over a shortage of housing. As queen, Beatrix has demonstrated no small amount of leftist sympathies. In 1982 she visited the United States and warned Congress not to ignore the dismay of the Dutch people over the deployment of additional nuclear missiles in the Netherlands. A year later, U.S. presidential candidate Jesse Jackson revealed that Beatrix had expressed to him her aversion to the North Atlantic Treaty Organization's (NATO) Double Track decision.

Beatrix has exerted considerably more influence over Dutch politics than did Juliana. She has won the favor of her people through conscientious hard work and her reputation as “the smiling queen.” Beatrix has also earned renown as a firm supporter of the European Integration Movement.

Begin, Menachem (1913–1992)

Commander of the pre-1948 Zionist militia Etzel, Israeli prime minister, Nobel Peace Prize recipient. Born in Brest-Litovsk, Poland, on 16 August 1913, Menachem Begin attended Warsaw University, where he received a law degree in 1935. An ardent Zionist, he became active in the Revisionist Zionist Movement of Jabotinski, in both Eastern Europe and then Palestine. Begin was involved in the East European resistance effort against the German occupation and helped various Zionist groups infiltrate British-controlled Palestine. After the German invasion of the Soviet Union in 1941, he joined the Polish Army, was posted to the Middle East, and wound up in Palestine.

He assumed command of Etzel in 1943, directing operations against the British occupation of Palestine.

During the battles that led to the establishment of Israel in 1948, Begin's militancy resulted in conflict with mainstream Zionists headed by David Ben-Gurion. Begin and his partisans established the Herut Party in 1948 to foster the Revisionist Zionist program for a Greater Israel that included territories east of the Jordan River. Herut was later broadened to include other political sentiments opposed to Ben-Gurion's Labour Zionism. The Herut Party was renamed the Likud Party in 1973.

Part of a National Unity government in the mid-1960s, the Likud Party won a majority of seats in the Knesset (parliament) elections of 1977 and formed a government with Begin as prime minister the same year. As prime minister, Begin actively promoted immigration to Israel, particularly from the Soviet Union and Ethiopia, and sought to move the Israeli economy away from the centralized, command-style policies of the Labour Party. Begin's six-year tenure as prime minister was marked by a number of important events. In addition to his economic restructuring agenda, he pursued a vigorous foreign policy.

Begin's foreign policy achievements began in 1977 when he participated in the groundbreaking Camp David peace talks with Egyptian President Anwar Sadat, sponsored by President Jimmy Carter. The talks led ultimately to the 1978 Camp David Accords, followed by a formal Israeli-Egyptian peace treaty, signed in 1979, that ended thirty years of war between the two nations. Begin and Sadat shared the 1978 Nobel Peace Prize for their work toward the Camp David Accords.

Despite his peace overtures, Begin did not hesitate to exercise Israeli military force when he believed it necessary for national security. In 1981, he ordered an air attack against an Iraqi nuclear power plant near Osirak that destroyed the facility. He also ordered the Israeli military to retaliate against Palestinian terrorist attacks. The latter effort included sending Israeli forces into Lebanon in 1977 and 1982. The death of his wife Aliza and his own declining health prompted Begin to retire in September 1983 to his home in Yafeh Nof, near Jerusalem. He died in Tel Aviv on 9 March 1992.

Beijing Meeting (21–27 February 1972)

Summit meeting in Beijing, China, during 21–27 February 1972 between U.S. President Richard M. Nixon and People's Republic of China (PRC) leader Mao Zedong. This important meeting ended more than twenty years' of Sino-American confrontation and opened the way toward the normalization of relations between the two nations. The establishment of the PRC in October 1949 had deepened the Cold War in East Asia. At that time Mao announced to the world that he would adopt the lean-to-one-side policy, which signaled his alliance with the Soviet bloc. The United States responded with its nonrecognition policy and by refusing to allow the PRC to be seated in the United Nations (UN). This deep divide was greatly exacerbated by the Korean War, in which American forces directly battled PRC forces when China intervened in the war. The two Taiwan Strait crises and the Vietnam War also hindered Sino-American relations throughout the 1950s and 1960s.

By the late 1960s, however, both nations understood the need to reconcile their differences and normalize their relationship. America's ongoing quagmire in Vietnam prompted Nixon to reduce his country's global military commitments. Thus, détente with the communist bloc, promulgated in the Nixon Doctrine, was deemed the most effective means by which to reduce military costs and to preserve world peace. The PRC's border disputes with the Soviet Union, which resulted in armed confrontation in March 1969, rendered it a potentially new and ready American ally that U.S. policymakers hoped might counter Soviet influence in Asia. The PRC in turn was eager to improve Sino-American relations to diminish its isolation after the Sino-Soviet split and the Cultural Revolution.

Shortly after Nixon's 1968 election, the PRC proposed resumption of the Sino-American Ambassadorial Talks, which had begun in 1955 but were suspended during Mao's Cultural Revolution. The desire of both nations to achieve rapprochement helped pave the way for Nixon's visit to Beijing. Throughout 1970, working with the assistance of Pakistan and Romania, the PRC and the United States secretly opened a dialogue on issues of common interest, so as to set a mutually acceptable agenda for future discussion. In December 1970, both sides agreed to a high-level meeting in Beijing between their leaders.

On 6 April 1971, the PRC invited an American table tennis team to play exhibition matches in China in what came to be called ping-pong diplomacy. On 27 April 1971, the PRC signaled that it was ready to receive Nixon's special envoy to prepare for the forthcoming summit. Nixon responded by promising to visit Beijing to resolve contentious issues such as Taiwan and

President Richard Nixon meets with Chinese Communist Party Chairman Mao Zedong during his historic 1972 China trip. (National Archives and Records Administration)

Vietnam. U.S. National Security Advisor Henry A. Kissinger, Nixon's envoy, made a clandestine visit to Beijing in early July 1971 to discuss with Chinese Premier Zhou Enlai Nixon's pending visit. On 15 July, Nixon announced publicly that he would make a historic trip to Beijing, the first high-level visit since 1949.

On 21 February 1972, Nixon, accompanied by Kissinger, arrived in Beijing, where he received a warm welcome by Mao and Zhou. Their seven-day meeting covered a number of issues, in particular Taiwan and Vietnam. On 27 February 1972, upon the meeting's conclusion, both sides issued a joint communiqué in Shanghai stating that it was in the best interest of all nations to normalize the Sino-American relationship, it was mutually desirable to reduce military conflicts, and it was mutually desirable that neither country seek further hegemony in Asia. On the Taiwan issue, the communiqué restated Sino-American differences, suggesting that this might remain a stumbling block to full Sino-American reconciliation. The meeting was

nonetheless a triumph for both sides, as it marked a true breakthrough in Sino-American relations.

After the Beijing meeting, both sides redoubled their efforts to establish a formal and full diplomatic relationship. Kissinger subsequently visited China with some frequency, resulting in the creation of liaison offices in Beijing and Washington in 1973. In February 1978, the PRC's new leader, Deng Xiaoping, visited Washington and announced that China was willing to peacefully resolve the Taiwan question. On 1 March 1978, the United States accorded full diplomatic status to the PRC; it also abandoned its nonadmission policy by supporting the PRC's seating in the UN Security Council.

Belarus

Former Soviet republic that declared its independence on 25 August 1991. A landlocked state, Belarus (Belorussia) is bordered by Russia to the north and east, Ukraine to the south, Poland to the southwest, and Lithuania and Latvia to the northwest. It comprises 80,154 square miles and had a 1945 population of approximately 8.9 million people.

Throughout history, the position of Belarus as a borderland region has resulted in numerous incursions and shifting borders as well as the development of a rich cultural heritage. During the Soviet period, several variations of the country's name were used, the most common being Belorussia or the Belorussian Soviet Socialist Republic. The nation's name was officially changed to Belarus upon independence.

The country's geostrategic location on the western border of the Soviet Union helped define the role of Belarus during the Cold War. The most important aspects of Belarusian history relevant to the Cold War period include its position as a battleground of empires and ideas and its long and close association with the Germanic, Slavic, and Baltic worlds. During the 1917 Russian Revolutions and the ensuing civil war, the Belarusians attempted to establish an independent state but were ultimately defeated by the Bolsheviks. Belarusian lands were thus divided between the newly established Union of Soviet Socialist Republics (USSR) and Poland in the early 1920s. The political, economic, and social upheavals of the revolutionary era in

Belarus were followed by Soviet dictator Josef Stalin's brutal forced collectivization of agriculture and extensive purges of the local Communist Party, which led to further population losses, especially among the educated elite of Belarusian society.

In September 1939, in the wake of the German invasion of Poland and in accordance with the terms of the Molotov-Ribbentrop Pact of 23 August 1939, Stalin moved Soviet forces into eastern Poland, which was largely inhabited by Belarusians and Ukrainians. This situation only lasted until June 1941, when German forces invaded the USSR and occupied Belorussia. For much of the war, the country was turned into a battleground as Soviet partisans fought the Germans and their local allies. By the time Belorussia was re-occupied by the Soviets in 1944, the country had been almost completely devastated, and its population was significantly reduced, including the extermination of the large Jewish minority during the Holocaust. The reunification of the two parts of Belorussia under Soviet rule in 1939 was made permanent at the end of World War II, when the Western Allies acquiesced to Stalin's plan to move Poland's border with Germany significantly westward to compensate for the loss of western Ukraine and western Belorussia.

Once Soviet rule had been reestablished in Belorussia, Stalin instituted widespread purges and mass deportations against various strata of society, especially against those elements deemed "unreliable" by the Communist Party. To help compensate for the resultant population losses, the Soviets resettled large numbers of ethnic Russians and initiated a Russification program throughout Belorussia, especially in the capital, Minsk. This program met with resistance on the part of some intellectuals and students, many of whom were arrested and sentenced to prison terms in the gulags.

Belorussia played an important role in the early stages of the Cold War, as Stalin attempted to ensure a large Soviet presence at the newly created United Nations (UN) in the late 1940s. Despite Western refusal to allow each of the Soviet Socialist Republics to have individual representation in the UN, Soviet Belorussia, as well as Soviet Ukraine, received separate seats in the General Assembly. However, Soviet Belarusian diplomats were completely subordinated to the policies laid down by the central Soviet leadership in Moscow.

Throughout the late 1940s and the 1950s, Belorussia underwent extensive reconstruction as well as broad social, political, and economic changes. Shifting borders, enormous loss of life, and extensive wartime destruction of both the industrial and agricultural infrastructures created difficult living conditions in the countryside as well as in the major cities. Nevertheless, by the 1960s Belorussia had begun to recover economically, and living standards were on the rise.

A woman welds beams at the site of a tractor factory in Belarus, 9 May 1947. The factory construction was part of the post-war Five-Year Plan. (Bettmann/Corbis)

By the 1970s, Belarusian political, social, and economic life mirrored trends elsewhere in the Soviet Union as people suffered from the limitations of Soviet Premier Leonid Brezhnev's Era of Stagnation. This difficult but relatively stable situation continued well into the 1980s, until the advent of Mikhail Gorbachev's rise to power as general secretary of the Communist Party of the Soviet Union in 1985.

A major catalyst for change in Belorussia was the April 1986 nuclear disaster at the Chernobyl nuclear power plant in northern Ukraine, near the border with Belorussia, with Belorussia bearing the brunt of the radioactive fallout. The immediate impact of Chernobyl was the irradiation of large parts of the surrounding area and its population, creating a human and environmental tragedy of unprecedented proportions in the Soviet Union. Gorbachev's failure to respond immediately to Chernobyl drew heightened attention to the failings of the Soviet system and led to increased calls in Belorussia for reform, including a petition sent by intellectuals in December 1986 criticizing the policies of the government in the cultural sphere.

As Gorbachev's reform policies of glasnost and perestroika developed and as people in the Soviet Union, including Belarusians, became less inhibited in discussing the issues confronting Soviet society, a nascent democratic movement called the Belarusian Popular Front (BPF) was formed in June 1988. The BPF led the drive for reform and helped galvanize the population around the issue of Stalinist crimes in Belorussia. In June 1988, mass graves were uncovered at Kuropaty, near Minsk, that contained the remains of hundreds of thousands of Stalin's victims. In June 1990, the Belarusian Supreme Soviet adopted a Declaration of State Sovereignty, following the earlier Russian example.

Despite this upsurge in democratic activism, the majority of the Belarusian population did not appear to be interested in politics. The Belarusian Communist Party won more than 85 percent of the seats in the March 1990 Supreme Soviet election, with several seats remaining vacant because of lack of voter interest. Caution regarding reform was confirmed a year later during the March 1991 all-Union referendum on the future of the USSR, when 83 percent of the Belarusian population voted to remain a part of the Soviet Union. Shortly thereafter a series of strikes took place, with strikers calling for economic reform as well as the liberalization of political life in the republic.

The abortive August 1991 coup attempt against Gorbachev acted as a catalyst for political change in Belarus, just as in the other republics of the Soviet Union. On 25 August 1991, the Supreme Soviet declared independence and officially changed the name of the republic from the Belorussian Soviet Socialist Republic to the Republic of Belarus. The head of the Supreme Soviet, Stanislaw Shushkevich, along with the leaders of Russia and Ukraine signed the Minsk Agreement in December 1991, formally establishing the Commonwealth of Independent States (CIS) and making the independence of Belarus complete.

Belgium

The West European nation of Belgium is bordered to the northwest by the North Sea, to the west and southwest by France, to the southeast by Luxembourg, to the east by Germany, and to the north by the Netherlands. Belgium has an area of 11,783 square miles and had a 1945 population of about 8.5 million people. This population was divided into roughly 5 million Flemings, 3.5 million French-speaking Walloons, and 60,000 Germans. Belgium has been independent since 1830 and, with its close trading links to Britain, was the first country on the European continent to industrialize. Belgium was long known for family-owned enterprises and strong financial institutions.

Belgium emerged from World War II in a much stronger position than its neighbors. Fighting in Belgium was more fluid than elsewhere, and most of the cities and the countryside escaped extensive damage. The port of Antwerp became a major Allied base in the closing months of the war.

Belgium did not escape political turmoil, however. King Leopold III had concluded an armistice with the Germans on 28 May 1940 after only a brief stand and in violation of pledges given to Britain and France after those nations had come to Belgium's assistance. Leopold also chose not to accompany his ministers into exile in London and remained in Belgium. A popular decision at the time with many Belgians, it nonetheless created a constitutional problem. Many Belgians came to suspect Leopold of pro-German sympathies, and he further angered many Belgians by remarrying in wartime and choosing a commoner.

The German occupiers removed Leopold to Germany in June 1944, and when the country was liberated that fall his brother, Prince Charles, Count of Flanders, became regent. There was strong socialist opposition to a restoration of the monarchy, and it was not until a March 1950 referendum gave Leopold a 58 percent favorable vote that he actually attempted to regain his throne. His return precipitated both massive demonstrations and a political crisis, causing him to relinquish control of affairs to his son, Baudouin, and abdicate altogether in 1951. Baudouin was king until his death in 1993.

The same major parties that had predominated before the war continued afterward. The conservative Christian Social Party (PSC; Flemish name Christian People's Party) drew its greatest support from the Flemings. The

socialists represented the working classes and unions and were strong in Wallonia. The Liberal Party (called the Party of Liberty and Progress after 1961) was strong among the middle class, especially in Brussels, and favored economic liberalism and anticlericalism.

There was little disagreement over postwar foreign policy. Belgium abandoned its pre–World War II neutrality and embraced the 1948 Brussels defense pact with Luxembourg, the Netherlands, Britain, and France that was the forerunner of the 1949 North Atlantic Treaty Organization, which Belgium also joined. Belgium was also a leader in the European unification movement. It had agreed to economic union with Luxembourg in 1922, and in 1949 Belgium, Luxembourg, and the Netherlands agreed to a customs union. In February 1959 the three states signed the Benelux Treaty, which went into effect the next year and provided for the free movement of labor, capital, and trade among the three states. Belgium was also a driving force behind the European economic unification movement that led to the 1952 European Coal and Steel Community and the 1958 European Economic Community. Belgian socialist politician Paul Henri Spaak (foreign minister during 1936–1939, 1947–1949, 1954–1957, and 1961–1966 and premier during 1938–1939, 1946, and 1947–1949) is rightly regarded as one of the fathers of European integration.

In the years immediately after the war, Belgium's African colonies of the Congo and Ruanda-Urundi remained calm with little agitation for independence. Belgium had long exploited the raw materials-rich Congo, especially the copper deposits of Katanga province. However, the colony was among the worst-administered of any in Africa. The native population received only limited technical training, and there had been no preparation for independence. There were few native university graduates, doctors, or trained administrators. The calm in Congo was shattered by riots in the capital of Leopoldville (Kinshasa) in December 1959, prompted in large part by the French grant of independence for the neighboring French Congo (Congo-Brazzaville). In January 1960 King Baudouin announced his intention to end colonial rule, leading to Congolese independence in June 1960. Immediately thereafter, the Congo lapsed into a bloody civil war. Belgium dispatched troops to protect its national interests, but these were withdrawn following the arrival of peacekeeping forces mandated by the United Nations (UN). Several years of fighting over the secession of Katanga followed. In 1962 the UN voted to end the Belgian trusteeship over Ruanda-Urundi, established after World War I. This action led to the independent states of Rwanda and Burundi.

The major issue in Belgium during the Cold War era was the linguistics quarrel between Flemings, speaking a dialect of Dutch, and Walloons, who spoke French. After independence in 1830, the Walloons initially dominated both politically and culturally. Following World War I, however, the more rural Flemings of northern and western Belgium began challenging Fleming ascendancy, and both French and Flemish were made official languages for administrative purposes in their respective regions, with the capital city of Brussels to be bilingual.

In the 1960s the Flemish movement, seeking the Dutchification of Flanders, again intensified. Disturbances that year reflected economic as

well as linguistic dissatisfaction. The Walloons lived in the part of the country experiencing the most economic problems, especially with the depletion of the coal mines in southern Belgium. The steel industry was also outdated. New industry tended to locate in the Flemish areas, especially around Antwerp, in part because of better transportation facilities.

The focus of the controversy became the University of Louvain (Leuven) in Flanders. Flemings had long wanted this university exclusively theirs. The issue was settled only by its division into separate Flemish and Walloon institutions. Mostly French-speaking Brussels also figured in the agitation. Many Flemings resented the fact that the national capital remained a Walloon enclave inside Flemish territory.

The linguistic division cut across party lines. In general, Flemings supported the Christian Socialists, while Walloons favored the Socialists and Liberals. By the late 1960s, dual ministers were in place for such areas as education, culture, and the economy. Finally, in 1980 a limited degree of regional autonomy took effect, with each half of Belgium securing its own regional assembly and executives. A federal structure rooted itself with three socioeconomic regions in Flanders, Wallonia, and Brussels. Constitutional revisions in 1991 and 1994 confirmed this structure, granting the regions limited rights to levy taxes.

Another contentious issue was the political cleavage in Belgium between Catholics and non-Catholics that centered on school financing. The issue was finally settled by a compromise whereby the state would add to teacher salaries in church-sponsored schools but would not subsidize building construction.

Icelandic foreign minister and prime minister (1963–1970). Born on 30 August 1908, in Reykjavík, Iceland, Bjarni Benediktsson studied law in Iceland, Denmark, and Germany. As a strong-willed nationalist, he shaped Iceland's foreign policy in the early Cold War and proved instrumental in securing

Benediktsson, Bjarni
(1908–1970)

Iceland's founding membership of the North Atlantic Treaty Organization (NATO). He rose to prominence within the center-conservative Independence Party and from 1940 to 1947 served as the mayor of Reykjavík.

In 1941 the United States had taken on the protection of Iceland and at the end of World War II wished to continue its military presence there. Most Icelanders, however, longed for a complete return to neutrality. Benediktsson supported a delicate compromise, reached in 1946, that allowed a U.S. civilian firm to continue to operate the airfield at Keflavík, which was crucial for transatlantic air traffic, but disallowed troop deployments.

In 1947 Benediktsson became foreign minister. Although he knew that Icelanders would not tolerate the basing of U.S. troops on their soil, he also knew that the security of Iceland could only be safeguarded by an alliance with the United States. Toward the end of 1948, when it had become clear that Iceland might be invited into a Western defense pact, Benediktsson worked tirelessly toward that end. In March 1949 when Iceland's parliament agreed to join NATO, riots broke out. Protesters, led by pro-Soviet socialists, were particularly resentful toward Benediktsson.

In 1950, increased international tensions because of the Korean War convinced pro-Western Icelandic politicians that the country could no longer go without military protection. Benediktsson thus led negotiations that resulted in the return of U.S. troops in 1951. Ten years later, after having served in several other government posts, Benediktsson was elected chairman of the Independence Party and in 1963 became prime minister. During his tenure, Iceland enjoyed both political stability and economic prosperity.

On 10 July 1970, Prime Minister Benediktsson died in a house fire at Thingvellir National Park in Iceland along with his wife and young grandson. At the time of his death, Benediktsson was hailed for his leadership skills in both foreign and domestic policy.

Beneš, Edvard
(1884–1948)

Czechoslovak politician, foreign minister (1918–1935), and president (1935–1938 and 1948). Born on 28 May 1884 in Kozlany, Bohemia, Edvard Beneš

studied at Charles University in Prague, the Sorbonne in Paris, and then the University of Dijon, where he earned a doctorate in law in 1908. He was appointed a professor of sociology at the University of Prague in 1912 and there became a protégé of Czech nationalist leader Tomáš G. Masaryk.

Beneš was appointed secretary of the Czechoslovak National Council in 1916. This council became the Czech Provisional Government in 1918. Beneš was named foreign minister of the new state of Czechoslovakia, a post he held until 1935. As foreign minister, he worked to strengthen ties with Romania and Yugoslavia, which with Czechoslovakia formed the so-called Little Entente. Beneš was also a tireless advocate of the League of Nations and served as the National Council's chairman five times. When Masaryk resigned as president of Czechoslovakia in December 1935, Beneš replaced him.

The one intractable problem that Beneš and his ministers could not resolve was that of the minorities, especially the Germans. The Nazi government of Germany pushed grievances into calls for annexation. Germany's absorption of the Sudetenland as a result of the September 1938 Munich Conference prompted Beneš to resign in October. He then went into exile in France.

In July 1940 Beneš became president of the Czechoslovak government-in-exile in London. During the war he worked to preserve an independent Czechoslovakian state. Toward that end he worked to forge close ties with the Soviet Union, hoping that Czechoslovakia might be a bridge between East and West. In December 1943 Beneš concluded a twenty-year treaty of mutual friendship with the Soviets. In April 1945, a new Czechoslovak provisional government was established at Košice, in Czechoslovakia, with Beneš as temporary president.

Beneš was reelected president of Czechoslovakia in 1946. Following Communist Party gains in the December elections that year, he named communist leader Klement Gottwald to head a new coalition government. The Soviets were not content with an independent Czechoslovakia and in February 1948 staged a coup d'état. Embittered by the coup that he had been unable to prevent, heartbroken over the death under suspicious circumstances of his close friend Foreign Minister Jan Masaryk a month after the coup, and in declining health, Beneš resigned as president on 7 June 1948. He died in Sezimovo Ústí on 3 September 1948.

One of the founders of Czechoslovakia, Edvard Beneš worked to preserve the independence of his nation, both as its first foreign minister and then as its president. (Library of Congress)

Ben-Gurion, David (1886–1973)

A devout Zionist and head of the Jewish Agency in Palestine, David Ben-Gurion delivered Israel's Declaration of Independence and was Israel's first prime minister (1948–1953, 1955–1963). (USHMM)

Zionist, defense minister, and prime minister of Israel (1948–1953, 1955–1963). Celebrated as Israel's "Father of the Nation," David Ben-Gurion was born David Gruen in Plonsk, Poland, on 16 October 1886. As a teenager he joined the Workers of Zion (Poalei Zion) while teaching in a Hebrew school in Warsaw. He believed that Zionism could be achieved by Jewish settlement in Palestine and by collective farming and industrialization of the land. Putting his beliefs into action, he moved to Jaffa, Palestine, in 1906 and established the first Jewish workers' commune there. He then began organizing other workers into unions. In 1910 he published his first article on Zionism under the name Ben-Gurion ("son of the lion" in Hebrew). He then moved to Jerusalem and joined the editorial staff of a Hebrew-language newspaper. In 1914 he earned a law degree from the University of Constantinople. He returned to Palestine to take up his union work but was expelled by the Ottomans, who still controlled Palestine, in 1915.

Buoyed by the 1917 British Balfour Declaration that proposed a Jewish homeland in Palestine, Ben-Gurion organized a volunteer military unit to help the British drive the Ottomans out of the region. In 1920 he returned to union organizing. Indeed, he helped found the Histadrut, a powerful federation of Jewish labor unions. During 1921–1935 he served as Histadrut's general secretary. He worked closely with the British (who now controlled Palestine) as head of the Jewish Agency for Palestine during 1935–1948.

When it became clear after World War II that Britain was not sympathetic to the establishment of a Jewish state in Palestine, Ben-Gurion pursued other avenues to Jewish statehood. He supported the 1947 United Nations (UN) partition plan that called for separate Jewish and Arab states in Palestine. In May 1948 the UN formally partitioned Palestine, and the State of Israel was born.

Ben-Gurion was concurrently prime minister and defense minister of the new nation. He immediately consol-

idated all defense organizations into the Israel Defense Forces (IDF), which enabled them to effectively fight both the Arab Palestinians and the surrounding Arab nations. As Israel's first prime minister, Ben-Gurion promoted and increased immigration, established government institutions, advocated compulsory primary education, and created new towns, cities, and settlements. Ben-Gurion retired from politics in 1953 only to return as prime minister and defense minister in 1955.

Ben-Gurion's second stint as head of state coincided with the disastrous 1956 Suez Crisis in which the IDF, working in consort with the French and British, moved into the Sinai Peninsula. Although the IDF performed admirably, the overall operation, by which the British and French planned to seize the Suez Canal, was a dismal failure in terms of international politics.

The last years of Ben-Gurion's premiership were marked by economic prosperity and stalled secret peace talks with the Arabs. He resigned his posts in June 1963 but retained his seat in the Knesset (parliament) until 1970. Ben-Gurion died in Tel Aviv–Yafo on 1 December 1973.

Soviet commissar of internal affairs (1938–1941), general commissar of state security (1941–1953), and member of Soviet dictator Josef Stalin's inner circle. Born on 29 March 1899 in the Russian province of Georgia, Lavrenty Beria as a teenager was attracted to Marxism and Vladimir Lenin's leadership. Beria joined the Bolsheviks in March 1917 and became involved in a series of revolutionary activities during which he gained both political and military experience. In 1919 he graduated from the Polytechnical Institute of Baku with a diploma in architecture.

Beria served in a wide range of positions in the Soviet and regional governments as well as in the Red Army during the 1920s. In 1934 his loyalty and talents were rewarded when he was named a member of the Central Committee of the Communist Party of the Soviet Union (CPSU). In the mid-1930s Stalin began his purges of the CPSU and military leadership. Genrikh Yagoda was Stalin's primary manager of the purges. Yagoda's excessive zeal and desire to please Stalin resulted in the trials and deaths of thousands, and by the end of the decade Soviet leadership ranks had been greatly depleted. Stalin replaced Yagoda with Beria in August 1938, and Yagoda subsequently disappeared. Beria corrected some of the abuses of the purges

As head of internal security in the Soviet Union from 1938 to 1953, Lavrenty Beria was one of the most dreaded and powerful figures in the Soviet Union. He lost influence after World War II and was executed in 1953 by Soviet dictator Josef Stalin's successors. (Library of Congress)

and, in doing so, enhanced Stalin's public reputation. By March 1939 Beria had become a member of Stalin's innermost circle.

Beginning in 1938, Beria served Stalin as commissar of internal affairs, a post he held until 1941, and then as general commissar of state security from 1941 to 1953. After the German invasion of the Soviet Union in June 1941, Beria further consolidated his powers and became responsible for Stalin's brutal scorched-earth policy as Soviet troops retreated in the face of the German onslaught. During World War II Beria also conducted a reign of terror within the Soviet Union in the name of national security. His distrustful nature was quickly transformed into paranoia, and he lacked even the slightest scintilla of mercy. During the last days of the war, Stalin's recognition of Beria's efficiency and loyalty was manifested when he was assigned to lead the Soviet Union's atomic bomb program.

As the Cold War between the Soviet Union and the United States became more entrenched, Beria drove his atomic scientists relentlessly for progress, and the first successful Soviet detonation of an atomic weapon occurred in August 1949. In addition to his leadership on the atomic bomb project, Beria reorganized the domestic and foreign intelligence services of the Soviet Union, assisted in creating a Soviet spy network in the United States and other Allied nations, and supported anti-imperialist activities in the developing world. The aging Stalin rewarded Beria by

bringing him ever closer to the center of power.

After Stalin's death in March 1953, Georgy M. Malenkov named Beria deputy premier of the Soviet Union. Beria's tenure in that position was exceedingly brief, however. Other Soviet leaders saw him as a great threat and a distinct liability for any post-Stalinist government. Beria personally controlled an armed force of 1.5 million men equipped with tanks, artillery, and aircraft. In July 1953, on the orders of Nikita Khrushchev, Beria was arrested and accused of being a spy and an imperialist. He was neither but was secretly tried nevertheless. Found guilty, Beria was probably shot to death in his jail cell in Moscow on 23 December 1953.

The first serious crisis of the Cold War precipitated by the Soviet Union's attempt to cut off access to West Berlin, which lay within Soviet-occupied eastern Germany. As part of the Potsdam Agreements, Germany and Berlin were divided into occupation zones by the victorious World War II Allies (the United States, the Soviet Union, France, and Great Britain), reaffirming principles laid out earlier at the Yalta Conference. Although the provisions of the agreement allocated occupation sectors of Berlin to the other three Allies, no formal arrangements had been made for access to Berlin via the Soviet zone.

After the war, the relationship between the Soviet Union and the West began to deteriorate steadily, as demonstrated by disputes in the United Nations, Winston Churchill's March 1946 "Sinews of Peace" speech (also known as the "Iron Curtain" speech), U.S. emphasis on Soviet containment, Soviet hostility toward the Marshall Plan, and a growing Western commitment to consolidate occupation zones in western Germany to form a single, independent state. The Soviets, who had been invaded by Germany twice in the first half of the twentieth century, were alarmed at the prospect of a reunited, independent Germany.

In late 1947, discussions on the fate of Germany broke down over Soviet charges that its former Allies were violating the Potsdam Agreements. After the decision of the Western powers to introduce a new currency in their zones, on 20 March 1948 the Soviets withdrew from the Four-Power Allied Control Council, which controlled Berlin. Ten days later, guards on the eastern German border began slowing the entry of Western troop trains bound for Berlin. On 7 June, the Western powers announced their intention to proceed with the creation of a West German state. On 15 June, the Soviets declared the Autobahn entering Berlin from West Germany closed for repairs. Three days later all road traffic from the west was halted, and on 21 June barge traffic was prohibited from entering the city. On 24 June, the Soviets stopped all surface traffic between West Germany and Berlin, arguing that if Germany were to be partitioned, Berlin could no longer be the German capital.

Located 110 miles inside the Soviet occupation zone, West Berlin from the start of the Cold War had been a Western outpost deep within the communist bloc, a hotbed of intelligence operations by both sides, and the best

Berlin Blockade and Airlift (1948–1949)

West Berlin from the start of the Cold War had been the best available escape route for East Germans fleeing Communism and Soviet control.

available escape route for East Germans fleeing communism and Soviet control. U.S. President Harry Truman was convinced that abandoning Berlin would jeopardize control of all of Germany. He further believed that the Soviets were determined to push the Western powers out of Berlin, thereby discrediting repeated American assurances to its allies and the rest of Europe that it would not allow Berlin to fall.

A military response to the blockade was initially considered but rejected, as the Western powers lacked the manpower to counter the massive Red Army's numerical and strategic advantage. Thus the United States, working with its European allies, undertook to supply West Berlin via air corridors left open to them in a postwar agreement. The Berlin Airlift began on 24 June 1948 and continued uninterrupted for the next 324 days. Western fliers, under the leadership of U.S. Air Force Lieutenant General Curtis LeMay, made a total of 272,000 flights into West Berlin, delivering thousands of tons of supplies every day.

The airlift was at first meant to be a short-term measure, as Allied officials did not believe that the airlift could support the whole of Berlin for any length of time. The situation in the summer and fall of 1948 became very

BERLIN AIRLIFT, 1948 – 1949

tense as Soviet planes buzzed U.S. transport planes in the air corridors over East Germany, but the Allies only increased their efforts to resupply the German city once it became apparent that no resolution was in sight. The Soviets never attempted to shoot down any of the Western aircraft involved in the airlift, no doubt because such a provocation might well result in war.

Hundreds of aircraft were used to fly in a wide variety of cargo items, including more than 1.5 million tons of coal. By the fall, the airlift, called by the Americans “Operation VITTLES,” was transporting an average of 5,000 tons of supplies a day. At the height of the operation on 16 April 1949, an aircraft landed in Berlin every minute around the clock.

The airlift was an international effort; airplanes were supplied by the United States, the United Kingdom, and France, but there were also flight crews from Australia, Canada, South Africa, and New Zealand. The three main Berlin airfields involved in the effort were Tempelhof in the American sector, Gatow in the British zone, and Tegel in the French sector. The British even landed seaplanes on the Havel River.

The airlift gained widespread public and international admiration, and on 12 May 1949 the Soviets, concluding that the blockade had failed, reopened the borders in return for a meeting of the Council of Foreign Ministers, perhaps believing that they could have some influence on the Western Allies’ proposed plans for the future of Germany. Even though the Soviets lifted the blockade in May, the airlift did not end until 30 September because the allies sought to build up sufficient amounts of reserve supplies in

West Berlin in case the Soviets blockaded it again. In all, the United States, Britain, and France flew 278,118 flights transporting more than 2.3 million short tons of cargo. Thirty-one Americans and thirty-nine British citizens, most of them military personnel, died in the airlift.

In the end, the blockade was not only completely ineffective but also backfired on the Soviets in other ways. The blockade provoked genuine fears of the Soviets in the West and introduced even greater tension into the Cold War. Instead of preventing an independent West Germany, it actually accelerated Allied plans to set up the state. It also hastened the creation of the North Atlantic Treaty Organization (NATO), an American-West European military alliance.

Berlin Crises (1958–1961)

Continual disagreement over the control of Berlin between the Soviet bloc and the Western Allies had begun in earnest in the late 1940s, culminating in the Berlin Blockade (1948–1949). Then, following a period of relative—if tense—calm, renewed Cold War tensions transformed the city into one of the world's potential flash points during 1958–1961.

With Soviet prestige dramatically boosted by the launch of *Sputnik 1* in 1957, Soviet Premier Nikita Khrushchev decided to revive the issue of Berlin. On 10 November 1958, he sought to end the joint-occupation agreement in the city by demanding that Great Britain, France, and the United States withdraw their 10,000 troops from West Berlin. He also declared that the Soviet Union would unilaterally transfer its occupation authority in Berlin to the German Democratic Republic (GDR, East Germany) if a peace treaty were not signed with both East and the Federal Republic of Germany (FRG, West Germany) within six months. West Berlin would then become a free city. Khrushchev

couched his demands by portraying West Berlin's proposed free-city status as a concession because it lay in East German territory and therefore properly belonged to the GDR. None of the Western powers, however, formally recognized East Germany, viewing it as a mere subsidiary of the Soviet Union.

The United States flatly rejected Khrushchev's demands, although other Western powers initially tried to meet some of the Soviet leader's demands by proposing an interim Berlin agreement that placed a limit on Western forces and curtailed some propagandistic West Berlin activities, such as radio broadcasts that targeted East German audiences. These Allied proposals would have given the Soviets and East Germans some measure of power in West Berlin, a concession that many West Berliners viewed as a highly dangerous step toward neutralization and, ultimately, abandonment. In December 1958, the Allies issued a North Atlantic Treaty Organization (NATO) declaration rejecting Soviet demands and insisting that no state had the right to withdraw unilaterally from an international agreement.

Khrushchev gradually retreated from his hard-line stance on Berlin. American U-2 overflights of the Soviet Union indicated that the West had an accurate count of the comparatively small number of Soviet nuclear missiles, and the Soviet leader obviously feared starting a war that he could not win. The Soviets now envisioned a gradual crowding out of the Western powers without bloodshed. In the meantime, the economic situation in East Germany continued to deteriorate, with vast numbers of refugees continuing to flee to the West.

In 1961, the newly elected U.S. president, John F. Kennedy, abandoned the demand for German unification that had been part of the U.S. policy since the 1940s. His foreign policy team had drawn the conclusion that such a policy was not only impractical but might actually provoke a U.S.-Soviet war. Kennedy and his advisors decided that only three interests were worth the risk of nuclear war: the continued Allied presence in West Berlin, Allied access to West Berlin by land and by air, and the continued autonomous freedom of West Berlin. Realizing that a rather inconsequential event and a sequence of mutually threatening and unnecessary mobilizations had led to World War I in 1914, Kennedy worried constantly that a relatively minor incident in Germany could escalate into World War III.

Meanwhile, GDR leader Walter Ulbricht decided to close the East Berlin borders in an attempt to exercise control over all traffic to and from Berlin, including Allied military as well as German civilian travelers. On 13 August 1961, East German authorities began the construction of the Berlin Wall, essentially sealing off East Berlin from West Berlin and permanently bifurcating the city. Ulbricht sought to control not only what went into East Berlin but also what came out as well, including thousands of East Germans who sought refuge in West Berlin. The Soviets and the East Germans had wagered that the West would not react to the construction of the Wall. Kennedy, in accordance with his policy, offered little resistance. Emboldened, Ulbricht began to take further measures to assert control over Berlin.

Ten days after closing the border, the GDR allowed tourists, diplomats, and Western military personnel to enter East Berlin only via the crossing

Soviet and American tanks face off at the tense Friedrichstrasse checkpoint on the East-West Berlin border, 28 October 1961. Seventeen hours after the confrontation began the two sides disengaged, ending the crisis. (Bettmann/Corbis)

point at Berlin Friedrichstrasse. The only other two checkpoints into East Germany were Helmstedt at the West German–East German border and Dreilinden at the West Berlin–East Germany border. According to the military’s phonetic alphabet, the Helmstedt checkpoint became Alpha, Dreilinden was nicknamed Checkpoint Bravo, and the checkpoint at Friedrichstrasse was famously dubbed Charlie. Checkpoint Charlie would soon become one of the best-known symbols of the Cold War.

At all of the East German checkpoints tourists were fully screened, but the postwar occupation agreement prevented East German authorities from checking any members of the Allied military forces. On 22 October 1961 Allan Lightner, chief of the U.S. Mission in Berlin, attempted to pass through Checkpoint Charlie to attend the opera in East Berlin. East German police stopped Lightner and asked him for identification. Lightner, following long-standing instructions, stated that he was a member of the U.S. occupation authority as shown by his U.S. Mission license plate and that he therefore did not have to provide identification. The East German police refused to let Lightner pass. General Lucius D. Clay, the hero of the Berlin Airlift and now President Kennedy’s personal representative in West Berlin, immediately dispatched a squad of U.S. soldiers to the site. With that, Lightner’s car went through the checkpoint, backed up, and went through it again and again to make the point that U.S. officials were going to move freely. Although Kennedy was reluctant to precipitate a crisis over a somewhat trivial affair, Clay nonetheless ordered tanks to the checkpoint, while the Soviet military brought in its own tanks to oppose them on the other side.

The 1961 Checkpoint Charlie incident thus proved that the Soviets, not the East Germans, were actually in charge of East Germany. The photos of American and Soviet tanks facing each other at the checkpoint on 25 October became one of the most memorable images of the Cold War. The confrontation boosted the morale of West Berliners because it clearly showed that the Allies, particularly the United States, would not yield to East German or Soviet pressure tactics. It also unmasked the charade of an independent and autonomous GDR that could deal on an equal basis with the Western powers.

Barrier first erected in August 1961 by the German Democratic Republic (GDR, East Germany) that walled off access to West Berlin from GDR-controlled East Berlin. Officially known in East Germany as the “Antifascist Bulwark,” the Berlin Wall was constructed to stop the flood of East German citizens seeking asylum in the Federal Republic of Germany (FRG, West Germany). *Republikflucht* (flight from the Republic) created tremendous economic strains.

Most of the people fleeing the GDR were young skilled workers. Between 1949 when the GDR was created and 1952 when the border was sealed off everywhere but in Berlin, almost 200,000 people left for West Germany each year. After the East Berlin Uprising in 1953, the number of refugees doubled—more than 400,000 people left the GDR that year. Although flight from the GDR dropped to normal levels again for 1954, a mild economic crisis in 1956 led to another longer rise in numbers.

Walter Ulbricht, the leader of the Socialist Unity Party (SED) that controlled the GDR, proposed to Soviet leader Nikita Khrushchev that the border in Berlin be sealed in early 1961. This was a risky move, as Berlin was still theoretically an open city under the control of all four Allied powers. Despite Soviet misgivings, GDR army, police, and volunteer (*Kampfgruppen*) units began the construction of the barrier on the night of 12–13 August 1961. The Brandenburg Gate was closed to traffic the following day, and by 26 August all crossing points into West Berlin had been sealed off. Eventually, twelve checkpoints were established to regulate traffic between the GDR and West Berlin. The most famous, in the center of Berlin, was called Checkpoint Charlie.

The Berlin Wall went through four generations of architecture. Far more than the symbolic barricade that cut through the center of Berlin and was so often photographed by tourists, the wall encircled the western half of the city. Until 1971, when a connecting road was constructed, two western exclaves existed behind the wall and were supplied solely by the American and British military. There were obstacles in canals, sewer lines, and communications and transportation tunnels that formed part of the Berlin Wall

Berlin Wall
(13 August 1961–
9 November 1989)

West Germans peer over the Berlin Wall, a barricade constructed by the East German government in 1961 that closed the border between West Berlin and the Democratic Republic of Germany (GDR, East Germany) for twenty-eight years. The wall, a symbol of communist tyranny during the Cold War, was destroyed in late 1989. (Library of Congress)

system. It stretched for 155 kilometers (106 miles) and by 1989 contained ninety-two watchtowers, twenty bunkers, antivehicle trenches, and other advanced defensive systems.

The first two versions of the Berlin Wall consisted of concrete blocks and barbed wire. These were replaced in 1965 with a system of concrete slabs and steel girders topped by a sewage pipe to make scaling the wall more difficult. In 1975, this structure gave way to one made entirely of reinforced concrete some twelve feet high, not including the tube element on top. Behind this was the so-called death strip secured by dogs, tanks, trip-wire machine guns, and guards.

While these measures prevented the flood of refugees like that of the late 1950s, they did not stop people from trying to escape from the GDR to the West. In the early days of the Berlin Wall, people jumped from buildings, used ladders to climb over the wall, or dug tunnels under it. As the system evolved, attempts became more dangerous and more complex. At least

171 people were killed trying to leave the GDR between 13 August 1961 and 9 November 1989, when the wall came down. More than 5,000 East Germans, including 574 GDR border guards, successfully crossed the wall.

East Germans were not the only victims of the Berlin Wall, however. Because the wall was actually built a few yards back from the border, in the early years of the wall West German citizens who strayed too close could be and were sometimes arrested by GDR border patrols. The restricted supplies and claustrophobic atmosphere of West Berlin caused a drop in population of some 340,000 people between 1963 and 1983. To keep the city alive, the FRG encouraged foreign immigration and granted special privileges to West Berliners.

The western half of the city became a symbol of freedom, recognized most famously in the phrase “*Ich bin ein Berliner*” (I am a resident of Berlin) in John F. Kennedy’s 1963 speech. A later American president, Ronald Reagan, also recognized the symbolism of the Berlin Wall when he challenged Soviet leader Mikhail Gorbachev to “tear down this Wall” to prove his sincerity about reform. Soviet pressure for reform in fact did play a part in the fall of the Berlin Wall.

During the transitional crisis of late 1989, the new East Berlin regime lifted travel restrictions to West Berlin. Günter Schabowski, head of the SED’s Berlin organization, announced on television on 9 November 1989 that the lifting of restrictions would be effective immediately. East Germans went, cautiously, to test this at the Berlin Wall; lacking specific instructions, border guards let them through. Within hours, Germans from both sides of the wall were sitting atop it, drinking champagne and celebrating the end of the divided city.

Today, the only reminder of the Berlin Wall is a strip of bricks that follows its former path. Most sections of concrete are in museums, many in foreign countries. While it existed, however, the Berlin Wall was one of the most infamous and powerful symbols of the Cold War.

Berlinguer, Enrico

(1922–1984)

Italian politician and head of the Italian Communist Party (PCI) from 1972 to 1984. Enrico Berlinguer was born in Sassari, Sardinia, on 25 March 1922 to an aristocratic Sardinian family with ties to the fathers of the Italian Risorgimento. His father was a member of the Italian parliament who vehemently objected to Italian dictator Benito Mussolini's regime. Berlinguer attended law school at the University of Sassari and in 1937 had made contacts with Sardinian antifascist groups. He joined the PCI in 1943 and soon became secretary of its youth organization Federazione Giovanile Comunista Italiana (FGCI). In 1944 he met PCI head Palmiro Togliatti, who helped Berlinguer's ascension to the party's upper echelons as a member of the Central Committee in 1945, director of the youth wing in 1948, and secretary-general of the FGCI from 1949 to 1956.

In 1968 Berlinguer won a seat in parliament and in 1969 was appointed the PCI's general vice-secretary. By 1972, he had become secretary-general of the PCI. As such, he developed a strategy that sought to modernize Togliatti's original plans for Italian socialism, adapting it to the ever-changing context of Italian politics and the international scene of the 1970s. Chagrined

by the September 1973 Chilean military coup that ousted Salvador Allende, Berlinguer concluded that the Italian Left could not govern the country alone and instead must forge alliances with progressive, centrist political parties. The core of his new strategy included close cooperation with the Christian Democrats (DC) that was soon dubbed the *compromesso storico* (historic compromise).

During a time of economic uncertainty and terrorism, Berlinguer's proposals attracted great interest, particularly among Italians who believed that the current state of affairs offered an opportunity to stabilize Italian politics and transform the PCI into a more moderate party. Berlinguer himself encouraged this view by publicly admitting in 1976 that NATO offered his party a "guarantee" to experiment with socialism by gradually moving away from the pro-Soviet line of his predecessors. Internationally, Berlinguer was crucial in developing the Eurocommunism movement, which linked the PCI not with Moscow but rather with Paris, Madrid, and Lisbon. His strategies paid off, as the PCI won 36 percent of the vote in the 1976 elections. By 1978, the PCI was informally supporting the noncommunist majority in power. When the infamous terrorist organization Red Brigade kidnapped and executed DC Secretary Aldo Moro, Berlinguer immediately denounced terrorism.

Yet Berlinguer's extraordinary efforts to forge a more moderate image for the PCI were never wholly successful. Many still regarded the PCI as too close to Moscow to be trusted, and by the end of the 1970s the *compromesso storico*

Enrico Berlinguer headed the Italian Communist Party (1972–1984), the most powerful in Western Europe. (Gianni Giansanti/Sygma/Corbis)

had gained little momentum. He had formally abandoned this strategy by 1981 but continued to distance the PCI from Moscow, declaring his criticism of Soviet tactics after the 1981 coup in Poland. Berlinguer died on 11 June 1984 after collapsing during a public speech in Padua.

Urban, Joan B. *Moscow and the Italian Communist Party: From Togliatti to Berlinguer*. Ithaca, NY: Cornell University Press, 1986.

Polish politician, Communist Party leader, and deputy prime minister of the Polish Republic from 1954 to 1956. Born on 24 December 1901 in Warsaw to a middle-class Jewish family, Jakub Berman graduated with a law degree from Warsaw University in 1925. In the interwar period he became active in the Communist Party of Poland. In September 1939, when Nazi Germany and the Soviet Union invaded Poland, he found himself in Soviet-occupied territory. In the USSR Berman continued to associate with fellow Poles, mainly through the Union of Polish Patriots. In January 1944 he helped found the Central Office of Polish Communists, and in July 1944 he played a prominent role in forming the Polish Committee for National Liberation, a Soviet-style government imposed by Soviet dictator Josef Stalin.

From 1944 to 1948 Berman was a member of the Polish Workers' Party politburo. After the party merged with the Polish Socialist Party in December 1948, he held membership in the politburo of the renamed Polish United Workers' Party.

Between 1945 and 1956, Berman fulfilled numerous functions in the Polish government, keeping a relatively low profile. From 1952 to 1954 he was a member of the Council of Ministers, and from 1954 to 1956 he served as deputy prime minister. Berman's power was far greater than his positions might have suggested. He was the ideological leader of the Communist Party and was responsible for Poland's cultural and foreign affairs. Second in power only to Bolesław Bierut, Berman was also largely responsible for Poland's foreign policy in the initial years of the Cold War. In addition, he supervised the Ministry of Public Security and was instrumental in the mimicking of Stalin's terror tactics. Berman personally supervised numerous political investigations and interrogations of opposition activists, some of which included torture and death sentences.

Berman, Jakub
(1901–1984)

In 1957, after the Soviets' 1956 de-Stalinization campaign, Berman was forced out of the Polish United Workers' Party, which effectively ended his political career. Afterward, he worked as an editor in a Polish publishing house until his 1968 retirement. He died in Warsaw on 14 April 1984.

Bessarabia

Southeast European territory covering some 17,600 square miles in present-day Moldavia and Ukraine, bounded by the Prut, Danube, and Dneister rivers and the Black Sea. Its population in 1945 was approximately 2 million. Moldavians made up about 50 percent of the population, while Ukrainians were 20 percent; the remainder were Russians, Germans, Bulgarians, and Jews.

Until 1812 Bessarabia, which was named for the Bassarab dynasty that ruled much of Wallachia in the fourteenth and fifteenth centuries, formed the eastern boundary of Moldavia, a vassal state of the Ottoman Empire. In the Treaty of Bucharest of May 1812 Russia annexed Bessarabia, and it remained part of the Russian Empire until 1918. Bessarabia was briefly independent following the end of World War I but chose to join Romania. This decision was confirmed by the Allied powers, which formally awarded the territory to Romania in 1920 as an additional buffer against communist Russia. The Russian government, however, continued to regard Bessarabia as its own territory.

In June 1940, in accordance with the German-Soviet Nonaggression Pact of 23 August 1939, the Soviet Union annexed Bessarabia and that August formed much of it into the Moldavian Soviet Socialist Republic (MSSR), although portions of it were also awarded to the Ukrainian Soviet Socialist Republic (SSR). The Soviets also deported significant numbers of Bessarabians to Siberia. Romania retook Bessarabia following the Axis invasion of the Soviet Union in June 1941 in which Romanian forces participated. Approximately 65,000 of 75,000 Jews living in Bessarabia perished during the Holocaust.

The Soviet Union regained the region at the end of World War II. Although Romania became a communist state and entered the Soviet bloc after the war, there was continued acrimony between the Soviet Union and Romania over Bessarabia. With the collapse of the Soviet Union in 1991, the MSSR declared itself independent and became the Republic of Moldova.

Many in Romania continued to believe, however, that Moldova should be part of Romania.

Venezuelan politician, provisional president (1945–1948), and president (1959–1964). Born into a modest family in Guatire, Miranda, on 22 February 1908, Rómulo Betancourt became involved in politics while attending the University of Caracas, where he led student protests against the dictatorship of Juan Vicente Gómez. Arrested in 1928 and released after several weeks in jail, Betancourt was exiled to Costa Rica until Gómez's death in 1935.

A founder of the Costa Rican Communist Party, Betancourt became an admirer of the New Deal policies of U.S. President Franklin D. Roosevelt after pragmatism and nationalism led the Venezuelan to renounce dogmatic, Moscow-directed communism. In September 1941 Betancourt helped establish Acción Democrática (Democratic Action), a left-wing anticommunist party that came to power in Venezuela's October Revolution of 1945. Appointed provisional president, Betancourt established a new constitution and initiated a program of moderate social reforms. He handed power over to a democratically elected president in 1948, but a coup a few months later led by General Marcos Pérez Jiménez forced Betancourt into exile again. He spent the next ten years abroad directing the outlawed Acción Democrática party.

After Jiménez was overthrown in 1958, Betancourt returned to Venezuela and was elected president in 1959. His reformist administration passed an agrarian reform law to expropriate large estates, initiated public works programs, and fostered industrial development to reduce dependence on petroleum reserves. Betancourt exercised greater control over foreign-dominated petroleum companies, increased government tax revenue from oil production, and supported the formation of the Organization of Petroleum Exporting Countries (OPEC).

Betancourt adopted a policy of nonrecognition of undemocratic governments. He praised President John F. Kennedy's Alliance for Progress and supported U.S. efforts to isolate Fidel Castro's Cuba. Beleaguered by forces from both the Left and the Right, Betancourt suppressed an armed insurgency by leftist admirers of the Cuban Revolution, countered rightist military

Betancourt, Rómulo
(1908–1981)

uprisings, and survived an assassination attempt planned by Dominican dictator Rafael Trujillo.

After his presidential term ended in 1964, Betancourt became the first Venezuelan in history to hold the presidency by a legitimate election and to relinquish the office to a popularly elected successor. He then lived for eight years in Switzerland, returning to Venezuela in 1972. Betancourt died on 28 September 1981 while visiting New York City.

Bevin, Ernest (1881–1951)

British trade union leader, Labour Party politician, minister of labor, and foreign secretary from 1945 to 1950. Born in Winsford, Somerset, on 9 March 1881, and orphaned at the age of eight, Ernest Bevin left school at age eleven and worked a series of odd jobs to support himself. He eventually worked his way up from dockworker to secretary of the dockworkers' union by age twenty. Bevin continued to rise through union ranks and became general secretary of the Transport and General Workers Union in 1931. Influential in Labour Party politics throughout the 1930s, he became minister of labor in Winston Churchill's wartime coalition government in 1940 and was responsible for mobilizing manpower for the war effort. After Labour's 1945 electoral victory, Bevin became foreign secretary to Prime Minister Clement Attlee, accompanying him to the last Allied conference at Potsdam in the summer of 1945.

Bevin's years as a trade unionist ingrained in him a deep distrust of Soviet-style communism. After 1945, he was convinced that the Soviet Union was bent on expanding its influence over the whole of Europe and the Middle East. But a Britain badly weakened by six years of war had to look elsewhere for help in reestablishing world order and stanching Soviet expansionism. Bevin therefore turned over British commitments in the Mediterranean, particularly in Greece and Turkey, to the United States on 21 February 1947. This decision ultimately led in March 1947 to the Truman Doctrine,

which pledged American responsibility for anticommunist and anti-Soviet policies in the region.

Having cast Britain's lot with the United States, Bevin worked tirelessly to convince U.S. President Harry S. Truman of the need for financial and military support for European reconstruction and the unification of Western Europe as a bulwark against Soviet expansionism in what soon became known as the containment policy. A similar consensus was emerging within the Truman administration, and on 5 June 1947 U.S. Secretary of State George Marshall announced that the United States would establish an aid package for both Western and Eastern Europe, known as the Marshall Plan or the European Recovery Program. Bevin then turned to military concerns and negotiated the 1948 Brussels Treaty, which was ultimately expanded into the North Atlantic Treaty Organization (NATO), founded on 4 April 1949.

Bevin preserved Britain's freedom of action in international affairs, however, by eschewing Anglo-European integration, and he angered the United States by officially recognizing the People's Republic of China (PRC) in January 1950. Health problems forced Bevin to resign on 10 March 1951, and he died in London on 14 April 1951.

One of the most powerful union leaders in Great Britain during the first half of the twentieth century, Ernest Bevin was a forceful and effective foreign secretary in Prime Minister Clement Attlee's Labour government during 1945–1951. (Library of Congress)

King of Thailand since 1946. Born on 5 December 1927 in Cambridge, Massachusetts, Bhumipol Adulyadej was the third and youngest child of Prince and Princess Mahidol Songkla, both of whom were educated in the United States. The future king was educated in Switzerland, attending the École Nouvelle de la Suisse Romande, earning a degree in letters from the

Gymnase Classique Cantonal of Lausanne, and attending Lausanne University to study science. His career in science ended when his eldest brother, King Ananda Mahidol, died suddenly, elevating Bhumipol to the Thai Crown on 9 June 1946. In May 1950 he was officially crowned Rama IX of the Chakri dynasty.

As king, Bhumipol played a critical role in shaping modern Thailand, earning an early reputation as a supporter of U.S. and Western Cold War policies in the region. Although his powers were largely ceremonial, the king nonetheless wielded considerable political influence during the Cold War. Profound reverence for the king combined with the Buddhist faith unified Thailand and insulated it from the convulsive nationalism and revolutions that engulfed other Southeast Asian nations. The Thai Army portrayed itself as the defender of traditional Thai culture, protecting it from communist expansion in the region. This rationale helped justify Thai military authoritarianism and a close relationship with the United States, which used Thailand as a major base for operations during the Vietnam War.

King Bhumipol in many ways symbolized the durability of U.S.-Thai relations. He had lived and traveled extensively in the United States and was even an accomplished jazz musician, playing saxophone with many famous American artists. Moreover, he supported the American efforts in Indochina, which endeared him to U.S. policymakers.

Yet Bhumipol was no puppet. The staged American withdrawal from Southeast Asia that began in 1973 precipitated revolution in Thailand. In October 1973 Thai demands for an end to military rule exploded in violence. When the army and the police began using brutal force against demonstrators, the king publicly intervened to stop them. Top military officials were forced to flee the country, and a civilian government came to power. The military returned to govern, however, following another revolution in 1976 and remained behind the scenes of nominally civilian governments throughout the 1980s. When army generals seized power for themselves in the spring of 1992, King Bhumipol again intervened, putting an end to the power struggle and heartily endorsing civilian rule.

Over the course of the Cold War Bhumipol also demonstrated a genuine commitment to improving the welfare of his people by introducing reforms dealing with agriculture, the environment, health care, and education. He still commands the genuine love and respect of the Thai people and remains the symbol of Thai national unity.

Bhutan

Landlocked South Asian nation covering 18,147 square miles, about half the size of the U.S. state of Indiana. The Kingdom of Bhutan, with a 1945 population of some 300,000 people, is bordered on the north by Tibet, now part of the People's Republic of China (PRC), and on the south by India. It shares historical and cultural ties with Tibet. Predominantly a Lamaistic Buddhist country, Bhutan is the only Buddhist constitutional monarchy in the world, with three kings since 1945: Jigme Wangchuck (1926–1952), Jigme Dorji Wangchuck (1952–1972), and Jigme Singye Wangchuck (1972–). Popular political participation has been limited, and political power has remained in the hands of the royal family and other elites.

Bhutan came into contact with the British as they conquered India in the 1770s. An 1865 treaty transferred some of Bhutan's border territory to the British in return for annual compensation. In 1907 Britain influenced the creation of a hereditary monarchy to replace the dual theocratic-civil government that had been in place since the seventeenth century. Thereafter, the British agreed to refrain from interfering in internal Bhutanese affairs while retaining the right to guide foreign relations.

After the British withdrawal from the subcontinent in 1947, a now-independent India assumed the task of steering Bhutanese foreign relations. This arrangement was formalized in Article 2 of the 1949 Treaty of Friendship, which also recognized Bhutanese independence. In subsequent years, Bhutanese leaders periodically questioned the effect that this treaty had on their sovereignty. From the 1970s on, Bhutanese leaders adopted a broad interpretation of Article 2 and asserted their own right to shape foreign policy.

In the post-1945 period, Bhutan's foreign policy was primarily shaped by its location between two regional powers occasionally in conflict with each other, the PRC and India. This led Bhutan to adopt a nonaligned position between these two in particular and in the wider Cold War generally. While developments such as the 1951 Chinese occupation of Tibet and the 1962 Sino-Indian border clash seem to have prompted a tilt toward India, Bhutan also asserted its independence from India by engaging directly with the Chinese on boundary and refugee issues. At the same time, Bhutan exploited opportunities to end its isolation and its traditional dependence on India with greater involvement in international organizations, such as the 1962 Colombo Plan, the United Nations, and the Non-Aligned Movement. In 1983, Bhutan became a founding member of the South Asian Association for Regional Cooperation.

Since the 1960s Bhutanese leaders, with economic assistance from India and international institutions, intensified efforts to develop and modernize their country. Such efforts were costly, and the struggle between conservative and progressive forces at times led to internal instability. One such instance was the assassination of the reform-minded prime minister, Jigme Palden Dorji, in April 1964, a murder masterminded by the king's uncle Namgyal Bahadur, the army chief of operations. Bhutan's economy today is largely agricultural and remains one of the less-developed economies in the world, although the government is turning to tourism as a potential source of new revenue.

Bhutto, Benazir (1953–)

Leader of the Pakistan People's Party (PPP) and prime minister of Pakistan during 1988–1990 and 1993–1996. Born in Karachi, Pakistan, on 21 June 1953, Benazir Bhutto was the daughter of Zulfikar Ali Bhutto, Pakistan's popular leader and prime minister. Benazir Bhutto graduated from Radcliffe College in 1973 and went on to earn a degree from Oxford University in philosophy, politics, and economics in 1976. She returned to Pakistan that same year.

On 5 July 1977, Zulfikar Ali Bhutto was overthrown by Army Chief General Zia ul Haq. Arrested by the new government, Bhutto was charged with the murder of a political opponent and executed in 1979. Benazir Bhutto, meanwhile, was held under house arrest. She then left for Britain after her father's death as the leader-in-exile of the opposition PPP. Following Haq's lifting of martial law in 1986, Bhutto returned to Pakistan and became the nation's most prominent prodemocracy leader. After Haq's death, Bhutto won the national elections in December 1988, becoming the prime minister and the first female leader of a Muslim nation.

There was initial euphoria in both Pakistan and the West that Bhutto's leadership would bring about substantive reforms. But this optimism did not take into account the scale and scope of the problems she faced, and her first

Pakistani opposition leader Benazir Bhutto flashes victory signs to welcoming crowds shortly after her return from exile on 10 April 1986. (Reuters/Corbis)

stint as prime minister witnessed few meaningful changes. In August 1990 she was ousted by a military coup, which claimed corruption on the part of her government. In October 1990, the United States suspended military and economic assistance to Pakistan because of the coup and its ongoing nuclear weapons program. After Bhutto's return to power in 1993 she visited Washington in April 1995, convincing American policymakers to suspend sanctions previously imposed on Pakistan.

During her second term in office, Bhutto made small strides toward reform, mainly in health care and education. Her second term also witnessed the rise of the Taliban in neighboring Afghanistan, which seized power in September 1996 with financial backing from Pakistan. In November 1996, however, Pakistanian President Farooq Leghari again dissolved Bhutto's government on charges of corruption and financial irregularities.

In 1999 Bhutto and her husband, Ali Zardari, were convicted of corruption. That same year, Bhutto left Pakistan. She has been living in exile in London and in Dubai. Zardari was freed in November 2004 after eight years in jail. Bhutto continues as the leader of the PPP.

Bhutto, Zulfikar Ali (1928–1979)

Pakistani politician, president (1971–1973), and prime minister (1973–1977). Born on 5 January 1928 in Larkana, Sind, India, Zulfikar Ali Bhutto was the son of Sir Shahnawaz Khan Bhutto, an influential landlord and politician in British colonial India. Bhutto studied at the University of California, Berkeley, where he earned a BA degree in 1950, and at Oxford University.

Returning to Pakistan, Bhutto practiced law. He also served in 1957 as a member of the Pakistani delegation to the United Nations (UN). Entering politics, from 1958 he held several cabinet posts in the government led by Muhammad Ayub Khan. As foreign minister in Khan's government from 1963 and as prime minister from 1967 to 1977, Bhutto provided a new direction to Pakistan's foreign policy. He secured Pakistan's relations with the People's Republic of China (PRC), and when the United States sought rapprochement with China, it was Pakistan that acted as the mediator. Bhutto also bolstered relations with the USSR in a bid to forge a more independent foreign policy and to project his country's prominence in the developing world.

Following differences with President Khan in the aftermath of the Indo-Pakistan War (1965), Bhutto began a mass political campaign. His charismatic personality and talk of social justice met with an enthusiastic response, and in December 1967 he launched the Pakistan People's Party (PPP). In the elections of 1970 Bhutto's PPP won a resounding victory in West Pakistan, but the Awami League of East Pakistan won the majority vote. Bhutto continued to speak of the need for constitutional reform, but talks on the subject went nowhere. Meanwhile, the East Pakistani secession movement was rapidly gaining ground, and General Mohammad Yahya Khan, who had taken over from Ayub Khan in 1970, carried out a military crackdown in East Pakistan.

Pakistan was humiliated after its defeat by India in the 1971 war. The subsequent emergence of Indian-backed Bangladesh added insult to injury. In 1971 Bhutto assumed power with the military's approval. He vowed to rebuild Pakistani morale, and a period of frenetic nation building ensued.

To counter growing opposition due to his heavy-handed rule, Bhutto called for elections in 1977. Although ostensibly victorious, he was accused of electoral fraud and ousted from power by General Muhammad Zia ul Haq on 5 July 1977. Bhutto was later arrested on charges of ordering the murder of a political opponent. He was subsequently convicted and executed in 4 April 1979 at Rawalpindi, Pakistan.

Nigerian tribal and civilian conflict during 1967–1970. The Biafra War emerged from tribal conflicts in Nigeria that could barely be contained by the poorly functioning federal government established when the country achieved independence from Britain in 1960. The eastern part of Nigeria, under the leadership of the ethnic Ibo (Igbo) Colonel Chukwuemeka Odumegwu Ojukwu, declared itself independent as Biafra in May 1967. The ensuing war caused much suffering, especially among civilians, as the Nigerian military government under the northerner Lieutenant Colonel Yakubu Gowon sought to extinguish the rebellion. The war ended with the collapse of Biafra in January 1970.

At the beginning of 1966 a declaration of martial law followed by a military coup had resulted in a military junta led by Major General Johnson Aguiyi Ironsi, an Ibo from eastern Nigeria. Fearful northerners then launched a counter coup in July 1966, establishing the Nigerian military government of Lieutenant Colonel Gowon. This resulted in rioting and violence between northerners and easterners; attacks on Ibos in the north fueled Ibo fears about the intentions of Gowon's federal military government. Through the second half of 1966 it became clear that tribal tensions might culminate in the secession of eastern Nigeria, under Lieutenant Colonel Ojukwu's leadership. Despite diplomacy intended to avoid that outcome and declarations by all parties of allegiance to the concept of Nigerian unity, such was the result.

Following the January 1967 Aburi Conference attended by both Gowon and Ojukwu that was called to reach a peaceful solution to the crisis, Ojukwu declared himself dissatisfied with the negotiations, which envisaged a renewed federal structure. Ojukwu then moved toward secession. The secession declaration formally establishing Biafra was made on 27 May 1967. War quickly followed as the Nigerian government sought to defeat the secessionists.

The Biafra War became a major problem for Britain, Nigeria's former colonial ruler, and Labour Party Prime Minister Harold Wilson. While calling for negotiations, peace, and Nigerian unity, Wilson's government decided to supply arms to Gowon's federal government but not to Biafra, on the grounds that the United Kingdom was, in Wilson's words, a "traditional supplier" of

Biafra War (1967–1970)

The Biafra War brought untold misery and suffering to hundreds of thousands of Nigerians. Here, an emaciated child waits with others for emergency food and medical shipments that offered some hope of survival to the people of the secessionist province, 13 January 1970. (Bettmann/Corbis)

arms to Nigeria. This stance brought Wilson under fierce attack in the House of Commons and even evoked questions in Washington. Later, when the Nigerian government's blockade of Biafra resulted in mass starvation there, parliamentary criticism of Wilson became even more vociferous.

Wilson's memoirs reveal an abiding sense of hurt at his treatment; he also believed strongly that the media had misrepresented the conflict in Biafra's favor. While hunger and misery on a massive scale were indeed to be found in Biafra, Wilson was not alone in arguing that Ojukwu's policies, which allowed only night relief flights so that he could simultaneously import arms, may have contributed to the humanitarian catastrophe.

Wilson's motives for assisting Nigeria were expressed in terms of seeking to maintain the integrity of the country if possible while limiting Soviet influence in the region. The Nigerian federal government did, ultimately, purchase a limited amount of military hardware from the Soviet bloc but pointedly noted that this did not indicate a change in its general pro-Western orientation. Ironically, Wilson's memoirs are more critical of French arms sales to Biafra than of any communist bloc sales. He even suggested that the war was unnecessarily prolonged as a result of French President Charles de Gaulle's actions.

The stance of the United States toward Biafra was marked by caution and formal neutrality, for several reasons. First, the United Kingdom was the dominant Western power in the region, and the United States acknowledged and accepted that fact. This was not simply an acknowledgment of diplomatic niceties but was also a recognition by American policymakers that their nation had few assets and comparatively little influence in Nigeria. Additionally, the Americans realized that armed intervention in the conflict would require huge resources and carry grave risks. Finally, the United States was already deeply involved in the increasingly unpopular Vietnam War, and President Lyndon Johnson and his advisors did not dare risk another war of intervention. The Americans supported Nigerian unity (in preference to unpredictable disintegration) and pushed for a peaceful resolution to the conflict.

The United States did not supply arms to either party although some private U.S. citizens did, to the irritation of the U.S. State Department. Interestingly, there was little anxiety in American governmental circles (in contrast to Wilson's anxieties, very much played up in his memoirs) about the possibility of the Soviet Union taking advantage of chaos in Nigeria to extend its regional influence. Indeed, the Soviets were seen by some in the United States as playing a fairly responsible role as the tension increased in Nigeria. A National Security Council (NSC) memorandum of July 1967

declared that “the Soviets have behaved very correctly throughout the crisis, pressing for unity at every opportunity.” Even the Soviets saw the risks of being caught up in an unpredictable tribal war and abstained from action that might only have exacerbated the situation. Clearly, neither side wished to transform Nigeria into a Cold War battle zone.

Wilson visited Nigeria in March 1969, but apart from eliciting platitudes from his hosts he was unable to move the conflict toward resolution. Nor was he able to remove the images of death and starvation in Biafra from the front pages of newspapers. The Biafra War ended only with the military defeat of the Biafran rebellion in January 1970.

French resistance leader, politician, foreign minister, and prime minister in 1946 and again during 1949–1950. Born in Moulins (Allier), France, on 5 October 1899, Georges Bidault was educated at the Sorbonne and became a history teacher. From 1932 to 1939 he edited the Catholic daily *L'Aube*. An active opponent of fascism and Nazism, in 1942 he cofounded Combat, a resistance organization. After the death of Jean Moulin at the hands of the Gestapo in 1943, Bidault followed him as the president of the National Resistance Council (CNR) that coordinated the various resistance movements in France.

In November 1944 Bidault helped found the Mouvement Républicain Populaire (MRP), the French centrist Christian democratic party that, along with the communists and socialists, was one of the three largest French political parties. Bidault served as French foreign minister during 1944–1948, first under the provisional government and then in the Fourth Republic. He was again foreign minister during 1953–1954.

Bidault was twice premier of France, from July to December 1946 and from October 1949 to June 1950. As foreign minister and premier he was closely associated with the formation of the Council of Europe, the North Atlantic Treaty Organization (NATO), and the European Coal and Steel and

Bidault, Georges

European Defense Communities. As did so many of his countrymen, he greatly feared a resurgent Germany.

Bidault strongly supported the notion of a French empire and authorized French High Commissioner to Indochina Georges Thierry d'Argenlieu to employ force if need be against the Vietnamese nationalists. Although Bidault probably did not understand d'Argenlieu's intent, this led to the outbreak of the Indochina War. From 1949 to 1950 Bidault was again premier and he was foreign minister during 1951–1952 and 1953–1954. He tried but failed to form a government in June 1953 and was an unsuccessful candidate for president of France that December.

Bidault initially supported Charles de Gaulle's return to power in 1958 but broke with him over the issue of Algerian independence. Bidault then headed a new National Resistance Council to maintain French Algeria, and he supported the anti-independence and terrorist Secret Army Organization (OAS). Charged with treason in 1962, Bidault went into exile in Brazil and did not return to France until de Gaulle pardoned him in 1968. During his postexile years, Bidault avidly defended his subversive activities. He died in Cambo-les-Bains, France, on 27 January 1983.

Bierut, Bolesław (1892–1956)

Polish communist politician and president of the Republic of Poland from 1947 to 1952. Born to a peasant family in Rury Jeżuickie near Lublin on 18 April 1892, Bolesław Bierut participated from his youth in various leftist political activities. In 1918 he joined the Polish Communist Workers' Party (PPR). He was also active in underground leftist activities in Poland in the

1920s, and in 1925 he went to Moscow, where he received training by the Comintern (Communist International), first in the party school near Moscow (1925–1926) and then in the International Leninist School (1928–1930). As a Comintern agent, he carried out a variety of unspecified assignments in Czechoslovakia, Austria, and Bulgaria.

Returning to Poland in 1933, Bierut became the secretary of the International Support Organization for Revolutionaries. As a consequence of his activities, he was arrested in 1935 and sentenced to seven years in prison. He spent much of World War II in the Soviet Union. In 1943 he returned to Poland, and along with Władysław Gomułka he organized an underground communist movement (the PPR). This activity was kept secret, because that same year Bierut was appointed chairman of the National Council of the Homeland, a broadly based and ostensibly noncommunist popular front.

After World War II, Bierut became one of the leaders of the Soviet-imposed Polish communist regime in Poland and was instrumental in introducing Stalinist rule. He was slavishly allied with the Soviets and wholly obedient to the directives emanating from Moscow.

In 1947 Bierut was elected president of the Republic of Poland. Following Gomułka's removal as general secretary of the PPR in mid-1948, the party was merged with the Polish Socialist Party (PPS) to form the communist Polish United Workers' Party (PZPR), headed by Bierut. He then proceeded to install a communist dictatorship in Poland. He not only led the PZPR but was president and premier. Under the 1952 Polish constitution, the function of president was replaced by chairman of the State Council (premier). Although Bierut had little leadership ability and was not a particularly savvy politician, he was nonetheless an effective executor of Moscow's directives and a faithful agent for Soviet dictator Josef Stalin and forced on Poland the Stalinist state apparatus. Bierut was, without doubt, Moscow's most loyal adherent in Poland. Following Stalin's death, Bierut did not deviate from his policies. Bierut died in Moscow on 12 March 1956 while heading the Polish delegation to the 20th Party Congress of the Communist Party of Soviet Union (CPSU).

Bikini Island Atomic Tests

The site of U.S. atomic tests during 1946–1958, Bikini Atoll is located in the westernmost Marshall Islands in the Central Pacific. The Marshalls are about 4 degrees above the equator and 2,000 miles southwest of Pearl Harbor, Hawaii. Japan had acquired the islands from Germany following World War I, and the United States conquered them in 1944. The Marshalls became a U.S. trust territory in 1947.

In 1946, Bikini was the site for Operation CROSSROADS, a U.S. experiment to gauge the effects of atomic weapons on ships. Vice Admiral William Blandy commanded the joint army-navy nuclear tests. On 1 July 1946, following extensive publicity, the United States exploded the first atomic bomb in peacetime. It was an air burst, dropped over seventy-three unmanned naval vessels at Bikini Atoll with the explosive power of about 20,000 tons of TNT, roughly equivalent to the size of the bomb dropped on Nagasaki in August 1945. Five of the ships were sunk outright, and forty-five were damaged. Ninety percent of the test animals aboard the ships survived the initial blast but died later from radiation exposure.

Atomic bomb explodes during the Baker Day test at Bikini Atoll in the Marshall Islands on 25 July 1946. This ground-level image was taken about six seconds after detonation. (Naval Historical Center)

On 25 July a second bomb was detonated, this one underwater. The blast sent into the air a column of a million tons of water half a mile in diameter and sank ten of seventy-five unmanned ships. Following the initial tests, Bikini and nearby Enewetak Atoll became the Pacific Proving Grounds of the U.S. Atomic Energy Commission.

The United States conducted additional tests at Bikini in 1954, 1956, and 1958, including a hydrogen bomb explosion on 1 March 1954. Unexpected widespread radiation fallout from this test inflicted radiation burns on Japanese fishermen 70–90 miles from the blast site and also affected residents of Kwajalein Island, 176 miles distant. This test triggered widespread alarm, especially in Japan, that helped to bring about the 1958 moratorium on atmospheric nuclear weapons tests.

Biological and Chemical Weapons and Warfare

Biological and chemical weapons are often associated with nuclear weapons as weapons of mass destruction. Such weapons, along with many others not so labeled, can indeed create massive casualties, and this led many military planners in the post–World War II era to explore their possible battlefield use.

“Chemical” and “biological” are difficult terms to define. *U.S. Army Field Manual 3–100, NBC Defense, Chemical Warfare, Smoke, and Flame Operations* (1991) defines a biological agent as “a micro-organism that causes disease in man, plants, or animals, or deterioration of materiel.” A chemical agent is defined as a “chemical substance intended for use in military operations to kill, seriously injure, or incapacitate humans through its physiological effects.” This definition excludes riot control agents, herbicides, smoke, and flame and is a matter of diplomatic debate. Tear gas agents present a special case, as these are now included under the rubric of chemical agents but have been used by military forces in cases that resemble nonmilitary crowd control actions.

The history of chemical warfare goes back for millennia. More than 2,000 years ago, the Chinese used smoke pots and the Japanese used pepper spray as lachrymatory agents. During the sieges of Platea and Belium, the Spartans used burning pitch and sulfur in attempts to overcome the cities’ inhabitants. Flaming chemicals such as Greek fire were employed in ancient times. More recently, the British used burning sulfur against the Russians in the 1855 siege of Sebastopol. Similar agents were used by both sides in the U.S. Civil War before the 1907 Hague Conference, over Admiral Alfred Thayer Mahan’s objections, declared chemical weapons inhumane.

Biological weapons have also been used for centuries. Ancient warriors poisoned wells with decomposing bodies of animals, and there is a (possibly apocryphal) story that Mongol soldiers catapulted infected corpses into Genoese trading settlements on the Black Sea and precipitated the first wave of European bubonic plague. Lord Jeffrey Amherst and the British Army have been accused (again, possibly apocryphally) of giving blankets infected with smallpox to North American Indians.

The French were actually the first to use chemical weapons during World War I, having tried grenades filled with the irritant xylyl bromide in August 1914. In October 1914 at Neuve Chapelle and again in January 1915 at Bolimov on the Eastern Front, the Germans tried artillery shells filled with chemical irritants. The first large-scale use of chemical weapons was at the Second Battle of Ypres, when Germany released a cloud of chlorine gas that drifted over British, Canadian, French, and Algerian forces. By September 1915, the British had begun using chlorine as well, although the gas was subject to the vagaries of shifting winds and was generally of limited effectiveness. This disadvantage led to a return to delivery by artillery shells.

Nerve gases act by inhibiting breakdown of the neurotransmitter acetylcholine and cause runny nose, wheezing, drooling, involuntary defecation and urination, and, ultimately, convulsions, coma, and death.

Chlorine was soon replaced by the more potent irritants phosgene and mustard gas. Phosgene (coded CX) caused less immediate coughing, so more was inhaled; however, it caused more delayed pulmonary damage than chlorine. Diphosgene (coded DG) and chloropicrin (coded PS) were later pulmonary irritants. Mustard gas (both nitrogen and sulfur variants) was first used against the Russians at Riga in 1917 and was delivered in artillery shells. Unlike the earlier agents, it blistered the skin as well as damaged the lungs and was more difficult to defend against since gas masks alone were insufficient protection. The final blistering agent developed was Lewisite (coded L), a liquid arsenical agent for which Dimercaprol (British Anti-Lewisite or BAL) is an antidote.

Once combatants developed protection mechanisms, gas warfare became relatively ineffective. After May 1915, only about 9 percent of British casualties were from gas, and only about 3 percent of those were fatal, although many victims had permanent disabilities.

There was a generally negative reaction to the use of chemical weapons, and they were banned by international agreement in the Geneva Protocol on Gas Warfare (signed in 1925) that went into effect in 1928. Nonetheless, America, Britain, Japan, and the Soviet Union continued to experiment with chemical and biological weapons. The greatest advances were made by Germany with the development of hydrogen cyanide (which interferes with cellular oxygen metabolism and one form of which, under the name Zyklon B, was used for genocide) and the nerve gases tabun (coded GA by the U.S. military), sarin (GB), and soman (GD). (Since GC was military medical shorthand for gonorrhea, those letters were not used as a gas designation.) The nerve gases act by inhibiting breakdown of the neurotransmitter acetylcholine and cause runny nose, wheezing, drooling, involuntary defecation and urination, and, ultimately, convulsions, coma, and death. Following World War II, the Soviets developed a thickened version of Soman that could be deployed from spray tanks and made it the major part of their chemical arsenal. Sarin was used by Japanese terrorists in the Tokyo subway in the 1990s.

Although Italy employed mustard gas with devastating effect in its conquest of Ethiopia in 1935–1936, the threat of retaliation prevented the use of poison gases against combatants in World War II, with the exception of infrequent use by the Japanese in China.

In 1936 the Japanese Army established its infamous Unit 731 in Manchuria to test and refine chemical and biological weapons. After the war the United States granted immunity from prosecution to the members of this unit in exchange for the information on the experiments, even though a number were conducted on humans. Washington considered this work invaluable in its own biological warfare program, although the Soviet government prosecuted twelve members of the unit in December 1949.

VX gas, a neurotoxin, was developed at the Porton Down Chemical Research Centre in Wiltshire, England, in 1952. The British subsequently traded the technology for VX production with the United States in return for data on production of thermonuclear weapons. Unlike sarin and tabun, VX is a liquid that adheres to surfaces, is difficult to remove, and persists for long

Chemical Agents and Toxins

<i>Chemical</i>	<i>Classification</i>	<i>Symptoms</i>
Chlorine	Pulmonary agent	Burning in eyes and nose, nausea, pulmonary edema, death
Chloropicrin (PS)	Pulmonary agent	Burning in eyes and nose, nausea, pulmonary edema, death
Diphosgene (DG)	Pulmonary agent	Burning in eyes and nose, nausea, pulmonary edema, death
Hydrogen cyanide	Blood agent	Difficulty breathing, convulsions, organ damage, cardiac arrest, death
Lewisite (L)	Blister agent	Swelling, blistering, liver necrosis, death
Mustard gas	Blister agent	Blistering, respiratory bleeding, pulmonary edema, death
Phosgene (CX)	Pulmonary agent	Burning in eyes and nose, nausea, pulmonary edema, death
Ricin	Cell toxin	If inhaled: difficulty breathing, pulmonary edema, death if ingested: vomiting, diarrhea, convulsions, organ failure, death
Sarin (GB)	Nerve agent	Difficulty breathing, loss of control of bodily functions, convulsions, death
Soman (GD)	Nerve agent	Difficulty breathing, loss of control of bodily functions, convulsions, death
Tabun (GA)	Nerve agent	Difficulty breathing, loss of control of bodily functions, convulsions, death
VX gas	Nerve agent	Difficulty breathing, loss of control of bodily functions, convulsions, death

periods. In liquid form, it is absorbed through the skin and can cause death in one to two hours. In its gaseous form, it causes death almost instantly. It is usually fatal in doses of ten milligrams, although the anticholinergic drug Atropine is an effective antidote and is regularly supplied to troops at risk of chemical attack. Atropine can be applied subcutaneously to counteract liquid VX but must be given directly into the heart to counteract the gaseous form.

A final agent bridges the gap between chemical and biological warfare. Ricin is a protein toxin derived from castor beans that causes respiratory failure thirty-six to seventy-two hours after being inhaled or clotting failure, shock, and multiple organ failure after being ingested or injected. Bulgarian exile Georgi Markov was said to have been assassinated by the Soviet KGB in London using a sharpened umbrella tip contaminated with ricin.

The fact that the Soviets considered chemicals viable weapons became evident during the Yom Kippur War of 1973, when the Israelis captured Soviet-manufactured Egyptian tanks that utilized overpressure systems to protect against gaseous agents by maintaining a constant pressure differential between the inside of the vehicle and the outside environment. This information reversed efforts within the U.S. Army to abolish the Chemical Corps, the agency charged with conducting chemical defensive and offensive operations. The Chemical Corps was then directed to enhance defensive procedures and develop new chemical binary weapons. These latter were designed to be safer to deploy for the troops using them, as the lethal gases were not created until the projectiles were actually en route to target, when two chemicals combined within the projectile being fired.

A UH-1D helicopter from the U.S. 336th Aviation Company sprays a defoliation agent on a dense jungle area in the Mekong Delta in South Vietnam on 26 July 1969. (National Archives and Records Administration)

Both sides worked on biological weapons throughout much of the Cold War, the United States at Fort Detrick, Maryland, and the Soviet Union on Vozrozhdeniye Island in the Aral Sea. Fort Detrick was decommissioned in 1970 when President Richard Nixon made a unilateral policy decision to abandon biological warfare. The Soviet facility remained open until 1992, housing a small city of 1,500 people and sophisticated animal testing facilities, although, according to Gennadi Lepyoshkin, who directed the facility until its closure, the majority of research was defensive and was concentrated on protection against bacterial agents such as plague, botulism, and anthrax.

Although smallpox was eradicated worldwide in 1977, both the United States and the Soviet Union retained samples of the organism, and there has been persistent suspicion that one or both might have altered the virus to make it a usable weapon. In 2001, anthrax-contaminated letters were sent to members of Congress in Washington, to television news stations in New York, and to a Florida newspaper, although the source of the agent and the reasons for its use remain unknown. Although neither the Soviet Union nor the United States overtly used chemical agents against humans during the

Cold War, toxic chemicals have been widely used against plants. Between 1962 and 1971, the United States sprayed about 11 million gallons of Agent Orange (a mixture of two phenoxy herbicides) over 6 million acres of Vietnamese forest. There have been persistent claims that either Agent Orange or the dioxin with which it was contaminated caused birth defects, delayed neurological damage, and cancer, although these claims have been difficult to prove definitively.

Since the close of the Cold War, there have been scattered rumored and verified uses of chemical weapons against enemy combatants or civilians including use by Egypt against Yemen, by Iraq against Iran, and by Iraq against its own Kurdish population. The United States maintains an active educational and logistic chemical defense program at Fort Leonard Wood, Missouri.

Chief administrator of the Economic Cooperation Administration and head of the Central Intelligence Agency's (CIA) Directorate of Plans from 1958 to 1962. Born on 18 September 1909 in Hartford, Connecticut, Richard Mervin Bissell Jr. graduated from Yale University in 1932 with a BA degree in history, then studied at the London School of Economics before returning to Yale in 1933 and graduating from there in 1939 with a doctorate in economics.

During World War II, Bissell served in the Office of Strategic Services (OSS), beginning his career in intelligence. After the war, he worked in the Department of War Mobilization and Reconversion from 1945 to 1946 and then joined the Economic Cooperation Administration in 1948, later becoming its head. Bissell joined the CIA in 1954 and was named head of the Directorate of Plans (or covert operations) in 1958.

**Bissell, Richard
Mervin, Jr.**
(1909–1994)

The operations of the Directorate of Plans were soon dubbed “Black Operations” for their clandestine mandate to eradicate world leaders unfriendly to the United States. Bissell and his deputy, Richard Helms, engineered the ouster of Guatemala’s Jacobo Arbenz in 1954 and later became nearly obsessed with overthrowing Cuban leader Fidel Castro after his 1959 revolution. During Bissell’s tenure with the CIA, he was also instrumental in the development of the U-2 spy plane and the Corona spy satellite. It was, however, the unsuccessful 1961 Bay of Pigs operation for which Bissell gained the most notoriety.

In March 1960 CIA Director Allen W. Dulles was tasked with devising a strategy to remove Castro from power, a mission that he turned over to Bissell and Helms. Code-named Operation MONGOOSE, the plan called for a paramilitary invasion of Cuba that involved nearly 400 CIA officers as well as some 1,400 Cuban exiles, who were to carry out the attack itself. Bissell and Helms devised and organized the strategy, which ultimately ended in disaster. The invasion force, trained and armed by the CIA, landed at Cuba’s Bay of Pigs on 17 April 1961. Before long, they had been routed by Castro’s forces, blowing the cover on the operation and greatly embarrassing the Kennedy administration. The Bay of Pigs fiasco effectively ended Bissell’s CIA career, as he was forced to leave the agency in February 1962. He subsequently worked for a think tank and then held positions in a number of private corporations. Bissell died in Farmington, Connecticut, on 7 February 1994.

Black Panthers

American militant black power organization. In 1966 in Oakland, California, two Merritt Junior College students, Bobby Seale and Huey P. Newton, both

of whom were black power advocates, founded the Black Panther Party for Self-Defense, later known as the Black Panther Party (BPP). The events that triggered the foundation of the BPP were the 1965 assassination of the Nation of Islam's Malcolm X and the 1965 riots in Watts, an impoverished black neighborhood in Los Angeles. The Black Panthers pointedly rejected the nonviolent approach of the mainstream civil rights movement as personified by the Reverend Martin Luther King Jr.

The BPP demanded that American society reform and provide equality to black Americans in all spheres as well as freedom and self-determination through United Nations-supervised plebiscites. It also sought restitution for slavery, exemption from military service for black Americans, an end to police brutality, and full employment. The BPP was also bitterly opposed to the Vietnam War.

The Black Panthers believed in self-help; therefore, they set up neighborhood programs that created educational programs, food banks, medical services, and patrols against police abuse. From their base in Oakland, the BPP quickly grew into a nationwide organization. Defenders of the Black Panthers claimed that they talked more violence than they practiced. Critics, however, pointed to their tactics of violence, aimed particularly at the police.

To publicize their militant image, BPP members usually donned black berets, leather jackets, and firearms. Their militancy resulted in repeated

Members of the Black Panthers march in Manhattan to protest the murder trial of Huey Newton, 22 July 1968. (Bettmann/Corbis)

confrontations with police and the Federal Bureau of Investigation (FBI). Fearing a union of black and white radicals, the FBI organized and conducted a counterintelligence program, known as COINTELPRO, that operated from 1956 to 1971 to monitor and control dissent. The FBI infiltrated the BPP, paid informants, and raided Black Panther offices from coast to coast. In 1963, a shootout with police in Chicago killed Fred Hampton, the Illinois BPP leader, while a showdown in Oakland in 1967 left a policeman dead and landed Newton in jail for manslaughter. By the end of the 1960s, twenty Black Panthers had died in such violence, and much of the leadership was behind bars.

Released while his case was on appeal in 1970, Newton focused the BPP strictly on community services such as soup kitchens, free clinics, clothing and food drives, and community patrols of schools. During this period, he also led successful rent strikes and campaigns against drug abuse and crime and published *Revolutionary Suicide* (1973). He was shot dead on an Oakland, California, street in 1989. By 1973, with many of its leaders jailed or dead, the BPP had faded almost into obscurity.

Blair, Eric Arthur

See Orwell, George

Blum, Léon (1872–1950)

French political leader, premier, and man of letters. Born in Paris on 9 April 1872 into a middle-class republican Jewish family, Léon Blum entered the École Normale Supérieure in 1890 but did not pursue an academic career. After obtaining degrees in law and literature at the Sorbonne, he made his mark in literary criticism and law. Politicized by the Dreyfus Affair of 1894, Blum began writing in the socialist daily *L'Humanité* and joined the French Socialist Party (SFIO). Soon he was the party's main theoretician.

A staunch supporter of SFIO leader Juan Juarès who was assassinated on the eve of World War I, Blum in 1919 won election to the French Chamber of Deputies as a socialist. Soon thereafter he drafted the SFIO program. After the communists split off from the socialists at the 1920 Socialist Party Congress, Blum devoted his efforts to reviving the SFIO. His leadership was a major factor in making the party into a formidable political force. This is remarkable given that Blum was an intellectual with no great oratorical skills heading a proletarian party. He also established *Le Populaire*, the new party newspaper.

By the mid-1930s the SFIO was the leading party in the leftist Popular Front, and the 1936 election victory catapulted Blum into the premiership in June. He was both the first Jewish and first socialist premier of France. The Popular Front was not a success, and Blum lasted barely a year as premier, the coalition collapsing under economic pressures and the Spanish Civil War.

Blum's second premiership, March–April 1938, was even less successful. Long an advocate of disarmament, he now championed French rearmament. The defeat of France in 1940 splintered the SFIO. Blum was among those who refused to vote for Marshal Henri Pétain to be premier and courageously chose to remain in France. Arrested by the Vichy government, Blum was brought to trial at Riom, an event that he turned into a major triumph and defense of republicanism that helped inspire the Resistance. He supported General Charles de Gaulle and in 1943 was imprisoned by the German Gestapo at Buchenwald.

After the defeat of Germany, Blum was welcomed back to France, although now his role was that of elder statesman. From December 1946 to January 1947, he headed an all-socialist government. It was during this turbulent period in the new Fourth Republic that events in Indochina reached a point of crisis. A week before taking his position as head of the government, Blum wrote in *Le Populaire* that independence (later qualified to read “independence within the French Union”) was the only solution for Vietnam. Vietnamese nationalist leader Ho Chi Minh sent Blum proposals to relieve Franco-Vietnamese tensions, but French military censors in Saigon held up the cable until it was too late to do any good. Even so, it is doubtful that Blum could have carried this off. Since the Liberation the socialists were but one of three major French political parties, locked in uneasy coalition with the Popular Republican Movement (MRP) and the communists. Center and rightist French political factions opposed colonial concessions. And Blum's government was a stop-gap affair designed to bridge the period until the new constitution took effect.

In any case, it was ironic that a long-standing critic of French colonialism should be French premier when the Indochina War began. In responding to the beginning of the war in December 1946, Blum reacted very much as a centrist or rightist leader would have done. He told the Assembly that France was using military force in self-defense. “Before all, order must be established,” he said. In January, fellow socialist Paul Ramadier replaced Blum as premier.

After leaving the premiership, Blum carried out a number of important diplomatic assignments. He also continued to write for *Le Populaire* until

his sudden death during a party meeting at Jouy-en-Josas, near Paris, on 30 March 1950.

Bo Yibo

(1908–2007)

Minister of finance and vice premier of the People's Republic of China (PRC). Born in Dingxiang, Shanxi, on 17 February 1908, Bo Yibo was educated at various universities in Beijing and Hebei. In 1925 he joined the Chinese Communist Party (CCP) and became an active participant in the party's student organizations. During the Sino-Japanese War, he fought valiantly in his native province and was rewarded with the directorship of the administrative office of southeastern Shanxi in 1943. During the Chinese Civil War, Bo served as the political commissar of the North China Military Region.

After the establishment of the PRC in October 1949, Bo became responsible for financial and economic affairs. He was first appointed minister of finance and then in 1953 vice chairman of the State Planning Commission. In 1956 he became the PRC's vice premier. In 1959 he was also tasked with the deputy directorship of the State Office of Industry and Communications and assumed the full directorship in 1961, during which he was responsible for the Great Leap Forward program.

In mid-1966, as a result of the ultraleftist Cultural Revolution, Bo was branded as a counterrevolutionary revisionist and purged from office. He was thereafter kept sequestered until December 1978, when he was reappointed as vice premier. During his second vice premiership, he headed several delegations to Canada, the United States, and Japan, reinforcing the freshly hewn Sino-American rapprochement. He also served on the State Financial and Economic Commission, assisting China's new leader, Deng Xiaoping, in reforming the Chinese economy with an emphasis on the uniqueness of Chinese socialism. In mid-1982, Bo became vice minister of the State Commission for Restructuring Economic System and actively engaged in promoting Chinese trade. In early 1988, he retreated from the political front line but still held the vice chairmanship of the Central Advisory Committee, in which capacity he supported Deng's military crackdown on student demonstrators in Tiananmen Square on 4 June 1989. Bo died of old age in Beijing on 15 January 2007.

Romanian communist and political leader. Born on 10 February 1904 (according to official Romanian records) either in Kolomyia (in the disputed region of Bukovina, now Ukraine) or in Cimpulung Moldovenesc, Romania, into a Ukrainian-German family of modest means, Emil Bodnăraș studied law at the University of Iași. During 1925–1927 he attended the artillery officers' academy in Timișoara and was an officer in the Royal Romanian Army from 1928 until he defected to the Soviet Union in February 1932. On one of the clandestine missions he undertook for the Soviet security and intelligence agency, the People's Commissariat of Internal Affairs, he traveled through Bucharest, where he was recognized and arrested in 1934. Tried for desertion and espionage, he was sentenced in May 1935 to ten years' imprisonment, during which time he befriended fellow inmate Gheorghe Gheorghiu-Dej and in 1940 joined the Romanian Communist Party (RCP).

After his early release in November 1942, Bodnăraș kept up contact with Gheorghiu-Dej and continued his undercover work for the Soviets, now as "Engineer Ceașu," a construction materials merchant whose cover allowed him to purchase German weapons for RCP cells forming in 1944 around Bucharest. Bodnăraș was instrumental in the August 1944 ouster of Romanian strongman Ion Antonescu and worked closely with the advancing Soviets. Honing his connections with both Moscow and Gheorghiu-Dej, Bodnăraș achieved a succession of influential posts in the new communist government, most prominently as minister of national defense from 1947 to 1957, Politburo member from 1948, and vice president during 1954–1955 and 1957–1965. Long regarded as a shadowy but menacing figure in communist Romanian politics, Bodnăraș's fortunes waned as Gheorghiu-Dej steered a course away from Soviet oversight of Romania and especially after the latter's death in 1965. Bodnăraș died in Bucharest on 24 January 1976.

Bogotá, Act of (13 September 1960)

Act adopted by the Council of the Organization of American States (OAS) on 13 September 1960 in Bogotá, Colombia, and designed to improve living conditions and keep communism at bay in Latin America. The main objectives of the Act of Bogotá were to improve the socioeconomic situation of Latin American peoples, to develop the Latin American economy, and to stanch the threat of communism in the region. These goals were to be achieved by domestic and international financial assistance, social and economic revitalization programs, and the reformation of domestic institutions.

The act's objectives were to be realized through the buttressing of democratic institutions in Latin America. The values promoted by the act were said to "lie at the base of Western civilization" and included political and religious freedom, democracy, and the dignity of the individual. Regional and international cooperation was paramount and required self-help efforts in the areas of taxation, land distribution, education and vocational training, health care, and housing.

The 1960 act was divided into four sections. Section I, "Measures for Social Improvement," was subdivided into five parts. Part A recommended "measures for the improvement of conditions of rural living and land use." These included increased land ownership, the financing of farmers through governmental programs, and the reformation of tax systems to put more land to work. Part B recommended "measures for the improvement of housing and community facilities." These would be met by increasing the availability of low-cost housing, better planning, and the facilitation of public and private investment. Part C recommended "measures for the improvement of educational systems and training facilities" by employing mass education and the development of subjects and specialists in the arts and sciences. Part D recommended "measures for the improvement of public health," which would help eradicate malaria and other infectious diseases, reduce infant mortality, provide health insurance, promote health education, and increase the number of hospitals. Part E recommended "measures for the mobilization of domestic resources," which focused on encouraging domestic savings and sound financial practices, implementing fair taxes, and allocating funds for social development.

In Section II, "Creation for a Special Fund for Social Improvement," the act stipulated that a special inter-American fund would be created by the U.S. government to aid social development. The fund was to be operated by the Inter-American Development Bank. Money would be provided to Latin American nations intent on reforming their institutions in accordance with social and economic development.

Section III, “Measures for Economic Development,” declared that the above-listed measures were aimed at economic development whose implementation was promptly required. This was to be achieved through public-private finance that involved the United States, Western Europe, and international lending agencies.

Section IV, “Multilateral Cooperation for Social and Economic Progress,” stipulated that multilateral cooperation would be monitored through annual meetings by the Inter-American Economic and Social Council. The new council and the OAS would be used to promote trade and increase capital flow from the Western Hemisphere and other international sources.

The Act of Bogotá provided for the creation of the Alliance for Progress, which was confirmed by the Charter of Punta del Este in 1961, and became the vehicle for U.S. Agency for International Development (USAID) programs and outreach in Latin America during the 1960s.

U.S. foreign service officer and ambassador. Born in Clayton, New York, on 30 August 1904, Charles “Chip” Bohlen was educated at St. Paul’s School in Concord, New Hampshire, and at Harvard University. He joined the U.S. Foreign Service in 1929. Here, along with his lifelong friend George F. Kennan, he became one of the small initial group of American diplomats trained as Soviet specialists.

When the United States resumed diplomatic relations with the Soviet Union in 1933, Bohlen became one of three Russian-language officers in the Moscow embassy. After further assignments in Washington and Tokyo, in 1942 he became assistant chief of the Russian Section of the State Department’s Division of European Affairs and in 1944 its chief. He attended the Moscow Conference of Foreign Ministers in 1943 and the Tehran and Yalta summits of the Allied leaders in 1944 and 1945.

**Bohlen, Charles
Eustis**
(1904–1974)

U.S. State Department official and ambassador Charles E. “Chip” Bohlen helped develop the Cold War containment policy. (Library of Congress)

Although later criticized by Senator Joseph McCarthy for his acquiescence in the decisions at Yalta, Bohlen in fact had reservations as to the wisdom of American policies. Like Kennan, he was deeply suspicious of Soviet actions and intentions. Unlike Kennan, who originally recommended acquiescence in the creation of a Soviet sphere of influence, Bohlen advocated firm diplomatic pressure to attempt to win Soviet concessions. Appointed political advisor to the secretary of state in 1946 and counselor to the Department of State in 1947, he helped develop the Cold War containment policy.

In 1953 Bohlen was appointed ambassador to the Soviet Union. McCarthyite attacks on his record held up his appointment until Secretary of State John Foster Dulles, while denying that Bohlen was a security risk, pledged that Bohlen would have little input in the secretary’s policies. During 1957–1959 Bohlen was ambassador to the Philippines.

In 1959 Bohlen became special assistant to Secretary of State Christian A. Herter. Preparing for the June 1960 Soviet-American Paris summit, Bohlen advised President Dwight D. Eisenhower to remain resolute over West Berlin, then under considerable Soviet pressure. Bohlen accompanied Eisenhower to this meeting, which was cut short by the U-2 Crisis.

In their first eighteen months in office, President John F. Kennedy and Secretary of State Dean Rusk relied heavily on Bohlen’s expertise. During the Cuban Missile Crisis, Bohlen counseled a mix of firmness and restraint and recommended a naval blockade of the island. He next served as ambassador to France during 1962–1967.

Appointed deputy undersecretary of state for political affairs in 1967, Bohlen called for the expansion of American trade with the Soviet bloc as a way to weaken Soviet control over Eastern Europe. He failed to anticipate the Soviet military intervention in Czechoslovakia in August 1968 but advised that, given Soviet determination to maintain its hold over Eastern Europe, the United States should restrict its response to diplomatic protests.

Bohlen retired in 1969, warning President Richard M. Nixon not to try using China against the Soviet Union. Bohlen was publicly skeptical of both the emerging American policy of détente and West German Chancellor Willy Brandt’s Ostpolitik opening to East Germany. In retirement Bohlen became president of the investment company Italamerica, wrote his memoirs, and lectured extensively. He died in Washington, D.C., on 1 January 1974.

Dictator and self-proclaimed emperor of the Central African Republic (Central African Empire). Born on 22 February 1921 in Bobangui, Moyen-Congo, Jean-Bédél Bokassa was a career soldier. He served in the Free French Forces during World War II, rising to the rank of captain in the French Army before leaving it in 1964 to join the Central African Republic's army. By the end of 1965, Bokassa had achieved the rank of colonel and was chief of staff of the armed forces. On 1 January 1966, he mounted a successful coup against President David Dacko, his cousin, who had plunged the African nation into economic chaos.

Once in power, Bokassa almost immediately abolished the constitution and ruled with an iron fist. He survived two coup attempts, one in April 1969 and another in December 1974, and also an assassination attempt in February 1976. In March 1972 he declared himself president for life; in December 1976 he declared an end to the Central African Republic and in December 1977 had himself crowned emperor of the new Central African Empire. During his despotic reign he managed to forge close ties with France, particularly with its president, Valéry Giscard d'Éstaing, who for a time supported Bokassa's regime. In turn, Bokassa supplied uranium for France's nuclear weapons programs. By January 1979, however, following the massacre of civilians during a protest in Bangui, Giscard came under fire for his military and financial aid to Bokassa.

While Bokassa was visiting Libya, former President Dacko mounted a successful coup and overthrew Bokassa's regime on 20 September 1979, using French troops. After Bokassa's thirteen-year reign that had become increasingly bizarre amid allegations of cannibalism and crimes against humanity, Dacko restored a minimal semblance of order until he too was overthrown—for a second time—in September 1981.

In the meantime, Bokassa went into exile in France before returning to his homeland in 1986 to face charges that included treason, murder, and cannibalism. He was cleared of the cannibalism charges but was found guilty of the others and sentenced to death. In 1988 his sentence was commuted to

Bokassa, Jean-Bédél
(1921–1996)

life imprisonment; he was eventually freed on 1 August 1993 during a general amnesty. Bokassa died on 3 November 1996 in Bangui.

Bolivia

Landlocked South American country covering 424,162 square miles, roughly the size of the U.S. states of Texas and California combined. Bolivia is bordered by Brazil to the east and north, Argentina and Paraguay to the south, and Peru and Chile to the west. Bolivia had a 1945 population of 2.56 million people; more than 60 percent were indigenous peoples, mostly concentrated in the western section of the country, known as the Altiplano. Mineral wealth has been at the core of economic activity ever since the Spanish colonial period (when silver ruled) through the era of tin extraction from the beginning of the twentieth century to the 1960s. In the last three decades, tin mining has given way to petroleum and natural gas exploitation. The new hydrocarbon wealth is located in eastern Bolivia, which has become the center of a dynamic agroindustrial complex built around sugar, cotton, and cattle, with the city of Santa Cruz at its core.

Middle-class discontent and a self-confident, armed miners' movement brought on the 1952 Bolivian Revolution. This was only the second social revolution in Latin America and was led by the Revolutionary Nationalist Movement (MNR). In 1953 a radical land reform restored land to peasant communities that had lost out to big estates in the nineteenth and early twentieth centuries. The MNR government also nationalized the tin industry in 1952, and for a short period (until 1964), militias of tin workers and peasants displaced the traditional armed forces.

In 1964, a revitalized national army overthrew the MNR and ruled Bolivia with the help of a military-peasant pact that secured the neutrality of the rural masses and facilitated the army's repression of the militant leftist tin miners. The newly installed government of Rene Barrientos (1966–1969) defeated the insurrection headed by Che Guevara during the 1966–1967 period. The Guevarista effort to establish a revolutionary base, or *foco*, languished in the absence of peasant support. The traditional centers of the Bolivian Left—the tin miners, the Bolivian Workers Central, and the Bolivian Communist Party—remained on the margins or were actively hostile to Guevara's enterprise. Guevara was killed in 1967 by Bolivian Rangers trained by U.S. military advisors.

From the early 1970s to 1986 Bolivia was ruled by a bewildering series of governments that ranged from the moderate Left to the far Right. After 1986, civilian rule was maintained by a series of governments built around three political parties: the MNR, the Party of the Revolutionary Left (PIR), and the Nationalist Democratic Action (AND).

In the 1970s, coca, a traditional part of indigenous culture, became a hugely profitable commercial crop, leading to the corruption of the armed forces and political parties who profited from protecting growers and traffickers. The eradication of coca became the centerpiece of U.S. policy toward Bolivia from the 1980s onward. The United States demanded and financed the eradication of coca cultivation and made aid dependent on Bolivia's cooperation in this endeavor. The war on drugs was, in some ways, a replacement of the Cold War, and the sharply increased level of U.S. economic and military intervention in the war pitted the United States and its government allies against nationalist groups, especially the increasingly powerful peasant federations (such as the movement of the coca growers, or *cocaleros*, led by Evo Morales) that challenged the old social order from the 1980s.

Pressure from nationalist and anti-imperialist peasant and urban popular movements angered by the sale of state enterprises (water utilities and petroleum and gas companies) to foreign corporations destabilized governments in the 1990–1995 period. In the three years of 2002–2005, two elected presidents (Gonzalo Sánchez de Losada and Carlos Mesa) were forced to resign under pressure from mass urban and rural mobilizations.

Bomber aircraft played an important role in the Cold War as the first strategic nuclear delivery systems employed by nuclear-capable nations. Bombers predated nuclear-tipped ballistic and cruise missiles. Unlike ballistic missiles, long-range bombers were both recallable and retargetable and were therefore flexible. Bombers could be more accurate delivery systems than the early ballistic missiles, and in an age before the development of multiple independently targeted reentry vehicles (MIRVs), bombers could carry several nuclear gravity bombs and standoff missiles. Bombers could also be used as a show of force in ways that ballistic missiles, whether ground-based or sea-based, could not. Indeed, the forward deployment of long-range bombers was used to signal potential adversaries during crises such as Berlin (1948–1949

Bombers, Strategic

With improvements in air defense systems by the 1960s, particularly surface-to-air missiles and nuclear-tipped air-to-air missiles, the long-range bomber had to evolve to survive.

and 1960–1961), Lebanon (1958), Cuba (1962), and the Yom Kippur War (1973).

Mass production of long-range bombers also stimulated vast expenditures in air defense systems and commands, particularly the North American Aerospace Defense Command (NORAD) and the Protivo-Vozdushnaya Oborona Strany (PVO Strany), the Soviet Union's national defense system. Aggressive reconnaissance activities involving bomber aircraft, some of which were modified for these missions, constituted an undeclared war of sorts as ferreting flights tested the weaknesses and strengths of the air defense systems. Ferreting was the dangerous and provocative use of reconnaissance aircraft to test the air defenses of a potential enemy in order to gather electronic and signals intelligence. In such operations, many U.S. aircraft were shot down and their crews lost. Low-flying Soviet bombers often observed and disrupted at close ranges U.S. Navy aircraft carrier operations; two of these Soviet bombers lost control and crashed near U.S. ships in 1964 and in 1968.

During the 1950s and 1960s, the use of long-range bombers by the United States and Britain resulted in a number of programs designed to limit their vulnerability to Soviet intercontinental ballistic missiles (ICBMs). For example, the U.S. Air Force Strategic Air Command (SAC) implemented a so-called fail-safe system whereby bombers would deploy and then fly to a pre-arranged aerial holding area to await further orders. SAC also used airborne alert that kept about 16 percent of the bomber force constantly airborne, sustained in this posture using tanker aircraft and rotating aircraft. Upon receipt of orders, the bombers would then proceed to predesignated targets.

In contrast, the Royal Air Force's (RAF) V-Force tended to use a ground alert system and shell-game satellite deployment airfields. In this, several airfields were made bomber-capable, but not all were occupied by V-bombers. The aircraft were then shifted around among the airfields to complicate enemy targeting.

Long-range bombers evolved during the Cold War. The United States entered the Cold War with the Boeing B-29 Superfortress, a piston-driven aircraft. The Soviet Union utilized the Tupolev TU-4 Bull, based on impounded examples of the B-29. Neither aircraft possessed intercontinental range, and both required forward basing to attack enemy targets. The RAF used borrowed B-29s, called Washingtons, until its first long-range jet bomber, the Vickers Valiant, was deployed in 1955. By 1958, the futuristic-looking delta-wing Avro Vulcan and crescent-wing Hawker-Siddley Victor entered service. The U.S. Air Force's intercontinental Boeing B-36 Peacemaker, equipped with both piston-driven and jet engines, took over from the B-29s in the late 1940s. It was in turn supplanted by the Boeing B-47 Stratojet swept-wing jet bomber in the mid-1950s. The B-47s had a shorter range than the B-36s but were capable of aerial refueling. The Soviet Union, on the other hand, had deployed the swept-wing jet Tupolev TU-16 Badger by 1955, the swept-wing jet Myasishchev M-4 Bison in 1955, and the huge swept-wing, propeller-driven Tupolev TU-95 Bear in 1958. These aircraft constituted the "golden age" of long-range bomber aviation.

The Boeing B-52 Stratofortress strategic bomber first flew in 1954 and remains in active service. It is considered one of the greatest aircraft ever built. The B-52G model shown here was photographed in 1984. (U.S. Department of Defense)

With improvements in air defense systems by the 1960s, particularly surface-to-air missiles and nuclear-tipped air-to-air missiles, the long-range bomber had to evolve to survive. During this time, the U.S. Air Force retired its older aircraft and replaced them with a large fleet of Boeing B-52 Stratofortresses. The B-52, like many of the Soviet aircraft such as the Tupolev TU-95, and Tupolev TU-16, was equipped with standoff missiles tipped with nuclear warheads. Standoff missile systems, such as the Hound Dog, could be used to suppress air defenses from a distance, permitting the bomber to carry on to its targets and drop gravity bombs. The British Vulcans were equipped with Blue Steel, an indigenous standoff missile.

Both the United States and the Soviet Union invested heavily in supersonic long-range bombers in the 1960s; the U.S. Convair B-58 Hustler and the Soviet Tupolev TU-22 Blinder were comparable in this regard. The planned replacements for the U.S. Air Force's and Soviet Union's strategic bomber fleets, the North American XB-70 Valkyrie and the experimental Myasishchev M-50 Bounder, were indicators of what direction bomber design was supposed to go, but cost, vulnerability, and technological limitations led to both aircraft being canceled by the 1970s. By the 1980s, the United States produced the Boeing B-1B Lancer, a variable-geometry-wing jet bomber, while the B-52 fleet received improved standoff systems, including the highly accurate air-launched cruise missile with a computer-piloted terrain-following system. Bomber aircraft could carry up to twenty such missiles in

the bomb bays, which would have held only two or four gravity bombs in the 1960s.

Other nations also used long-range bombers, but usually in a conventional role. The United Arab Republic (Egypt), for example, secured from the Soviet Union Tupolev TU-16s, some with conventional standoff systems. In the 1960s the People's Republic of China (PRC) built its own versions of Soviet aircraft and then employed them as nuclear delivery vehicles. Most of the Western Allies, however, did not have a need for long-range bombers given the defensive nature of the North Atlantic Treaty Organizations (NATO) and the comparatively short distances found in Europe. Thus, France used its Dassault Mirage IV as its primary nuclear delivery system, while Canada employed the CF-104 Starfighter based in Europe.

As elements of the nuclear triad developed and improved, specifically submarine-launched ballistic missiles (SLBMs) and MIRV systems, the bomber ceased to be the first line of deterrence for the United States, the United Kingdom, and the Soviet Union. Nevertheless, all three nations continued to maintain long-range bombers throughout the last two decades of the Cold War, for a variety of reasons. First, they could be used in a conventional bombing role, as with U.S. aircraft in Vietnam, British aircraft in the Falklands War, and Soviet aircraft in Afghanistan. Second, they remained good signaling tools in a crisis. Finally, they introduced uncertainty and ambiguity into an adversary's defensive strategy in the event of nuclear exchange.

**Bonner, Yelena
Georgievna**
(1923–)

Physician, human rights activist, and prominent Soviet dissident. Yelena Bonner was born on 15 February 1923 in Moscow. Her stepfather was jailed and sent to a Soviet labor camp in 1937 for allegedly treasonous activities. He

later died in internment. Because of her husband's alleged crimes, Bonner's mother was also sent to a labor camp in 1937 for eight years.

When Germany invaded the Soviet Union in June 1941, Bonner served in the army as a nurse and was partially blinded. During 1947–1953 she studied medicine in Leningrad and earned a degree in pediatrics. She practiced medicine as a district doctor, a maternity home pediatrician, and a foreign aid health worker in Iraq.

In 1965 Bonner joined the Communist Party of the Soviet Union (CPSU), but she became disillusioned after the Soviet invasion of Czechoslovakia in 1968 and abandoned the party permanently in 1972. Between 1968 and 1972, she became one of the most active members of the Soviet dissident community. It was also during this period that she met famed Soviet dissident Andrei Sakharov, whom she married in January 1972. In 1975 Bonner cofounded the human rights organization Helsinki Watch. When she publicly criticized the Soviet regime for human rights violations, she was sentenced to five years of internment in 1984 but was released in 1985.

After Sakharov's death in 1989, Bonner continued her human rights activism, even after the dissolution of the Soviet Union in December 1991. She vigorously campaigned against the war in Chechnya and in favor of self-determination for the people in Nagorno-Karabakh, the disputed region between Azerbaijan and Armenia. Bonner will always be remembered for having helped push Soviet leader Mikhail Gorbachev into implementing glasnost and perestroika, policies that ultimately contributed to the end of the Cold War.

Dominican writer, prodemocracy opposition leader, and president of the Dominican Republic during February–September 1963. Born on 30 June 1909 in La Vega, Dominican Republic, Juan Bosch Gaviño was educated at the Autonomous University of Santo Domingo. During the early years of Rafael Trujillo's long and savage dictatorship, Bosch was arrested for conspiracy against the regime and spent three months in jail. In 1937, he fled the Dominican Republic and spent the next twenty-four years in exile, primarily in Cuba.

In 1939, Bosch helped found the Partido Revolucionario Dominicano (Dominican Revolutionary Party, PRD). During most of the 1950s he traveled

Bosch Gaviño, Juan
(1909–2001)

throughout Latin America, campaigning for democracy in the region and earning a reputation as an accomplished novelist, essayist, biographer, and historian. He returned to the Dominican Republic in 1961 and immediately engaged in politics.

Concerned that the impoverished Dominican Republic would follow Cuba's approach to social and economic change after Trujillo's May 1961 assassination, U.S. President John F. Kennedy sought to bring democracy to the Dominican Republic. In U.S.-supervised elections held in December 1962, Bosch won 60 percent of the vote in what many observers called the first democratic elections in the history of the Dominican Republic. He took office in February 1963. Initially heralded by the Kennedy administration as a promoter of constitutional democracy, Bosch set out to implement sweeping economic and social reforms. In September 1963, however, he was overthrown by a military junta that viewed him as a communist.

Bosch supporters attempted to restore him to power in April 1965, igniting a civil war that resulted in U.S. military intervention. Bosch was defeated by Joaquín Balaguer in a 1966 election. Believing that the PRD had abandoned its reform agenda, Bosch left the party in 1973 and founded the Partido de la Liberación Dominicana (PLD, Party of Dominican Liberation). He then ran unsuccessfully for the presidency in 1978, 1982, 1986, 1990, and 1994. Bosch died on 1 November 2001 in Santo Domingo.

Botha, Pieter Willem (1916–2006)

National Party prime minister and state president of South Africa. Born in Paul Roux, South Africa, on 12 January 1912, Pieter Botha left the University of the Orange Free State to become a full-time National Party organizer in 1936. He became a member of the South African Parliament from 1948 and was appointed minister of defense by Prime Minister Johannes Vorster in 1966. Botha gained a reputation as being hard-nosed and stubborn; he was later dubbed “the crocodile” by critics because of his thick skin and aggressive behavior.

A staunch anticommunist, in 1975 Botha persuaded Vorster and the cabinet to agree to a South African military invasion of Angola in order to prevent the pro-Moscow Popular Movement for the Liberation of Angola (MPLA)

Pieter Willem Botha, president of South Africa (1984–1989), speaks to the National Party in Durban, ca. 1986. Unrepentant over his support of apartheid, Botha died in 2006. (David Turnley/Corbis)

from coming to power there. This proved to be an embarrassing failure, for the South African forces had to withdraw. The MPLA took power and then supported the South West African People's Organization (SWAPO) in its guerrilla war against the South African forces occupying Namibia.

Despite this failure, a scandal in the National Party allowed Botha to take over from Vorster as prime minister in September 1978. With Marxist-Leninist regimes in both Angola and Mozambique, Botha saw a communist threat to the whole of southern Africa.

Botha did urge reform of the apartheid system then in place. One of the major reforms that he pushed through was a power-sharing scheme with two minority groups, the mixed-race Coloreds and the Indians. This split the National Party, but part of Botha's constitutional reform was to create a powerful executive state president, and he was the first to fill that post in 1984. While he continued to denounce the exiled and restricted African National Congress (ANC) as a tool of the South African Communist Party (SACP), he allowed some of his officials to begin covert discussions with Nelson Mandela and other key ANC officials from 1985 on. In July 1989 shortly before Botha left office, he met with Mandela, who rejected release on renunciation of violence. Botha lacked the courage to release him unconditionally.

Under Botha's leadership, apartheid then entered its most brutal phase both at home and abroad. Units in the security forces carried out assassinations,

torture was rampant, and neighboring states were destabilized. Yet when Botha began to introduce reforms, British Prime Minister Margaret Thatcher was prepared to meet him, and U.S. President Ronald Reagan was well disposed toward South Africa as a former ally in World War II. Reagan's constructive engagement policy let Botha off the hook as far as possible sanctions were concerned until the mass uprising of the mid-1980s, when the United States and other countries did begin to impose sanctions.

Botha did agree to withdraw from Namibia in 1988, under pressure from the United States and in the new context of superpower détente. Botha suffered a minor stroke in January 1989 and left office in August that year. It is unlikely that his fierce anticommunism would ever have permitted him to legalize the South African Communist Party as his successor, F. W. de Klerk, did in February 1990. Unrepentant to the last, Botha died in Wilderness, South Africa, on 31 October 2006.

Botha, Roelof Frederik (1932–)

South African apartheid diplomat, politician, and foreign minister (1977–1994). Born on 27 April 1932 in Rustenburg, South Africa, Roelof “Pik” Botha studied at the University of Pretoria, where he took a bachelor's degree in 1953 and a postgraduate law degree in 1955. In February 1953 he joined the South African Department of Foreign Affairs, and in June 1956, as a junior secretary, he was transferred to the South African Mission in Stockholm, Sweden. In 1960 he was assigned to South Africa's embassy in the Federal Republic of Germany (FRG, West Germany). Three years later he became a member of the South African legal team at the International Court of Justice, The Hague, in a case over the international status of South West Africa (now Namibia).

In 1966, Botha was appointed a law advisor in South Africa's Department of Foreign Affairs; during 1966–1974 he attended annual sessions of the United Nations (UN) General Assembly. In 1974, a month after presenting his credentials as ambassador to the UN, South Africa was suspended from the body.

Botha's interest in public life mixed diplomacy with politics, and he won a seat for the ruling National Party in April 1970 and again in May 1977. In 1975 he was appointed ambassador to the United States, combining this post

with that of permanent representative at the UN, even though apartheid South Africa had been suspended from fully participating in its meetings and activities.

In April 1977, with his popularity high among white South Africans because of his combative diplomatic style, Botha was appointed minister of foreign affairs. Twice a candidate for the presidency, Botha was on the *verligte* (enlightened) end of the political spectrum. In February 1986 he suggested that South Africa could one day be ruled by a black president.

Botha was instrumental in bringing about the 1984 Nkomati Accord, a nonaggression pact between South Africa and Mozambique that brought him into conflict with South Africa's military and its policy of regional destabilization. Along with U.S. emissary Chester Crocker, Botha ignited a process of dialogue that would eventually prepare the way for the cessation of hostilities in Angola and the independence of Namibia.

When apartheid ended in 1994, Botha became minister of minerals and energy affairs in the government of national unity headed by President Nelson Mandela. In 1996, Botha resigned from government and public life after F. W. de Klerk quit South Africa's postapartheid national unity government.

Tunisian independence leader and Tunisia's first president during 1957–1987. Born on 3 August 1903 in Monastir, Tunisia, Habib Bourguiba was educated at Sadiki College in Tunisia and the University of Paris, where he earned a degree in law.

Upon his return to Tunisia, Bourguiba started the newspaper *l'Action Tunisienne* and in 1934 became head of Al-Destour Al-Gadid (New Constitution Party), which advocated Tunisian independence from French colonial rule. He was arrested three times and imprisoned for his political activities (1934–1936, 1938–1942, and 1952–1954). In 1945, French authorities in Tunisia forced him to seek refuge in Cairo, Egypt. From 1945 to 1950 he embarked on a multination speaking tour in an attempt to garner support for Tunisian independence.

Bourguiba, Habib
(1903–2000)

Bourguiba returned to Tunisia in 1950, resuming his campaign to throw off French rule. But in 1952, French authorities jailed him for a third time. After participating in independence negotiations in France upon his release, he returned to Tunisia to a tumultuous welcome in 1955. The following year, Tunisia was granted its independence, and in 1957 Bourguiba was elected president.

As president, Bourguiba was a pro-Western gradualist who sought to modernize Tunisia by reducing the role of religion, guaranteeing the rights of women, and, for a time, guiding an expanding economy. By the 1980s, however, Tunisia's economy was in decline, and Bourguiba was seen as increasingly ineffectual. Citing Bourguiba's failing health and apparent senility, his prime minister, Zine el Abine Ben Ali, ousted him from the presidency in November 1987. Bourguiba was held under house arrest in Monastir, Tunisia, until his death there on 6 April 2000.

Bradley, Omar Nelson (1893–1981)

U.S. Army general, head of the Veterans Administration (VA), U.S. Army chief of staff, first chairman of the Joint Chiefs of Staff (JCS), and first chairman of the military committee of the North Atlantic Treaty Organization (NATO). Born on 12 February 1893 in Clark, Missouri, Omar Nelson Bradley graduated from the U.S. Military Academy, West Point, in 1915. He first served as an infantry lieutenant with the 14th Infantry Regiment along the Mexican border. During World War I he served in the United States. Promoted to captain in 1920, he held a number of routine assignments, including teaching at West Point. In 1924 he was promoted to major and attended the Infantry School, Fort Benning, Georgia. His most significant assignment was at the Infantry School as chief of the Weapons Section while Colonel George C. Marshall was deputy commandant.

Bradley's career accelerated during the 1930s with the support of General Marshall, who became army chief of staff in 1939. Promoted to brigadier general in February 1941, Bradley took command of the Infantry School. Advanced to major general in February 1942, he commanded in succession the 82nd and 28th Infantry Divisions and X and II Corps, leading the latter with distinction in fighting in Tunisia and Sicily. Assuming command of the First Army in October 1943, Bradley led it in the invasion of France in June 1944. During the subsequent campaign in France he performed effectively, and in August 1944 he assumed command of the 12th Army Group. In March 1945 he was promoted to full general.

Following the war, Bradley became head of the VA, significantly reorganizing the sprawling agency. In February 1948 he succeeded Dwight D. Eisenhower as army chief of staff, an appointment that coincided with increased tensions between the United States and the Soviet Union. Americans had expected a return to peacetime normalcy after the war, and that meant lower taxes and a smaller military, leaving Bradley with a much-diminished army. In 1949 he was appointed the first chairman of the JCS, which had emerged when the armed services were restructured and consolidated under the new Department of Defense in 1947.

Despite a greatly decreased budget, Bradley successfully lobbied for increased wages for his troops and for the reinstatement of the draft. He also worked to unify the nation's armed forces. He applied his leadership experience in developing the new allied command structure required by NATO, which was established in 1949.

At the outbreak of the Korean War in June 1950, Bradley emerged as one of President Harry S. Truman's closest confidants. In September 1950 Bradley was promoted to the rank of general of the army. He understood and supported the Truman administration's policy of a limited war and defended General Douglas MacArthur's 1951 dismissal, famously saying that an expanded war in Asia would involve the United States "in the wrong war, at the wrong place, at the wrong time, and with the wrong enemy." Bradley continued as chairman of the JCS under President Eisenhower and retired in August 1953. He went on to work for a number of private corporations and wrote his second autobiography before he died in New York on 8 April 1981.

Brady Plan (March 1989)

Debt restructuring plan for developing-world nations implemented by the United States in March 1989. Named after U.S. Treasury Secretary Nicholas F. Brady, the Brady Plan was developed in the first few months of the George H. W. Bush administration. The plan outlined several methods by which both developing and middle-income nations could reduce their foreign debt load. American and international supporters of the Brady Plan urged commercial banks as well as the International Monetary Fund (IMF) and the World Bank to offer qualifying debtor nations a variety of options for reducing their debt. During 1989–1995, the twenty-one countries that participated in the plan reduced their debt load by \$75 billion.

American officials outlined three main programs in the Brady Plan that would allow debtor nations to replace existing debt: debt buybacks, debt conversions, and debt-for-equity swaps. A buyback involved the debtor nation repurchasing some of its existing debt at discounted prices. Because the debt of many countries was valued on open markets far below its face value, nations could reduce their overall debt by borrowing funds from the IMF or the World Bank to purchase their existing debt at deep discounts. Debt conversion involved replacing existing variable interest rate loans with new debt carrying lower fixed rates. Participation in this program required debtor nations to offer guarantees of payment or collateral. For instance, some nations were expected to secure debt repayment with future oil production. In a debt-for-equity trade, a debtor country bought back a portion of its debt with cash reserves. The seller of the debt, the creditor, agreed to reinvest the proceeds of the debt sale in the debtor nation. This reinvestment constituted a new equity position for the creditor in the debtor nation. To participate in the Brady Plan programs, debtor nations pledged to meet certain policy standards for achieving long-term economic stability.

Any middle-income or developing-world debtor nation was potentially eligible to participate in the Brady Plan; however, its implementation is usually associated with Latin America. The four nations participating in Brady Plan debt reduction programs in the first year of its existence were Costa Rica, the Philippines, Mexico, and Venezuela.

Term originating during the Cold War referring to the indoctrination of an individual or a group of people. The U.S. military termed brainwashing “a prolonged psychological process designed to erase an individual’s past beliefs and concepts and to substitute new ones.” The term “brainwashing” came into general use during the Korean War, when it was used to explain the behavior of a significant number of U.S. prisoners of war (POWs) who chose to collaborate with their communist captors. Indeed, twenty-one U.S. POWs chose to remain after the war in either the People’s Republic of China (PRC) or the Democratic People’s Republic of Korea (DPRK, North Korea).

Allegations of brainwashing, which also found their way into such films as *The Manchurian Candidate*, were exaggerated. The North Koreans displayed great brutality toward their prisoners but rarely attempted to indoctrinate them. The Chinese did attempt indoctrination, a process they referred to as *xiniao*. It included the same methods employed by communist authorities in the PRC to indoctrinate their own people. Prisoners of the Chinese were segregated by rank, race, and nationality. The Chinese also separated the leaders, introduced informers, disrupted bonding activities, and encouraged collaboration. The authorities also intercepted mail, delivering only that which carried bad news. The reeducation process included lengthy compulsory political lectures as well as self-criticisms and confessions. The Chinese largely ended such practices in 1952. More important in influencing prisoners were the effects of cold, hunger, and illness as well as the threat of violence. U.S. servicemen captured early in the war had received no training in how to resist indoctrination, and many were poorly informed about U.S. foreign policy or the causes of the war.

The Korean experience led to training modifications and, in 1955, the establishment of a six-point code of conduct for American POWs. Filmed appearances by captured U.S. airmen during the Vietnam War and by U.S. and British airmen during the 1991 Persian Gulf War reminded the public that even well-trained personnel could be temporarily persuaded to embrace their opponents’ cause. Other Cold War examples of brainwashing can be seen in the confessions of many prominent individuals in Soviet satellite nations who were subjected to show trials and yet were actually completely innocent of the charges brought against them.

Brandt, Willy (1913–1992)

Federal Republic of Germany (FRG, West Germany) political leader, foreign minister (1966–1969), and chancellor (1969–1974). Born Hubert Ernst Karl Frahm in the town of Lübeck on 16 December 1913, Willy Brandt became the most charismatic German politician of the Cold War era. He joined the youth section of the German Socialist Workers' Party (SAP) in 1929 and then briefly became a member of the German Social Democratic Party (SPD) in 1930 before returning to the more radical SAP in 1931. He adopted the name Willy Brandt in 1933, when the rise of the National Socialists in Germany forced him to flee to Norway.

Brandt spent the war years as a journalist and organizer. He returned surreptitiously to Berlin in 1936 to reorganize the SAP resistance, then went to Spain as an observer reporting from the republican side of the civil war there. The Nazi government stripped him of German citizenship in 1938. When World War II ended, Brandt returned to Germany; among his first jobs was covering the Nuremberg trials for the Scandinavian press.

Brandt became involved in politics again once his citizenship was restored in 1948. As a pragmatic socialist who was also an anticommunist, he was elected to the German parliament in 1949 as a member of the SPD. He served as president of the senate for the City of Berlin during 1955–1957 and, in 1957, won election as mayor of Berlin. Brandt proved his mettle during the crises of 1958–1962 and especially during the construction of the Berlin Wall in August 1961.

The SPD subsequently put Brandt forward as its candidate for chancellor in 1961 and again in 1965. Although both campaigns were unsuccessful, Brandt became foreign minister and vice chancellor in the SPD–Christian Democratic Union (CDU) Grand Coalition government that emerged in 1966. In 1969, when the SPD led a coalition with the Free Democratic Party, Brandt became chancellor.

He quickly set about implementing the policy that would become his legacy: Ostpolitik, or eastern politics. Brandt believed that the path to German success and unity lay in reconciliation with the Soviets and with Eastern Europe. He was particularly concerned with establishing normal relations with the German Democratic Republic (GDR, East Germany), a direct contravention of the previous regime's Hallstein Doctrine. Where Adenauer and the CDU had claimed to be the sole legitimate representatives of the German nation, Brandt was willing to accommodate "two states in one nation."

In the wake of the Prague Spring of 1968, moreover, he had openly renounced violence and the threat of violence as political tools in favor of mediation. To that end, he became the first chancellor of the FRG to visit the GDR when he went to Erfurt in March 1970 as part of an exchange of visits with Willi Stoph, chairman of the Council of Ministers for the GDR.

By all accounts, Brandt was received “like a rock star” in East Germany, and he moved quickly to consolidate his position. In August 1970, the FRG concluded a treaty of nonaggression with the Soviet Union, the so-called Moscow Treaty. The FRG recognized the borders of Poland and of the GDR and agreed to make no territorial claims. The Soviets, for their part, recognized that the FRG’s position on unification remained unchanged but agreed to work for the normalization of the situation in Berlin. The Four-Power Agreement realizing that goal was signed in September 1971.

With the groundwork for normal relations with East Germany in place, Brandt signed a similar agreement with the Poles. In the Warsaw Treaty of December 1970, the FRG gave assurances that West Germany would accept the borders established in 1945, but Brandt’s performance during the concluding visit was even more spectacular. At a ceremony commemorating the victims of the Warsaw Ghetto Uprising, Brandt dropped to his knees before a memorial to Jews victimized by the SS in 1943 and bowed his head in a gesture that demonstrated to many people that Germany had turned over a new leaf. In addition to being named *Time* magazine’s Man of the Year for 1970, Brandt won a Nobel Peace Prize in 1971.

Brandt’s achievements were not always readily accepted in the FRG. However, a constructive no-confidence vote forced the issue in April 1972. Brandt and the SPD were returned the following November with 45 percent of the vote, and they forged ahead. In June 1973, Brandt became the first German chancellor to visit Israel, where he offered words of consolation and apology for Germany’s actions during World War II. Three months later, he became the first German chancellor to address the General Assembly of the United Nations.

Brandt’s term as chancellor came to an end in 1974, when his loyalty to Gunter Guillaume, an aide who was revealed to be an East German spy, caused a scandal that brought down the government. Brandt continued in politics outside of Germany following his resignation. He was involved in negotiations for peace in the Middle East at several points and worked on nonproliferation issues in a number of capacities. Brandt died in Unkel am Rhein, near Bonn, on 8 October 1992.

West Berlin Mayor Willy Brandt, 14 March 1961. Brandt was later foreign minister and then chancellor of the Federal Republic of Germany (West Germany). (National Archives and Records Administration)

Brătianu, Gheorghe Ion

(1898–1953)

Romanian politician and historian. Born on 3 February 1898 in Ruginoasa, Gheorghe Brătianu was the son of Ion I. C. Brătianu and the nephew of Ion C. Brătianu, both historically prominent figures in Romanian politics. Upon Romania's entry into World War I in 1916, the young Brătianu volunteered for and served in the Romanian Army. In 1921 he attended the Sorbonne in Paris and by 1923 had earned a doctorate in philosophy at Cernăuți University in Romania. In 1928 he was awarded his doctorate in history from the Sorbonne. He returned to the University of Iași in Romania to resume a professorship of world history that he had first held in 1924. In 1940 he joined the history faculty of the University of Bucharest, and in 1942 he became a full member of the Romanian Academy.

By 1930 Brătianu, whose political career paralleled his academic pursuits, had risen to prominence in the National Liberal Party, but he broke ties with that body over its resistance to King Carol II's reinstatement to the throne. Brătianu formed his own splinter party, the National Liberal Party-Gheorghe I. Brătianu, only to rejoin the parent organization in 1938 as its vice president.

During World War II, Brătianu initially sided with Marshal Ion Antonescu in opposing the Soviet acquisition of Bessarabia and northern Bukovina, but by August 1944 Brătianu's energies were behind the planners of Antonescu's ouster. After the war, Brătianu opposed the communist takeover of Romania, and in 1947 he was removed from his academic posts by the new government. Brătianu, along with many of his former colleagues in politics, was arrested on 6 May 1950 and imprisoned at Sighetu Marmăției, where his death was reported on 27 April 1953.

Hitchins, Keith. *Rumania, 1866–1947*. Oxford, UK: Clarendon, 1994.

German physicist and rocket scientist who led in establishing the foundations of the U.S. guided missile program. Born in Wirsitz, Posen, on 23 March 1912, Wernher von Braun graduated from the Berlin Institute of Technology in 1932. He then earned a doctorate in physics from the University of Berlin, concentrating on developing liquid-fueled rocket engines.

In 1932 the German military began funding von Braun's work, and he headed a team of engineers building and testing rockets first at Kummersdorf and then at Peenemünde in the Baltic. Von Braun made no secret of his interest in sending rockets to explore space rather than using them as weapons, leading to his arrest for frivolous indulgence. In 1943 Adolf Hitler ordered von Braun's group to develop a rocket as a "weapon of vengeance" to shower explosives on London. Von Braun's colleagues argued that without him they could not accomplish this, so he was freed. The first operational V-2 ("Vengeance") rocket was launched in September 1944.

Fearing for his group's personal safety and the program's future, in early 1945 von Braun led his production team to surrender to U.S. military representatives in western Germany. The Americans seized V-2s, spare parts, and scientific documents from the Peenemünde and Nordhausen facilities and gave von Braun and 126 of his scientists visas for the United States. The group initially settled at Fort Bliss, Texas, and in 1950 transferred to Huntsville, Alabama, where they shared their knowledge with American scientists and laid the foundations of the U.S. rocketry and space exploration programs.

Von Braun's well-publicized suggestions that the United States build a space station and launch manned missions to the moon contributed to the establishment of the National Aeronautics and Space Administration in 1958 and to Skylab and the Apollo space program during the 1960s. Von Braun retired in 1972 and died in Alexandria, Virginia, on 16 June 1977.

Brazil

Latin America's largest nation, Brazil covers an area of nearly 3.3 million square miles and had a 1945 population of about 53 million people. Brazil borders Colombia, Venezuela, Guyana, Suriname, French Guinea, and the Atlantic Ocean to the north; Uruguay, Argentina, and Paraguay to the south; Bolivia and Peru to the west; and the Atlantic Ocean to the east. Brazil's population is ethnically diverse and includes large numbers of Portuguese, Italian, German, Spanish, Japanese, Arab, African, and indigenous peoples. The official language is Portuguese. Approximately 80 percent of Brazilians are Roman Catholic.

Brazil declared war on Germany and Italy in August 1942 and on Japan in June 1945. The country was an important link in the air route to the Middle East from the United States, and it furnished important raw materials, especially rubber, to the Allied war effort. Brazil was also the only Latin American state apart from Mexico to provide combat units. Some 26,000 men of the Brazilian Army and Air Force participated in the Italian Campaign on the Allied side. Brazil became a large recipient of U.S. military aid during the war, and its economy benefited from American investments that jump-started industrialization.

In 1947, Brazil hosted the conference that created the Inter-American Treaty of Mutual Assistance (Rio Pact). Under the administration of President Enrico Dutra (1946–1951), Brazil aligned its foreign policy with that of the United States. The Communist Party was outlawed, and Dutra broke relations with the Soviet Union in 1947. Brazil signed a mutual assistance pact with the United States in 1952.

The government of President Getulio Vargas (1951–1954) pursued nationalist policies designed to strengthen Brazilian control over its natural resources. In 1953, the Brazilian Congress approved creation of the Brazilian oil company known as Petrobras. Originally there was to be both national and foreign investment, but the final bill eliminated the latter, giving the government a monopoly over Brazilian oil reserves.

Vargas's successors adopted a nonaligned foreign policy, maintaining relations with Cuba after the 1962 Cuban Missile Crisis and celebrating Che Guevara as a national hero. In the domestic sphere, Brazil's economic growth slowed; inflation was running at an annual rate of 140 percent in early 1964, and unemployment was rampant. On the other hand, President João Goulart (1961–1964) was unable to reconcile sharp divisions among communists, conservatives, and the armed forces. The military overthrew Goulart in April 1964.

Following the coup, Brazil's foreign policy changed. Washington, concerned about Goulart's leftist policies, had welcomed the coup. The fight against communism became one of the main goals of President Humberto Castelo Branco (1964–1967). In 1964, Brazil decided to break diplomatic relations with Cuba, and in 1965 it supported the U.S. intervention in the Dominican Republic. In fact, Brazil sent troops to the island as part of the Inter-American Force. Castelo Branco's foreign policy adhered to the defense

A convoy of Brazilian Army tanks and other vehicles pauses on the way to Rio de Janeiro on 1 April 1964, after the army high command overthrew the government and forced Brazilian President João Goulart to flee abroad. (AP/Wide World Photos)

of Western democracies, but a certain level of independence was in line with Brazilian national interests. Thus, Brazil maintained commercial relations with the Soviet Union.

In 1964 Brazil and other South American countries implemented the National Security Doctrine (NSD). Created in Brazil's War College, the NSD was anticommunist in essence and saw the military as the guardian of the state and society. Immediately after taking power in 1964, the military regime suspended the Brazilian congress, dissolved political parties and student and union organizations, arrested political leaders, and distanced itself from the Catholic Church. According to the NSD, the armed forces were empowered with internal security functions. In the 1970s other military regimes in the Southern Cone, such as Argentina and Chile, emulated this Brazilian model.

The alliance between Brazil and the United States operated at three levels: military, economic, and technical. The United States continued military assistance, yet it was in the economic arena that Brazil benefited the most. Between 1964 and 1970, Brazil received nearly \$2 billion in economic

aid from the United States. U.S. advisors were present in almost every government office.

By the end of the 1960s, however, bilateral relations changed. Brazil was positioning itself as the main economic and military power in South America, and its foreign policy reflected a new pragmatism. While the country continued to maintain good relations with the United States, it also sought to strengthen its ties with developing nations. Brazil was one of the leading nations in creating the Group of 77, a coalition of developing countries at the United Nations; it also opened new markets in Europe and increased its trade with the USSR.

Throughout the early 1970s, Brazil was more concerned with its own economic development than with Cold War ideology. Nevertheless, U.S.-Brazilian relations remained cordial. In the mid-1970s, a combination of inflation, climbing foreign debt, and the effects of the oil crisis (1973–1974) put an end to the Brazilian economic miracle. Two issues also strained U.S.-Brazilian relations during the late 1970s: human rights violations and Brazil's development of a nuclear program. The military junta ruling Brazil was guilty of human rights abuses, including the torture and execution of political prisoners. The Catholic Church was the principal agency condemning the repression, but human rights organizations such as Amnesty International also raised the alarm. Brazilian leaders, however, considered U.S. President Jimmy Carter's defense of human rights an intervention in Brazilian internal affairs. Consequently, President Ernesto Geisel (1974–1979) decided to end the bilateral military pact with the United States that dated from World War II. Because U.S. economic and military aid was suspended, Brazil signed trade agreements with Europe and Japan while continuing to develop its nuclear program in association with the Federal Republic of Germany (FRG, West Germany).

The Brazilian nuclear program had begun in 1975, when Brazil signed an agreement with the FRG for reactors and enrichment plants. The nuclear program was not a new Brazilian ambition, but the need to develop new energy sources accelerated the process. The effort by the United States to stop Brazil from developing a nuclear program failed. With the inauguration of democratic governments in the 1980s, Brazil and Argentina did agree to develop nuclear energy only for peaceful purposes, to cooperate in nuclear policies, and to exchange personnel at their nuclear plants. Such nuclear cooperation continued during the following decade.

Toward the end of the Cold War, Brazil continued to follow a nonaligned and independent foreign policy. In 1985, President José Sarney (1985–1990) and Argentine President Raul Alfonsín (1983–1989) signed the Iguazu Declaration, by which both countries shared their commitments toward the peace process in Central America, the defense of the Argentine sovereignty rights over the Falklands, and the creation of a peace zone in the South Atlantic. Later agreements were signed laying the groundwork for the creation of Mercosur (Southern Common Market) in 1991.

International monetary system initiated under United Nations auspices at a 1944 conference held at the Bretton Woods resort in New Hampshire. The Bretton Woods System was the first such agreement in history among countries to promote stability in the international monetary system. Negotiated under U.S. leadership, the system was expected to have a broad membership including the Soviet Union, which attended the Bretton Woods conference. In spite of American efforts to involve the Soviet Union in the world economic order, with the deterioration of relations between the wartime allies Moscow decided not to participate in the system. As the Cold War deepened, Moscow denounced the system as an instrument of American imperialism and hegemony.

The Bretton Woods System worked through multilateral lending institutions such as the International Monetary Fund (IMF) and the International Bank for Reconstruction and Development (IBRD), better known as the World Bank. The system was also predicated upon certain rules, including convertibility of currencies and fixed but adjustable exchange rates in terms of gold. Under the adjustable peg currency arrangement, governments were obliged to declare to the IMF the parity value (or peg) of their currency and to intervene in the world currency market to maintain fluctuations of the exchange rate within a 1 percent margin above or below parity. The United States defined the value of its dollar in terms of gold, with one ounce of gold equivalent to thirty-five dollars. The United States converted the dollar into gold at this price, while all the other governments defined the value of their currency in terms of gold or U.S. dollars, buying or selling dollars to keep the exchange rate within the range of fluctuation. To keep the exchange rate

Bretton Woods System

Participants of the United Nations Monetary and Financial Conference meet at the Mount Washington Hotel in Bretton Woods, New Hampshire, in 1944. The result was an agreement among forty-five countries (including the United States) to ensure worldwide financial stability after World War II. (Library of Congress)

within parity range, deficit countries were assured a supply of liquidity via an IMF borrowing mechanism.

As early as 1947 the Bretton Woods System seemed to be somewhat inadequate in managing postwar economic problems. Because their reserves were insufficient and loans could be issued only for financing current account deficits and not capital deficits and reconstruction, the IMF and the World Bank proved unable to finance Western Europe's economic reconstruction and its balance-of-payments deficit. Ultimately, the United States assumed the financial burden of monetary stabilization necessary for the economic recovery of Western Europe and Japan through loan and grant programs such as the Marshall Plan and through discriminatory, preferential trade and payment arrangements such as the Organization for European Economic Cooperation (OEEC) and the European Payments Union (EPU). Because economic strength was seen as a bulwark against communism, the United States inter-

vened in ways that sometimes superseded Bretton Woods System institutions. The United States became the residual source of world liquidity—financed by deficits in its own balance of payments—and the linchpin of the monetary regime based on the dollar that, in fact, substituted for gold.

Notwithstanding the success of U.S. policy leading to the economic reconstruction of its allies, after 1958 the persistent American balance-of-payments deficit began to increase dramatically. This development underscored the vulnerability of America's economic position and of the Bretton Woods System. The growing American deficit in the balance of payments and the drain of American gold supplies undermined the credibility of America's pledge to convert dollars into gold because of the erosion of U.S. gold reserves, which in 1960 were less than the amount of dollars in circulation.

Presidents John F. Kennedy and Lyndon B. Johnson linked the U.S. balance-of-payments deficit to the financial burden of the Cold War and the policy of containment. They viewed the deficit as a consequence of the U.S. defense posture in Europe, continued foreign aid, and the American commitment in Vietnam. Therefore, they urged the European allies to assume a larger financial burden in fighting the Cold War by paying a greater share of military expenses for the defense of Western Europe and by holding dollars instead of gold. Because the cost of American troops stationed in the Federal Republic of Germany (FRG, West Germany) made up a considerable part of the U.S. deficit, Washington pressed Bonn especially to increase its share of defense costs.

American efforts to convince the Europeans to share the Cold War burden provoked tensions among the United States and its Western allies, each of whom was convinced that the system was asymmetrically favorable to the other. Washington blamed its allies for not reducing the U.S. balance-of-payments deficit by inflating or revaluing their currencies, while the Western Allies, and above all the French, maintained that the role of the dollar as the key currency gave an economic and political advantage to the United States in conducting its foreign and domestic policies, which freed it from the concern of the balance of payments.

After 1965, when President Johnson increased spending for social programs and, to finance the Vietnam War, the balance of payments deficit widened, the American economy began to falter. This caused inflation at home and abroad and increased monetary speculation. Eventually, President Richard M. Nixon, concerned by the deficit in the U.S. balance of payments and the depletion of U.S. gold reserves, unilaterally announced on 15 August 1971 the suspension of the dollar's convertibility into gold, a violation of the most basic principle upon which the Bretton Woods System rested. After Nixon's announcement, the dollar was allowed to float freely.

After a last attempt to save the Bretton Woods System with the unsuccessful 1971 Smithsonian Agreement, monetary speculation in 1973 pushed industrialized nations to allow their own currencies to float freely, bringing an effective end to the last vestiges of the system.

Brezhnev, Leonid (1906–1982)

General-secretary of the Communist Party of the Soviet Union (CPSU) during 1964–1982 and head of state during 1977–1982. Leonid Ilyich Brezhnev was born in the Ukrainian town of Dneprodzerzhinsk, then called Kamenskoye, on 19 December 1906. The son of a steelworker, he graduated as an engineer in 1935 from the Kamenskoye Metallurgical Institute and worked in the iron and steel industries of the eastern Ukraine. In 1939 he became CPSU secretary in Dnepropetrovsk in charge of the city's important defense industries.

Brezhnev matured as an unquestioning follower of Soviet dictator Josef Stalin and gained rapid promotion within the Communist Party hierarchy, especially after the political purges of the late 1930s opened up many positions. Following the German invasion of the Soviet Union in June 1941, Brezhnev was soon drafted into the Red Army as a political commissar. By the end of the war he was in charge of the Political Administration of the 4th Ukrainian Front.

After the war, Brezhnev's party career gained momentum. During 1946–1955 he served as party first secretary in Zaporozhe, Dnepropetrovsk, and then in the republics of Moldavia and Kazakhstan. In 1952 he was also appointed a member of the CPSU Central Committee. In 1957 he joined the Politburo.

Brezhnev's meteoric rise was due in large measure to the power of his new patron, Nikita Khrushchev. Nevertheless, Brezhnev, together with Alexei Kosygin, unseated Khrushchev during a 1964 CPSU power struggle. In the division of power that followed, on 15 October 1964 Brezhnev became first secretary of the CPSU, while Kosygin became prime minister. In 1966 Brezhnev named himself general secretary of the CPSU and began to dominate the collective leadership. In 1975 he was appointed an army general; in 1976 he became marshal of the Soviet Union (the highest military rank); and in 1977 he replaced Nikolai Podgorny as head of state.

During the Khrushchev years, Brezhnev had supported the leader's denunciations of Stalin's arbitrary rule and the liberalization of Soviet intellectual policies. But as soon as he had ousted Khrushchev, Brezhnev began

to reverse this process. The 1966 trials of Soviet writers Yuri Daniel and Andrei Sinyavsky marked the reversion to a more repressive policy. The Komitet Gosudarstvennoi Bezopasnosti (KGB, Committee for State Security) regained much of the power it had enjoyed under Stalin, although there was no recurrence of the political purges of the 1930s and 1940s.

In August 1968, Brezhnev brought communist reforms in Eastern Europe to a halt by ordering the invasion of Czechoslovakia, where the Prague Spring had threatened to dissolve that country's political and military solidarity with Moscow and the Warsaw Pact. This military intervention was afterward justified by the Brezhnev Doctrine, which claimed for the Soviet Union the right to interfere in its client states' affairs in order to safeguard socialism and maintain the unity of the Warsaw Pact.

During Brezhnev's tenure, a nonaggression pact with the Federal Republic of Germany (FRG, West Germany) was concluded in 1970, marking the beginning of détente with the West. On a global level, Brezhnev carried out negotiations on arms control with the United States and signed the 1968 Anti-Ballistic Missile Treaty and the 1972 Strategic Arms Limitation Talks Treaty. On the whole, during the 1970s Brezhnev advocated a relaxation of Cold War tensions, which he also demonstrated by signing the 1975 Helsinki Final Act. This recognized the postwar frontiers of Central and Eastern Europe and in effect legitimized Soviet hegemony over the region. In exchange, the Soviet Union agreed to respect human rights and fundamental freedoms.

Relaxation abroad was not matched by liberalization at home. On the contrary, Brezhnev tried to neutralize the effects of détente by expanding the Soviet security apparatus and government control over society. His regime also became synonymous with corruption and the severe repression of dissidents. Urbanization had given rise to an ever-larger number of Soviet citizens, especially from the young and educated groups, hoping to live a Western lifestyle with access to Western culture and a Western middle-class standard of living.

The Soviet invasion of Afghanistan in 1979 signaled an end to détente. The Afghanistan War soon deteriorated into a debacle and contributed to the steady decline of the communist regime. Although the Soviet Union was awash in oil dollars, this money was of little help to the civilian economy because the regime frittered its wealth away on construction projects, corruption, and handouts to brother regimes and pumped it into military industries and the Afghan quagmire.

Parallel to the deterioration of the economic and political system, Brezhnev's physical health and mental awareness steadily declined in the late 1970s. The geriatric Politburo, however, with an average age of seventy, feared change and thus kept him in power well beyond his time. Brezhnev died in

Brezhnev Doctrine

Policy articulated by Soviet leader Leonid Brezhnev to justify Soviet intervention in its East European client states. The doctrine was used to justify the 1968 Soviet invasion of Czechoslovakia, which ended the Prague Spring, and also the 1979 Afghanistan invasion.

The Brezhnev Doctrine dictated that whenever socialism was perceived to be in danger in any socialist country, fellow socialist regimes were obligated to intervene. An integral part of the doctrine was that Moscow would determine the timing and extent of intervention. Brezhnev formally defined the doctrine in a speech given in Poland on 13 November 1968, although the policy was already in force. What was most significant about this speech was that it publicly stated what had long been an implicit assumption: that the Soviet Union would intervene in the internal affairs of any nation over which it had exercised control since the end of World War II. Soviet military and political intervention had been used in the German Democratic Republic (GDR, East Germany) in 1953 and in both Poland and Hungary in 1956. A dramatic difference was that the recent Czechoslovak deviation had not been violent but rather was part of a series of internal reforms sponsored by the Czechoslovak communist leadership.

Brezhnev stated that while the individual communist parties and socialist nations had the freedom to reach their own solutions to specific problems, none had the right to make decisions that would either damage socialism in that country or weaken it in other countries. Thus, socialism was an intertwined international movement, and all socialist nations shared an international responsibility. The need to avoid this type of damage led the Soviet Union and other socialist states to stop what Brezhnev called the “antisocialist forces in Czechoslovakia.”

On 21 August 1968, Warsaw Pact troops had invaded Czechoslovakia for the very reasons Brezhnev cited three months later. While no immediate personnel changes had been made in Czechoslovakia, leading members of Alexander Dubček's regime were eventually removed from their positions, and the government was staffed and led by Czechoslovak communists who had demonstrated their loyalty to Moscow.

The Brezhnev Doctrine was again invoked in 1979. The Afghan monarchy had been overthrown in 1973 and was replaced by a pro-Soviet communist government. Attempting to impose socialist reforms in a traditional nation such as Afghanistan had made the government exceedingly unpopular. A Soviet puppet government had then replaced it and had requested military aid from Moscow. Using this request as justification, Soviet forces intervened in Afghanistan in December 1980 and did not quit the country until 1988.

The looming specter of the Brezhnev Doctrine and the intervention it threatened played a large part in the 1981 imposition of martial law in Poland. During his trial in the early 1990s, Wojciech Jaruzelski, former head of communist Poland, used that fact as part of his defense. He stated that he believed he had no choice but to declare martial law to forestall the Soviets from invoking the Brezhnev Doctrine. The subsequent release of several transcripts of conversations between Jaruzelski and Brezhnev did not, however, prove that an unambiguous threat existed.

Soviet leader Mikhail Gorbachev officially repudiated the Brezhnev Doctrine in 1989. This came at a time when several East European socialist nations had begun to exercise dramatic independence from Moscow.

Britain

British Commonwealth of Nations

A voluntary organization of states connected to Britain through the shared experience of colonialism. The Commonwealth is a loose alliance of countries, with no constitution or binding rules. Its main accomplishment has been to offer a forum for discussion among member nations. It operated on a small budget and only provided a framework for bargaining and for establishing principles and priorities of member states.

Development of the Commonwealth was spurred by both nationalism and the continued decline of Britain as a world power. The Commonwealth began with the recognition of sovereign independence and equality among all British Dominions in 1931. By the end of World War II, Britain, while still nominally a major power, was virtually bankrupt and could no longer defend its empire in the Cold War era of massive military spending. And its colonies wanted independence.

Membership in the British Commonwealth at the end of World War II included Australia (1931, ratified 1942), the United Kingdom (1931), the Republic of Ireland (1931–1949, when it became a republic), Newfoundland (1931, and part of Canada since 1949), New Zealand (1931, ratified 1947), and South Africa (1931). The Commonwealth was originally to be an economic bloc wherein members accorded each other's goods privileged access to their markets (Commonwealth Preference) and had fewer or no restrictions on migration among member countries. In 1950 more than 40 percent of British exports went to Commonwealth countries.

The Commonwealth did not come together for the specific purpose of military alliance, although member states were often involved in other international defensive alliances. During the Cold War, however, the Commonwealth nearly broke apart because of seemingly irreconcilable political differences among certain member states.

The simultaneous Cold War era and worldwide decolonization movement led to the independence of many former colonies and their admission into the Commonwealth, although this also contributed to some tensions. The first occurred in 1950 when newly independent colonies that were republics wanted to join the Commonwealth, whereas other member states were Dominions. The impasse was resolved when Canadian Prime Minister Louis St. Laurent proposed a formula whereby India and other countries could remain members if they accepted the British monarch as head of the Commonwealth, regardless of their domestic constitutional arrangements. This compromise is considered by many to be the start of what is called the Modern Commonwealth. Not all issues were so easily resolved, however.

The debate concerning Southern Rhodesia (called Zimbabwe after 1980) was particularly heated. Northern Rhodesia (Zambia) was granted independence and membership into the Commonwealth in 1964, but Southern Rhodesia remained a British colony because it did not have adequate representation for the nonwhite population. On 11 November 1965, Ian Smith, the leader of the white minority government, declared independence. This move was internationally condemned and, upon Britain's insistence, Rhode-

sia was placed under sanctions authorized by the United Nations (UN) Security Council from 1965 until its independence in 1980. Throughout the period, Southern Rhodesia was wracked by a bloody civil war. Britain gained control of the country for a short time in 1979. The new nation of Zimbabwe joined the Commonwealth in 1980, was suspended in 2002, and left in 2003 because of charges of electoral fraud.

The most contentious and well-known conundrum involving the Commonwealth during the Cold War era was South Africa's apartheid government. During 1948–1990, successive white-minority governments enacted policies and laws that legally sanctioned strict racial segregation. A Commonwealth member, South Africa left in 1961 because of widespread international condemnation. During this time there was widespread violence against the black population as state police tried to repress protest movements. In response, both the Commonwealth and the UN passed resolutions condemning South Africa. The 1971 Declaration of Commonwealth Principles denounced racial prejudice, colonial domination, and great disparities of wealth. Yet Britain, among others, desired a moderate and gradual approach to combating apartheid, whereas African states would not accept any compromise regarding racial oppression. This created a rift between white Commonwealth members and the poorer African members.

International economic pressure was applied whereby nations refused to invest in South African businesses or any business that had dealings in South Africa. South African sports teams were barred from international events, and South African tourism was boycotted. These bans, however, were not very effective, and many states did little to enforce them. In 1984 limited reforms in South Africa were introduced, but violence immediately followed when P. W. Botha's government tried to eliminate political opposition and then attempted to conceal its actions by censoring the media. Not until 1994, when Nelson Mandela became president of South Africa, did apartheid end, whereupon South Africa was allowed to rejoin the Commonwealth.

At the end of the Cold War, member states other than Britain had more influence than they did in 1945. The formation of regional groups (usually motivated by economic imperatives) such as the African Caribbean Pacific Group or the Caribbean Community allowed states to support one another in binding agreements. Yet poor countries were still often unable to redistribute wealth among their populations or make international political demands because of their lack of negotiating power when dealing with international financial institutions. The end of the Cold War also meant that the Soviet Union could no longer provide an alternative to capitalism. There was also the realization that many ethnic, political, regional, and religious divisions within former colonies had been overlooked when they were first granted independence. This was especially true in many African states, where the number of human rights abuses was appalling. Nonetheless, in such instances the Commonwealth continued to provide a forum for discussion that, by allowing a place for dialogue, will perhaps result in solutions to the problems that continue to plague Commonwealth nations.

Browder, Earl Russell (1891–1973)

Head of the American Communist Party (CPUSA) during 1932–1945. Born in Wichita, Kansas, on 20 May 1891, Earl Browder received only an elementary school education but later attended business college and was, for a brief time, a bookkeeper. When he was fifteen, Browder joined the Socialist Party of America. During World War I, he was imprisoned from 1917 to 1918 for draft evasion. In 1921 he joined the newly formed CPUSA.

The American communist movement was largely urban- and immigrant-based, with a dearth of members from the interior heartland; thus, Browder was decidedly in the minority. However, overseas assignments with the Communist International (Comintern) helped Browder's rise within the CPUSA. He was appointed general secretary of the party in 1930 and assumed leadership of it in 1932 when its leader, William Foster, suffered a heart attack. Under Browder's guidance, party membership swelled to its peak of 90,000 in 1939.

Between 1941 and 1945, Browder strongly championed the so-called Grand Alliance. When Josef Stalin dissolved the Comintern in 1943 to placate the West, Browder took this as an opportunity to follow a more autonomous path. In 1944 Browder unilaterally announced that communism and capitalism could coexist peacefully. Such ideological heresy caused his immediate ouster as general secretary. In 1946, Soviet officials stripped Browder of his party membership.

In April 1950, Browder was called to testify before Senator Joseph R. McCarthy's House Committee on Un-American Activities. During his testimony, Browder admitted his involvement in the CPUSA and even criticized it, but he refused to incriminate former associates. He was charged with contempt of Congress but was never prosecuted for it. After his brush with McCarthyism, he retreated into obscurity until his death in Princeton, New Jersey, on 27 June 1973. Soviet archives would later suggest that Browder had participated in espionage prior to 1945, but his precise involvement remains in question.

U.S. secretary of defense (1977–1981). Born in New York City on 19 September 1927, Harold Brown was a child prodigy. He graduated in 1945 from Columbia University, which awarded him a PhD in physics four years later. In 1950 he joined the University of California at Berkeley Lawrence Radiation Laboratory and in 1960 succeeded Edward Teller as director of the associated Lawrence Livermore Radiation Laboratory. During the 1950s Brown worked on Polaris missile warheads, serving on the President's Science Advisory Committee from 1958 to 1961, and was a scientific advisor to Geneva talks on discontinuing nuclear testing in 1958 and 1959.

In 1961 President John F. Kennedy appointed Brown director of research and engineering in the Defense Department. From 1965 to 1969 Brown was secretary of the U.S. Air Force, where he spearheaded numerous improvements, especially in the areas of ballistic missile, antimissile, and space technology. He was president of Caltech during 1969–1977, a controversial period of antiwar protests and cuts in higher education funding. During these years he was also a delegate to the Strategic Arms Limitation Talks (SALT) that began in Helsinki in November 1969, contributing substantially then and later to the treaties concluded in May 1972 and 1979 and also to the interim November 1974 Vladivostok Agreement.

In 1977 President Jimmy Carter appointed Brown, a fellow Trilateral Commission member who had advised the president during his 1976 campaign, secretary of defense, expecting Brown to upgrade American defenses while eliminating wasteful spending. Carter respected Brown's fairly hawkish views on the need to modernize American strategic nuclear forces by developing and deploying intermediate-range cruise missiles, which were included in the SALT negotiating positions. Brown's views aligned him with the president's hard-line national security advisor, Zbigniew Brzezinski, in opposition to disarmament advisor Paul C. Warnke. Carter also approved Brown's recommendations to improve the strategic balance by developing the land-based MX missile, which carried ten multiple independently targeted

reentry vehicle (MIRV) warheads, and the new Ohio-class ballistic missile submarine and Trident II submarine-launched ballistic missiles (SLBMs).

To counterbalance what he perceived as growing Soviet assertiveness in the Horn of Africa, South Yemen, Cuba, Vietnam, and Latin America, Brown strongly supported the further improvement of U.S. ties with the People's Republic of China (PRC); visited that country in January 1980, a year after the United States opened full diplomatic relations; and lobbied in favor of continued American and European weapons sales to China. He initially supported the administration's abortive April 1980 effort to rescue American diplomatic personnel held hostage in Iran since November 1979 but canceled the operation after it encountered mechanical problems and two military airplanes collided. Brown's final report to Congress in 1980 noted that continuing budgetary constraints still hampered the introduction of light and mobile Rapid Deployment Force military units to project American power in the Persian Gulf region and elsewhere.

After leaving office, Brown spent four years as a distinguished visiting professor at the Johns Hopkins University School of Advanced International Studies in Washington, D.C., and from 1984 to 1992 he chaired that organization's Foreign Policy Institute. He became a director of the Council on Foreign Relations in 1983, sat on several corporate boards, and wrote extensively on U.S. national security policy.

U.S. diplomat and ambassador to France (1949–1952), the Federal Republic of Germany (1957–1959), and Great Britain (1961–1969). Born to a well-to-do family in Baltimore, Maryland, on 12 February 1898, David Bruce attended Princeton University from 1915 to 1917 before serving in the U.S. Army during World War I. Following the war he became active in politics, serving as a member of both the Maryland and Virginia houses of delegates. During World War II he headed the London operations of the Office of Strategic Services (OSS).

In 1949 President Harry S. Truman named Bruce, a Democrat, ambassador to France. Bruce then served as undersecretary of state from 1952 to 1953 and as President Dwight Eisenhower's representative to the European Coal and Steel Community from 1953 to 1954. During 1957–1959 Bruce was ambassador to the Federal Republic of Germany (FRG, West Germany).

Bruce actively supported John F. Kennedy's successful 1960 presidential campaign and was rewarded by being appointed ambassador to Britain. In this important position, Bruce ardently defended his government's Cold War policies, although on occasion he questioned the wisdom of some of its actions. In 1964 he challenged the validity of reports that led to the August 1964 Gulf of Tonkin Resolution and the subsequent U.S. military escalations in Vietnam. Despite a period of rocky relations between the United States and the United Kingdom, during his tenure Bruce nonetheless managed to sustain the special relationship between the two nations.

After President Richard M. Nixon's election, Bruce vacated the ambassadorship in 1969. He resided in London as a private citizen until 1970, when he was asked to lead the American delegation to the Paris Peace Talks with the North Vietnamese. In 1973 Nixon appointed Bruce to lead the U.S. Liaison Office to the People's Republic of China (PRC). A recipient of the Presidential Medal of Honor in 1976, Bruce died in Washington, D.C., on 5 December 1977.

Brunei

Southeast Asian nation covering 2,228 square miles, about the size of the U.S. state of Delaware. Brunei, with a 1945 population of some 43,000 people, is located on the northwestern coast of the island of Borneo and is bordered by Malaysia, the South China Sea, and Brunei Bay. The country is predominantly Muslim and is a constitutional sultanate, with power vested in the hands of Sultan Hassanal Bolkiah (since 1967), who is both the head of state and the head of government. Although some constitutional reforms have been introduced in recent years, the Sultan and his family retain a tight grip on power.

A 1906 treaty established a British Residency in Brunei through which Brunei acquired protectorate status but retained nominal independence. Even as a wave of decolonization swept through the Afro-Asian world after World War II, Brunei remained reluctant to sever its ties with the British. In 1959 Sultan Omar Ali Saifuddin III consented to internal self-government, with the British maintaining control over defense, foreign affairs, and internal security.

In 1961, Malayan Prime Minister Tunku Abdul Rahman proposed a federation that would have included Malaysia, Singapore, Brunei, Sabah, and Sarawak. While discussions concerning the federation were ongoing, members of the Partai Rakyat Brunei (PRB, Brunei's People's Party), which favored immediate independence and a northern Borneo federation, launched a revolt on 8 December 1962. Although quickly crushed, the revolt strengthened Omar's inclination to join the federation. Talks, however, broke down, and Brunei opted out in July 1963. The result was strained relations with both Malaysia and Indonesia. PRB leader A. M. Azahari was believed to have received support from Indonesia, whose president, Sukarno, condemned the Malaysian Federation as a neocolonial tactic and subsequently launched the Crush Malaysia campaign. Emergency regulations imposed after the revolt expanded the Sultan's powers and delayed progress toward democratization. During the Cold War, the conservative nature of the sultanate and its reliance on the British placed it squarely in the pro-Western camp.

After formally declaring its independence in 1984, Brunei was welcomed into the Association of Southeast Asian Nations (ASEAN), the United Nations (UN), and the Organization of the Islamic Conference. Its policies remain oriented toward cooperation with regional and international bodies to ensure regional and internal stability. Since the 1990s, the tiny oil- and gas-rich nation

has also pursued friendly relations with the People's Republic of China (PRC), the energy needs of which render it an important client.

The history of modern Brunei is also the story of its rulers' efforts to preserve the sultanate and maintain stability. To this end, sultans willingly surrendered territory and even some measure of sovereignty during the heyday of European imperialism. In recent times, Brunei's rulers—the current sultan and his father, Omar, in particular—have used the country's oil and gas revenues to provide a high standard of living to forestall internal dissent. Given that these are nonrenewable resources, however, Brunei's ability to continue along this path is open to question. Mindful of this, in the aftermath of the Asian financial crisis of the late 1990s Brunei has focused on diversifying its economy. Whether its ruler can continue to control the process and pace of democratization also remains to be seen.

Multilateral treaty of cooperation and collective defense signed on 17 March 1948 by Belgium, France, Luxembourg, the Netherlands, and Great Britain. Europe was bifurcated after World War II, with the democratic states in Western Europe and the Soviet-controlled states in Eastern Europe. Consequently, there was an urgent need for cooperation among West European nations to counter any future German belligerence and the threat of Soviet communism. The Brussels Treaty, an important event in the context of the emerging Cold War, guarded against Soviet hegemony and allowed the United States to assist Western Europe. The Brussels Treaty was signed in Brussels and consisted of ten articles. The duration of the treaty was to be fifty years; following ratification by the five signatories, the treaty came into force on 25 August 1948. It ultimately served as the precursor to the North Atlantic Treaty Organization (NATO) and the Western European Union (WEU).

A major goal of the treaty was to supplement the United Nations (UN) Charter, including the enforcement of human rights. In addition, it aimed to fortify the principles of democracy and the rule of law in international affairs. It also sought to establish economic cooperation in Western Europe to bolster reconstruction efforts and provided for collective self-defense.

Brussels Treaty (1948)

Article I of the treaty ensured that all signatory nations would cooperate in economic recovery efforts by removing economic and trade barriers. Article II called for the improvement in living standards and social services in member nations. Article III encouraged cultural exchanges among the signatories. Article IV declared that if any of the five nations was attacked, Article 51 of the UN Charter would be invoked to aid the attacked nation. The remaining articles dealt with other collective security issues, conflict resolution, and the particulars of the treaty's ratification and enforcement procedures.

Brzezinski, Zbigniew (1928–)

Prominent international relations scholar, diplomat, and U.S. national security advisor from 1977 to 1981. Born the son of a Polish diplomat on 28 March 1928 in Warsaw, Poland, Zbigniew Brzezinski received his PhD from Harvard University in 1953 and became a U.S. citizen in 1958. Following his graduation, he joined the faculty of Harvard and then moved on to Columbia University in 1960, where he stayed until 1977.

Brzezinski also served as a foreign policy advisor to President John F. Kennedy and as a member of the State Department's influential policy planning staff during the Lyndon B. Johnson administration. In 1968 Brzezinski resigned his State Department post in protest over America's Vietnam War policies. He subsequently returned to academia and directed the Trilateral Commission from 1973 to 1976. After serving as foreign policy advisor to Jimmy Carter's successful 1976 presidential campaign, Brzezinski was named Carter's national security advisor in 1977.

As national security advisor, Brzezinski played a critical role in the normalization of relations with the People's Republic of China (PRC) as well as in the 1978 Camp David Accords. Most significant perhaps, to both Carter and Brzezinski, was the 1978 Iranian Revolution and the resultant hostage crisis that dominated their last year in office.

Following Carter's defeat in the 1980 election, Brzezinski returned to Columbia University. In 1989 he joined the faculty of Johns Hopkins University. He has written and edited numerous books on international relations.

Soviet statesman, deputy prime minister, minister of defense, and premier. Born on 11 June 1895 in Nizhniy Novgorod, Russia, the son of a factory worker, Nikolai Bulganin joined the Bolsheviks as a youth and became a member of the All-Russian Extraordinary Commission for Combating Counter-revolution and Sabotage (Cheka, or secret police) in Turkistan in the wake of the 1917 October Revolution. His accomplishments in the ranks of Cheka facilitated his political ascendancy, and in the 1920s he was tasked with managing a large electrical equipment factory in Moscow.

With his continued success and the connections he established among the elite of the Communist Party of the Soviet Union (CPSU), Bulganin was appointed mayor of Moscow in 1931, remaining in that post for six years. There he oversaw the construction of the Moscow Underground. He then took over as head of the state bank from 1937 to 1941. During World War II, he served in Soviet leader Josef Stalin's war cabinet and as the chairman of the state defense committee.

In 1947, Bulganin assumed the post of minister of the armed forces, was granted the rank of marshal of the Soviet Union, and a year later became deputy prime minister and a full member of the Politburo. After Stalin's death in 1953, Bulganin assumed the post of minister of defense under Georgy Malenkov. Thus, Bulganin was one of the five central figures who ruled the Soviet Union during the interregnum following Stalin's death. Despite his links to Malenkov, Bulganin supported Nikita Khrushchev in the ensuing power struggle and in February 1955 was rewarded with the post of chairman of the council of ministers, that is, premier of the Soviet Union. He remained in that position until 1958.

During the summer of 1957, however, Bulganin disagreed with Khrushchev on a series of issues. As a result, Bulganin joined forces with Khrushchev's opponents, whose aim was to remove Khrushchev from the top leadership

spot. When the putsch failed, Bulganin was accused of conspiracy, stripped of the rank of marshal, and forced into semiretirement in September 1958. He was expelled from the Central Committee of the CPSU in 1961. Bulganin remained in secluded retirement until his death in Moscow on 24 February 1975.

Bulgaria

A Balkan nation slightly larger than the U.S. state of Ohio with a land mass of 42,822 square miles. Bulgaria is bordered by Romania to the north, Greece and Turkey to the south, Macedonia and Serbia to the west, and the Black Sea to the east. In 1945 it had a population of approximately 6.3 million people. Bulgaria was best known during the Cold War for its production of rose oil, the longevity of its orthodox communist dictator Todor Zhivkov, and its unshakable loyalty to the Soviet Union. Bulgarian devotion to Moscow no doubt sprang from Russian assistance in liberating the country from the Ottoman Empire in the 1870s and from the Germans in World War II and was also rooted in the dependence of Bulgaria's communist leaders on Soviet support to maintain their authority. Zhivkov personified such dependence, and while occasionally experimenting with autonomous economic and cultural reforms, he consistently supported Soviet foreign policy and modeled domestic programs on Russian counterparts.

During the prelude to World War II, Bulgaria's ruler Czar Boris III (1918–1943) advocated neutrality but was ultimately forced into an alliance with Nazi Germany. Boris proved a reluctant ally at best and through creative foot-dragging managed to protect the nation's Jewish population from mass extermination at the hands of the Nazis. He also prevented Bulgarian soldiers from serving on the Eastern Front. His untimely death in August 1943 before the war ended deprived the nation of a skilful leader, although it is unlikely, given Bulgaria's strategic importance, that he could have prevented its incorporation into the Soviet sphere.

The Red Army crossed the Danube into Bulgaria on 9 September 1944, greeted by cheering crowds and the small Bulgarian wartime resistance movement. A regency government, ruling in the name of Boris's six-year-old son Simeon II, soon fell in a bloodless coup led by the Fatherland Front, a coalition that included the Bulgarian Communist Party (BCP), the influential

Agrarian Party, and a number of other small groups. By 1946 the BCP dominated the coalition, but oversight of the country by a joint Soviet-American commission prevented the party from dictating its own terms.

Veteran international communist Georgi Dimitrov, who became prime minister in November 1946, proceeded cautiously at first. He waited until after the termination of the joint commission to seize power openly and promulgate a Soviet-style constitution. Dimitrov died suddenly under mysterious circumstances in Moscow in July 1949. Bulgarian mourners built a mausoleum in twenty-four hours of fevered labor, placing his embalmed body on permanent display in Sofia, like that of Lenin in Red Square in Moscow.

Dimitrov's successor, Vasil Kolarov, a founding member of the BCP, died within a year of Dimitrov, prompting Soviet leader Josef Stalin to select Vulko Chervenkov as prime minister (1950–1956). Later Chervenkov became head of the BCP and president of the National Council of the Fatherland Front. Chervenkov quickly moved to suppress all opposition, sent dissidents and intellectuals to the Bulgarian concentration camp at Kozloduy, collectivized agriculture, promoted the development of heavy industry, and established a cult of personality. Stalin's March 1953 death undercut Chervenkov's authority, however, especially after new Soviet leader Nikita Khrushchev exposed Stalin's crimes in 1956. Over the course of the next five years, Sofia BCP boss Zhivkov, who was personally acquainted with Khrushchev, removed Chervenkov's supporters from their positions and gradually stripped Chervenkov of his offices.

By 1965 Zhivkov had assumed all of Chervenkov's titles and effectively eliminated all challenges to his own authority. Zhivkov ruled Bulgaria from April 1956 to November 1989, in effect as his personal fiefdom. He built dozens of grand personal residences, many of which were later converted into resort hotels. Although Zhivkov supported Soviet foreign policy, he rarely committed troops abroad. Instead, Bulgaria sent hundreds of physicians and engineers to Africa, Asia, and the Caribbean to provide professional assistance to Soviet friends and allies. Bulgaria also aided clandestine Soviet operations, most notoriously the 1977 assassination of dissident writer Georgi Markov with a poisoned umbrella in London.

In keeping with his personal style, Zhivkov actively promoted the political career of his daughter Ludmillia Zhivkova. Raised under communism and educated abroad at Oxford, she became deputy chair of the Committee for Arts and Culture in 1971 and was appointed to the BCP's Politburo in 1980. Zhivkova cultivated a rather flamboyant and bohemian image, dressing in flowing white robes; publicly displayed an interest in Buddhism and other Eastern religions; and surrounded herself with the best and brightest of her generation. She opened Bulgaria to jazz and abstract art and advanced Bulgarian national pride by sponsoring archaeological investigations of the ancient culture of Thrace. In 1981 she staged a nationwide celebration of the 1,300th anniversary of the founding of the first Bulgarian state. Her premature death from a cerebral hemorrhage that year marked the end of Bulgaria's liberalization. Thereafter, many of her close associates were purged and jailed,

while economic difficulties forced her father into taking increasingly conservative actions.

During much of the 1970s Bulgaria enjoyed good times thanks to cheap energy from the Soviet Union and favorable trading relations with the other nations of the Soviet bloc. By the mid-1980s, however, mounting hard currency debts and the inherent inefficiencies of the communist economy put increasing strains on the population and encouraged dissident activities, resulting in rounds of repression that only inspired more dissent in return. To distract the Bulgarian people from their difficulties, Zhivkov embarked on an ambitious building program by refurbishing regional centers and hosting tours of the international diplomatic community. He also raised an old *bête noire* by launching a campaign to force ethnic Turks, who had lived in Bulgaria for centuries, to adopt Bulgarian names and renounce their heritage or face deportation.

In 1989 members of the BCP visited Moscow to determine their reaction to the unrest sweeping Eastern Europe. When they returned that November they summarily deposed Zhivkov, changed the name of the BCP to the Bulgarian Socialist Party (BSP), and held open elections. Although the BSP won the first round of elections, the political situation remained unstable, resulting in the fall of the BSP to the Union of Democratic Forces (UDF). The BSP returned to power in 1994 but collapsed spectacularly in the wake of hyperinflation and civil unrest in 1997. Disillusioned with the chronic infighting between the BSP and the UDF, Bulgarian voters rejected both parties in 2001 and elected their former king, Simeon II, prime minister. Bulgaria has moved so far toward the West that it formally joined the North Atlantic Treaty Organization (NATO) in 2004 and the European Union (EU) on 1 January 2007.

Bunche, Ralph Johnson

(1904–1971)

African American political scientist, civil rights activist, and diplomat. Born on 7 August 1904 in Detroit, Michigan, Ralph Bunche was orphaned in 1917 and moved to Los Angeles, where he was raised by his grandmother. He earned a bachelor's degree in political science and philosophy at the University of California, Los Angeles, in 1927, and in 1928 he earned an MA degree in political science from Harvard University. Over the next six years, while

working on his doctorate, Bunche taught political science at Howard University. In 1934 he was awarded a doctorate in government and international relations from Harvard University, and he then pursued postdoctoral research in anthropology in the United States, London, and South Africa.

Although Bunche was an expert in African politics, he also studied U.S. race relations and joined civil rights protests on several occasions. During World War II, he worked as a social science analyst for the U.S. government and served as an advisor in the negotiations that led to the formation of the United Nations (UN) in 1945. As a member of the newly created UN Secretariat, he became an expert on Palestinian affairs.

In 1950, Bunche became the first person of color to receive the Nobel Peace Prize for his successful efforts in negotiating an armistice agreement between Egypt and Israel after the first Arab-Israeli War. Four years later, he was appointed undersecretary-general of the UN. In 1956 he supervised UN peacekeeping operations in the Middle East after the Suez Crisis, and he organized subsequent peacekeeping missions in the Congo (1960) and Cyprus (1962). Bunche died on 9 December 1971 in New York City.

Foreign policy expert, presidential advisor, and U.S. national security advisor during 1961–1966. Born on 30 March 1919 in Boston, Massachusetts, McGeorge Bundy graduated from Yale University in 1940. During World War II, he served as an intelligence officer and participated in the planning of the invasions of Sicily and France. In 1949, he joined the faculty of Harvard University and was dean of arts and sciences there from 1953 to 1961.

In January 1961, President John F. Kennedy tapped Bundy to become national security advisor. As such, Bundy transformed the post into a powerful policymaking position, and it has remained so ever since. He played a crucial role in major U.S. foreign policy decisions in the 1960s, including the Bay of Pigs invasion, the Berlin Wall Crisis, the Cuban Missile Crisis, and the Vietnam War.

Under President Lyndon B. Johnson, Bundy was an initial advocate of expanding American involvement in the Vietnam War. In February 1965, while visiting South Vietnam at the time of the Viet Cong attacks on the U.S. barracks in Pleiku, he wrote a crucial memorandum calling for a policy of

Bundy, McGeorge
(1919–1996)

National Security Advisor McGeorge Bundy was one of the key advisors to President Lyndon B. Johnson in the development of U.S. policy toward Vietnam. (Yoichi R. Okamoto/Lyndon B. Johnson Library)

sustained reprisal, including air strikes against North Vietnam. By 1968, however, Bundy had come to regret his hawkish views toward Vietnam and was among the so-called Wise Men who in 1968 advised President Johnson to seek a negotiated end to the war and to withdraw U.S. troops.

After he resigned his position in February 1966, Bundy served as president of the Ford Foundation until 1979. Later, he taught at New York University and headed a Carnegie Corporation project studying nuclear proliferation. When Bundy died of a heart attack on 16 September 1996 in Boston, he was working on a book about the Vietnam War. He unabashedly admitted that Vietnam was a terrible mistake and that he personally had made great errors of perception, recommendation, and execution.

Bundy, William Putnam

(1917–2000)

Assistant U.S. secretary of state for Far Eastern affairs (1964–1969) who helped to propel the United States into the Vietnam War. William Bundy was born in Washington, D.C., on 24 September 1917 into a prominent Boston, Massachusetts, family. During World War II his father, a lawyer, served in the War Department under his mentor Secretary of War Henry L. Stimson, whom his children likewise admired and emulated. Bundy attended Groton School in Connecticut, graduated from Yale University in 1939, and studied history and law at Harvard University. In 1941 he joined the U.S. Army. Assigned to the Signals Corps as a specialist in cryptology, from spring 1943 he was sta-

tioned at Bletchley Park, headquarters of the top secret World War II ULTRA project decoding German military communications.

When the war ended Bundy, who married the daughter of future Secretary of State Dean Acheson in 1943, completed law school. Bundy practiced law for three years before joining the new Central Intelligence Agency (CIA) in 1950. Between 1953 and 1955 he successfully weathered charges by Senator Joseph McCarthy that he had contributed to the defense fund of Carnegie Corporation official Alger W. Hiss, accused of spying for the Soviet Union during the 1930s.

In 1956 Bundy became deputy assistant director of intelligence, a position he held until 1960. In 1956 he recommended that the United States assist the anticommunist government of President Ngo Dinh Diem of the Republic of Vietnam (RVN, South Vietnam), a decision that tied successive American administrations to supporting the RVN against the Democratic Republic of Vietnam (DRV, North Vietnam).

Appointed deputy assistant secretary of defense in 1961, that fall Bundy recommended that President John F. Kennedy deploy U.S. troops to South Vietnam. After three months as assistant secretary of defense for international security affairs, in February 1964 Bundy became President Lyndon B. Johnson's assistant secretary of state for Far Eastern affairs and an influential policymaker on Vietnam. By 1964 Bundy privately doubted the value and wisdom of further long-term U.S. commitments to the RVN but publicly favored a strong line. In August 1964 he helped to draft the congressional Tonkin Gulf Resolution, granting Johnson virtually unlimited authority to use force in Vietnam. Bundy nonetheless urged—somewhat unavailingly—that besides fighting in order to demonstrate its resolve to win, the United States should concurrently seek to open negotiations to facilitate the withdrawal of U.S. military forces, a position enshrined in the November 1964 report of the Vietnam Working Group, which he chaired.

From the commitment of U.S. ground forces in spring 1965 onward, Bundy had serious reservations over the Johnson administration's continuing escalation of military commitments in Vietnam, but loyalty inhibited him from publicizing these or resigning, and he remained in office until the president left office in January 1969. As protests over the war intensified, Bundy and his brother McGeorge, national security advisor under Kennedy and Johnson, became increasingly controversial figures. Both featured prominently in journalist David Halberstam's highly critical 1972 account of why the United States had become so deeply involved in Vietnam, a responsibility that Halberstam and others ascribed to the influence of an elitist and activist U.S. foreign policy establishment to which, they alleged, Bundy and many of his colleagues belonged.

For the rest of Bundy's life, his role in Vietnam continued to dog him, provoking protests from influential Council on Foreign Relations members in 1971 when he was named editor of the organization's journal, *Foreign Affairs*. He held that post until he retired in 1984. Perennially wrestling with and seeking to elucidate the past, Bundy wrote but never published a lengthy

memoir of his part in Vietnam policymaking. A lifelong Democrat, in 1998 he also produced *The Tangled Web*, a lengthy, somewhat critical study of President Richard Nixon's foreign policies. Bundy died of heart failure in Princeton, New Jersey, on 6 October, 2000.

Burgess, Guy Francis de Moncy

(1911–1963)

British intelligence operative, diplomat, and member of the Cambridge Five spy ring. Born in Devonport, Devon, England, on 6 April 1911, Guy Burgess graduated from Eton in 1930 and went on to study at Trinity College, Cambridge University, where he secretly joined the Communist Party, became associated with the infamous Cambridge espionage ring, and was first recruited by Soviet Komitet Gosudarstvennoi Bezopasnosti (KGB) agents. On and off throughout his career, Burgess passed important and classified information to his Soviet contacts.

In 1936 Burgess secured a position as a broadcaster with the British Broadcasting Corporation (BBC) in London. This job put him into contact with many top British officials. In 1938 he joined the British Secret Intelligence Service (MI6). He went on to serve in the British Foreign Office in 1944, during which time he began passing information to the Soviets. In 1947 he was posted to the British embassy in Washington, D.C., where he was in a position to pass more classified intelligence to his Soviet handlers.

While he was in Washington, Burgess became reacquainted with Kim Philby, whom he had known as a student at Cambridge. At the time, Philby was serving as an MI6 liaison with the U.S. Central Intelligence Agency (CIA). In 1951 Philby learned that the head of the American Department at the Foreign Office, Donald Maclean, who was also a Soviet agent, was about to be interrogated by British intelligence. He had been identified as "Homer," a cryptogram for Maclean contained in the Venona decrypts. At that point, the KGB arranged for Burgess to return to London to warn

Maclean that his cover had been blown. The KGB subsequently ordered both Maclean and Burgess to Moscow in May 1951. Burgess stayed in Russia but never adapted to the austerity of Soviet life. He died in Moscow of liver disease on 19 August 1963.

Southeast Asian nation comprised mainly of ethnic Burmese. Nearly 90 percent of the population is Buddhist. Slightly smaller than the U.S. state of Texas and since 1989 known as Myanmar, Burma encompasses 261,969 square miles. It occupies the Indo-Chinese peninsula and is bordered by the Andaman Sea, the Bay of Bengal, Bangladesh, and India to the west; China to the northeast; Laos to the east; and Thailand to the southeast. Burma's 1945 population was approximately 18 million people. Once expected to be a most promising Asian state, Burma became one of the poorest, most oppressive countries in the world during the Cold War.

Burmese opposition to British colonial rule emerged prior to World War II, but it was not until the Japanese occupation during the war that the drive for independence gained momentum. The Japanese co-opted Burmese nationalists such as Aung San, U Nu, and Ne Win. Some Burmese leaders, particularly Marxists, favored an antifascist alliance with the British. But Aung San—the most influential nationalist in the country—believed that cooperation with the Japanese would best serve Burmese interests. He and other top leaders, the so-called Thirty Comrades, cooperated with the Japanese after securing promises that independence would be granted.

As Tokyo's war fortunes waned, however, in 1944 Aung San turned against Japan and formed the Anti-Fascist People's Freedom League (AFPFL) in support of the Allies. Almost immediately, plans for self-government were adopted when the British retook Burma in May 1945. Whereas in most places the British immediately restored their colonial rule, the strength and diversity of nationalist Burmese sentiment discouraged them from doing so in Burma. The July 1947 assassination of Aung San and conflict within Burmese political circles threatened to derail the transition

Burma

from colony to nation, but on 4 January 1948 the Union of Burma gained its independence.

Aung San had hoped that Burma would become a republic with a pluralistic society, fully incorporating its diverse array of ethnic minorities. His successor and Burma's first prime minister, U Nu, envisioned a different course, however, trying to synthesize Buddhism with socialism, which alienated many non-Burmese minorities. Further complicating matters, Burmese communists began their own insurrection within a few months of independence. By the mid-1950s Burma faced a multiparty civil war and was rapidly losing cohesion as a nation-state. Amid economic stagnation and growing ethnic insurgencies, in September 1958 General Ne Win and two other senior military officers seized power.

The so-called Bogyoke (General's) government accomplished two important goals. First, it resolved a significant border dispute with China, thereby improving relations with Beijing. Second, the government convinced some ethnic insurgents to quit their war with Rangoon. Still, it was clearly a military government, quick to eliminate dissent and punish opponents. Due to building pressure from the public, the generals finally agreed to hold elections in February 1960, resulting in a landslide victory for U Nu.

Despite the presumed legitimacy of the elections, the generals continued to plot. U Nu immediately revisited policies aimed at establishing majority rule in parliament and making Burma a Buddhist state, moves that again alienated ethnic minorities. By 1961, with the Shan and Kachin forming armies, Burma faced the specter of a civil war even worse than the first. On 2 March 1962 the generals launched another coup, overthrowing U Nu and restoring military rule.

Facing a cascade of economic and political problems, most Burmese accepted Ne Win's rationalization that democracy had failed. Moreover, many believed that ethnic minorities were the chief cause of their country's decline and tacitly endorsed a military solution. As one of the Thirty Comrades and a father of independence, Ne Win commanded great respect. This was especially felt within the army, which he set about rebuilding and expanding. In so doing, he appeased the only segment of Burmese society capable of opposing him.

Ne Win's Revolutionary Council governed the country by decree. The regime was anticapitalist, anti-imperialist, and decidedly undemocratic. Ne Win's policies were fashioned from the so-called Burmese Way to socialism, a bizarre mix of militant nationalism, native religious practices, and a personalized brand of dictatorship predicated on control of the armed forces. Through the strength of the military, Ne Win eliminated much of his opposition. Opposition political parties were forcibly disbanded, leaving only his Burma Socialist Program Party (BSPP). To deflect public attention from intractable economic problems, Ne Win cultivated an aggressive xenophobia. Foreign businesses and their assets were seized. Anti-Chinese sentiment was particularly strong, frequently developing into purges.

Ne Win also sealed Burma off from the international community, which unquestionably aggravated its economic decline. Equally debilitating were

the Revolutionary Council's largely unsuccessful wars with insurgents that lasted for almost thirty years. By the 1980s Burma had become one of the poorest and most despotic and isolated countries in the world.

Sporadic protests by intellectuals, students, workers, and Buddhist monks against Ne Win's rule did flare up from time to time. There were even occasional plots against him from within the armed forces. In fact, U Nu helped form an opposition movement that fought alongside ethnic insurgents such as the Karen National Union, the Kachin Independence Organization, the New Mon State Party, and the Shan State Army—each boasting armies of several thousand members. In addition, the Communist Party of Burma continued its war against Rangoon with help from the People's Republic of China (PRC). Meanwhile, new groups such as the Muslim Rohingya in Arakan and the Pa'o and Palaung in Shan began fighting for their independence from other ethnic minorities. The result was near chaos along Burma's frontiers.

In 1988 mass demonstrations against Ne Win were launched in Rangoon by the National League for Democracy (NLD). Ne Win resigned in September 1988 but retained influence behind the scenes. The new government,

Burmese demonstrators supporting Aung San and protesting the ruling military regime march along a street in Rangoon, Myanmar (Burma), 8 September 1988. (Corbis/Corbis Sygma)

called the State Law and Order Restoration Council (SLORC), was dominated by the Burmese Army. One of its first acts was to change the name of the country from the English “Burma” to the Burmese “Myanmar,” hoping to instill nationalistic pride in its people. The SLORC also opened the country to limited foreign investment in hopes of alleviating some of its economic problems. With this, there was brief hope that Burma was changing for the better.

But the SLORC’s leadership soon revealed itself to be just as brutal and despotic as its predecessor. Antigovernment protests were ruthlessly suppressed, with many opposition leaders jailed. Several hundred protesters were killed in September 1988 alone. Aung San Suu Kyi, the charismatic daughter of Aung San and the leader of the NLD, was put under house arrest in July 1989. Surprisingly confident that it would win, the new government yielded to international pressures and agreed to national elections in May 1990. The NLD swept the polls, but the army refused to yield power, and opposition was again crushed. The Burmese Army, renamed the State Peace and Development Council, continues to dominate the country with little sign of change.

Bush, George Herbert Walker (1924–)

U.S. congressman, ambassador, director of the Central Intelligence Agency (CIA), vice president (1981–1989), and president (1989–1993). George H. W. Bush was born on 12 June 1924 in Milton, Massachusetts, to a wealthy and patrician family. His father, Prescott Bush, was a prominent U.S. senator from Connecticut. Educated at the elite Phillips Andover Academy, on his eighteenth birthday Bush enlisted in the U.S. Navy, becoming the navy’s youngest pilot. After World War II he married Barbara Pierce, graduated from Yale with an economics degree after two and a half years, moved to Texas, and embarked on a career in the oil business.

Bush entered politics in 1964 as a Republican, winning a seat in the U.S. House of Representatives. In 1970 he ran unsuccessfully for the U.S. Senate. President Richard M. Nixon appointed Bush ambassador to the United Nations (UN) in 1971. In this post for two years, Bush fought to preserve Nationalist China's (Taiwan) seat in the UN, an effort that was ultimately unsuccessful.

From 1973 to 1976 Bush held a series of important government posts, including the directorship of the CIA. When he took over the CIA in 1975, the agency was reeling from revelations about its role in assassination plots, coups, and other covert operations conducted in the name of the Cold War. He tried to rehabilitate the CIA during his tenure, and his efforts met with some success.

In 1980, Bush sought the Republican presidential nomination but lost to former California Governor Ronald Reagan, who then named Bush his running mate. The pair went on to win an overwhelming victory in the 1980 elections. As vice president, Bush loyally backed Reagan's hard-line Cold War policies. Military spending increased dramatically during Reagan's first term, and the administration provided considerable aid to foreign governments and insurgents to combat communism.

Bush bolstered these measures by traveling around the globe soliciting support for Reagan's policies, particularly in Central America. Bush met with Panamanian strongman Manuel Noriega, who had allied himself with the anticommunist Nicaraguan Contras. The Contras were fighting the Sandinista government and receiving U.S. military and financial aid. After Congress voted to cut off assistance to the Contras in 1983, the Reagan administration began covertly aiding them. Members of the National Security Agency concocted a plan by which proceeds from the sale of weapons to Iran were diverted to the Contra rebels. When the Iran-Contra story broke in 1986, Bush denied any knowledge of the illegal operation. Questions remained about his role in the Iran-Contra Affair when he ran for the presidency in 1988, but he nonetheless secured a sound victory that November over Massachusetts Governor Michael Dukakis.

When Bush took office in January 1989 the Cold War was winding down. During Reagan's second term, relations between the United States and the Soviet Union had improved tremendously, and Bush continued to negotiate with Soviet Premier Mikhail Gorbachev in his first year as president.

In November 1989, the momentous fall of the Berlin Wall ushered in the end of the Cold War. Bush's reactions to the changes in Eastern Europe were calculatingly restrained. He and his foreign policy advisors were wary of antagonizing the Soviet leadership and were fearful that the Soviet military might be employed to stanch the prodemocracy movements. But Soviet weakness and Gorbachev's promises not to intervene led to a peaceful revolution.

Before serving as president of the United States during 1989–1993, George H. W. Bush was a congressman, United Nations ambassador, Republican National Committee chairman, director of the Central Intelligence Agency, and vice president. (Library of Congress)

By January 1992 the Soviet Union had been officially dissolved, and later that year President Bush and the new Russian leader Boris Yeltsin declared an end to the Cold War.

After Iraq invaded and occupied Kuwait in August 1990, Bush successfully mounted an international coalition force that liberated Kuwait and dealt a crippling blow to Iraqi dictator Saddam Hussein's military. The first Persian Gulf War, Operation DESERT STORM, ended in less than one hundred hours of ground fighting after a protracted air war that had begun in January 1991. The war liberated Kuwait and protected Saudi Arabian and Middle Eastern oil supplies but left Saddam Hussein's bloodthirsty regime in place. After the war, Bush enjoyed meteoric approval ratings, but a deep economic recession combined with Bush's inability to offer solutions to the downturn resulted in his losing a presidential reelection bid in 1992 to Democrat William Clinton.

Byrnes, James Francis (1879–1972)

U.S. politician, administrator, and secretary of state. Born on 2 May 1879 in Charleston, South Carolina, James Byrnes was the son of Irish immigrants. After qualifying as a lawyer, in 1910 he won election to Congress and in 1930 became senator for South Carolina. A longtime friend of President Franklin D. Roosevelt, from 1933 onward Byrnes deployed impressive negotiating talents in steering New Deal legislation through Congress. In 1941 Roosevelt appointed him to the Supreme Court.

Sixteen months later, in 1942, Byrnes left the bench to head the new Office of Economic Stabilization. The following year he became director of the Office of War Mobilization (from 1944 the Office of War Mobilization and Reconversion). In domestic policy, Byrnes, often termed “assistant president,” exercised powers second only to those of Roosevelt himself. Responsible for coordinating the work of all domestic war agencies and federal government departments, Byrnes worked closely with both Congress and

the bureaucracy to devise the most efficient arrangements to facilitate the war effort.

Passed over as Roosevelt's vice presidential running mate in 1944, Byrnes, already considered a hard-liner on the Soviet Union, attended the February 1945 Yalta summit conference of the Big Three Allied leaders. Returning to Washington, he successfully lobbied Congress to support the outcome of Yalta, deliberately glossing over outstanding contentious issues dividing the Soviet Union and its Allies. Still disappointed over the 1944 election, he resigned in March 1945.

When Roosevelt died one month later, the inexperienced former Senator Harry S. Truman became president. Truman immediately appointed Byrnes head of a top secret committee on employment of atomic weapons, then in their final stage of development, whose existence Byrnes recommended be kept secret even from American allies until their first use in combat. He believed that American possession of the bomb would make Soviet behavior more malleable.

In June 1945 Truman made Byrnes secretary of state. Attending the July 1945 Potsdam Conference, he hoped that the speedy employment of atomic weapons against Japan would prevent the Soviet Union from entering the Pacific war and enhance America's influence in Asia. Byrnes also helped to reach a compromise agreement on German reparations. Returning to Washington, in August he helped negotiate the Japanese surrender agreement, implicitly agreeing to retain the emperor. As Soviet-American relations became more difficult after the war, for several months Byrnes sought to negotiate compromise solutions, traveling extensively to meet with other Allied foreign ministers outside the United States. In early 1946 political complaints that he was too conciliatory led Byrnes to assume a harsher rhetorical stance on standing up to the Soviet Union, most notably in a well-publicized speech in Stuttgart, West Germany, in September 1946, when Byrnes proclaimed American determination to restore the German economy and his country's willingness to accept the permanent division of Germany and Europe. Even so, at the end of the year Truman, increasingly irked by Byrnes's policies, secretive conduct of diplomacy, and condescending attitude toward the president, replaced him with George C. Marshall.

Byrnes returned to South Carolina and wrote his memoirs. In 1948 he broke with Truman over civil rights, subsequently serving two terms, from 1951 to 1955, as governor of South Carolina and defending segregationist policies. Byrnes died on 9 April 1972 in Columbia, South Carolina.

James F. Byrnes served as a legislator, Supreme Court justice, and secretary of state (1945–1946). He was then governor of South Carolina. (Franklin D. Roosevelt Library)

C

Portuguese politician and prime minister (1968–1974). Born in Lisbon on 17 August 1906, Marcelo Caetano studied law at the University of Lisbon, graduating in 1931. He then taught at that university from 1932 to 1968. In 1940 he joined the Portuguese government.

Among other duties, Caetano served as minister of the colonies (1944–1947) and deputy prime minister (1955–1958). In September 1968, after Prime Minister António de Oliveira Salazar suffered a stroke, Caetano replaced him as premier. Salazar had ruled as *de facto* dictator of Portugal since 1932.

As prime minister, Caetano attempted to hold together Portugal's rapidly disintegrating overseas empire in Angola, Mozambique, and Cabo Verde. In response to building criticism of the authoritarian government, he instituted modest political reforms known as the Marcelist Spring in 1969. Most notably, he allegedly reorganized the secret police, the *Polícia Internacional e de Defesa do Estado* (PIDE, International Police State Defense). But the changes amounted to little more than a name change for the agency. As dissent grew in the early 1970s, Salazar loyalists in the government pressured Caetano to crack down, which only fueled more unrest. The colonial situation became ever more critical as antirebellion efforts consumed nearly 50 percent of Portugal's annual budget. In February 1974 Caetano ousted General António de Spínola from the army after he had attempted to liberalize colonial administration. This move set the stage for a military coup. Caetano was ultimately deposed by the army during the Carnation Revolution on 25 April 1974. He then fled to Brazil and died in Rio de Janeiro on 26 October 1980. The Carnation Revolution, meanwhile, ended Portuguese authoritarianism and instituted a liberal democracy.

das Neves**
(1906–1980)

Callaghan, James (1912–2005)

British Labour Party politician, chancellor of the exchequer (1964–1967), foreign secretary (1974–1976), and prime minister (1976–1980). Born in Portsmouth, Hampshire, England, on 27 March 1912, James Callaghan at age fourteen left school and worked as a tax officer before becoming a trade union official in 1929.

Following service in the Royal Navy in World War II, Callaghan was elected to Parliament in 1945 as a Labour Party candidate. While Labour was in power, he held several minor government posts. After Labour's defeat in 1951, he served as opposition spokesman on colonial affairs during 1956–1960 and as shadow chancellor from 1960 to 1964. In 1963, he ran unsuccessfully for the top Labour leadership spot, losing to Harold Wilson.

Upon Labour's victory in the national elections in 1965, Callaghan became chancellor of the exchequer. But when Prime Minister Wilson was forced to devalue the pound in November 1967, Callaghan resigned and moved to the Home Office. Once more in opposition, in May 1971 he surprisingly opposed entry to the European Community in his "Language of Chaucer" speech.

During Wilson's second administration (1974–1976), Callaghan served as foreign secretary. As such, he renegotiated the terms of Britain's entry into the European Community but was primarily concerned with establishing better relations with the United States and the Commonwealth, both of which, in his view, had been neglected by the previous government. He also established a robust friendship with U.S. Secretary of State Henry Kissinger, although he was disappointed that Kissinger did not put more pressure on Turkey during the Cyprus crisis of mid-1974. Callaghan assisted the Portuguese socialist leader Mario Soares in nurturing the fragile democratic politics emerging in post-Salazar Portugal.

Upon Wilson's surprise resignation in March 1976, Callaghan succeeded him as prime minister and was almost immediately confronted with severe economic difficulties. In autumn 1976 Callaghan announced that it was no longer possible to "spend your way out of a recession," which prefigured Margaret Thatcher's economic philosophy. At the end of 1976, Britain was obliged to request credits from the International Monetary Fund. Meanwhile, conflicts with trade unions escalated, and the foundering economy led to Callaghan's defeat in the House of Commons on a no-confidence motion in March 1979. In the subsequent national election, the Labour Party was defeated and Callaghan lost office. He resigned as Labour Party leader in 1980 and left the House of Commons in 1987 to take a seat in the House of Lords. Callaghan died in Ringmer, East Sussex, on 26 March 2005.

Southeast Asian nation located on the Indochinese peninsula. About the size of the U.S. state of Oklahoma, Cambodia encompasses 69,900 square miles. It is bordered to the northwest by Thailand, due north by Laos, to the east and southeast by Vietnam, and to the southwest the Gulf of Thailand. An overwhelmingly Buddhist nation, Cambodia had a 1945 population of approximately 3.5 million people.

Few countries endured conflict and suffering during the Cold War more than Cambodia. Through the legacy of colonialism, the struggle for independence, untenable neutrality, civil war, genocide, and occupation, Cambodia witnessed some of the worst horrors in modern history.

From ancient times, Cambodia was always at the center of conflict in Southeast Asia. Once the seat of the magnificent Khmer Empire, by the early nineteenth century Cambodia was little more than a tributary state, contested between the Siamese (Thai) and Vietnamese. In 1863 Cambodian rulers agreed to the establishment of a French protectorate, at least in part to rid themselves of Siamese and Vietnamese influences. Rebellions against French rule began almost immediately, culminating with a national uprising in 1884. France, however, maintained control until World War II.

With the fall of France in June 1940, Indochina came under the rule of the collaborationist Vichy government. In August 1940 it was forced to allow access to Japanese troops. By the end of 1940 Vichy Indochina was at war with Thailand, which took advantage of French weakness to reclaim “lost” territory in Cambodia and Laos. The Franco-Thai War was ended by Japanese mediation in February 1941 but had significant effects on Indochina. First, France was humiliated and its rule fundamentally undermined. Second, Thai aggression greatly angered Cambodians. Third, by intervening, Japan demonstrated support for anticolonial movements in Southeast Asia. All of these factors naturally invigorated Cambodian nationalism.

The Japanese did not, however, endorse Indochinese nationalisms as originally hoped. Rather, they allowed the Vichy government to suppress them. Only in March 1945, with the war decidedly against them, did the Japanese take formal control of Indochina, encouraging declarations of independence in Vietnam, Laos, and Cambodia. Cambodia’s independence

Cambodia

declaration came on 13 March 1945, made by twenty-three-year-old King Norodom Sihanouk. By August, however, French rule had been restored. Anti-French guerrillas, the Khmer Issarak (Free Khmer), assembled a government-in-exile in Thailand, while other Cambodian nationalists joined the Viet Minh, fighting against French rule in neighboring Vietnam.

Weakened by World War II and facing enormous difficulties restoring its empire in the region, by 1949 France moved slowly toward Indochinese independence. Sihanouk took control of the nationalist movement, but in fact Cambodians were deeply divided over their future rule. There was an array of political parties, each with a different approach to independence. The Krom Pracheathipodei (Democratic Party) attracted intellectuals, many of whom had joined the Khmer Issarak. They considered Sihanouk a traitor and a French collaborator. The Kanaq Sereiheap (Freedom Group or Liberal Party) was particularly strong among the conservative commercial elite and favored the status quo and the retention of the monarchy. Communism, represented by guerrillas operating under the banner of the Khmer People's Revolutionary Party (KPRP) and controlled by the Viet Minh, also had its appeal.

Amid this divisive confusion, Sihanouk emerged as the only plausible solution, and in early 1953 he began a world tour to generate support for Cambodian independence. When that failed, he dramatically offered his life in exchange for nationhood. When negotiations with the French proceeded too slowly, he went into voluntary exile. With France's war in Vietnam going poorly, the French finally agreed to limited Cambodian autonomy in October 1953.

Cambodia was granted full independence under the terms of the 1954 Geneva Accords. This, however, did not bridge Cambodia's political divisions. In fact, these became more acute once the French were gone. Encouraged by his early success and yet frustrated by opposition, Sihanouk decided to abdicate the throne in March 1955 and stand for election. Victorious, "Citizen Sihanouk" dominated Cambodian politics until 1970 but was never able to mend Cambodia's fractures, especially as the war next door in Vietnam spilled over into Cambodia.

Sihanouk's party, the Sangkum Reastre Niyum (Sangkum, or Popular Socialist Community), was, in effect, Cambodia's only political party. It revolved exclusively around him and, based on his popularity, won every seat in the National Assembly in the 1955, 1958, and 1962 elections. However, Sihanouk's domination was ultimately Sangkum's downfall. Fissures emerged within the party as the 1960s unfolded, mostly over Cambodia's neutrality in the Vietnam War. By 1967, those on the far Left criticized Sihanouk for not supporting the Vietnamese revolution against Western imperialism, and many defected to join the KPRP. At the same time, those on the Right asserted that Sihanouk's neutrality had become hopelessly compromised by North Vietnamese communists using Cambodia as a sanctuary in their fight against the Americans and the South Vietnamese. Prominent critics on the Right included the Cambodian military, which by 1970 had decided to topple Sihanouk.

The army coup came in March 1970 while Sihanouk traveled abroad. It coalesced around General Lon Nol, Sihanouk's prime minister, with the

blessing of the U.S. government, which had lost patience with Sihanouk and his compromised neutrality. Sihanouk fled to the People's Republic of China (PRC), where he formed an opposition government-in-exile. This put him in a loose alliance with Cambodian communists, many of whom had left the KPRP to join the more radical Communist Party of Kampuchea (CPK), better known as the Khmer Rouge (Red Khmer). The Khmer Rouge had been founded in 1960. Sihanouk had ruthlessly suppressed the movement, and it remained divided and weak throughout most of the 1960s. But the Khmer Rouge, supplied by North Vietnam, began an insurgency in 1968 that intensified after Lon Nol's coup. Bombings of eastern Cambodia and incursions by U.S. and South Vietnamese forces against communist sanctuaries there galvanized Khmer Rouge support. In addition, Lon Nol's government was notoriously corrupt and inefficient, and many Cambodians deeply resented it. By 1973, when the United States withdrew its troops from Vietnam, Lon Nol was already in serious trouble. Even large-scale bombings of Khmer Rouge positions by the Americans could not prevent the collapse of his government.

Lon Nol's government came to an end in April 1975, just two weeks before the North Vietnamese seizure of Saigon. Almost immediately after taking control of Phnom Penh, the Khmer Rouge and its leader, Pol Pot (Saloth Sar), implemented one of the most monstrous regimes in history. Adopting an ultranationalist, radicalized communism, the Khmer Rouge attempted to eradicate from Cambodia any vestiges of its colonial past.

The country was renamed Democratic Kampuchea (DK). In place of the monarchy, the mysterious, distant, and authoritarian Angkar Loeu (Upper Organization) of the Khmer Rouge elite ruled. Sihanouk returned to the country in late 1975 but had no power. Increasingly uneasy in the midst of Khmer Rouge radicalism, he again left for exile in early 1979. Under the Khmer Rouge's brutal rule, millions of Cambodians were forcibly moved from towns and cities into the countryside to work on collective farms. Urban centers, considered obstacles to the so-called people's revolution, were all but abandoned. Severe food shortages caused by the move led to widespread malnutrition and disease, which claimed many lives. Offers of foreign aid were declined, adding to the misery. Private property, money, businesses, and religion were all banned. People who wore glasses or had fair skin were deemed to be capitalists and were severely punished.

Family ties and even individual personalities were considered counterrevolutionary. Wholesale executions were commonplace, especially among former government officials, the military, bureaucrats, intellectuals, businesspeople, and members of the Buddhist clergy. Many Cambodians simply disappeared, their bodies dumped in Cambodia's infamous killing fields. During the period of

Piles of skulls and bones memorializing as many as 2 million victims of the Khmer Rouge killing fields. (iStockPhoto.com)

Systematic
executions of
ethnic Vietnamese
in Cambodia and
heated border
disputes were the
final sparks that
led to war.

Khmer Rouge rule between 1975 and 1978, it is estimated that nearly 2 million Cambodians were killed, or approximately one in six Cambodians, making it one of the worst genocides in modern history.

The end of Khmer Rouge rule came in December 1978 when Vietnamese forces invaded Cambodia. Communism could not overcome centuries-old tensions between the two nations, and their differences over the Sino-Soviet split had only aggravated matters. Systematic executions of ethnic Vietnamese in Cambodia and heated border disputes were the final sparks that led to war. Internal divisions, which had plagued the Khmer Rouge from the outset, prevented it from mobilizing any real opposition. Moreover, the Cambodian people had suffered so much that there was little resistance. Within two weeks, DK was occupied, and the Khmer Rouge returned to the jungles and guerrilla warfare. Their hopes were briefly lifted when in February 1979 Chinese and Vietnamese forces clashed along their common border, ostensibly over control of Cambodia. When the Chinese withdrew after just a few weeks, however, the Khmer Rouge's best chance of restoring its rule faded.

Vietnamese forces occupied Cambodia for nearly fifteen years. They supported a puppet government led by former Khmer Rouge officials who had fled or had fallen out with the Pol Pot clique. Throughout this period the Khmer Rouge launched attacks against the government from bases in western Cambodia, supported clandestinely by China and Thailand. A coalition of other noncommunist opposition groups also fought the occupation, most under the symbolic leadership of Sihanouk—with the blessing of many Western governments. Internationally sponsored peace talks led to the withdrawal of Vietnamese forces beginning in early 1992. But for Cambodia this was only a small step toward peace. Disarming the various factions and establishing a new government were gargantuan tasks. Today, Cambodians are confronting their bloody past and rebuilding a nation ripped apart by the convulsions of the Cold War.

On 25 December 1978, Vietnamese armed forces invaded Cambodia, ushering in an occupation lasting nearly thirteen years. This incursion marked the first and only extended war between communist regimes and led to a brief but bloody border war between Vietnam and the People's Republic of China (PRC). Moreover, the occupation added to the tremendous suffering that Cambodia endured during the Cold War and greatly affected Southeast Asia.

The origins of the Vietnamese-Cambodian conflict are complex and reach far back into history. The Vietnamese and Khmer (Cambodian) Empires had been bitter rivals for centuries. By the early 1800s, much of Cambodia had come under Vietnamese rule or was forced to pay tribute to it. This gave rise to deep-seated animosities that survived decades of French colonial rule, Japanese occupation during World War II, and two Indochinese conflicts spanning nearly thirty years.

Communist rhetoric and ideology masked these tensions but could not overcome them. Vietnamese and Cambodian communists cooperated in the fight against American-sponsored regimes in Saigon and Phnom Penh. In fact, Vietnamese support was essential to the 1975 communist Khmer Rouge (Red Khmer) victory in Cambodia. However, common ideology did not bridge their historical and ethnic divisions. The Khmer Rouge feared that a unified Vietnam, even if communist, would again dominate Cambodia. Leaders in Hanoi worried that the Khmer Rouge was too dependent on Beijing and feared the extension of Chinese power in Southeast Asia.

These anxieties were inextricably linked to international developments. During the 1960s the Sino-Soviet split widened, and the Democratic Republic of Vietnam (DRV, North Vietnam) aligned itself more with the Soviet Union, alienating the PRC. After reunification in 1975, Vietnam purged its ethnic Chinese minorities and relied even more on Soviet aid. In this light, the PRC came to consider Vietnam a rival in Southeast Asia and an extension of Soviet power. The United States also played an important role, particularly through *détente* with the Chinese. Thus, by the late 1970s a bizarre diplomatic arrangement emerged in the region, pitting the Americans and Chinese, formerly fierce enemies in the Cold War, against the Soviets and Vietnamese.

Within this complicated international context, local tensions resurfaced soon after both the Vietnamese communists and the Khmer Rouge seized power in 1975. Hanoi denounced the regime in Phnom Penh as reactionary for its infamous genocide in the killing fields. The Khmer Rouge demanded that Vietnam return historically disputed lands and leveled allegations that Hanoi was plotting to divide Cambodia via the country's ethnic Vietnamese population.

Cross-border raids by poorly equipped Khmer Rouge forces into Vietnam and atrocities committed against ethnic Vietnamese living in Cambodia worsened the situation between the two countries. Paranoid Khmer Rouge leaders may have believed that war with Vietnam would galvanize Cambodians behind their regime, but the exact opposite happened. When Vietnam

VIETNAMESE INVASION OF CAMBODIA, 1978

launched its invasion on 25 December 1978, the Cambodian people offered no resistance. Indeed, after three years of terror under the Khmer Rouge, many Cambodians welcomed the Vietnamese as liberators. Three Cambodian regiments, equipped by the Vietnamese and made up mostly of those who had fled the Khmer Rouge, took part in the invasion.

Some speculate that the Vietnamese invasion was originally designed to stop at the Mekong River, but meeting only sporadic resistance, Hanoi decided to push on. Phnom Penh fell on 7 January 1979, and Khmer Rouge forces withdrew to the west. Operating from the remote jungles bordering Thailand, they carried out guerrilla warfare against the Vietnamese and their puppet Cambodian government led by Heng Samrin.

Alarmed by the prospect of a Vietnamese-dominated Indochina, the Chinese decided to take action. On 17 February 1979, 120,000 Chinese troops attacked Vietnam. After pushing 25 miles into Vietnam, PRC forces then halted. By 16 March, Beijing withdrew, claiming that it had taught Hanoi a lesson. In fact, Vietnamese forces had inflicted considerable punishment on the invading Chinese.

Hanoi maintained that its invasion was humanitarian in seeking to overthrow the genocidal Khmer Rouge, but except for the Soviet bloc Vietnam was condemned by the international community. The United States and the PRC led the condemnations. Together with Thailand, the two powers began supporting Cambodian resistance movements. One, the noncommunist Khmer People's National Liberation Front (KPNLF), was led by former

government minister Son Sann. The other, the Front Uni National pour un Cambodge Indépendant, Neutre, Pacifique, et Coopératif (FUNCINPEC), pledged allegiance to deposed Cambodian King Norodom Sihanouk and postured as the government-in-exile of Cambodia. The U.S. government extended military assistance to these noncommunist groups, but in fact much of the aid reached the Khmer Rouge.

Although these two groups operated independently, they were part of a de facto alliance with the Khmer Rouge, and the three maintained a fierce resistance well into the 1980s. Chinese support of the Khmer Rouge was a key factor in the insurgency. In June 1982, intermediaries from the Association of Southeast Asian Nations (ASEAN) helped negotiate the tripartite Coalition Government of Democratic Kampuchea (CGDK). The arrangement made the noncommunist groups the public face of Cambodian resistance, while the Khmer Rouge retained mostly military power.

Substantial Vietnamese forces were committed to fight the CGDK, but from bases in Thailand its guerrillas operated largely beyond reach. Frustrated, in 1985 the Vietnamese tried clearing the jungle and building barriers along the Thai border. They also mined the area and began shelling refugee camps believed to be guerrilla safe havens. There were even clashes between Vietnamese and Thai forces during the late 1980s.

By 1989, however, Hanoi had developed other priorities. The occupation of Cambodia was not only a financial and military drain but was also a

Vietnamese troops departing Cambodia (Kampuchea), 22 September 1989. (Jacques Langevin/Corbis Sygma)

diplomatic liability. Indeed, diplomatic isolation had seriously handicapped economic development, and Soviet support declined as communism in Eastern Europe collapsed. Improving relations with the United States and the PRC, deemed essential to Vietnamese security, became Hanoi's focus, and this necessitated a withdrawal from Cambodia.

In September 1989, following almost three years of gradual withdrawal, Hanoi announced the removal of all Vietnamese forces from Cambodia. Despite Khmer Rouge claims to the contrary, most experts agree that by the beginning of 1990 Vietnam made good on the promise. This paved the way for international negotiations that resulted in the October 1991 signing of the Paris Agreements, which provided for the United Nations Transitional Authority in Cambodia (UNTAC). Its difficult mandate involved disarming all factions and securing the country ahead of national elections. Since 1992 Cambodia has struggled under the weight of its internal divisions, trying to cope with its tragic history.

Cambridge Five

Group of five British citizens accused of spying for the Soviet Union, so named because they met as students at Cambridge University in the 1930s. Nicholas Elliott, Secret Intelligence Service (MI6) colleague of suspected Soviet spy Harold Adrian "Kim" Philby, was dispatched to Beirut in 1963 to obtain a confession detailing Philby's espionage activities for the Soviet Union. In return, Philby was offered immunity from prosecution. Elliott reportedly told Philby, "You took me in for years. How I despise you now." Elliott failed in his task, for five days after their initial meeting, Philby sailed for the Soviet Union in a Soviet merchant vessel.

Elliott's words could have been applied to any of the Cambridge Five spies: Philby, Anthony Blunt, Guy Burgess, Donald Maclean, and John Cairn-

cross. All had been introduced to Marxism while they were students at Cambridge University in the 1930s, and all were eventually persuaded to work for Soviet intelligence. They became the notorious Cambridge Five of popular Cold War literature. The Soviet Komitet Gosudarstvennoi Bezopasnosti (KGB) called them the Magnificent Five.

Blunt entered the British Security Service (MI5) in 1940 and delivered to Soviet intelligence information that he believed would be of importance to the Soviet war effort. After 1945 he did little more than occasional communications work. He became a distinguished art historian, director of the Courtauld Institute, and confidant of the queen as the surveyor of queen's pictures. Burgess, a brilliant student, had a professional career that included work for the British Broadcasting Company (BBC), the MI5, and, finally, the British Foreign Office. Like Blunt, he was homosexual and drank to excess. Burgess passed on to Soviet intelligence information gleaned mainly from friends in high places. Burgess was so flamboyant and gregarious that it is surprising he could keep anything confidential.

Each of the remaining three, Maclean, Philby, and Cairncross, was more valuable to Soviet intelligence than either Blunt or Burgess. They reliably served their two masters during World War II and the Cold War that soon followed. Maclean enjoyed a sparkling academic career and easily gained entrance into the Foreign Office. His postings included the British embassy in Washington, D.C.; he eventually became head of the American Department in the Foreign Office and as such had ample access to Anglo-American military and defense plans. It was said that Soviet Foreign Minister Vyacheslav Molotov was delighted with Maclean's reports. The most recognized of the Cambridge Five, however, was Philby. At first he worked as a journalist for the London *Times*, but in 1940 he joined the MI6, probably under pressure from his Soviet masters. Philby was credible, socially adept, and professionally respectable. In fact, he was so successful at MI6 that many colleagues expected him to retire as director. During and after World War II, Philby provided the Soviets with large quantities of useful documentation about a wide variety of Anglo-American plans. He was also able to identify various British and American agents in Soviet service. Unlike the other four, Cairncross did not come from the upper middle class. His father was an ironworker near Glasgow. Cairncross matriculated at Cambridge on a scholarship. Once in government employment, Cairncross moved around. He worked for the Foreign Service and then the Treasury, was private secretary to Lord Hankey in Winston Churchill's wartime administration, and in 1945 went back to the Treasury. Cairncross's chief benefactor seemed to be the Soviet armed forces, although much of his espionage work ceased after 1945.

The Cambridge Five functioned well in their dual roles until Igor Gouzenko's defection to Canada in 1945. Gouzenko presented documentation revealing the cryptonyms of hundreds of Soviet agents around the world. The Venona decrypts after 1944 added more evidence of Soviet moles. Fearing arrest, in 1951 Maclean (code-named Homer), accompanied by Burgess, left his American posting and fled to the Soviet Union. Philby,

suspected as the source who had tipped off Maclean of his impending detention, was forced to resign his position with MI6. Philby then joined the news staff of the London *Observer* and relocated to Beirut, Lebanon. Nicholas Elliot's rather inept offer of a British immunity proposal caused Philby to flee Beirut and relocate to the Soviet Union in 1963, assuring that the full extent of the damage done by the Cambridge Five might never be known.

Blunt was knighted in 1956. In 1963 Michael Straight, an American, reported to the Federal Bureau of Investigation (FBI) an attempt by Blunt to recruit him as a Comintern agent in 1937 while both were at Cambridge. The results of this interview, in combination with other evidence, led Blunt, in return for immunity, to confess his involvement with Soviet intelligence. His role was not publicly exposed until 1979. Cairncross fell under suspicion in 1951 after references to him were found in Burgess's apartment following the latter's flight to Moscow. Cairncross then left the Treasury and went abroad, where he held several employments in Rome and Paris. He returned to Britain in 1995 and died the same year. A biography attributed to him (*The Enigma Spy*) was published in 1997.

Burgess was the first of the Cambridge Five to die. He had suffered for a time from heart and liver problems and died in Moscow on 19 August 1963. Maclean, the most Russianized of the three expatriates, also died in Moscow, on 9 March 1983. Blunt died in disgrace on 28 March 1983 in London. Philby died in Moscow on 11 May 1988. His body lay in state for two days at Komitet Gosudarstvennoi Bezopasnosti (KGB) headquarters and was interred at Kuntsevo Cemetery, a KGB burial ground west of Moscow. Cairncross died of a stroke in Longhope in Herefordshire, Britain, on 8 October 1995.

These men may have been the last of the idealistic spies. More recently, money has driven spying activities. Aldrich Ames and Edward Lee Howard of the CIA and Robert Hanssen of the FBI sought little else.

Peace agreement reached between Egypt and Israel in September 1978 at Camp David, the U.S. presidential retreat in rural Maryland. During 1977 and 1978, several remarkable events took place that set the stage for the Camp David negotiations. In autumn 1977, Egyptian President Anwar Sadat indicated his willingness to go to Israel for the cause of peace, something that no Arab leader had done since the creation of the Jewish state in 1947. On 19 November 1977, Sadat followed through on his promise, addressing the Israeli Knesset (parliament) and calling for peace between the two nations. The Israelis welcomed Sadat's bold initiative but took no immediate steps to

Camp David Accords (September 1978)

U.S. President Jimmy Carter stands between Egyptian President Anwar Sadat (*left*) and Israeli prime minister Menachem Begin (*right*) after the signing of the Camp David Accords on 17 September 1978. Forged during an unprecedented thirteen-day negotiating session at the presidential retreat at Camp David, Maryland, the accords established a framework for peace between Israel and Egypt. The formal agreement, the Camp David Peace Treaty, was signed on 26 March 1979. (Jimmy Carter Library)

Sadat bristled at Begin's demands, which led to such acrimony between the two men that they met in person only once during the entire negotiation process.

end the state of belligerency, instead agreeing to ministerial-level meetings in preparation for final negotiations.

In February 1978, the United States entered into the equation by hosting Sadat in Washington, with both President Jimmy Carter and Congress hailing the Egyptian leader as a statesman and courageous leader. American adulation for Sadat led to greater cooperation by the Israelis, and they thus agreed to a summit meeting in September at Camp David.

For two weeks in September 1978, Sadat, Carter, and Israeli Prime Minister Menachem Begin hammered out a framework for an agreement, but not before both sides were forced to make serious concessions. Begin insisted that Sadat separate the Palestinian issue from the peace talks, something that no Arab leader had been willing to do before. Israel also demanded that Egypt negate any former agreements with other Arab nations that called for war against Israel.

Sadat bristled at Begin's demands, which led to such acrimony between the two men that they met in person only once during the entire negotiation process. Instead, Carter shuttled between the two leaders in an effort to moderate their positions. After several days of little movement and accusations of bad faith directed mostly at Begin, however, Carter threatened to break off the talks. Faced with the possibility of being blamed for a failed peace plan, Begin finally came to the table ready to deal. He agreed to dismantle all Jewish settlements in the Sinai Peninsula and return it in its entirety to Egypt. For his part, Sadat agreed to put the Palestinian issue aside and sign an agreement separate from the other Arab nations. On 15 September 1978, Carter, Sadat, and Begin announced that an agreement had been reached.

In reality, there were still many details to work out, and Carter and his secretary of state, Cyrus Vance, made numerous trips to the Middle East during the next several months to finalize the agreement. One guarantee that the United States made was to help organize an international peacekeeping force to occupy the Sinai following the Israeli withdrawal. The United States also promised \$2 billion to pay for the relocation of an airfield from the Sinai to Israel and made guarantees of economic assistance to Egypt in exchange for Sadat's signature on a peace treaty.

Finally, on 26 March 1979, in a White House ceremony, Sadat and Begin shook hands again and signed a permanent peace treaty, normalizing relations between their two nations. When the accord was reached, all sides believed that other Arab nations, particularly the pro-Western regimes in Jordan and Saudi Arabia, would soon follow Egypt's lead and sign similar agreements. They were mistaken. Other Arab states and the Palestine Liberation Organization (PLO) denounced the Camp David Accords and Sadat for having sold out the Arab cause. Egypt was expelled from the Arab League, and several Middle Eastern nations broke off diplomatic relations with Cairo. Not until the mid-1990s would another Arab nation, Jordan, join Egypt in normalizing relations with Israel. The Camp David Accords were, without doubt, Carter's greatest foreign policy success.

Summit meeting between U.S. President Dwight D. Eisenhower and Soviet leader Nikita Khrushchev at the presidential retreat, Camp David, during 25–26 September 1959. The Camp David Meeting, held at a rural retreat of U.S. presidents in Maryland's Catoctin Mountains 60 miles northwest of Washington, D.C., was part of a larger state visit by Khrushchev that had commenced on 15 September. This marked the first U.S. visit ever taken by a Soviet head of state and as such produced a considerable—albeit brief—thaw in the Cold War.

Camp David provided an informal setting for the historic talks between Eisenhower and Khrushchev and the background for a significant turning point in the Cold War. In 1959, the ongoing Berlin Crisis was still at the forefront of U.S.-Soviet relations after Khrushchev's November 1958 pledge to sign a separate peace treaty with the Democratic Republic of Germany (GDR, East Germany). In mid-July 1959, Eisenhower believed that personal diplomacy might ease the tensions between Washington and Moscow. Although he intended to extend an invitation to Khrushchev only after the Geneva Foreign Minister Talks (May–August 1959) had seriously addressed issues surrounding the German question, the State Department issued the invitation on an unqualified basis. Eisenhower was furious about the mistake but could do little to remedy it, as Khrushchev accepted a week later.

On 15 September 1959, Khrushchev began his two-week state visit. The first meeting between Khrushchev and Eisenhower, which lasted ninety minutes at the White House, was merely a prelude and an opportunity for the two leaders to size each other up. As such, it did not produce anything of substance. But Eisenhower did approach Khrushchev privately, trying to persuade him to show more willingness to compromise. Khrushchev shared Eisenhower's desire for peace but emphasized that both sides needed to make an effort to overcome their differences.

On 16 September, Khrushchev visited the U.S. Capitol and met congressional leaders, including Massachusetts Senator John F. Kennedy. During 17–24 September, Khrushchev toured New York, California, Iowa, and

Pennsylvania, accompanied by U.S. ambassador to the United Nations (UN) Henry Cabot Lodge. On 18 September, Khrushchev became the first Soviet leader to address the UN General Assembly in New York City. There he made a surprise announcement of a Soviet plan for general and comprehensive disarmament, which carried considerable weight with many nonaligned nations.

Eisenhower and Khrushchev flew by helicopter to Camp David on 25 September 1959. The next day, they discussed the prickly subject of Berlin, first in a formal meeting, then more informally during a walk and private discussion between Eisenhower and Khrushchev, speaking through his interpreter Oleg Troyanovski. Nevertheless, the two men failed to reach agreement on Berlin. After lunch, Eisenhower took Khrushchev to his farm in nearby Gettysburg, Pennsylvania. The change of venue led to a sudden change of mood. A grandfatherly figure, Khrushchev delightedly interacted with Eisenhower's children and grandchildren. Eisenhower even showed the Soviet leader his prize-winning herd of Angus cattle. By day's end, things were looking considerably brighter.

On Sunday, 27 September, Eisenhower again met privately with Khrushchev, with Troyanovski again interpreting. Finally, the two men arrived at a compromise formula and, ultimately, a breakthrough in the Berlin dilemma.

Khrushchev promised that he would not insist on a time limit for negotiations on Berlin. In Eisenhower's mind, Khrushchev's disavowal of a time limit on the Berlin ultimatum had essentially nullified it. Thus, he agreed to Khrushchev's suggestion of a four-power summit conference, to include Britain and France, as a way to further discuss Berlin and other contentious issues.

Both sides considered the visit a great success. Although it did not end the Cold War, tensions between the two superpowers were significantly eased. Eisenhower and Khrushchev each received the minimum concessions they were hoping for. In addition, the talks allowed both leaders to build a personal and diplomatic relationship.

The thaw forged at Camp David, however, was short-lived. Already in difficulty over a lack of forward movement on substantive issues, it collapsed when Khrushchev left the four-power summit in Paris on 16 May 1960.

French journalist, existentialist novelist, essayist, playwright, and philosopher. Albert Camus was born to a poor family in Mondovi, Algeria, on 7 November 1913. His father died in World War I. Camus received early intellectual encouragement from a primary school teacher and went on to study at the University of Algiers. For a brief time in the 1930s, he was a member of the French Communist Party. In 1938, he moved to Paris and worked as a journalist. During World War II he edited the French Resistance newspaper *Combat*, which he founded with fellow existentialist writer Jean-Paul Sartre.

In postwar France, Camus and Sartre achieved recognition and, eventually, fame as engaged intellectuals. Camus' celebrity rested largely on his two great novels, *L'Étranger* (The Stranger, 1942), a fictional exploration of the utter emptiness and random depravity of modern-day life, and *La Peste* (The Plague, 1947), a nuanced parable of the injustice and absurdity of the German occupation of France. The philosophy inherent in *L'Étranger* was pre-saged at length in Camus' *Le Mythe de Sisyphe* (The Myth of Sisyphus, 1942), which lent him a reputation as an existentialist, a label that Camus himself rejected.

Camus' 1951 book, *L'Homme Révolté* (The Rebel), drew withering, condescending criticism from Sartre. In it Camus condemned revolutionary violence, especially that which justified itself with the idea of history as the moral force. This was not, however, a completely original viewpoint, as the philosopher Karl Popper, in 1945, had argued in similar vein in *The Open Society and Its Enemies*. Nevertheless, for Camus *L'Homme Révolté* signaled a break from the rigidities and hypocrisy of Stalinist-Marxism that was so popular among certain postwar French intelligentsia. His anti-Stalinism was publicly evident in 1956 when he criticized the Soviet invasion of Hungary and welcomed the Polish revolt. During the Algerian War (1954–1962), Camus was torn between an emotional response to the land of his birth and orthodox leftist political thinking on colonialism. In 1957 he won the Nobel Prize for Literature. Camus died after a car accident on 4 January 1960 in Villeblerin, France.

Canada

A large North American nation comprising 3.855 million square miles. Bigger in area than the United States, Canada is bordered to the south by the continental United States, to the west by the Pacific Ocean and the U.S. state of Alaska, to the east by the Atlantic Ocean and Greenland, and to the north by the Arctic Ocean. In 1945 it had a population of approximately 12 million people.

Canada played a supplementary and, at times, important role throughout the Cold War. This role was primarily performed in alliance with the United States and other Western nations and included participation in the North Atlantic Treaty Organization (NATO); the dispatching of troops to the Korean War (1950–1953); the containment of the Soviet Union; the establishment, with the United States, of the North American Air Defense Command (NORAD); and contributing to international diplomatic efforts. Domestically, Canada would undergo considerable change in the Cold War era.

At the end of World War II, Canada was in a strong yet awkward position. Traditionally, it had aligned itself with Britain. The war, however, marked a decisive shift toward the United States as Canada's principal protector and partner. This relationship would both benefit and bedevil Canada throughout the Cold War. The choice to be an active ally of the United States was not one made grudgingly. Canadian policymakers feared America's return to a state of isolation and were also committed anticommunists. And the September 1945 revelations of a communist spy ring in Canada only reinforced the perceived threat posed by the Soviet Union.

Domestically, the Liberal Party government of Prime Minister William Lyon Mackenzie King dealt with reincorporating returning veterans into the economy by introducing several measures. These included a "baby bonus" payment designed to encourage women to return to traditional occupations from jobs they held during the war. The payments also contributed to the baby boom, as Canada experienced rapid population growth into the early 1960s. Canada's economy, fueled by its ties to the United States, grew rapidly in the years after the war, while unemployment remained low. This growth contributed to political stability, as the Liberal Party dominated the federal system until 1957.

Regardless of the government in power, there was no doubt about Canada's commitment to battling communism. In 1950, Prime Minister Louis

St. Laurent's government sent 26,800 troops to fight in the Korean War, in which more than 500 Canadians would die. Ottawa would be first and foremost a loyal American ally but would also try to maintain a degree of independence by encouraging collective security measures, such as NATO, and multilateralism. This emphasis on multilateralism made Canada a strong proponent of and an active participant in the United Nations (UN). In late 1956, then Canadian Minister of External Affairs Lester Pearson was awarded the Nobel Peace Prize for helping to negotiate an end to the 1956 Suez Crisis. Canada would subsequently become a strong proponent of peacekeeping around the world.

Canada's relationship with the United States increasingly dominated domestic issues in the postwar period. Economic integration between the two nations grew rapidly, and Canada supplied such natural resources as uranium for America's burgeoning nuclear arsenal. This economic integration sparked concern about Canadian independence, however, particularly in cultural affairs. In 1949 the Canadian government appointed a special commission to investigate the state of Canada's cultural life. It recommended a much greater government role in supporting and promoting Canadian culture.

Military integration with the United States grew through the 1950s as well. In August 1957, the newly elected Progressive Conservative government of John Diefenbaker announced NORAD, a new defense agreement with the United States. NORAD involved the integration of command structures between the two nations on a continental scale. Despite major implications for Canadian sovereignty, the agreement received little initial debate. Many saw it as a logical continuation of closer defense ties between the two countries that had led to American construction of radar lines to provide advance warning of Soviet bomber or missile attack.

Integrated North American defense included the stationing of nuclear weapons on Canadian soil that could be used to shoot down Soviet bombers. By the end of the 1950s, however, this had become a thorny political issue, in the process souring relations with U.S. President John F. Kennedy. U.S.-Canadian relations reached a new low during the 1962 Cuban Missile Crisis. Annoyed that Kennedy had not phoned him in advance of publicly revealing the construction of Soviet missile sites, Diefenbaker delayed responding to an American request under NORAD to raise the level of alert of the Canadian military. Eventually, the Canadian defense minister gave authorization for the increased level of alert without the knowledge of the rest of the government.

By the 1960s, Canada increasingly began to distance itself from the United States. In two elections, 1962 and 1963, Diefenbaker successfully drew upon anxiety over Canada's relationship with the United States to first avoid defeat and then to prevent his victorious opponent, the Liberal Party's Lester Pearson, from forming a majority government.

Canada's relationship with the United States formed only part of the disorder of the 1960s, however. The province of Quebec, the center of Canada's French-speaking population, underwent a burst of nationalism that would witness the birth of a peaceful movement toward winning independence for

Quebec Liberal Party leader Claude Ryan voting in the Quebec Referendum in Montreal, Canada, 20 May 1980. Ryan led the forces opposing the Quebec separatist movement. (AP/Wide World Photos)

the province at the ballot box and a violent effort to achieve independence through acts of terrorism. Quebecois nationalism flared first in the 1970 October Crisis when a prominent Quebecois politician was kidnapped and murdered by terrorists. In response, the government of Prime Minister Pierre Trudeau, who was elected in 1968 in part because he seemed capable of dealing with the Quebec issue, suspended civil liberties in the province. Then, in 1976, a separatist party was elected to power in Quebec. It would twice hold referendums (in 1980 and 1995) in unsuccessful bids to attain independence.

Other turmoil rocked Canada during the 1960s as well. The baby boom generation began to enter the workforce and attend universities in large numbers, causing adjustment tensions and sparking youth protests. Partially as a response to the impact of the baby boomers, Canadian laws governing abortion, divorce, and homosexuality would be liberalized during the 1960s and early 1970s.

A similar pursuit of an independent voice was also apparent in foreign policy beginning in the 1960s. Canada stayed out of the Vietnam War and in 1965 became openly critical of American efforts there. At the same time, Canada welcomed thousands of American draft resisters. To the persistent chagrin of Washington, Canada continued to trade with Cuba and began selling wheat to the People's Republic of China (PRC) in the early 1960s. This trend continued in the 1970s under the Trudeau regime. During the same period, his government significantly reduced spending on the Canadian military.

The defense cuts were in part a reaction to the rising economic malaise that struck Canada in the mid-1970s. The energy crisis contributed to high inflation and unemployment and greatly increased public dissatisfaction. Not surprisingly, some of this unhappiness remained focused on American domination. Culturally, measures were taken to ensure a distinctive Canadian cultural voice by, among other things, guaranteeing Canadian programming a fair share of television and radio airtime. These efforts paid off handsomely in the long run by helping to foster a growing arts community that would eventually receive international recognition.

During the late 1970s and early 1980s, similar efforts were taken to reduce American hegemony over the Canadian economy. The Trudeau government, which held power during 1968–1984 with the exception of a few months in 1979, spearheaded these efforts. In its final term in office during 1980–1984, to the chagrin of U.S. President Ronald Reagan, the Trudeau government instituted the National Energy Program, designed to increase Canadian control over its domestic energy sector. Washington was equally unhappy over another Trudeau initiative. Just before retiring in 1984, the Canadian prime

minister embarked on a quixotic peace mission designed to reduce tensions between the superpowers.

The 1984 election of the Progressive Conservative Party under the leadership of Prime Minister Brian Mulroney saw a reversal of the trend of the previous decades and a move toward a closer relationship between Canada and the United States. In the foreign policy arena, there was little substantive change as the Mulroney government rejected participation in the American Strategic Defense Initiative (SDI), continued to enjoy friendly relations with Cuba, and, continuing a trend from the Trudeau era, kept military funding low. The real change occurred economically. In 1987 Ottawa negotiated a free trade agreement with Washington. After considerable Canadian opposition to the agreement, it became an election issue in 1988, with Mulroney emerging victorious. The agreement was subsequently enacted.

U.S. diplomat, administrator, presidential advisor, deputy director of the Central Intelligence Agency (CIA), and secretary of defense (1987–1989). Born in Scranton, Pennsylvania, on 18 October 1930, Frank Carlucci graduated from Princeton University in 1952. After two years' service in the U.S. Navy and a stint as a student at the Harvard Business School, he became a foreign service officer in the U.S. State Department.

During 1957–1969 Carlucci was stationed in posts around the globe. In 1969 he left the State Department to work in the Office of Economic Opportunity. During 1971–1972 he was at the Office of Management and Budget

**Carlucci, Frank
Charles**
(1930–)

(OMB), and during 1972–1974 he served as undersecretary of Health, Education and Welfare (HEW). In the last two posts he served under mentor and future secretary of defense Caspar Weinberger. Carlucci had also become a protégé of future secretary of defense Donald Rumsfeld.

In 1975 President Gerald R. Ford named Carlucci to the ambassadorship to Portugal, where he served until 1978. That same year, he became deputy director of the CIA and served in that post until 1981. In 1981 during Ronald Reagan's presidency, Weinberger chose Carlucci to be deputy secretary of defense. Carlucci remained in that post until 1983. He wielded considerable influence, running the Pentagon's day-to-day operations and overseeing the budget and procurement processes. As such, he was a key player in the defense buildup set in motion by President Reagan.

In 1983 Carlucci left government service for the private sector, but he returned to the government in 1986 as assistant to the president for national security affairs and then succeeded Weinberger as defense secretary in November 1987. As the new defense chief, Carlucci worked hard to improve relations with Congress and the State Department, which had not been Weinberger's forte. As with Weinberger, Carlucci was a strong proponent of the Strategic Defense Initiative (SDI). Carlucci was intimately involved with the ongoing thaw in U.S.-Soviet relations and took part in arms reduction talks as well as summit meetings between Reagan and Soviet President Mikhail Gorbachev.

After leaving office in 1989, Carlucci joined the Washington-based investment outfit the Carlyle Group. He has continued to be engaged in defense and national security issues.

Carrero Blanco, Luis (1903–1973)

Spanish admiral, counselor to dictator Francisco Franco, and prime minister during June–December 1973. Born on 4 March 1903 in Santoña, Spain, Luis Carrero Blanco pursued a career in the Spanish Navy. A devout Catholic and conservative monarchist, he was hostile to the Spanish republic established in 1931.

When General Franco launched his right-wing rebellion against the government in July 1936, Carrero, a professor at the Naval War College in Madrid, fled to the Nationalist (pro-Franco) zone, where he served during the Spanish

Civil War (1936–1939). In 1939 he was promoted to chief of operations for the Naval General Staff. Franco promoted Carrero to vice admiral in 1963 and admiral in 1966. In May 1941 Franco appointed Carrero undersecretary of the president, and from that point until his death he remained Franco's closest advisor.

After World War II, the victorious Allies and quasi-fascist Spain viewed each other with suspicion and hostility. As the Cold War progressed, however, Carrero encouraged Franco to pursue a rapprochement with the United States by emphasizing his regime's staunch anticommunist credentials. Spain quickly established close military, economic, and diplomatic ties with the United States and Western Europe as a result of Carrero's policies.

Franco designated Prince Juan Carlos as his successor in 1969, while Carrero was to keep the Falangist political order intact under the reinstated monarchy. In September 1967 Franco appointed Carrero vice prime minister and named him prime minister in June 1973. On 20 December 1973 the Basque separatist organization Euskadi ta Askatasuna (ETA, Basque Homeland and Freedom) assassinated Carrero by detonating a bomb under his car in Madrid. With Franco's ideological successor gone, the Spanish transition to democracy was greatly hastened after Franco himself died in 1975.

Spanish politician and general secretary of the Spanish Communist Party (PCE) during 1960–1982. Born on 18 January 1915 in Gijón, Spain, Santiago Carrillo joined the PCE during the Spanish Civil War (1936–1939) and presided over security operations in Madrid. He went into exile at the end of the war, spending much of his time in France but also traveling to the Soviet Union and Eastern Europe.

Early on Carrillo was a committed Stalinist, but during the 1950s his views began to change. He became convinced that for strategic reasons the PCE had to participate in broader coalitions in order to overthrow the regime of Francisco Franco. Consequently, Soviet leader Nikita Khrushchev's denunciation of Stalin in 1956 helped secure Carrillo's leadership within the PCE. He assumed the top party spot in 1960.

As general secretary, Carrillo worked to distance the PCE from the Soviets and to forge closer alliances with other West European communist parties,

Carrillo, Santiago
(1915–)

notably that of Italy. He also supported calls for reform and democratization in Eastern Europe. His final break with Moscow came in 1968 with the Soviet invasion of Czechoslovakia.

With Franco's death in 1975 and the legalization of the PCE, Carrillo returned to Spain and was elected to the Congress of Deputies in 1977. That same year he articulated his philosophical and strategic views in his major work, *Eurocomunismo y Estado* (Eurocommunism and the State). According to Carrillo, Spain's transition to socialism was to be gradual, cooperative, and democratic. He refused to countenance calls for pluralism within the party itself, though, and opposition by the party faction known as the Renovators grew steadily. Carrillo was forced to step down as general secretary after the PCE's dismal performance in the 1982 elections, and in 1985 he was expelled from the party.

Carter, James Earl, Jr. (1924–)

U.S. Navy officer, Democratic Party politician, and president of the United States (1977–1981). Born on 1 October 1924 in Plains, Georgia, James “Jimmy” Carter was raised on his family's farm. He graduated from the U.S. Naval Academy in 1946, pursued graduate work in physics at Union College, and spent seven years as a naval officer, working under Vice Admiral Hyman Rickover in the nuclear submarine program. Carter eventually served on the nuclear submarine *Seawolf*.

Carter left the navy and returned to Georgia upon his father's death in 1953 to run the family farm, eventually building it into a large and prosperous enterprise. He entered state politics in 1962, serving two terms in the Georgia Senate. He also became a born-again Christian with a profound commitment to his Baptist faith. Carter was elected governor of Georgia in 1970.

In December 1974, amid the fallout of the Watergate scandal and an economy in a deep recession, Carter decided to run for the presidency. He secured the Democratic Party nomination and won the presidential election of November 1976. His first major act as president in January 1977 was to extend a pardon to draft evaders, military deserters, and others who had violated the Selective Service Act from 1964 to 1973 during America's controversial Vietnam War. The psychic and political wounds from Vietnam had

yet to heal, and the nation still remained deeply divided over its involvement in the war and suspicious of the government after Watergate. Carter's move generated controversy among the public and elicited criticism from Congress, which helped contribute to a rift with Congress that only widened during his presidency.

Carter was unable to inspire public confidence or to fulfill his election promise to end stagflation (rampant inflation coupled with economic recession). To solve the ongoing energy crisis, a contributory factor to economic stagnation, Carter proposed energy taxes, limits on imported oil, and greater reliance on domestic sources of energy—plans largely stymied by Congress. The Carter administration also deregulated the nation's airline industry, passed major environmental legislation to encourage cleanup of hazardous waste sites, revamped the civil service, and created the Department of Education.

Carter criticized other nations for human rights abuses, often linking economic and military cooperation to a country's commitment to the American ideals of freedom and equality. Such disapproval of the Soviets' treatment of political dissidents undermined détente and delayed SALT II (Strategic Arms Limitation Treaty) negotiations, which finally resulted in a 1979 treaty never ratified by Congress because of the Soviet invasion of Afghanistan that same year. In response to the Afghan situation, the administration enunciated the Carter Doctrine, which committed the United States to protecting oil interests in the Persian Gulf. Carter also imposed a controversial and ineffective American grain embargo on the Soviets and ordered a U.S. boycott of the 1980 Olympic Games in Moscow. In January 1979, he also extended full diplomatic recognition to the People's Republic of China (PRC), effectively cutting most American ties with Taiwan.

Carter invited Egyptian President Anwar Sadat and Israeli Prime Minister Manachem Begin to Camp David in September 1978. After two weeks of intense negotiations, a deal was brokered for a peace treaty between Israel and Egypt and signed on 26 March 1979. The Camp David Accords represented a true diplomatic breakthrough, provided a framework for future Middle East peace initiatives, and helped temporarily bolster Carter's sagging popularity. In September 1977 he signed the controversial Panama Canal Treaties, ceding the canal to Panama and ensuring the neutrality of the waterway. Congress narrowly ratified the treaties in March 1978, but Carter came under additional fire for having ceded an important U.S. strategic interest.

The 1979–1980 Iranian hostage crisis ultimately doomed Carter's presidency. In the wake of Iran's ouster of U.S.-supported Mohammad Reza Shah Pahlavi, Iran established an Islamic regime headed by Ayatollah Ruhollah Khomeini. In November 1979, radical Iranian students seized the

U.S. embassy in Tehran, taking seventy Americans hostage. Carter's diplomacy was unable to diffuse the crisis, and a failed April 1980 rescue attempt paralyzed Carter as a leader and contributed to his defeat in the November 1980 presidential election. His secretary of state, Cyrus R. Vance, resigned in protest against the operation. The hostages were released on 20 January 1981, after 444 days in captivity, as soon as Ronald Reagan was sworn in as president.

Upon leaving the White House, Carter continued a vigorous public life, acting as a mediator in international conflicts, working on the eradication of poverty, promoting human rights, and writing books and memoirs. He was awarded the Nobel Peace Prize for his accomplishments in 2002.

Carter Doctrine

(23 January 1980)

U.S. foreign policy enunciated by President James "Jimmy" Carter in 1980 that pledged the nation to protect American and Allied interests in the Persian Gulf. By 1980, the Carter administration, which had been engaged in an ongoing debate over the direction of U.S. foreign policy as détente faded, declared its determination to use any means necessary, including military force, to protect American interests in the Persian Gulf. These interests mainly involved Persian Gulf oil and regional shipping lanes.

On 23 January 1980, Carter, in his State of the Union message, declared that "an attempt by any outside force to gain control of the Persian Gulf region will be regarded as an assault on the vital interests of the United States of America, and such an assault will be repelled by any means necessary, including military force." This emphasis on American military power marked a fundamental reorientation in Carter's foreign policy. Since 1977, in response to public disillusionment with the Vietnam War and disgust over the Watergate scandal, Carter had attempted to fight the Cold War with different weapons. While not ignoring the Soviet Union, he determined that U.S.-

Soviet relations would not be allowed to dominate foreign policy formulation, a stance that he saw as having led to the costly containment policy and the tragedy of Vietnam. Instead, other nations, especially those in the developing world, would be considered in a regional rather than a global context. Additionally, the United States would assert its international predominance by emphasizing moral rather than military superiority by focusing on human rights and related humanitarian concerns.

But by 1980, the international climate had changed. On 4 November 1979 Iranian students seized the American embassy in Tehran and took seventy Americans hostage. This precipitated a 444-day crisis during which the Carter administration could do little to free the hostages. Also, on 26 December 1979, the Soviet Union invaded Afghanistan, sparking a bloody nine-year war there. Faced with these twin crises—religious fundamentalist terrorism and communist advancement by military force—during an election year, Carter reoriented his foreign policy. Although he did not abandon his commitment to human rights, the issue was accorded a much lower priority in policy formulation and was no longer used as a major weapon with which to wage the Cold War. Instead, the administration's official posture reflected a more customary Cold War policy that emphasized military power and communist containment. In addition, a globalist perspective began to supplant the regionalist outlook, with increased emphasis on East-West issues.

Director of the U.S. Central Intelligence Agency (1981–1987). Born in Queens, New York, William Casey graduated from Fordham University in 1934 and from St. John's School of Law in 1937. During World War II, he served as a member of the Office of Strategic Services (OSS) helping to supervise its operations in Europe.

Following the war, Casey became a successful tax lawyer in the firm of Hall, Casey, Dickler, and Howler. He then became active in venture capitalism, becoming quite wealthy. A conservative Republican, Casey served in President Richard Nixon's administration as chairman of the Securities and

**Casey, William
Joseph, Jr.**

William J. Casey Jr., director of the Central Intelligence Agency (1981–1987). (Ronald Reagan Library)

Exchange Commission (1973–1974). Casey then headed the Export-Import Bank (1975–1976) before returning to private law practice, this time with the firm of Rogers and Wells.

A longtime acquaintance of Republican Governor Ronald Reagan, Casey directed Reagan's successful 1980 presidential campaign and was rewarded with appointment in 1981 as director of the Central Intelligence Agency (CIA), where he succeeded Admiral Stansfield Turner. One of Reagan's most trusted advisors, Casey played a key role in the president's foreign policy, especially regarding the Soviet Union. Casey also worked to improve morale and benefits at the CIA but at the same time tried to reduce congressional oversight.

Casey had a singular passion for covert operations, and many of his undertakings were highly controversial, even illegal. In 1985 he authorized the assassination of Ayatollah Mohammad Hussein Fadlallah, a prominent anti-American Hezbollah cleric. President Reagan signed off on the operation. The ayatollah escaped unharmed from the car bomb designed to kill him that, however, killed 85 people and wounded another 175.

Casey also supervised covert assistance to the mujahadeen resistance in Afghanistan fighting the Soviet occupation, and he was the principal architect of the arms-for-hostages deal, which became known as the Iran-Contra Affair and had been approved by both President Reagan and Vice President George H. W. Bush. It involved the sale of U.S. arms to Iran in return for money that was used to support the Contra rebels fighting to overthrow the Sandinista regime in Nicaragua. This action was undertaken in contravention of U.S. law. Subsequent congressional investigations concluded that Casey had also manipulated intelligence data to fit certain decisions.

Casey suffered a serious stroke in December 1986 shortly after the Iran-Contra Affair became public. He resigned in January 1987 and died of brain cancer in Glen Cove, New York, on 7 May 1987 without revealing details of the Iran-Contra Affair.

Cuban communist revolutionary guerrilla fighter and leader of Cuba since January 1959. Fidel Alejandro Castro Ruz was born on 13 August 1926 in the municipality of Mayarí (Oriente Province). His father was a wealthy sugarcane planter of Spanish origin. Castro studied at the University of Havana, earning a law degree in 1950. Here his political formation began in the action-oriented and often violent student politics of the period. As part of the wave of disaffection with government corruption, he joined the new Ortodoxo (Orthodox) Party led by Eduardo Chibás and in 1947 participated in actions to overthrow Dominican Republic dictator Rafael Trujillo. In 1948 Castro attended a student congress in Bogotá, Colombia, where major disturbances broke out after the assassination of the popular radical politician Jorge Gaitán.

After the 1952 Cuban military coup carried out by Fulgencio Batista, Castro and his Orthodox Party allies initiated a campaign of resistance against the newly installed dictatorship. On 26 July 1953, the youthful rebels attacked the Moncada military barracks in Santiago de Cuba, the country's second-largest city. The assault failed, and Castro was ultimately imprisoned on the island of Pines. His defense speech at his trial, titled "History Will Absolve Me," was a powerful denunciation of social and economic injustice that would subsequently serve as a rallying cry in his struggle against the Batista regime.

In 1955 Castro was released from prison as part of a general amnesty and took refuge in Mexico. There he and his comrades, who would eventually establish the July 26 Movement, connected with Argentinean physician and revolutionary Ernesto "Che" Guevara. In December 1956 Castro, Guevara, and their followers sailed from Mexico on board the yacht *Granma* and landed in southeastern Cuba. This marked the beginning of a two-year military and political campaign to overthrow the U.S.-supported Batista regime. In the last days of 1958 Batista fled the island, and Castro entered Havana in triumph in January 1959.

From that point on, Castro steadily increased his influence. In February 1959 he made himself premier. Increasingly, he based his regime on anti-Americanism. During 1959–1962 he moved Cuba radically to the Left. Two agrarian reforms—confrontation with the United States over American investments in Cuba and U.S. support for counterrevolutionary movements culminating in the 1961 Bay of Pigs invasion—led to a break in diplomatic relations with the United States. In December 1961 Castro declared that he was a Marxist-Leninist. Economic, political, and military ties with the Soviet Union strengthened steadily throughout the 1960s.

Settlement of the October 1962 Cuban Missile Crisis led to Cuban anger over what was seen as a Soviet betrayal of Cuban interests. It initiated a

Castro, Fidel
(1926–)

Cuban leader Fidel Castro, 1959. (Library of Congress)

complex period in Cuban-Soviet relations characterized by Castro's suspicion of the Soviet Union's motives tempered by a growing reliance on Soviet economic assistance.

While Cuba became a member of Comecon and received important Soviet military aid in the 1960s, Castro's foreign policy, especially in Latin America, embraced the strategy of armed revolution conducted by guerrilla movements in Guatemala, Venezuela, Peru, and Bolivia. This challenged Soviet support for policies of peaceful coexistence with the West.

By the end of the 1960s the failure of the first wave of Castro-inspired guerrilla wars and the collapse of his ambitious plans to industrialize Cuba and produce a record 10 million-ton sugar crop in 1970 led to an accommodation with Soviet economic and strategic goals in the 1970s. Steady economic growth and institutionalization weakened Cuba's commitment to continental and even worldwide revolution. However, adjustment to Soviet economic orthodoxy did not completely erode Castro's commitment to support of socialist liberation movements.

In Bolivia during 1967–1968 with support for Guevara's revolutionary expedition and then in the 1980s in Grenada, El Salvador, and Nicaragua, Castro assisted revolutionary movements and left-wing governments. He began sending Cuban military forces to Angola in November 1975, which helped to turn the tide there against South Africa's attempt to defeat the left-wing *Movimento Popular da Libertação de Angola* (MPLA, Popular Movement for the Liberation of Angola) in Angola. Some see the Cuban victory in the 1988 Battle of Cuito Carnavale as the beginning of the end of the apartheid regime.

The renewed Cold War of the 1980s ended with the defeat of the Cuban-supported Sandinista government in Nicaragua and the negotiation of an end to the civil war in El Salvador, which pitted Cuban-supported Farabundo Martí National Liberation Front (FLMN) forces against a series of U.S.-supported governments. The collapse of communism in Eastern Europe and the dissolution of the Soviet Union itself in 1991 were serious setbacks for Castro both economically, with a sharp falloff in Soviet aid, and diplomatically. In the 1990s Castro announced the launching of "The Special Period in Times of Peace," which inaugurated a shift away from Soviet-style economic institutions toward a limited tolerance for private economic enterprises. It also embraced tourism and encouraged investments from Europe, Asia, Canada, and Latin America.

The end of the Cold War did not, as most observers anticipated, bring about the demise of Castro's regime. In spite of his adoption of many Soviet models, the indigenous, nationalist roots of Cuba's noncapitalist path since 1959 continued to confound predictions.

Portuguese politician and prime minister (1985–1995). Born on 15 July 1939 in Boliqueime, Portugal, Aníbal Cavaco Silva graduated with a degree in finance from the Technical University of Lisbon in 1964 and received a doctorate from the University of York, England, in 1976. He subsequently taught economics there.

After the 1978 restoration of the constitutional system in Portugal, Cavaco Silva entered politics as a Social Democrat (PSD). He was appointed minister of finance in 1980 and, seeking to deregulate business, soon gained a reputation as an economic liberal. When the PSD joined with the socialists to form the Center Bloc coalition, Cavaco Silva resigned from the government in 1983. He was elected head of the PSD in 1985, ending the coalition.

On 6 November 1985 the PSD won a sufficient number of seats in parliament to form a government with Cavaco Silva as prime minister. In the 1987 and 1991 elections, he and the PSD won clear majorities. He pushed through tax reform and more business liberalization measures that contributed to rapid economic growth. He also oversaw Portugal's entrance into the European Community in January 1986. He did not seek reelection in 1995, and the PSD lost its majority in parliament. He left office in October 1995 and ran unsuccessfully for the presidency in 1996. Cavaco Silva ran again for the presidency in January 2006. He was sworn in as president of Portugal in March 2006.

Ceaușescu, Nicolae (1918–1989)

First secretary of the Romanian Communist Party (PCR) during 1965–1989 and president of Romania during 1974–1989. Born the third of ten children to peasant parents on 26 January 1918 in Scornicești, Nicolae Ceaușescu received only a rudimentary primary schooling before he moved to Bucharest at age eleven to work as a shoemaker's apprentice. Joining the outlawed Union of Communist Youth (UCY) in 1933, he became a regional secretary in 1936 and secretary of the central committee in 1938. Ceaușescu was first arrested in November 1933, charged with inciting a strike and distributing communist pamphlets. Upon his fourth conviction in July 1940, he was imprisoned until August 1944. In the Tîrgu-Jiu prison camp, he became a protégé of Romanian Workers' Party leader Gheorghe Gheorghiu-Dej and future Premier Ion Maurer.

After the postwar communist takeover, Ceaușescu occupied various party posts. He became regional secretary for Oltenia in November 1946, deputy in the Ministry of Agriculture during 1948–1950, and deputy minister of the armed forces during 1950–1954. Appointed in 1952 to the Romanian Workers' Party (PMR) Central Committee, he was made secretary in 1954 and a Politburo member in 1955. Upon Gheorghiu-Dej's death in 1965, Ceaușescu became first secretary of the renamed PCR, backed by Prime Minister Maurer.

As with Gheorghiu-Dej, Ceaușescu both supported rapid industrialization and minimized Soviet control. In 1967 he established diplomatic relations with the Federal Republic of Germany (FRG, West Germany) and maintained relations with Israel after the Six-Day War. Romanian diplomats also acted as negotiating brokers between the Democratic Republic of Vietnam (DRV, North Vietnam) and the United States. Ceaușescu's popularity rose at home and abroad when he opposed the 1968 Soviet intervention in Czechoslovakia, a stance that led to U.S. President Richard M. Nixon's visit to Romania in August 1969 and Ceaușescu's return visits to the United States in 1970, 1973, and 1978. He also visited the People's Republic of China (PRC) and the Democratic People's Republic of Korea (DPRK, North Korea) in June 1971, followed in April 1972 by meetings with Egyptian President Anwar Sadat and Palestine Liberation Organization (PLO) head Yasir Arafat. Subsequently, Romania achieved most-favored nation (MFN) trade status with the United States in 1975 and was admitted to international organizations including the International Monetary Fund (IMF) and the World Bank.

Internally, the liberal tendencies of Ceaușescu's early government in freeing political prisoners detained under Gheorghiu-Dej and deposing pro-

Soviet members of the Securitate (the Romanian secret service) soon gave way to nationalism, a personality cult, and even more stringent Securitate surveillance. Upon the retirement of Premier Maurer in 1974, Ceaușescu assumed the newly created office of president of the republic. Natural disasters such as poor harvests and the 1977 earthquake combined with reckless trade practices and economic mismanagement led to an immense foreign debt crisis and domestic shortages. In response, Ceaușescu imposed strict rationing for food and electrical power and, to boost the country's workforce, forbade abortion and contraception. His regime also began a systematization campaign to resettle villagers in agroindustrial centers, a movement that led to massive discontent and the destruction of historical landmarks. As his popular support eroded, Ceaușescu increasingly surrounded himself with sycophants and appointed family members to strategic posts. His wife Elena became a Central Committee member in July 1972, a member of the Politburo and head of the PCR's personnel section in 1973, and first deputy prime minister in 1980.

In the 1980s, Romania's international relations deteriorated as growing condemnation of human rights abuses accumulated. This compelled Ceaușescu to renounce Romania's MFN status in 1988 before it could be revoked by the U.S. government. Unrest spread throughout Romania, marked by brutally repressed miners' strikes (1977, 1983, and 1986), the protest marches of 1987 in Iași and Brașov, and, in March 1989, an internationally released letter signed by six senior PCR members in the name of the National Salvation Front (NSF). Shortly after Ceaușescu's November 1989 reelection for another five-year term, antigovernment demonstrations in Timișoara in December 1989 left 122 dead after an army intervention. Returning from a state visit to Iran on 20 December, Ceaușescu denounced the demonstrators and called for a progovernment rally in Bucharest. This evolved into another protest and led to the defection of much of the army. Ceaușescu and his wife fled the capital in a helicopter but were eventually captured and detained in the Târgoviște military garrison. There they were tried by a tribunal of the NSF and executed on 25 December 1989.

Romanian communist Nicolae Ceaușescu ruled his nation for nearly twenty-five years. He kept the country relatively free of Soviet domination but led a corrupt, repressive regime that ended in his overthrow and execution in 1989. (Peter Turnley/Corbis)

Central Intelligence Agency

Primary U.S. intelligence agency during the Cold War. Congress established the Central Intelligence Agency (CIA) in July 1947 to centralize and coordinate intelligence and espionage activities in reaction to the deepening Cold War. Early on, the CIA's main focus was on the Soviet Union and its satellites. The CIA assumed primary responsibility not only for intelligence collection and analysis but also for covert actions. Its origins can be traced to the Office of Strategic Services (OSS) of World War II that had conducted espionage, intelligence analysis, and special operations from propaganda to sabotage. The main impetus for the creation of the CIA came from the investigation into Japan's surprise attack on Pearl Harbor in December 1941. President Harry S. Truman vowed to prevent a repetition of this massive intelligence failure.

On 22 January 1946, Truman signed an executive order forming a Central Intelligence Group (CIG) modeled after the OSS. Its mission was to provide analysis and coordination of information about foreign threats and to undertake advantageous policy initiatives. Truman signed the National Security Act on 26 July 1947, replacing the CIG with the new CIA as an independent agency operating within the Executive Office.

Truman appointed legendary OSS spymaster William "Wild Bill" Donovan to serve as the first CIA director. The CIA's primary function was to advise the National Security Council (NSC) on intelligence matters and make recommendations for coordination of intelligence activities. To accomplish these goals, the CIA was to correlate, evaluate, and disseminate intelligence and perform other services in accordance with NSC directives. Because Congress was vague in defining the CIA's mission, broad interpretation of the act provided justification for subsequent covert operations, although the original intent was only to authorize espionage. The CIA director was responsible for reporting on intelligence activities to Congress and the president. Power over the budget and staffing only of the CIA meant that no director ever exerted central control over the other twelve government entities in the U.S. intelligence community.

Known to insiders as "The Agency" or "The Company," the CIA consisted of four directorates. The Directorate of Operations (DO) supervised official and nonofficial agents in conducting human intelligence collection, covert operations, and counterintelligence. The DO was divided into geographic units and also contained the Center for Counterterrorism. The Directorate of Administration managed the CIA's daily administrative affairs and housed the Office of Security (OS). Created in 1952, the Directorate of Intelligence conducted research in intelligence sources and analysis of the results. It produced the "President's Daily Brief" and worked with the National Intelligence Council in preparing estimates and studies. The Directorate of Science and Technology, created in 1963, was responsible for development and operation of reconnaissance aircraft and satellites, operation and funding of ground stations to intercept Soviet missile telemetry, and analysis of foreign nuclear and space programs. It also operated the Foreign

Central Intelligence Agency headquarters, Langley, Virginia. (National Archives and Records Administration)

Broadcast Information Service (FBIS), which monitored and analyzed all foreign media outlets.

During its first years, the CIA had difficulty prevailing in bureaucratic battles over authority and funding. For example, the State Department required CIA personnel abroad to operate under a U.S. ambassador. Walter Bedell Smith, who replaced Donovan in 1950, was an effective director, but the CIA's power increased greatly after Allen W. Dulles, brother of Secretary of State John Foster Dulles, became director in 1953. An 80 percent increase in the agency's budget led to the hiring of 50 percent more agents and a major expansion of covert operations.

The CIA played a key role in the overthrow of allegedly radical governments in Iran in 1953 and Guatemala in 1954. With the advice of CIA operative Edward G. Lansdale, Philippine Secretary of National Defense Ramon Magsaysay during 1950–1954 crushed the Hukbalahap uprising in his country. CIA agents in South Vietnam infiltrated the Michigan State University Advisory Group that trained police and administrators during 1955–1962 as a basis for nation building. In Laos, the CIA operated Air America and supported rightist politicians, while Donovan, who became U.S. ambassador to Thailand, organized Thai paramilitary units to fight communist forces in neighboring countries.

President John F. Kennedy lost confidence in the CIA after the disastrous Bay of Pigs invasion, which failed to oust Cuba's Fidel Castro in 1961. The

CIA nonetheless continued to devise imaginative but somewhat improbable schemes to assassinate or discredit Castro, efforts suspended during the Cuban Missile Crisis. In 1961, however, a Soviet military intelligence (GRU) officer began providing the CIA with information on Soviet strategic capabilities, nuclear targeting policies, and medium-range ballistic missiles that would prove critical in the 1962 Cuban Missile Crisis. The CIA also penetrated the Soviet Foreign Ministry, the Defense Ministry and General Staff, the GRU, and the Komitet Gosudarstvennoi Bezopasnosti (KGB). But its covert activities—especially its operations to kill Castro and its involvement in the murders of South Vietnam’s Ngo Dinh Diem and later the Congo’s Patrice Lumumba—soon caused much of the world community to view the agency as a sinister force. Although the agency instigated a rebellion in Indonesia that failed to topple Sukarno’s regime in 1958, claims that it engineered his ouster in 1965 were false.

As direct American military action in Indochina grew, covert operations became less important, but by 1968 they witnessed a resurgence in the Phoenix Program that called for assassination of communist operatives. Debate continues over CIA involvement in the 1970 coup in Cambodia but not on its role in ousting Chile’s Salvador Allende in 1973.

In 1975 public revelations of CIA assassination plots and an illegal operation to spy on American citizens protesting the Vietnam War led to the creation of the President’s Intelligence Oversight Board as well as an Intelligence Committee in each house of Congress. In 1977, President Jimmy Carter increased oversight of the CIA and reduced its budget but reversed course after the 1979 Soviet invasion of Afghanistan. Meanwhile, the CIA had failed to predict the 1979 rebellion overthrowing Mohammad Reza Shah Pahlavi of Iran.

During the presidency of Ronald Reagan, the CIA used its renewed power and clout to undermine communist regimes worldwide, providing support for Afghan rebel forces that included Osama bin Laden. Ignoring statutory limits, the CIA also participated in the secret sale of arms to Iran and used the proceeds to fund covert actions against Nicaragua’s leftist government. In 1991 Congress passed a new oversight law to prevent another Iran-Contra Affair.

In 1991, the CIA correctly forecast a coup against Soviet leader Mikhail Gorbachev. But the sudden collapse of the Soviet Union beginning in August 1991 came as a complete surprise. Two-and-a-half years later, in February 1994, the arrest of agent Aldrich H. Ames for selling secrets for many years to the Soviets and compromising operatives provided critics with more evidence to back charges that the CIA had prolonged rather than helped to win the Cold War.

Landlocked nation located in north-central Africa, the continent's fifth-largest country, measuring 495,792 square miles, four-fifths the size of the U.S. state of Alaska. Chad is bordered by Libya to the north, Cameroon and the Central African Republic to the south, Niger to the west, and Sudan to the east. Economically and developmentally poor for much of its history, Chad had fewer than 5 million citizens in 1945. The nation's ethnically, culturally, and linguistically diverse population straddles three major geographic areas: the sparsely populated northern region across the Sahara Desert, the arid middle Sahel region, and the heavily forested southern third of the country, home to most of its citizens. These divisions sparked a series of battles, coups, and unrest that plagued the country during much of the Cold War.

France began colonizing the region around 1900 along with other large areas of western Africa, bringing together several groups that had previously never been under the same ruler, from nomadic Muslims in the north and east to animists in the south and around Lake Chad in the west. The divide between north and south began early, as southerners were more willing to accept French administration, language, and culture. Southerners also received positions in the colonial bureaucracy, headquartered in N'djamena, which remains the capital today. Pastoral and nomadic northerners, however, largely rejected French efforts to settle in permanent communities.

Chad was the first African colony to join the Allied effort in World War II under its first African governor, Félix Éboué, and won independence in August 1960 even though French military administration continued in the north for five more years. François (Ngarta) Tombalbaye became the country's

Chad

first president and premier in 1960, uniting northern and southern factions and isolating the more extremist Muslim groups in the north. Following a brief period of stability, however, dissatisfaction among northerners at Tombalbaye's favoritism toward his native south led to rebellions in the north and east. By 1968, Chad was requesting military assistance from France to help quell the unrest. The French intervened but were unable to effectively stabilize the country.

Meanwhile, the Tombalbaye government became increasingly corrupt and despotic. The Chad military intervened in 1975, fomented a coup, killed Tombalbaye, and installed General Félix Malloum, another southerner, in power. Malloum included more northerners in his government, but by 1978 there was yet another rebellion, with northerners eventually capturing N'djamena. Efforts by the Organization of African Unity (OAU) to mediate the dispute led to a weak coalition government, which collapsed in 1980. Libya supported northern President Goukouni Oueddei, who eventually consolidated a hold on the capital in March 1979; by March 1980, however, he had been driven from the capital by the defense minister, Hissen Habré. In 1983, Libya annexed the Aozou Strip along its border with Chad and occupied significant areas of Chadian territory while simultaneously trying to keep Oueddei in power. This move drew the ire of France and the United States, who opposed Libyan leader Muammar Qadhafi. France sent troops to southern Chad, and by 1987 Libyan forces had been largely expelled from the country, although conflict between Oueddei's forces and those of Habré persisted. Thereafter, French military forces and an OAU peacekeeping force (partially funded by the United States) remained largely neutral during the conflict and managed to keep a semblance of order.

Libya's graduated withdrawal had cleared the way for southern leader Habré to gain control of the government by 7 June 1982. President Ronald Reagan openly supported the Habré government, using Chad as a base to train anti-Qadhafi Libyan rebels. Continued French and American aid helped Chad keep Libyan forces from moving beyond the Aozou Strip, which would remain occupied by Libya until 1994. Habré had little success in gaining his people's trust, however, as they had long suffered under his brutal rule. Minor reforms instituted following a 1985 agreement in Libreville, Gabon, momentarily helped bring about a sense of stability, but within a few years opposition leaders began agitating for deeper reforms. Under the leadership of former Chadian General Idriss Déby, rebels with support from Libya deposed Habré on 1 December 1990.

Facing the same ethnic divisions and political divisiveness, Déby himself soon became an autocratic dictator. He remains in office today. Chad held multiparty elections in 2001, won by Déby with more than two-thirds of the vote. Chad remains strategically important as a result of the confirmation of sizable oil deposits in 1996 and the government's inability to control its porous borders, which terrorist organizations operating in North Africa often take advantage of.

American communist, editor, writer, and informant. Born Vivian Jay Chambers on 1 April 1901 in Philadelphia, Whittaker Chambers graduated from high school in 1919, attended but was expelled from Columbia University in 1922, and joined the U.S. Communist Party in 1925. He spent thirteen years in the party, writing for and editing its periodicals. Beginning in 1932, he worked in the party's underground apparatus under various aliases as a courier for a Soviet intelligence network within the U.S. government.

Appalled by Josef Stalin's notorious political purges, Chambers defected from the Communist Party in April 1938. Like many apostates, he veered sharply to the Right; by the time he joined the staff of *Time* magazine twelve months later, he was an ardent anticommunist. In September 1939, he outlined to Adolf Berle, an assistant secretary of state, his allegations about communist espionage in Washington and implicated eight individuals, including Alger Hiss.

During the deepening Cold War and as anticommunist activity in America grew more intense, Chambers appeared before the House Un-American Activities Committee (HUAC). On 3 August 1948, Chambers publicly identified Hiss as a communist. In a protracted, controversial, and highly publicized series of hearings and trials, Chambers leveled explicit charges of perjury and implicit charges of Soviet espionage against Hiss, who vehemently denied the allegations. Chambers appeared before HUAC and the various courts fourteen times, attempted suicide once, and lost his job at *Time*.

After the hearings were over and Hiss was convicted and imprisoned for perjury, Chambers drifted, became a Quaker, and wrote his compelling autobiography, *Witness*. Before his death on 9 July 1961 near Westminster, Maryland,

Chambers, Whittaker (1901–1961)

Whittaker Chambers. An American communist and writer, his allegations of communist espionage implicated Alger Hiss. (Library of Congress)

Chambers worked for William Buckley's conservative *National Review*. In 1984, President Ronald Reagan, himself influenced by *Witness*, posthumously awarded Chambers the Presidential Medal of Freedom.

Chang, John Myon
(1899–1966)

Republic of Korea (ROK, South Korea) diplomat, vice president (1956–1960), and premier (1951–1952, 1960–1961). Born in Seoul, Korea, on 28 August 1899, John Chang (Chang Myon) was a devout Roman Catholic. He graduated from Suwon High Agriculture School in 1917, the Seoul YMCA English School in 1919, and Manhattan Catholic College in New York in 1925. Upon his return to Korea, he worked with the Catholic Church in Pyongyang and Seoul during the Japanese colonial period.

Following World War II and the end of Japanese rule, Chang plunged into politics in 1946 and was elected to the National Assembly in May 1948. With the establishment of the ROK in 1948, President Syngman Rhee appointed Chang chief representative to the United Nations (UN). Chang went on to serve as South Korea's first ambassador to the United States from 1949 to 1951, during which time he tried to secure additional U.S. military assistance prior to the outbreak of the Korean War in June 1950.

In February 1951, Rhee appointed Chang premier. Chang resigned in 1952 and then joined the anti-Rhee faction, which organized the Democratic Party in 1955. Chang was elected vice president in 1956 but lost his reelection bid in March 1960.

The student uprisings of April 1960 brought the collapse of Rhee's government, while the subsequent National Assembly elections of 29 July 1960 gave birth to the ROK's second republic, a parliamentary system. Chang was inaugurated as its first premier in August 1960. Park Chung Hee's 16 May 1961 military coup overthrew Chang's government, however, making it the first and last parliamentary government in Korean history. Park subsequently banned Chang from political activities and had him imprisoned. After his release, Chang concentrated on religious activities. He died in Seoul on 4 June 1966.

Conference convened in 1945 to foster hemispheric cooperation and security. The meeting, held under its full title—the Inter-American Conference on War and Peace—assembled at Chapultepec Castle in Mexico City during 21 February–8 March 1945. It was there that the framework for a regional security system in the Americas was formally laid out.

Latin American nations, together with the United States, adopted the Act of Chapultepec; the signatories agreed to a full inter-American consultative process. They also pledged to band together in the application of collective measures, including armed force, in cases of threats or acts of aggression against any American state.

A month later, at the United Nations Conference held in San Francisco in April 1945, the Latin American countries ratified their Chapultepec commitments. Three years later, the Organization of American States (OAS) was formally founded, a direct consequence of the Chapultepec Conference. Together with the Rio and Bogotá Treaties, the OAS and the Chapultepec Conference resolutions formed the foundations of inter-American military and political cooperation during the Cold War.

The Chapultepec Conference also addressed the postwar economic future of the Americas. This subject was controversial, because the United States called for an Economic Charter of the Americas that was opposed by Latin American states anxious to promote industrialization, income redistribution, and increased standards of living.

The clash between Latin American developmentalism and U.S. economic orthodoxy was not resolved at Chapultepec. Indeed, the conference disillusioned the leaders of the Latin American states, who had expected that their efforts supporting the Allied cause in World War II would have resulted in more tangible rewards, including a focusing of U.S. energies on the Americas instead of on Europe.

Charter 77

The most significant postwar dissident movement in Czechoslovakia, comprising some 2,000 members who in 1977 called on the communist government to respect human rights. Charter 77 signatories comprised three groups: former elite “reformed communists” who had supported Alexander Dubček’s 1968 Prague Spring attempt to liberalize communism; artists, writers, and philosophers; and religious personages and clergy. The Charter 77 movement had at any given time three spokespersons representing each of the three groups. Each spokesperson was appointed for one year (or until arrested) and then replaced by another from the same group. The first three spokespersons were the philosopher Jan Patočka, the playwright Václav Havel, and the reformed communist and former foreign minister Jiří Hájek.

The immediate catalyst for the drafting of the Charter 77 document in January 1977 had been the 1976 arrest and trial of the rock group Plastic People of the Universe. The text of the Charter document demanded that the Czech government abide by its own laws and, above all, uphold international human rights agreements, most notably the Helsinki Final Act. Besides the first three spokespersons, Zdeněk Mlynář and author Pavel Kohout participated in preparing the charter document. To remain within the constraints of the law that prohibited political parties apart from the Communist Party and to accommodate dissidents who spanned the political spectrum, the document specifically stated the nonpolitical nature of the charter. Patočka’s philosophy of “living in truth” through sacrifice for “things worth suffering for” offered a nonpolitical foundation in phenomenology. Perhaps because of the influence of reformed communists, the document also called for negotiations with the communist leadership.

President Gustáv Husák had no interest in negotiations with Charter 77 members, however. Instead, the document unleashed repression and reprisals, including arrests, imprisonments, harassment, job losses, and the restriction of educational opportunities. Patočka died following a police interrogation in March 1977. Havel and other spokespersons and signatories were imprisoned. Still others were pressured to emigrate. The regime even initiated an opposing petition, known as the Anti-Charter, to prove the loyalty of its own artists and supporters.

Despite the dreams of some signatories to create a parallel polis, a term taken from the title of spokesperson Václav Benda’s famous 1978 essay, the Charter 77 movement was effective only in garnering international support and in preserving Czech high culture through the dreary period of so-called normalization. However, Charter 77 signatories provided most of the leader-

ship for the Civic Forum that negotiated the end of communism in 1989. Consequently, Havel became the president of Czechoslovakia, spokesperson Jiří Dienstbier became its foreign minister, and signatory Petr Pithart became Czech prime minister. Thus, in the end Charter 77 played a profoundly important role in modern Czech history.

Border crossing point in the center of Berlin. Located on Friedrichstrasse just east of the Brandenburg Gate, Checkpoint Charlie was originally the only crossing point between the U.S. and Soviet zones of Berlin. The Soviets knew it simply as the Friedrichstrasse Crossing Point.

After the government of the German Democratic Republic (GDR, East Germany) closed the border between the communist and Western zones of Berlin on 13 August 1961 and began construction of the Berlin Wall, Checkpoint Charlie became the sole crossing point for diplomats and military personnel as well as businessmen and tourists from abroad from the Western into the communist zone. Two other crossing points were subsequently opened: on the Autobahn at Helmstedt along the West German–East German border and at Dreilinden, where highway traffic connected East Germany and West Berlin. The Helmstedt crossing point was known as Alpha, that at Dreilinden as Bravo, and the Friedrichstrasse point was designated Charlie.

These three checkpoints served as a means for Western military authorities to register and to inform foreigners and military personnel entering East Germany. As such, Checkpoint Charlie figured prominently in many real and fictional accounts of the Cold War, including several dramatic escapes from East to West Berlin.

During 27–28 October 1961, several dozen U.S. and Soviet tanks briefly faced off at Checkpoint Charlie when Soviet Premier Nikita Khrushchev became convinced that U.S. forces were about to try to breach the Berlin Wall. Both sides went to a high state of alert, and each set of commanders had orders to return fire if fired upon. Khrushchev and President John F. Kennedy agreed to remove the tanks, which was accomplished one by one, and the crisis passed.

Checkpoint Charlie

Checkpoint Charlie was removed on 22 June 1990. Today a short wall of bricks marks its former location. The guardhouses are now in the Allied Museum in Zehlendorf. Copies of the former U.S. guardhouse and the sign that marked the border (“You are leaving the American Sector”) were erected on the site in August 2000. A museum about Checkpoint Charlie and the Berlin Wall is located nearby. Developers tore down the last East German watchtower at the crossing point in December 2000.

Chen Yi

(1901–1972)

Chinese communist politician, diplomat, and foreign minister of the People’s Republic of China (PRC) during 1958–1969. Born in Lezhi, Sichuan Province, on 26 August 1901, Chen Yi went to France in 1919 on a work-study basis. He returned to China in 1921 and joined the Chinese Communist Party (CCP), engaging in underground activities.

During both the Sino-Japanese War and the Chinese Civil War, Chen commanded the Chinese communist armed forces, fighting in northeastern China. After successfully liberating Shanghai, Jiangsu, in May 1949, Chen became its mayor, a post he held until 1959. Upon the establishment of the PRC in October 1949, he gained membership in both the People’s Revolutionary Military Council and the East China Military and Administrative Committee.

Prior to 1954, Chen spent most of his time in Shanghai, where he received a number of foreign visitors and made important diplomatic contacts. In September 1954, he moved to Beijing to assume the posts of vice premier and vice chairman of the National Defense Council. In these capacities he regularly traveled abroad to strengthen the PRC’s ties with fellow socialist nations in Africa and Asia. In 1958, he succeeded Zhou Enlai as the PRC’s foreign minister and continued to uphold Zhou’s Five Principles of Peaceful Coexistence first enunciated at the 1955 Bandung Conference.

Chen’s tenure witnessed a breakthrough in Sino-American relations. In early 1969 he proposed reinstating the Sino-American Ambassadorial Talks, which had begun in 1955 but were suspended in 1967. Chen sought to end China’s diplomatic isolation that had deepened since the Sino-Soviet split in the early 1960s. His proposal was ultimately approved, paving the way for the Sino-American rapprochement of the 1970s.

Despite Chen's considerable achievements, however, the leaders of the ultraleftist Cultural Revolution relieved him of all his posts in October 1969, charging him with conducting revisionist foreign policy. Chen died in seclusion in Beijing on 6 January 1972.

Legislator, administrator, businessman, secretary of defense (1989–1993), and vice president of the United States (2001–). Richard “Dick” Cheney was born on 30 January 1941 in Lincoln, Nebraska. His family moved to Casper, Wyoming, when he was young, and so he spent his formative years there. He earned BA and MA degrees from the University of Wyoming in 1965 and 1966, respectively. He undertook further studies at the University of Wisconsin, Madison, before departing for Washington, D.C., as a congressional fellow beginning in 1968.

In 1969 Cheney took a post in the U.S. Office of Economic Opportunity. He soon caught the eye of the White House, and in 1971 he became a staff assistant for President Richard Nixon. From there Cheney quickly moved up to become assistant director of the Cost of Living Council, a post he held until 1973. In 1974 he was hired to be deputy assistant to President Gerald R. Ford. In 1975 Cheney became White House chief of staff, where he remained until 1977.

In 1978, Cheney was elected to the U.S. House of Representatives as Wyoming's sole congressman. He was elected to five additional terms and became a respected and influential legislator in the process. Tapped by President George H. W. Bush to become secretary of defense, Cheney assumed that post in March 1989. He delegated much responsibility for the daily internal workings of the Pentagon to his deputy, Donald J. Atwood Jr. Cheney preferred to handle the larger, more public aspects of the job himself. In 1989 he selected General Colin L. Powell as chairman of the Joint Chiefs of Staff. The choice proved the right one when Iraq invaded Kuwait in August 1990, precipitating the Persian Gulf War. Cheney and Powell helped engineer a masterful international military coalition—backed by the United Nations—that swiftly defeated Iraqi forces and liberated Kuwait in February 1991.

Cheney, Richard B.
(1941–)

Casualties among coalition forces were extraordinarily light. Indeed, the Persian Gulf War made Cheney and Powell household words and brightened both men's political stars.

After Bush was voted out of office in November 1992, Cheney joined the American Enterprise Institute as a senior fellow. In 1995 he became president and chief operating officer of the Haliburton Oil Company, a major player in the international petroleum market. In 2000, Republican presidential candidate George W. Bush selected Cheney as his vice presidential running mate. Bush and Cheney were sworn into office after a contentious and disputed election in January 2001. Cheney is said to wield enormous influence in the Bush administration, but after the 11 September 2001 terrorist attacks, Cheney has kept an exceedingly public low profile.

Chernenko, Konstantin Ustinovich (1911–1985)

While in office,
Chernenko escalated
the Cold War rivalry
with the West
while pursuing
a rapprochement
with the People's
Republic of China.

Soviet politician and penultimate leader of the Soviet Union during 1984–1985. Born in Bolshaya Tes, Siberia, on 11 September 1911, Konstantin Chernenko left home when he was twelve and joined the Komsomol (communist youth organization) in 1926 and the Communist Party of the Soviet Union (CPSU) in 1931. He served in the Frontier Guard and in 1948 became head of the CPSU agitation and propaganda (AgitProp) activities in the Moldovian Central Committee. His eagerness and success in AgitProp affairs impressed party operative Leonid Brezhnev, who would become his mentor.

In 1956 Chernenko became Brezhnev's chief of staff and went on to serve as the CPSU's director of personnel in 1965, a position he held for nearly two decades. Chernenko was named a member of the Central Committee in 1971, attained candidate status in the Politburo in October 1977, and earned full membership in November 1978.

Following Brezhnev's death in 1982, Chernenko was the leading candidate to replace him, but party politics, which were then rather divisive, resulted in a compromise. Thus, the sickly Yuri Andropov became the new Soviet leader. Andropov died after less than fifteen months in office, however, and Chernenko became the general secretary of the CPSU and de facto Soviet leader on 13 February 1984, despite concerns over his health and Andropov's clear desire that Mikhail Gorbachev succeed him.

While in office, Chernenko pursued a hard-line foreign policy, unlike his predecessors, and escalated the Cold War rivalry with the West while pursuing a rapprochement with the People's Republic of China (PRC). Domestically, he worked for reductions in the bureaucracy and sought to decrease the party's control over the economy. He also attempted to increase the production of consumer goods while bolstering Komitet Gosudarstvennoi Bezopasnosti (KGB) surveillance of dissident activities.

Chernenko's short tenure in office was plagued by poor health, and he died in Moscow on 10 March 1985. Gorbachev succeeded him as general secretary that same month.

Konstantin Chernenko briefly led the Soviet Union as the general secretary of the Communist Party during 1984–1985. (Bettmann/Corbis)

Soviet nuclear power plant, site of the worst civilian nuclear reactor accident in history. A routine test at the Chernobyl nuclear power plant conducted between 1:00 and 2:00 A.M. on 26 April 1986 resulted in a massive release of radioactive material into the atmosphere and triggered a conflagration that took days to control. Chernobyl is in Ukraine, approximately 60 miles northwest of Kiev at the confluence of the Pripyet and Dnieper Rivers and about 5 miles from the current border between Belarus and Ukraine, although in 1986 this was a part of the Soviet Union.

Considered a risky and controversial design in the West, the Chernobyl plant began operation in 1977. Its fourth reactor, the one involved in the 1986 accident, came on line in 1983. The Chernobyl reactors used graphite to modify the nuclear reaction and water flowing around the channels holding the fuel elements for cooling. There was, however, no containment structure for these reactors.

It has been determined that a combination of design flaws and operating errors caused the 1986 disaster. During the early-morning test, the fuel

Chernobyl (26 April 1986)

Casualties of Chernobyl

<i>Group</i>	<i>Number estimated</i>
Instant deaths as a result of contamination	59
Estimated deaths as a result of radiation-induced cancer or leukemia (projected)	4,000
People who contracted thyroid cancer as a result of contamination	4,000
People evacuated from site	350,000
People still living in contaminated areas	5,000,000

elements in the reactor ruptured, causing an explosion that lifted the cover plate off the reactor and forced radioactive steam into the atmosphere in the form of a deadly radioactive cloud.

A secondary explosion then set the graphite afire, releasing more radioactivity as the fire raged for nine days. Estimates hold that the Chernobyl accident released one hundred times more radioactivity than the two atomic bombs dropped on Hiroshima and Nagasaki, Japan, in August 1945. Most of the radioactive fallout settled to the ground within a few miles of the site, but lighter amounts of radioactive material were carried by wind patterns as far as Scandinavia and to a lesser but measurable extent across the entire Northern Hemisphere.

View of the sarcophagus covering the damaged fourth reactor of the Chernobyl nuclear power plant, 26 April 2006. (Gleb Garanich/Reuters/Corbis)

The explosions and fire destroyed Reactor Four and led to the deaths of 30 workers by radiation exposure. More than 100 other workers suffered from radiation poisoning, all of whom recovered from the initial effects. Thousands more, however, were exposed to radiation, either from being in the immediate area or being sent there in response to the accident. By 4 May, more than 160,000 people living within 30 kilometers (18 miles) of the plant were evacuated. Another 210,000 residents outside that radius were later evacuated. The response to the accident in 1986 and 1987 involved about 200,000 people, some of whom received large doses of radiation. These and later responders have been referred to as “liquidators” in the Soviet literature involving the accident.

In later years another 400,000 helped with the cleanup, most receiving low dosages of radiation. In all, more than 1 million people were affected in some way by radiation, and the World Health Organization (WHO) has reported a statistically significant increase in the incidence of thyroid cancer in the affected areas. Scientists also expect an increase in the level of leukemia and congenital anomalies attributable to the accident, although they have not yet occurred with any great frequency.

What made the Chernobyl accident even worse was the Soviet government’s lack of immediate candor about the crisis and its inability to respond in a more timely fashion. Unwilling to admit to such a catastrophe, the Soviet

government at first tried to hide the effects of the explosions and fire; not until radioactivity sensors in Scandinavia and Western Europe began registering abnormally high readings did the Kremlin go public with the nuclear nightmare. Chernobyl also laid bare the inferiority of Soviet technology and the government's inability to react to the situation in a more efficacious fashion.

There will likely be a continuing debate over the long-term impact of the Chernobyl disaster. Soviet-era secrecy surrounding issues of health, particularly those involving environmental issues, will make it difficult to establish base data from which to calculate changes after 1986 that can be attributed to Chernobyl.

Chiang Kai-shek

South American nation covering 292,258 square miles, about twice the size of the U.S. state of Montana. With a 1945 population of approximately 5.9 million, Chile borders Argentina to the east, Peru and Bolivia to the north, and the Pacific Ocean to the west.

Chile's historic and commercial ties with Germany influenced its neutrality during World War II. Not until 1943 did the country sever its relations with the Axis powers, and not until 1945 did it declare war on Japan. This diplomatic reorientation was linked to the fact that Chile wanted to participate in the creation of the United Nations (UN). After the war, Chile aligned its foreign policy with that of the United States. In 1947 it signed the Inter-American Treaty of Mutual Assistance, and in 1952 it signed a Mutual Defense Assistance Pact. Chile received U.S. aid to purchase military matériel as well as military training. Chile broke diplomatic relations with the Soviet Union in 1947, and communists were forced to leave the government. In 1954, Chile

Chile

also supported the American intervention in Guatemala, despite domestic opposition.

By the end of the 1950s, two facts determined Chilean diplomacy. First, the reunification of communists and socialists under the Frente de Acción Popular (FRAP, Popular Action Front) created concerns within Chilean political parties and abroad when Salvador Allende nearly won the 1958 elections. Second, the 1959 Cuban revolution raised fear that communism might spread throughout Latin America. However, President Jorge Alessandri (1958–1964) pursued a twofold policy toward Cuba. He abstained from the votes suspending it from the Organization of American States (OAS) in 1962 and imposing sanctions. During the 1962 Cuban Missile Crisis, however, Alessandri decided to support President John F. Kennedy's Cuban quarantine. Although Alessandri abstained again from votes sanctioning Cuba in 1964, Chile finally broke relations with the regime of Fidel Castro that year.

A special chapter in U.S.-Chilean relations began in 1963 when the Central Intelligence Agency (CIA) embarked on a covert operation in Chile to short-circuit Allende's triumph in the 1964 elections. The CIA sent more than \$2 million to support the Christian Democratic candidate, Eduardo Frei. The money was primarily used for propaganda, including a leaflet that showed Soviet tanks in Czechoslovakia and warned what could happen to Chile if Allende won. The CIA covert operation continued until 1973, when President Allende was overthrown by a military coup. Despite the American involvement in Chile, President Frei (1964–1970) adopted a more independent foreign policy, especially toward Latin America. In 1965, Chile condemned the U.S. invasion of the Dominican Republic, criticized the United States for its unilateral actions, and refused to support the empowerment of the OAS to intervene in the internal affairs of a nation. As part of his economic program, Frei authorized the government purchase of 51 percent of Chile's copper mines. Although the American mining interests protested, the U.S. government declined to intervene.

The 1970 presidential elections revived CIA activity in Chile. The CIA spent millions of dollars to support an anti-Allende campaign. Allende won the election, but because he did not obtain the majority of votes, his confirmation remained in the hands of the Chilean congress. For two months, the United States embarked on an aggressive campaign to keep Allende from power. These efforts included bribes to congressmen, economic pressure, and the encouragement of a military coup. Nevertheless, Allende was elected by the Chilean congress.

Allende's foreign policy showed little change from that of Frei. Allende continued to support the principles of self-determination and nonintervention, and he established relations with Cuba, the People's Republic of China (PRC), and the Democratic People's Republic of Korea (DPRK, North Korea). He also advanced the nationalization of copper companies and the American-owned International Telephone and Telegraph Company (ITT) and embarked on agrarian reform. The United States responded by imposing an economic boycott, which included the suspension of aid from the Export-Import Bank, the International Monetary Fund, the World Bank, and the

Inter-American Development Bank. On 11 September 1973, after three years of socialist government, Allende was overthrown by the Chilean military. That day, General Augusto Pinochet began one of the most repressive regimes in the history of the Americas.

The new military government quickly restored relations with the United States. Soon, U.S. economic aid began to flow to Chile. But these good relations came to an end when human rights abuses became publicly known. In 1976, the U.S. Congress approved an embargo on arms sales and limited economic aid to Chile. In domestic affairs, the so-called Chicago Boys—Chilean economists influenced by the free-market ideas of the University of Chicago School of Economics—instituted a new economic program that reduced inflation and opened the economy to foreign investment. Such policies resulted in an amazing economic boom.

In the 1980s, international pressure to democratize Chile led Pinochet to modify the constitution and call for democratic elections in 1989. They took place that December. Patricio Alwyin, the candidate of the Concertación de Partidos por la Democracia (Coalition of Parties for Democracy), won 54 percent of the vote. Alwyin was sworn in as president in March 1990, but Pinochet remained commander in chief of the army until 1998, when he became a senator.

**China, Cultural
Revolution**

The world's most populous nation, the People's Republic of China (PRC) is a large Asian nation with an estimated 1945 population of 529 million. It covers a little more than 3.705 million square miles, just slightly smaller than the United States, and shares common borders with many states. To the north

**China, People's
Republic of**

Communist Party Chairman Mao Zedong shown reading a proclamation of the founding of the People's Republic of China on 1 October 1949 on the Tiananmen Gate rostrum in Beijing. (Bettmann/Corbis)

it is bordered by Russia and Mongolia; to the south by the South China Sea, Vietnam, Laos, Myanmar (Burma), India, Bhutan, and Nepal; to the west by Tajikistan, Kyrgyzstan, Kazakhstan, Afghanistan, and Pakistan; and to the east by the Democratic People's Republic of Korea (DPRK, North Korea) and the Yellow, East China, and South China Seas. During the Cold War period, the PRC promulgated several initiatives that led to its emerging from this period in a far more consolidated condition than the Soviet Union. The PRC also developed more flexible external policies, with a strong focus on its relations with the two superpowers but also involving linkages with developing nations. By the late 1960s, the PRC had become a significant player in the international arena. Even as the PRC consolidated internally and sought to secure its borders, it positioned itself for a larger role in Asia and beyond.

The PRC officially came into existence following the communist victory in the Chinese Civil War (1945–1949). On 1 October 1949, the chairman of the Central People's Administrative Council and leader of the Chinese Communist Party (CCP), Mao Zedong, proclaimed the PRC. Zhou Enlai became premier and foreign minister. The Soviet Union and its satellites immediately recognized the PRC, followed later by Burma, India, and (on 6 January 1950) Great Britain.

Domestically, the PRC followed varied political and economic policies, combining considerable centralized political control with an increasingly decentralized market economy in the final stages of the Cold War. Helping to drive the Chinese economy was its burgeoning population, which more than doubled during 1945–1991. At the end of the Cold War, China contained nearly 1.1 billion people.

Despite the ideological rivalry with the United States, the CCP tried to convey its message to the American public through progressive writers such as Edgar Snow, Jack Belden, William Hinton, Agnes Smedley, and others even before it came to power in 1949. Nevertheless, with the growing influence of the so-called China Hands and the China Lobby in the United States during the 1930s and 1940s, American administrations supported Jiang Jieshi's rabidly anticommunist Guomindang (GMD, Nationalist) government.

This and the Korean War (1950–1953) set the stage for a Cold War freeze between the PRC and the United States that lasted for nearly thirty years. The situation was compounded by a series of restrictive trade policies enacted by the United States. As the chances of building understanding with the United States during the last years of the Chinese Civil War declined—despite the U.S. diplomatic missions of General Patrick Hurley and General George C. Marshall—from 1949 onward the PRC looked to the Soviet Union for support.

During and after the Korean War, U.S. trade embargoes on the PRC, troop deployments to East Asia, and security alliances such as the Southeast Asia Treaty Organization (SEATO) along the peripheries of the PRC made the Chinese even more reliant on the Soviet Union. The 1950s saw massive Soviet arms sales, economic aid, and technical assistance to the PRC. After the United States and the Republic of China (ROC, Taiwan) signed a mutual security treaty in 1954, cooperation between the PRC and the Soviet Union increased again.

The communist Chinese and the Soviets differed on several political and international issues, however. When Soviet leader Josef Stalin cautioned Mao against an open break with the Nationalists, PRC leaders felt slighted by the superior attitude with which the Soviets treated the PRC and other socialist states. The leaders of the PRC and the Soviet Union disagreed sharply over who should lead the world communist movement following Stalin's death. The CCP also sharply criticized the Soviet leadership for its de-Stalinization campaign and for the policy of peaceful coexistence with the United States. The Soviet handling of the 1956 Hungarian Revolution and the 1962 Cuban Missile Crisis and its neutral position during the 1962 Sino-Indian border clash greatly exercised the Chinese leadership. Closer to home, Soviet proposals for building a joint PRC-USSR nuclear submarine fleet and the construction of long-wave radio stations along the Chinese coast were seen by the CCP as infringements on its independence and further steps toward full PRC integration into the Soviet orbit. Likewise, the PRC refused to adhere to the 1963 Partial Test Ban Treaty (PTBT) signed by the United States, the Soviet Union, and Great Britain, arguing that the treaty would impede the PRC's own nuclear program and make the nation all the more reliant on the Soviet Union.

The Sino-Soviet split, which began in earnest in August 1960, along with repeated Soviet-Chinese border clashes led the PRC to distance itself from the two superpowers. The PRC leadership strongly denounced both of them, accusing the Americans of capitalist imperialism and the Soviets of socialist imperialism. This led the Chinese leadership to identify with nations in the developing world, especially countries in Asia and Africa. In 1964, China exploded its first nuclear weapon and became the world's fifth nuclear power, after the United States, the Soviet Union, Great Britain, and France. The government communiqué issued on the occasion, while declaring a "no first-use principle," stated that nuclear weapons were necessary to protect the nation "from the danger of the United States launching a nuclear war." The PRC then developed long-range ballistic missiles for countering threats from either the United States or the Soviet Union.

In 1954, China announced a good neighbor policy with the aim of building bridges along its periphery to counter what it saw as American encirclement efforts. In the mid-1950s the PRC, along with other Asian countries, also promulgated "Five Principles of Peaceful Coexistence," which called for mutual respect of sovereignty and territorial integrity, mutual nonaggression, noninterference in each other's internal affairs, and economic equality. By the 1960s, the Chinese had signed border agreements with Mongolia,

Nepal, Afghanistan, Burma, and Pakistan. After the Korean War, however, China's military engagements were mainly border disputes, such as in 1962 with India, in 1969 with the Soviet Union, and in 1979 with Vietnam.

During the 1970s, prompted by increasing threats from the Soviet Union, the PRC normalized its relations with the United States under the policy of *yitiao xian* (following one line). U.S. Secretary of State Henry Kissinger secretly visited China in 1971, setting the stage for the Sino-American rapprochement. The following year, President Richard Nixon made a historic visit to Beijing, opening the way for the normalization of relations. The Americans granted formal recognition to the PRC in 1978, and in 1979 both nations exchanged diplomatic legations.

Despite their differences on issues such as democracy, human rights, the environment, and labor standards, the United States and China worked together in opposing the Soviet Union's 1979 invasion of Afghanistan. The 1979 trade agreement between the United States and the PRC granting most-favored nation (MFN) status to each other went a long way in fully normalizing relations in the economic sphere. U.S. Defense Secretary Harold Brown's visit to Beijing in early 1980 opened the prospects for American arms sales to the PRC, although President Ronald Reagan's 1982 decision to sell arms to the ROC put any such agreement on indefinite hold.

While the United States now recognized the PRC as the legitimate government of the Chinese people, the status of Taiwan remained unclear. A triangular strategic ambiguity thus came to exist in the relationship among the United States, the PRC, and Taiwan. The PRC has codified, as its minimalist policy toward Taiwan, the "three nos": no deployments of foreign troops on Taiwan, no independence movement, and no nuclear weapons on Taiwan. While the 8,000 U.S. troops stationed on Taiwan were withdrawn, the PRC's threats to use force against Taiwan and concerted military modernization efforts with a Taiwanese focus not only increased U.S. arms supplies to the island but also prompted the passage of the 1979 Taiwan Relations Act by the U.S. Congress. In the late 1970s, the PRC proposed its formula of one country, two systems, that is, one China and two different systems—socialist and capitalist—for eventual reunification of the PRC. This formula was also applied to Hong Kong and Macao in Chinese negotiations with the British and Portuguese.

The U.S.-Chinese rapprochement also had an impact on the PRC's relations with Japan, Southeast Asia, and Western Europe. In August 1978, the PRC and Japan signed a peace and friendship treaty. The PRC leadership was highly critical of Japan's occupation of Manchuria and much of coastal China during World War II, the Nanjing massacre, Japanese history textbooks glorifying Japanese militarism, and visits by Japanese prime ministers to the Yasukuni Shrine in Tokyo to honor the war dead. China badly needed Japanese financial and technological assistance, however, especially during its economic reform and modernization efforts that had begun in the late 1970s. The PRC therefore granted incentives to Japan, as well as to Taiwan and the Republic of Korea (ROK, South Korea), to locate industry in China.

There was a thaw in Sino-Soviet relations after Mikhail Gorbachev came to power in the Soviet Union in 1985. China conveyed to the USSR that rapprochement was possible if the Soviets were to withdraw their troop concentrations from the Sino-Soviet border and Mongolia, cease their support of Vietnam, and pull out of Afghanistan. After 1989, Sino-Soviet relations continued to warm as some of the Chinese demands were met. Other demands were realized as a result of the dissolution of the Soviet Union in 1991.

In the domestic political, social, and economic spheres, the PRC initially implemented a strong command-style socialist system with the CCP as the driving political force. During the Cold War, the CCP held eight national congresses, from the Seventh Congress in April 1945 to the Fourteenth Congress in October 1992. CCP membership grew from an estimated 1.2 million in 1945 to 39.6 million during the Twelfth Congress in 1982. Still, CCP membership was small compared to the PRC's population. Three generations of top political leaders existed during the CCP's Cold War history: Mao, Zhou, and Zhu De in the first generation; Deng Xiaoping and Chen Yun in the second generation; and Jiang Zemin, Li Peng, and Qiao Shi in the third generation.

Although there were eight other political parties, their role was quite limited. The PRC utilized competing political organizations and their leaders in the early years of postwar reconstruction. A united front of all Chinese parties was reflected in the work of the Chinese People's Political Consultative Conference, which was formed in September 1949. It held six conferences between 1949 and 1983, although the CCP was clearly the only party that wielded political and governmental control.

Four constitutions were adopted (1954, 1975, 1978, and 1982) by the National People's Congress (NPC), the highest executive body of state power in the PRC. Six NPC congresses were held during 1954–1987. Delegates to the NPC are elected for a period of five years. They in turn elect the president, vice president, and other high-ranking state functionaries. The State Council is the executive body of the PRC and includes the premier, vice premiers, councillors, ministers, and others. A similar dual political structure is reflected at the provincial levels of the country. There are no direct national elections in the PRC, although at the village and county levels direct elections for some local officials were gradually phased in after the end of the Cold War.

During the Cold War, several political campaigns were launched, which set the PRC's political system apart from other socialist countries and indicated its willingness to experiment. The CCP carried out a campaign to suppress counterrevolutionaries during 1951–1953, effectively ending opposition from remnant Nationalists, feudal lords, and other dissident groups. This period also coincided with the campaign against corruption among government officials.

In May 1956, the Hundred Flowers Movement was launched, inviting differing views from Chinese intellectuals. A barrage of criticism, however, led to the end of this program in the Anti-Rightist campaign of 1957. As

Chinese poster during the Cultural Revolution showing an artist, peasant, soldier, and Red Guard erasing an image of Liu Shaoqi, represented as a revisionist, hiding inside a crumbling fortresslike structure, 1967. (Library of Congress)

China crushed the Khampa Rebellion in Tibet in 1959, sending the Dalai Lama to exile in India, the Soviets withdrew nearly 10,000 of their engineers and technicians in the latter part of 1960. This coincided with the disastrous failure of the Great Leap Forward, a massive program of nationwide industrialization launched by Mao in 1958 and sharply criticized by Defense Minister Peng Dehuai at the 1959 Lushan Conference.

The 1960s brought more experiments. In May 1963, Mao began the Socialist Education Campaign to counter the growing influence of capitalism, end the corrupt practices of CCP cadres, and inculcate the idea of self-sacrifice among the population. The ultraleftist Cultural Revolution (1966–1976) was launched by Mao via a sixteen-point program that encouraged Red Guards to “bombard the headquarters” of CCP leaders and take out those following the “capitalist road.” Many CCP leaders, including Liu Shaoqi, Peng Zhen, and Luo Ruiqing, were summarily purged from the party and zealously persecuted.

Although Lin Biao was anointed as Mao’s heir apparent, he was killed—probably by design—in a 1971 plane crash in Mongolia. His crime was an alleged coup attempt against Mao. An anti-Lin Biao rectification campaign was launched from 1971 to 1973. The country underwent turmoil following the deaths in 1976 of Zhou in January and Mao in September, when several

demonstrations were held in Tiananmen Square in Beijing, supposedly mourning Zhou but also challenging the political ascendancy of the radical Gang of Four. These leftist extremists, who included Mao's wife Jiang Qing and three Shanghai-based Communist Party members—Wang Hongwen, Zhang Chunqiao, and Yao Wenyuan—initially tried to implement strongly ideological policies harking back to the height of the Cultural Revolution. Within weeks of Mao's death in September 1976, Hua Guofeng, who became premier in April 1976, ordered the arrest of the Gang of Four, who were tried and convicted of antiparty activities in 1981. Deng, who was rehabilitated a fourth and final time, introduced pragmatic policies of “seeking truth from facts” and extensive economic reforms in 1978.

In response to rising prices, increased alienation among the people, and growing corruption among the ranks of the CCP cadre, students, peasants, and workers launched prodemocracy protests leading to the Tiananmen Square Incident of 4 June 1989, which had been triggered by the death that April of a reformist former CCP chairman, Hu Yaobang, whose sympathies with previous prodemocracy groups had caused his expulsion from the CCP. The crisis resulted in scores of deaths, the resignation of Deng as the chairman of the Central Military Commission, and the appointment of Jiang in his place. An antibourgeois liberalization campaign was launched after this incident.

In the economic arena, for most of the Cold War, China followed Soviet-style centralized Five-Year Plans designed to guide its economic and modernization activities. Given the backwardness and war-ravaged nature of the economy in 1949, when there was rampant and disastrous inflation, the PRC leadership undertook comprehensive measures in the reconstruction of the country. In the industrial sphere, private enterprise was encouraged initially to revitalize production, and 156 major projects were begun with Soviet assistance. The PRC established nearly 4,000 state-owned enterprises during 1949–1989, some allowing for the gradual incorporation of private enterprise in joint firms or state enterprises after paying interest on the private shares.

In 1958, the Great Leap Forward was launched in part to increase iron and steel production by mobilizing the enthusiasm of the masses. State-controlled industrialization, the construction of transport and telecommunication networks, and trade with other socialist countries based on import substitution have all been part of the Maoist self-reliance model of economic development at various times. While these endeavors greatly enhanced the PRC's economic prowess, they also led to waste and increased bureaucratization. In 1975 China initiated a Four Modernizations Program of opening up to the outside world. The four modernizations dealt with agriculture, industry, science and technology, and defense, in that order of priority. It also adopted special policies and flexible measures to attract foreign investments and technology sharing and established special economic zones in the coastal regions for wholly-owned or joint enterprises to promote exports.

In agriculture, the PRC immediately initiated land reform with the Agrarian Law of 1950. The regime seized land from landlords and redistributed it

Banners and a portrait of Communist Party Chairman Mao Zedong adorn the front of this strange-looking freight train making its first run in the People's Republic of China on 5 August 1958. Its 125-mile railroad line was built to carry coke to the Yuhsien power equipment plant. The locomotive, powered by a converted automobile engine, pulls six cars, each loaded with three tons of coke. The locomotive and railroad were part of Mao's Great Leap Forward, the disastrous drive for economic self-sufficiency. (Bettmann/Corbis)

to the landless, a process largely completed by 1952. Through this reform, some 300 million peasants acquired 46 million hectares of land. By 1953, after the end of the Korean War, the PRC introduced mutual aid teams and gradually imposed agricultural collectivization. Following the Great Leap Forward, these farming co-ops were converted into People's Communes, combining industry, agriculture, trade, education, and the militia. More than 20,000 such communes were established, although declining production and natural calamities limited their effectiveness.

In the post-1978 reform period, the collectivization and communalization process was reversed, beginning with the institution of household land contracts, rural industrialization, and incentives to private enterprises. The main features of the new reforms included contracting land to private households, which would control land use; increasing agricultural production; raising farmers' income; shifting to commodity agriculture; forming conglomerates; encouraging private enterprises to privately hire labor; and competing in international markets.

In the initial period of the Cold War, the Chinese Air Force was that of Jiang Jieshi's Guomindang (GMD, Nationalist) forces. After the end of the Chinese Civil War (1945–1949), the victorious communist forces established the People's Liberation Army Air Force (PLAAF) with the few air assets left behind by the retreating Nationalists. By the last decade of the Cold War, the PLAAF was the third-largest air force in the world in terms of personnel and inventory. A mere 10,000 personnel in 1950, by mid-1952 the PLAAF numbered 1,800 aircraft, including more than 1,000 jet fighters, and 290,000 personnel. With Soviet assistance, by 1957 the PLAAF—although weak in bombers, of which it had only 300—became the world's third-largest air force in terms of personnel and inventory. During the early 1960s, the Sino-Soviet split, which caused the withdrawal of Soviet advisors in 1960, and the economic rigors of the disastrous 1959–1962 Great Leap Forward brought temporary declines in Chinese airpower. PLAAF strength rose again from 90,000 personnel and 2,000 aircraft in 1963 to 490,000 personnel and 6,000 aircraft in 1988. By 1991 the numbers had diminished to 470,000 men and 4,970 aircraft. As the military reforms of top leader Deng Xiaoping and party chairman

China, People's Republic of, Air Force

Jiang Zemin emphasized quality over quantity, aviation manpower and equipment declined to 370,000 personnel in 1997 and 330,000 by 2005, equipped with 3,500 aircraft.

Five rounds of reorganizations took place in the PLAAF during 1949–1992. With the exception of its operations in the Korean War (1950–1953), the Second Taiwan Strait Crisis (1958), the 1979 Sino-Vietnamese War, and occasional contacts with U.S. or the Republic of China's (ROC, Taiwan) surveillance aircraft, the PLAAF was largely an adjunct to ground force operations. Its role and capabilities remained limited.

The Korean War was a major watershed in the development of the PLAAF. After the People's Republic of China (PRC) entered the war, the Soviet Union rotated air units into southern China, trained Chinese personnel, and departed, leaving behind their sophisticated MiG-15 jet aircraft. From the Sino-Soviet split of 1960, the PLAAF became more self-reliant, especially in terms of aircraft production. From the 1980s onward, the PLAAF modernized its inventory, strategies, and organizational structure.

Throughout the period of the Cold War, the PLAAF was organized into five major divisions: antiaircraft artillery, air defense units, surface-to-air missile units, airborne units, and supporting units. Organization followed Soviet lines with headquarters and staff, political and logistics departments, as well as other branches in Beijing. The PLAAF included seven regional commands.

Since the 1950s, the PRC's aviation industry has introduced major innovations in key technologies related to aircraft and equipment. These include modernized aircraft systems, improved design and testing technology and practices, the use of light-weight titanium alloys and other advanced materials, the integration of American fire control technology into recent Chinese F-8 fighter designs, and more efficient manufacturing technology, including the assembly of Soviet-imported aircraft from prefabricated kits and the introduction of precision machine tools into Chinese aircraft production.

Most of the PLAAF inventory was of Soviet lineage, with successive versions of MiG interceptor aircraft, different Sukhoi aircraft, and Tupolev bombers. China produced Soviet MiG-17, MiG-19, and MiG-21 fighters, known as the F-5, F-6, and F-7 (also the J-5, J-6, and J-7), respectively. China also produced its own versions of the Soviet Il-28 and Tu-16 bombers, known as the H-5 and H-6, respectively.

Soon after the introduction of economic reform in 1978, Chinese leader Deng Xiaoping emphasized investment in the aviation industry and in developing the air force. To overcome problems in acquiring advanced engine technologies, avionics, and other systems, the PLAAF sent delegations abroad, including to Britain and the United States. China signed agreements for the manufacture of British Rolls Royce Spey jet engines and French Super Frelon helicopters. The United States also promised to upgrade avionics for the MiG-21-based J-8. The 1989 Tiananmen Square Incident postponed such transactions, however. China has also exported aircraft, such as the J-5 and J-6, abroad, particularly to Pakistan, Bangladesh, Burma, and Egypt.

In Cold War confrontations involving the PRC, the PLAAF played a major role only in the Korean War. Even there, although the PRC deployed

some 1,485 aircraft thanks to the Soviet Union, most were employed defensively to attack United Nations Command (UNC) bomber aircraft and their fighter escorts striking targets in North Korea. PLAAF aircraft did not provide protection for the Chinese People's Volunteer Army's (CPVA) supply lines, nor did they provide close air support to Chinese troops on the ground.

To avoid escalation, PLAAF aircraft were not utilized in the 1962 Sino-Indian confrontation, the 1969 Sino-Soviet Border Incident, or the 1979 Chinese invasion of Vietnam. During the Vietnam War, Chinese antiaircraft personnel served in the Democratic Republic of Vietnam (DRV, North Vietnam) helping to defend against U.S. air strikes.

Active PLAAF operations centered on homeland defense and the downing of intruding U.S. and ROC reconnaissance aircraft, including ROC-manned U-2s. A major diplomatic incident occurred in 2001 when a collision between a Chinese interceptor and a U.S. EP-3 spy plane forced the latter to land on Hainan Island.

By 1991, however, the PRC's air force evinced an interest in long-range aviation operations over the South China Sea, but its available bomber aircraft, the H-6, was too antiquated to act as an effective nuclear weapons delivery vehicle. Development of bomber forces was also adversely impacted by a Chinese concentration on nuclear missiles.

During the Cold War, the People's Liberation Army (PLA) in China was the largest standing army in the world. It took on both external and internal roles. In 1929, the Chinese Workers' and Peasants' Red Army, the predecessor of the PLA, numbered 300,000. It was reduced to a mere 25,000 by the mid-1930s following its defeat in the last of five encirclement campaigns by

Army**

Goumindang (GMD, Nationalist) forces. After growing to more than 1.2 million by 1945 and 5.2 million at the founding of the People's Republic of China (PRC) in 1949, the PLA's active troop strength stood at 4.2 million in 1982 and 3 million in 1992.

In the external sphere, Chinese forces fought in the Korean War (1950–1953), skirmished over offshore islands with the Republic of China (ROC, Taiwan) during the 1950s, waged the 1962 Sino-Indian War, clashed with Russia in the 1969 Sino-Soviet border dispute, and saw battle in the 1979 Sino-Vietnamese War. In addition, the PRC threatened to employ the PLA on several occasions against India during the India-Pakistan Wars of 1965 and 1971.

Internally, the PLA helped consolidate the Chinese Communist Party's (CCP) hold over the country during the Chinese Civil War (1945–1949) and the 1951 Tibet occupation. It also oversaw infrastructure development in far-flung areas of China and restored order during the chaotic periods of the Cultural Revolution (1966–1976) and the 1989 Tiananmen Square Incident.

During the Cold War, the PLA's defense strategy had two main aspects: "People's War" and "People's War under Modern Conditions." While the former was employed extensively during the period prior to 1949, PLA forces found recourse in the latter in certain wars after 1949. The "early war, major war and all-out nuclear war" slogan of the 1960s gave way to "peace and development" by the end of the Cold War, when the Soviets withdrew nearly fifty divisions from China's northeastern border with the Soviet Union as a part of the thaw in Sino-Soviet relations.

Soon after civil war ended in 1949, the PLA was engulfed in the Korean War under the guise of the Chinese People's Volunteer Army (CPVA). The CPVA was in the Democratic People's Republic of Korea (DPRK, North Korea) from October 1950 until October 1958. At the time of the intervention, CPVA forces were primarily infantry units drawn from the Fourth Field Army of the PLA. Peng Dehuai commanded the CPVA. In the fighting in Korea, the PLA encountered the most powerful and technologically advanced military in the world. While it sustained casualties estimated at more than 1 million, with half of these killed, the PLA achieved its objective of preserving the North Korean government. Other wars were less successful, although the PLA achieved certain limited military objectives such as driving back Indian forces from its borders in 1962 and punishing Vietnam in 1979. In the latter conflict, the PLA learned the need for modernization.

Organizationally, the PLA generally followed Soviet practices. Three large general departments oversaw staffing, logistics, and political duties. The PLA controlled a vast military-industrial complex of machine-building industries, ordnance and aircraft factories, and shipyards. Ranks mirrored those of the Soviet Union, as did training manuals.

The Central Military Commission of the CCP is at the top of the PLA's organization, although a similar and parallel nonparty structure was established at the state level in the 1980s. China was divided into military regions (which were reduced from thirteen to eleven to the current seven beginning in 1985), twenty-nine provincial military districts (one for each of China's

A Chinese poster showing a heroic soldier of the Chinese People's Liberation Army charging the enemy "in defense of Chairman Mao and the Motherland," ca. 1970. (Library of Congress)

twenty-nine provinces), one independent military district, and three garrisons. During the modernization drive that began in the mid-1980s, field armies were transformed into twenty-one army groups on the Western concept of military organization. To enhance professionalism, the PLA established a number of military academies, colleges, and schools, with the highest military educational institution being the National Defense University, established in 1985. As the PLA modernized and professionalized, it also downsized. Eight demobilization campaigns of soldiers and officers in the Cold War period brought down the PLA's troop numbers significantly.

During the Cold War, China amassed formidable military capabilities in ground, naval, air, and strategic weapons, although by the end of the Cold War most of the military assets lagged behind newer Western technologies. Initially, many PLA weapons were captured from Nationalist forces, who had been supplied by the United States and other Western nations. The February 1950 Treaty of Friendship and Alliance with the Soviet Union ensured a constant flow of military equipment, which was considered to be

advanced given the low technology levels of PLA forces at the time. This ended, as did military technology transfers, with the Sino-Soviet split of 1959–1960.

Of the 156 state-run industries created with the cooperation of the Soviet Union, nearly 40 were devoted to military needs. The PRC thus produced an array of military equipment, including tanks, armored personnel carriers, artillery, aircraft, engines, submarines, destroyers, frigates, and fast-attack craft. Much of the Chinese Army's equipment was supplied by the Soviets up to 1960. This included JS-2, T-34, and T-54 tanks and 152mm and 203mm artillery. The Chinese also manufactured the T-59 (their version of the Soviet T-54) and the T-60 (PT-76) amphibious tank.

Numbers of army personnel continued to increase for much of the Cold War. In 1965 army strength was estimated at 2.25 million men in 115 divisions (including 4 armored and 1–2 airborne divisions). By 1974 army strength had grown to 2.5 million men in 120 infantry divisions, 5 armored divisions, 3 cavalry divisions, and 2 airborne divisions. In 1991 at the end of the Cold War, the Chinese Army had been slightly reduced in size, with perhaps 2.3 million men in 84 infantry divisions and 10 armored divisions. In 1991 the Chinese operated some 7,500–8,000 main battle tanks (the bulk of them T-54/T-59s, along with several hundred T-69, T-79, and T-80s reported), some 2,000 light tanks, 2,800 armored personnel carriers, and 14,500 towed artillery pieces.

In addition to conventional deterrence, the PLA pursued nuclear deterrence. In 1964 China exploded its first nuclear weapon, and by the early 1960s the PRC was one of five countries with long-range missile capabilities. In general, these various weapons served the country well. But the 1991 Persian Gulf War, in which Chinese-supplied Iraqi military equipment was easily destroyed by coalition forces, showed the glaring technological deficiencies of many PLA weapons systems. Troop enhancements, modernization drives, and equipment acquisitions meant increasing budgetary outlays, which stood at an estimated 2.8 billion yuan (US\$340 million) in 1950 and had increased to about 39.5 billion yuan (US\$7.56 billion) by 1991.

The first three decades of the Cold War were turbulent ones for the PRC defense forces. The PLA saw the construction of a U.S.-led military alliance system in East Asia—including U.S. troops in Japan and the Republic of Korea (ROK, South Korea)—and the 1954 mutual defense pact with the ROC as distinct threats. This eased after 1971 with the normalization of Sino-American relations, although Chinese window-shopping in Western arms markets largely came to naught. Institutional linkages and mutual visits among Chinese and Western militaries increased in the 1980s, with enhanced prospects for arms sales under several programs. However, the 1989 Tiananmen Square Incident brought to an end any significant flow of military technology or hardware from Western nations.

China sent arms abroad both to assist in wars of national liberation, often in opposition to one of the two superpowers, or as straight commercial/political transactions. The Democratic Republic of Vietnam (DRV, North Vietnam) was a major recipient of Chinese weaponry during both the Indochina and

Vietnam Wars. Other groups receiving Chinese arms included the Khmer Rouge in Cambodia, the Pathet Lao in Laos, and the mujahideen in Afghanistan. Saudi Arabia procured Chinese intermediate-range Dong Feng-3 missiles (NATO-designation CSS-3). Iraq, Iran, Egypt, Pakistan, and Burma (Myanmar) also purchased Chinese arms, sometimes in defiance of international nonproliferation controls.

All of China's major warships were captured by the Japanese at the beginning of the Sino-Japanese War in 1937, and the only Chinese vessels returned at the end of the war were two gunboats. The navy of the Guomindang (GMD, Nationalist) government of the Republic of China (ROC, Taiwan) in 1945 consisted solely of river gunboats and motor torpedo boats (MTBs). Britain supplied two frigates and several smaller vessels, and the ROC purchased a cruiser as its flagship. The United States provided six destroyer escorts and a large number of patrol boats, minesweepers, and landing vessels. China also claimed as reparations the largest share of remaining Japanese warships, securing in 1946–1947 three destroyers as well as some destroyer escorts and smaller vessels.

American aid to the GMD Navy ended in August 1949, although the U.S. Navy assisted in evacuating ROC forces to Taiwan in 1949 following the

China, People's Republic of, Navy

communist victory in the Chinese Civil War. The current navy was established in 1949 and is known as the People's Liberation Army Navy (PLAN). Traditionally, it has played a secondary role to that of ground forces because of the focus by the People's Republic of China (PRC) on continental defense.

Beginning with the few GMD ships that were captured or defected, by 1950 the PLAN consisted of a cruiser, 7 frigates, 21 smaller escorts, 5 mine-sweepers, 13 river gunboats, 6 patrol boats, and about 60 landing craft. In major ships only, by 1963 the PLAN consisted of 4 destroyers, 31 submarines, and 500 naval aircraft. By 1991 it numbered 19 destroyers, 37 frigates, 94 submarines, and 880 naval aircraft. The PLAN's manpower grew from 60,000 in 1949–1950 to 136,000 in 1963 and to 260,000 in 1991.

During the PLAN's early years, the navy depended on recruits from infantry units. Professionalization was enhanced with the training of naval officers and cadets at ten newly constructed naval academies, colleges, and schools such as Qingdao, Dalian, Guangzhou, Nanjing, and Wuhan.

During most of the Cold War, the PLAN was geared to coastal defense operations, and ROC forces repulsed the PLAN effort to recover Penghu and Jinmen (known to Westerners as Quemoy) Islands in 1949. Since June

1950, when the U.S. Seventh Fleet was deployed in the Taiwan Strait, China feared amphibious attack and took measures to implement coastal defense. Its efforts to seize Jinmen in 1958 failed with the U.S. deployment of a half dozen aircraft carriers to the area. On 4 September 1958, the PRC unilaterally passed laws claiming 12 nautical miles as its territorial sea limit and incorporated Qionghou Strait and Bohai Bay into its jurisdiction. The Chinese also protected against possible blockade and amphibious threats from the Soviet Union in the 1960s and 1970s following the Sino-Soviet split. On 19 January 1974, Chinese naval vessels clashed with Republic of Vietnam (RVN, South Vietnam) forces off the Paracel Islands and claimed these as Chinese possessions. Another clash with the Vietnamese occurred on 14 March 1988 in the South China Sea.

By the early 1980s, concerted naval modernization efforts led to the construction of Luda- and Luhuk-class destroyers and the Jiangnan- and Jianghu-class frigates. The PRC also produced Xia-class strategic nuclear submarines equipped with its JL-1 missiles. By the mid-1980s, PLAN leaders had developed an offshore defense strategy that extended naval operations to the high seas, aided by the growing maritime trade interests of China after the economic reforms of 1978. Admirals Liu Huaqing and Zhang Lianzhong were instrumental in charting an ambitious program for PLAN during the latter phases of the Cold War, using elements of U.S. naval strategist Alfred Thayer Mahan's theories concerning power projection.

Organizationally, the PLAN followed the Soviet pattern, divided during the Cold War into staff, logistics, political, equipment and technology, and equipment repair departments and a headquarters. The PLAN had five major arms: surface fleets (three in the north, east, and south), submarine corps, naval air force, coast guard, and Marine Corps.

Following aspects of the Soviet naval-buildup model of constructing subsurface vessels, as propounded by Soviet Admiral Sergey Gorshkov, the PRC focused on submarine development with Romeo-, Ming-, and Song-class submarines. The early 1970s witnessed the development of Han-class nuclear attack submarines as well as destroyers and frigates. Apart from the quantitative increase in surface and subsurface vessels, missiles, naval aircraft and systems, qualitatively the PLAN improved its systems. Most of its weaponry was nonetheless obsolete.

At the end of the Cold War, the Chinese began acquiring military technology from abroad, including Dauphin-class helicopters, fire-control radars, and Crotale missile launchers from France. China exported naval technology to numerous countries, including Bangladesh, Pakistan, Sri Lanka, Burma, Thailand, North Korea, Iran, and Iraq, sometimes helping them to evade international nonproliferation controls.

At the end of the Cold War, however, the PLAN was still largely a coastal defense force made up of ships of obsolete design and dependent for defense on land-based aircraft. This was a situation that the Chinese were determined to change with the creation of a large, modern deep-water navy.

China, Republic of

The Republic of China (ROC) was the recognized government of China until the Chinese Communist Party (CCP) forced it into exile on Taiwan in 1949. The Cold War prevented destruction of the ROC and then placed it at the center of tension and conflict in East Asia, where it remained even after the fall of the Soviet Union.

The origins of the ROC date from the Chinese Revolution of 1911 that destroyed the Qing Dynasty. Two years later, military leader Yuan Shikai became president of the ROC after outmaneuvering Sun Yixian (Sun Yat-sen), China's most vocal advocate of republicanism. Rising opposition to his dictatorial rule, especially after he had himself named emperor, continued until his sudden death in 1916. During the Warlord Era that followed, local military leaders waged constant warfare with private armies to build regional political power. In 1918, Sun reorganized his Guomindang (GMD, Nationalist) party at Shanghai and supported protests against the Versailles Treaty during the May Fourth Movement of 1919. He proclaimed reestablishment of the ROC in 1921 at Guangzhou, based on his Three People's Principles of nationalism, democracy, and livelihood. He also formed a political alliance with the CCP and requested military and economic help and advice from the Soviet Union.

Chaos and instability motivated Sun to create a military academy to train officers, appointing Jiang Jieshi as its head. After Sun died in 1925, Jiang became leader of the GMD. In July 1926, he launched the Northern Expedition that reunited China when Nationalist forces marched into Beijing two years later. Not only had Jiang vanquished the warlords, but he had eliminated or undermined the communists after he broke with them in May 1927. In October 1928, following Sun's plan, the GMD adopted a provisional constitution for the ROC as the basis for governing China during a period of tutelage that was to last for six years. With its seat of government at Nanjing,

Jiang Jieshi followed in the footsteps of Sun Yixian, the father of modern China and the creator of the Guomindang (GMD, Nationalist) party. Jiang's determination to go his own way, coupled with neglect of issues important to the peasant majority of China, eventually led to his defeat. (Library of Congress)

the ROC introduced monetary reform to modernize China's financial system and promote modern industrial development. The Western powers recognized the ROC, granting tariff autonomy and revoking many foreign concessions. But the GMD neglected land reform and rent reduction that would have helped the vast majority of the populace escape impoverishment and oppression. Under the leadership of Mao Zedong, the CCP built support among the disaffected peasants.

In September 1931, Japan began its aggression against China by taking over all Manchuria and transforming it into a puppet state. Instead of defending China, Jiang concentrated on destroying the CCP, launching major assaults against the communists and forcing the CCP to flee to Yan'an in Shaanxi Province. His capture at Xi'an late in 1936 forced Jiang to join a united front against Japan as the price of his release. In July 1937, Japan opened an offensive against Chinese forces that brought it control over much of the coast and major cities, compelling the ROC to relocate westward to the remote Chongqing. After World War II began in Europe in 1939, the

GMD government fought as a partner in the Grand Alliance in World War II. Japan installed Wang Jingwei as president of the ROC at Nanjing, while its troops carried out a repressive campaign against the civilian population.

For the ROC, the war was a disaster. Continual fighting destroyed its best troops and bankrupted the government. Spiraling inflation devastated the urban middle class, eroding the GMD base of popular support. Still, Jiang represented China at the Cairo Conference in 1943, where he met with U.S. President Franklin D. Roosevelt and British Prime Minister Winston Churchill. In 1945, the Soviet Union signed a Treaty of Friendship and Alliance with the ROC rather than the CCP, although CCP forces controlled large portions of the country.

The civil war between the GMD and the CCP resumed following Japan's defeat in August 1945. U.S. Ambassador Patrick J. Hurley blamed his failure to arrange a cease-fire and coalition government on treasonous American diplomats in China who wanted a CCP victory. Against the backdrop of the emerging Cold War in Europe, General George C. Marshall's attempt at mediation in 1946 failed as well, creating anxiety for Americans over the prospect of a communist China. Then in 1947, corrupt and incompetent officers further demoralized already-discouraged GMD troops, resulting in a string of communist military victories and causing the United States to reduce assistance to the ROC. Jiang's forces fled to the island of Taiwan after Mao proclaimed the establishment in October 1949 of the People's Republic of China (PRC).

The ROC insisted that it was still the legitimate government of China, but the PRC considered Taiwan a renegade province. Britain, the Soviet Union, and many East European countries recognized the PRC immediately, while India favored seating the PRC in the United Nations (UN). The United States delayed recognition because domestic political critics blamed President Harry S. Truman's administration for allowing the loss of China to the Soviet bloc. But the United States was realistic in accepting as inevitable that the PRC would destroy Jiang's regime.

Taiwan, located one hundred miles off the southeastern coast of China, became a Chinese province in 1885. Ten years later, the treaty that ended the Sino-Japanese War made it part of the Japanese Empire. Following Japan's defeat in World War II, China regained title to Taiwan in accordance with the Cairo and Potsdam Declarations. Celebrating liberation from colonialism, the Taiwanese initially welcomed officials that the ROC sent from Mainland China. But the GMD government treated the island as almost a conquered territory, exploiting its people and resources. Rising friction between the ruling mainland minority and the native majority led to the systematic killing of thousands of Taiwanese leaders in February 1947. Two million Nationalist soldiers and civilians arrived on Taiwan in 1949 and soon depended on government stipends. Jiang Jingguo, Jiang Jieshi's son and chief of the provincial GMD, ruthlessly crushed political opposition and then imposed a rule more harsh, dictatorial, and exploitive than that of the Japanese. The official myth that the ROC was the legal government of China justified a political structure with a national party and government for all China and a separate provincial

party and government for Taiwan. Mainlanders dominated this national government at the capital in Taipei, but Taiwanese held most offices in local government.

Cold War security concerns in Asia caused U.S. military leaders to conclude early in 1950 that the United States must prevent communist China from seizing Taiwan. In June, the outbreak of the Korean War confirmed this emerging commitment when President Truman deployed the U.S. Seventh Fleet in the Taiwan Strait. After the PRC sent troops to Korea, the United States signed a military agreement in 1951 with the ROC, and the 1954 U.S.-China Mutual Defense Treaty provided the GMD government with \$2.5 billion in military aid and \$1.5 billion in economic aid from 1950 to 1965. In 1954, the PRC began shelling islands that the ROC held just off China's southeastern coast, prompting the U.S. Congress to pass a resolution empowering the president to defend Taiwan and "related positions and territories." Four years later, the Second Taiwan Strait Crisis intensified the Cold War in East Asia and caused the United States to strengthen its defense of Taiwan. U.S. opposition, however, did not stop most nations—except for Japan, the Republic of Korea (ROK, South Korea), and a few others—from recognizing Beijing rather than Taipei. By contrast, the United States was able to secure enough votes at the UN to allow the ROC to retain its seat as China's representative.

Cold War tensions kept alive Jiang's dream of returning to the mainland but could not prevent change on Taiwan undermining his authority. Taiwanese entered the GMD bureaucracy and gained election to the provincial assembly, but the National Assembly remained composed of legislators elected in Nanjing in 1948. As these aging representatives passed away, replacements were made by appointment, ensuring that the assembly would not oppose the GMD dictatorship and its assertion of authority through various security forces. But economic development and increasing social stability encouraged greater freedom. In 1969, elections filled vacancies in the assembly, and a few Taiwanese won seats. Jiang Jingguo, who became ROC president in 1978, opened the political process further. In 1986, parties other than the GMD were able to run candidates. Forty years of martial law ended in 1987, as did the ban on ROC citizens traveling to the mainland. When the now widely admired Jiang Jingguo died in 1988, Vice President Li Denghui became the first ROC president born on Taiwan, promising more political reform and restored power on the mainland.

Economic growth on Taiwan and failure in Vietnam resulted in the United States ending aid to the ROC in 1968 and reducing its Cold War commitments in East Asia. When President Richard Nixon sought normalized relations with the PRC to gain leverage against the Soviet Union, the ROC was expelled from the World Bank in 1970 and from the UN in 1971. Nixon's visit to the PRC in February 1972, along with issuance of the Sino-U.S. Shanghai Communiqué that declared Taiwan a part of China, sent relations between the United States and the ROC on a downward slide. In 1979, U.S. recognition of the PRC led to abrogation of U.S.-ROC defense treaties and the withdrawal of U.S. military personnel. In April, continuing bipartisan

support for the ROC in the U.S. Congress forced President Jimmy Carter to sign the Taiwan Relations Act, which sought to repair estrangement and build a new relationship based on wider economic ties. But Washington placed increasing importance thereafter on improving its relations with Beijing, advocating steps toward China's peaceful reunification. During the 1980s, the ROC, despite apparent U.S. indifference, improved its international standing as a fledgling democracy with one of the most industrialized and productive economies in the world.

In 1989, the Cold War ended without confirming the status of the ROC as the legal government of China because communist rule on the mainland continued. Moreover, the PRC still claimed sovereignty over Taiwan, although after the death of Mao in 1976 Beijing changed its policy from seeking liberation of the island to calling for voluntary reunification. Within the framework of one China, Taiwan would have autonomy and the right to maintain its own government, military forces, and economic system. The ROC rejected the offer and remained committed to regaining power on the mainland. Meanwhile, unofficial trade between Taiwan and the PRC through Hong Kong grew steadily. Taipei's acceptance of expanded contact with the mainland reflected confidence that its progress toward democratization and socioeconomic opportunity as well as broader material comfort and a thriving cultural life on Taiwan had won the loyalty and support of its citizens. The GMD hoped that the Taiwanese would convey to mainland relatives a belief in the superiority of the ROC's system. But these same factors caused other politicians to argue for declaring Taiwan's status as an independent nation, a course of action that Beijing warned it would prevent with a resort to force. During the 1990s, the ROC was at the center of what had become China's Cold War.

The Republic of China's (ROC) armed forces trace their origins to the Guomindang (GMD, Nationalist) military forces that fought against both the Japanese in World War II and the communist forces during the Chinese Civil War (1945–1949). Defeated on the Chinese mainland by communist forces that were better trained and better led, the GMD's army evacuated to the islands immediately off Fujian Province and to Taiwan in October 1949.

A number of GMD political and military leaders settled in Taiwan (Formosa). With the main island of Taiwan protected by the U.S. Seventh Fleet after the June 1950 outbreak of the Korean War, throughout the 1950s the ROC's military forces concentrated on protecting the coastal islands against numerous assaults and artillery barrages by the People's Republic of China's (PRC) military, the People's Liberation Army (PLA). ROC leader Jiang Jieshi hoped to use the coastal islands as a launching base for returning to the mainland. Although that dream faded as the years advanced, the ROC military benefited greatly from the U.S. commitment to sustaining the ROC as a bulwark against the PRC.

As the 1950s progressed, better ROC training and tactical cohesion enabled its forces to win several significant skirmishes against PRC forces, including the 1956 downing of six Chinese MiG-17 fighters without loss for ROC Air Force fighters. ROC forces maintained their superiority in equipment, maintenance, and training throughout the Cold War but began to lose their edge as the Cold War ended and the PRC threat seemed to recede.

Taiwan's military is based on the nation at arms concept in which all able-bodied males are conscripted into military service for two years. After that, they transfer into the reserves and can be recalled for periodic training and national emergencies until they reach the age of thirty. Generally, the military recalls approximately 10 percent of its reservists annually for training and education. This system enables Taiwan to mobilize up to 4 million soldiers in less than forty-eight hours, with more than 3 million available for service in the army. With each soldier, airman, and sailor receiving up to three times the training of their mainland counterparts and being equipped with more modern weapons and command and control support, Taiwan's military enjoys a significant qualitative advantage over the PLA. More important, the Taiwan Strait provided an all but insurmountable barrier to any Chinese attempt to invade the island nation.

The mobilization system remained largely unchanged throughout the period of the Cold War, although as the immediate PRC threat receded in the late 1970s, the military slowly shifted to a greater reliance on reservists and timely mobilization. Regular army strength declined from its peak of approximately 600,000 men in 1958 to roughly 250,000 by 1991. The transition to a smaller standing army reduced military spending and facilitated Taiwan's impressive economic growth during the 1970s and 1980s. With the reduced emphasis on standing forces came a greater focus on rapid mobilization and improved early warning systems of the PRC's military intentions.

A Chinese Nationalist soldier stands guard on a beach along the Taiwan shoreline during a period of heightened tension when the government of the People's Republic of China was threatening to invade the island, 1 February 1955. (Library of Congress)

Within that context, the Taiwanese Army's hold on the offshore islands of Jinmen, Mazu, and Penghu represented the country's first line of defense. Massively fortified and patrolled by more than 50,000 heavily equipped troops, the islands continue to be important listening posts and house early-warning radar stations, even though they no longer serve as forward staging bases for the GMD's return to the mainland.

The Taiwanese Air Force and Navy formed the country's second line of defense, supporting the army's hold on the offshore islands and ensuring that the PRC's navy could neither blockade the country nor mount an amphibious assault. Antisubmarine warfare (ASW) and mine countermeasure units were established and maintained to keep open the sea-lanes on which Taiwan's economic survival had become increasingly dependent. Light attack units equipped with the latest antiship missiles were stationed on the Penghu Islands to attack any task groups that might venture into those waters in time of war. The elite Taiwan Marine Corps is stationed in the Penghu Islands, both to prevent their seizure as a forward operating base against Taiwan and

to act as a counterattack or reserve force to recapture or reinforce Jinmen and Mazu if necessary. The ROC Air Force was tasked with maintaining air superiority over Taiwan and the Taiwan Strait in the event of war. The superior quality of Taiwan's aircraft and pilot training was considered more than sufficient to overcome the PRC's numerical advantage.

The army also served as the nation's final defense. It was to provide ground-based air defense of Taiwan's key cities, facilities, and infrastructure as well as to repel any forces that reached the country's shores. The army's three armored divisions and independent mechanized units were expected to drive any invading forces back into the sea. Light infantry and mobile units were to hold key cities, landing beaches, and facilities until the mobile forces and reserves could arrive. Army equipment was the least advanced of the three services, relying mostly on artillery and tanks from the late 1950s and 1960s. Although old and rather obsolete, the army's weapons were still superior to those of the PRC's landing forces, which were equipped with inferior Soviet designs of the same era. In addition, Taiwanese special forces were trained and equipped to conduct special operations in the Chinese rear, including on the mainland itself.

Taiwan's ability to acquire and maintain modern military equipment began to decline in the late 1970s as the PRC gained ground diplomatically and economically and arrived at rapprochement with the United States. Countries once willing to sell arms to Taiwan increasingly refused to do so as the 1980s advanced. Many nations feared losing access to the much larger and more rapidly growing markets in the PRC and were thus reluctant to antagonize the PRC leadership. Having eschewed building its own arms industry in favor of developing a robust civilian economy, Taiwan found it difficult to develop a domestic arms production capability, particularly in high-technology systems that were becoming increasingly important in modern warfare.

More critically, the PRC Air Force and Navy began to acquire newer Soviet-built weapons and Western-made weapons systems as well as electronics from Israel and France. Thus, as the Cold War drew to an end, Taiwan saw its qualitative edge eroding and its opportunities for addressing that challenge diminishing. Initial work on building a technological and defense industry base began in the late 1980s but remained incomplete as the next decade advanced. Today, the country is almost entirely dependent upon the United States for its modern military equipment.

Chinese Civil War (1945–1949)

In the December 1936 Xi'an Incident, Zhang kidnapped Jiang and forced him to form a united anti-Japanese front with the communists.

Interneine conflict between China's Guomindang (GMD, Nationalist) government and supporters of the Chinese Communist Party (CCP) that began immediately after World War II and brought the establishment of the People's Republic of China (PRC). The roots of the Chinese Civil War went back as far as the late 1920s. After the foundation of the CCP in 1921, Soviet Comintern representatives advised its members to collaborate with other political groups supporting the Chinese revolution, especially the GMD founded by Sun Yixian, the revered revolutionary leader who was elected provisional president of the new Republic of China (ROC) in 1911. After Sun's death in 1925, military leader Jiang Jieshi won power within the GMD and began to eliminate all potential rivals. In 1926 Jiang, alarmed by abortive but bloody communist uprisings in several industrial cities, began to purge Communist Party members from the Guomindang (GMD, Nationalists) institutions in which they had previously been prominent and to suppress them elsewhere. In mid-1927 he made the communist base in the Jiangxi province of south-central China the new target of the Northern Expedition that he had launched the previous year against northern warlords and suppressed several further communist insurrections.

Led by Mao Zedong and fortified by several former GMD military units whose commanders defected to the communists, this rural base developed into the Jiangxi Soviet Republic, whose military forces numbered 200,000 by 1933. Chinese communists also mounted several further urban and rural insurrections, and Jiang regarded them as the greatest threat to his government, more serious than even the Japanese troops who in 1932 established the client state of Manchouguo in Manchuria and who constantly sought to enhance Japan's influence in North China. Between 1930 and 1934 Jiang waged annual campaigns against the Ruijin base in Jiangxi, in the last of which he succeeded in forcing communist supporters, in the famous Long March, to retreat 6,000 miles to the remote northwestern province of Shaanxi.

During 1935–1936 Jiang ordered troops commanded by his loyal ally, Manchurian warlord Zhang Xueliang, to attack and, he hoped, eliminate the few thousand remaining communists. The soldiers rejected his orders, arguing that all Chinese should unite to fight the Japanese, not each other. In the December 1936 Xi'an Incident, Zhang kidnapped Jiang and forced him to form a united anti-Japanese front with the communists. The GMD-CCP relationship remained strained, as communists developed their own military

forces, the Eighth Route Army, commanded by Zhu De, and the New Fourth Army under Lin Biao, and retained control of northern Shaanxi.

The following year, a minor clash between Chinese and Japanese troops at the Lugouqiao Marco Polo Bridge, near Beijing in Hebei province, quickly escalated into full-scale warfare between the two countries. Over the following eighteen months, Jiang gradually retreated to Chongqing in the far southwestern province of Sichuan, abandoning northern and eastern China to protracted Japanese occupation. The communists controlled northwestern China. For three months in late 1940, the communists launched the Hundred Regiments campaign against Japan, but their eventual defeat by the better-equipped Japanese convinced them to switch to tactics of establishing guerrilla bases behind Japanese lines in northern and central China. This policy provoked ferocious Japanese reprisals against both the communists and the civilian population, but it proved effective in disrupting Japanese control and in enhancing the communists' reputation as dedicated opponents of Japanese rule and their postwar political position. It did not suffice, however, to defeat Japanese rule.

By 1940 Mao was already making plans for a postwar communist government of China. By this time, both sides anticipated a fierce struggle for power and sought to position themselves advantageously for it. In late 1941 GMD forces attacked and defeated the communist New Fourth Army in the

Nationalist troops man a Japanese-made 155mm howitzer, part of the artillery defenses ringing Shanghai, in the face of a communist advance, 18 May 1949. (Bettmann/Corbis)

lower Changjiang (Yangtze) Valley, an episode marking the fundamental breakdown of CCP-GMD collaboration, although an uneasy alliance continued until 1944. GMD forces possessed superior equipment and funding, but Jiang's abandonment of much of China to Japanese rule and his reliance on a protracted strategy of attrition, together with the corruption that characterized many top officials of his regime, eroded his hold on popular loyalties. Communist morale was high. Their idealistic rhetoric, the Spartan living conditions at their Yan'an base in Shaanxi, their attractive and charismatic leaders, and their dangerous though small-scale partisan operations all caught the popular imagination and impressed many visiting Western journalists and officials.

The war ended in August 1945 with Japanese occupation forces still in place throughout China. CCP membership had reached 1.2 million people, plus military forces of 900,000, and the communists controlled an area whose population numbered 90 million. Despite Jiang's objections, Russian forces entering Manchuria facilitated the surrender of Japanese forces and equipment to communist units. U.S. leaders, especially Ambassador Patrick J. Hurley in late 1945, sought to strengthen Jiang's regime, to promote reform from within, and to encourage Nationalist-communist reconciliation and the formation of a coalition government in which communists would have some influence, albeit as junior partners.

The most sustained such effort was the thirteen-month (December 1945–January 1947) mission to China of former U.S. Army chief of staff General George C. Marshall, who in January 1946 arranged a temporary cease-fire in the developing civil war, broken later that spring when, as Soviet units withdrew, GMD forces attacked Chinese communist troops in Manchuria, winning control of that region in late May. That same month the communists rechristened their military forces the People's Liberation Army (PLA). It proved impossible to devise any further agreements acceptable to both sides.

Full-scale civil war resumed on 26 June 1946 when Nationalist units launched an offensive against communist-held areas in the Hubei and Henan provinces. The United States continued to provide massive loans and quantities of military hardware to the GMD but prudently refused to commit American troops. As the Cold War rapidly developed, Soviet and American officials clearly backed different parties in the evolving Chinese Civil War, but neither was prepared to run great risks to assist its favored candidate.

By 1947, as inflation and corruption both ran rampant, Chinese businessmen and the middle class began to desert the GMD, and many fled overseas. As they had against the Japanese, the communists frequently employed

guerrilla tactics against Nationalist forces. Their introduction of land reform persuaded many peasants to support them. These tactics supplemented the full-scale military campaigns that they soon became sufficiently strong to launch. In mid-May 1947, Lin and the New Fourth Army opened a major offensive in northeastern China, and six weeks later another large army commanded by Liu Bocheng moved southwest across the Huanghe River, known to Westerners as the Yellow River, into Shandong province. In September 1948 Lin began a massive campaign in Manchuria, capturing Shenyang in Liaoning province in November, soon after 300,000 GMD troops surrendered to him. In north-central China, the communist Huai River campaign ended victoriously on 10 January 1949 after PLA troops surrounded sixty-six regiments—one-third of the existing GMD military forces. In January 1949 the GMD government fled to Taiwan, and that same month Beijing, China's symbolic capital, fell to Lin's troops, followed by the southern city of Guangzhou (Canton) in Guangdong the following October, as communist forces gradually consolidated their hold over the entire country. On 1 October 1949 Mao proclaimed the new People's Republic of China (PRC).

The Chinese Civil War and American support of the GMD government, which even after its move to Taiwan continued until the 1970s, left a lasting legacy of distrust and suspicion that divided the United States and Mainland China for several decades. American officials viewed the establishment in China of a communist government sympathetic to the Soviet Union as a major Cold War defeat, a perception enhanced by China's November 1950 intervention in the Korean War. For at least two decades, Chinese leaders in turn regarded the United States as their country's most significant international adversary, a perspective that only began to change after President Richard Nixon moved to reopen relations with China in the early 1970s.

Chirac, Jacques (1932–)

Conservative French politician, mayor of Paris (1977–1995), prime minister (1974–1976, 1986–1988), and president of the Fifth Republic (1995–present). Born on 29 November 1932 in Paris, Jacques Chirac attended the elite Lycée Louis-le-Grand before beginning his studies at the Institut d'Études Politiques in 1954. He left to serve as an army officer in Algeria. From 1957 to 1959 he attended the École Nationale d'Administration and subsequently joined the civil service in the Court of Accounts. In April 1962 he was appointed to Premier Georges Pompidou's staff. As Pompidou's protégé, Chirac successfully ran as a Gaullist in the 1967 National Assembly elections. With the seat came the post of junior minister for social affairs, which made him a central figure in Pompidou's crisis-management team during the student protests of May 1968.

From 1968 to 1971, Chirac worked as a state secretary under future political adversary Valéry Giscard d'Estaing in the Ministry of Economy and Finance. In 1972, Chirac was entrusted with the Ministry of Agriculture and Rural Development, gaining international attention when he attacked the agricultural policies of other major Western powers as harmful to French

interests. In March 1974, he became minister of the interior. When Pompidou's untimely death resulted in early elections and Giscard assumed the presidency, the young Chirac was appointed premier on 27 May 1974. Six months later, he used his position to take over the leadership of the Gaullist party. Differences with President Giscard led to Chirac's resignation in August 1976.

Chirac used the next several years to form a new, Gaullist-like party, *Le Rassemblement pour la République* (Rally for the Republic). Backed by his new party, he won an easy electoral victory and became mayor of Paris in 1977, an office he held until 1995. In 1978, the Chirac-Giscard feud deepened when Chirac accused Giscard's pro-European party of being "the agent of foreign powers." Chirac ran against Giscard from the Right in the 1981 presidential elections, thus splitting the electorate and paving the way for socialist François Mitterrand's May 1981 victory. When the conservatives won a majority in the 1986 National Assembly elections, however, Mitterrand appointed Chirac premier in March. He remained in office until he ran again in vain for the presidency in May 1988.

Finally, in May 1995 Chirac won election to the presidency, replacing the retiring President Mitterrand. President Chirac surprised the world and angered his European neighbors when he ordered the resumption of nuclear testing in French Polynesia, ending his predecessor's three-year moratorium. Less than a year later, however, he signed the Comprehensive Test Ban Treaty on 24 September 1996.

Jacques Chirac, president of France (1995–). He has played a pivotal role in the formation of the European Union and the creation of a single European currency. (Embassy of France/Bettina Rheims)

Despite subsequent electoral setbacks for his party, Chirac has managed to stay in office. In 1996 he visited Washington, D.C., and strengthened ties to the United States. He broke with the George W. Bush administration over the war in Iraq, however, and U.S.-French relations reached a low ebb by the end of 2003.

Chu Teh

British statesman and prime minister (1940–1945, 1951–1955). Born at Blenheim Palace, Oxfordshire, on 30 November 1874, the eldest son of Lord Randolph Churchill, third son of the Duke of Marlborough and a rising Conservative politician, and his wife Jennie Jerome, an American heiress, Winston Churchill was educated at Harrow and the Royal Military Academy, Sandhurst. From 1895 to 1899 he held a commission in the British Army, seeing active service in India, on the Afghan frontier, and in the Sudan, where he took part in the Battle of Omdurman. Captured by South African forces in 1899 while reporting on the Boer War as a journalist, he won popular fame after escaping.

Churchill entered politics in 1900 as a Unionist member of Parliament. In 1904 his party's partial conversion to protectionism caused him to join the Liberals, who made him president of the Board of Trade (1908–1910) and home secretary (1910–1911) after they returned to power. As first lord of the Admiralty (1911–1915), Churchill sought to modernize the Royal Navy, convert it to oil, and improve its administration. He championed the 1915 Dardanelles expedition against Turkey, the failure of which prompted his resignation. He spent the next six months to May 1916 on active service on

Churchill, Winston
(1874–1965)

One of the great figures of the twentieth century in a versatile career that spanned four decades, Winston Churchill served Great Britain as a war correspondent, soldier, politician, member of the British Parliament, first lord of the admiralty, and prime minister. (Library of Congress)

the Western Front but regained high office in July 1917, when Prime Minister David Lloyd George made him minister of munitions. In December 1918 Churchill moved to the War Office, where he unsuccessfully advocated forceful Allied action against Russia to eliminate that country's new communist government. In late 1920 he became colonial secretary. In 1924 he returned to the Conservatives, who in November 1924 made him chancellor of the exchequer, a post he held for five years.

By 1928 Churchill believed that the postwar peace settlement represented only a truce between wars, a view set forth in his book *The Aftermath* (1928). When Labour won the 1929 election Churchill lost office but soon began campaigning vigorously for major British rearmament, especially of the Royal Air Force (RAF). From 1932 onward he sounded this theme eloquently in Parliament, but Conservative leaders remained unsympathetic, and throughout the 1930s Churchill held no cabinet position. Churchill also became the most visible and vocal critic of the appeasement policies of the successive governments of Prime Ministers Stanley Baldwin and Neville Chamberlain, who effectively acquiesced in German rearmament and Chancellor Adolf Hitler's deliberate contravention of the provisions of the Treaty of Versailles.

When Britain declared war on Germany in September 1939, Churchill resumed his old position as first lord of the Admiralty. On 10 May 1940, the day Germany launched an invasion of France and the Low Countries, Churchill succeeded Chamberlain as prime minister. After the fall of France, and with Britain remaining as Germany's sole major military opponent, Churchill responded vigorously. An outstanding war leader, he delivered a series of rousing and eloquent speeches, affirming Britain's determination to continue the fight and his conviction of ultimate triumph. He also established a close relationship with U.S. President Franklin D. Roosevelt and persuaded U.S. policymakers to furnish substantial assistance. Churchill welcomed Japan's December 1941 attack on Pearl Harbor and the subsequent German declaration of war on the United States, believing that U.S. participation in the war guaranteed an Allied victory. Britain and the United States now worked closely together, establishing a Joint Chiefs of Staff and agreeing to pool technology.

After Germany invaded Soviet Russia in June 1941, Churchill also welcomed the Soviet Union as an ally, although his relations with Soviet Premier Josef Stalin were never as close as with Roosevelt. Churchill made repeated visits to the United States and met Roosevelt at other venues; all three leaders met at major international summit conferences in 1943 and 1945, and Churchill also met Stalin separately on several occasions. Stalin resented the Anglo-American failure to open a second front in Europe until June

1944, a decision due in considerable part to Churchill's fear that if Britain and the United States launched an invasion of Western Europe too soon, the campaign would degenerate into bloody trench warfare resembling that of World War I. Churchill bristled at growing American pressure to phase out British colonial rule.

As the war proceeded and Soviet forces began to push back German troops in the eastern region, Churchill feared that the Soviet Union would dominate postwar Eastern Europe. Soviet support for communist guerrillas in occupied countries and for Soviet-backed governments-in-exile as well as Moscow's failure to aid the uprising of Polish forces in Warsaw in August 1944, reinforced his apprehensions.

In October 1944 Churchill negotiated the informal Percentages Agreement with Stalin whereby the two leaders delineated their countries' respective spheres of influence. At the February 1945 Yalta Conference, Churchill and Roosevelt both acquiesced in Soviet domination of most of Eastern Europe, Churchill most reluctantly. In April 1945 Churchill unavailingly urged American military commanders to disregard their existing understandings with Soviet forces and take Berlin.

From early in the war the Allies had committed themselves to the creation of a postwar international organization to maintain peace, which led to the United Nations (UN) in May 1945. Churchill, however, hoped that close Anglo-American understanding would be the bedrock of the international world order, a perspective intensified by his continuing fears of Germany.

In August 1945 the British electorate voted Churchill out of office, replacing his administration with a reformist Labour government. He was still, however, honored as "the greatest living Englishman" and the war's most towering figure. Churchill's six best-selling volumes of *The Second World War* depicted a rosy view of unclouded and harmonious Anglo-American wartime cooperation, carefully designed to promote the continuing alliance between the two countries that had become his most cherished objective.

Churchill deliberately used his prestige to rally American elite and public opinion in favor of taking a stronger line against Soviet expansionism in Europe and elsewhere, a position he advanced to enormous publicity in his famous March 1946 "Sinews of Peace" speech (also known as the "Iron Curtain" speech) at Fulton, Missouri. Although the speech was cleared in advance with both British Prime Minister Clement Attlee and U.S. President Harry S. Truman, at the time many Americans criticized the address as unduly bellicose. One year later, however, the president's Truman Doctrine endorsed this position, and by the end of the 1940s the United States had launched the Marshall Plan to facilitate West European recovery and had joined the North Atlantic Treaty Organization (NATO).

Prime Ministers of the United Kingdom during the Cold War

<i>Name</i>	<i>Party</i>	<i>Term</i>

Churchill died at his London home on 24 January 1965, an occasion which for many marked the symbolic final passing of Great Britain's imperial age.

From 1951 to 1955 Churchill served again as Conservative prime minister. Growing Soviet-American tensions and the awesome destructive power of nuclear weapons led him to urge U.S. President Dwight D. Eisenhower to negotiate an understanding with the Soviet Union to limit and perhaps reduce stocks of such bombs. Churchill also gave early support and encouragement to the movement for European integration, regarding this as the only means whereby the continent would be able to defend itself against the Soviet Union, become a credible international military and economic force, and avoid future destructive internecine conflicts.

Declining health eventually forced Churchill to resign from office. In retirement, he urged Prime Minister Harold Macmillan to repair Anglo-American relations after the damaging 1956 Suez Crisis, on the grounds that Britain could not afford lasting estrangement from its most vital ally, and offered his assistance in this endeavor. A House of Commons man to the core, Churchill consistently refused the peerage to which his services entitled him. He died at his London home on 24 January 1965, an occasion that for many marked the symbolic final passing of Great Britain's imperial age. An idiosyncratic political maverick whose pre-1939 record was at best mixed, Churchill rose to the occasion to become the greatest British war leader since the eighteenth-century Earl of Chatham. The prestige that Churchill won in this capacity enabled him to have a major impact on the development of the Cold War.

Civil defense refers to programs and preventive measures to help defend civilian populations from military attack. During the Cold War, these efforts were directed mainly at protecting civilians during a nuclear attack. Two civil defense programs existed that can be regarded as standardized systems, namely those of the Soviet Union and the United States. These nations exported their civil defense organizations to their allies.

Soviet civil defense consisted of a system of state-sponsored measures designed to secure the population and national economy in time of war and to manage rescue and recovery efforts with the purpose of minimizing casualties. The Soviet civil defense apparatus was well organized, thought to be reliable, and based on two primary principles. First, civil defense was organized on a territorial-industrial basis to protect the entire nation. Citizens underwent continuous training in civil defense measures, and high emphasis was placed on fallout shelters, which were designed to safeguard the population from the effects of nuclear detonations. Second, civil defense called upon the mobilization of material and human resources of the nation as a whole.

The Soviet government approached civil defense with four major premises. The first was on the presumption that a well-trained populace would be less prone to injury or death and be less susceptible to panic in the event of a war. Second, adequate training would help the population to deal with dangers contingent upon an enemy attack. Third, people trained in civil defense would be capable of providing aid to the injured and could be mobilized to begin recovery efforts as soon as possible. Fourth, civil defense training would reinforce the defensive capabilities of the country. During the Cold War, some 30 million Soviet citizens and 70 percent of the industrial workforce were directly involved in civil defense programs. It is estimated that the Soviet Union spent \$1 billion per year on civil defense measures.

Two organizations oversaw the Soviets' civil defense program. The Local Civil Defense (MPVO) system was organized in individual municipalities. The objective of the MPVO was to protect local citizens against enemy attacks of various kinds. In charge of the Municipal Executive Committee of the Council of Workers' Deputies (ECCWD) was the municipal chief. The committee chief exercised the exclusive right to issue direct orders and make decisions in the best interest of the locality. Such committees were responsible for providing a diverse range of services by order of the Soviet government in order to maximize civil defense measures during an attack.

The second civil defense organization was the Volunteer Society for Assistance to the Army, Air Force, and Navy (DOSAAF). The objective of DOSAAF was to train people in the basics of military warfare. DOSAAF provided training to the civilian population, especially youth, to develop basic skills in firing weapons, skiing, driving, parachuting, piloting aircraft, and radio communications. In the process, DOSAAF also promoted various sports. DOSAAF fell under the aegis of the National Defense Ministry and worked closely with MPVO units.

During the Cold War, some 30 million Soviet citizens and 70 percent of the industrial workforce were directly involved in civil defense programs.

In the event of enemy attack, one of nine warning signals would be transmitted to cities and towns by means of siren alarms, loudspeakers, whistles, and radio. The majority of fallout shelters were public; in fact, the construction of family or individual shelters was not encouraged, as the common perception was that an enemy attack would focus on public places such as industrial centers, factories, and motorways. Soviet shelters were classified in numerous ways. These included blast shelters with high-level, industrially manufactured air filtering equipment; blast shelters with simplified filtering equipment; nuclear shelters equipped to handle peacetime accidents (such as nuclear reactor accidents); and simple nuclear shelters fabricated from readily available materials to offer refuge from nuclear attack. Fallout shelters were also classified according to capacity: small-scale (accommodating up to 150 persons), medium (150–450 persons) and large-scale (450 or more persons).

In the event that people could not reach fallout shelters in time, Soviet citizens were trained to wear protective clothing. Usually, they wore suits of rubber or plastic equipped with a breathing apparatus and gas mask, protective gloves, and footwear. Respirators were issued to high-ranking officials and civil defense chiefs. Families and individuals had to obtain protective gear at their own expense.

Civil defense was not nearly as well organized in the United States. Civil defense measures were left primarily to local and state authorities, with the federal government playing a relatively minor role, mainly coordinating and disseminating information. Furthermore, American civil defense emphasized individual self-help, privatization, voluntarism, and decentralization. Unlike Soviet citizens, Americans were routinely prompted to construct their own individual fallout shelters, and many did, particularly in the 1950s.

The first national Cold War civil defense agency was created in January 1951 as a response to the Soviets' first atom bomb detonation in 1949 and to the Korean War (1950–1953). This agency, the Federal Civil Defense Administration (FCDA), had a narrow mission, which was chiefly geared to educating the populace on appropriate civil defense measures to take in the event of a nuclear attack. Although the FCDA recommended the construction of fallout shelters as part of a comprehensive civil defense apparatus, the federal government never allowed for the construction of adequate public shelter protection, and no cohesive national civil defense policies were ever implemented. The emphasis remained on regional and local programs.

The U.S. government did, however, develop a civil defense plan aimed at protecting America's industrial base. In August 1951, President Harry S. Truman announced the National Industrial Dispersion Policy, a program designed to decentralize American manufacturing, thereby making it less vulnerable to a concentrated Soviet air attack. The dispersion program was highly decentralized, however, and the onus of implementation was placed on individual localities. Thus, almost no federal funds were allotted to the endeavor, and the policy had little impact on the protection of America's industrial sector. By the late 1950s, with the proliferation of highly destructive hydrogen bombs and Intercontinental Ballistic Missiles (ICBMs), the

Fallout shelter being dug by a family near Mechanicsburg, Pennsylvania. The program was funded by the Defense Civil Preparedness Agency. Under this program, families were paid to build various kinds of expedient fallout shelters (fast shelters that could be built in a nuclear emergency) to find out how quickly the shelters could be built and to test the adequacy and clarity of shelter plans. (National Archives and Records Administration)

National Industrial Dispersion Policy was rendered largely moot and faded into obscurity.

The closest the United States ever came to duplicating the more ambitious Soviet civil defense efforts was the National Security Resources Board (NSRB), created in 1947 to mobilize national resources and industrial production in time of war. It did not, however, play a large role in more traditional civil defense preparations. In December 1950, in response to the reversal of fortunes in the Korean War, the Truman administration established the Office of Defense Mobilization (ODM), whose task was to coordinate all military and defense production—much like the War Production Board of World War II. But again, the ODM played almost no role in civil defense procedures. In 1953, President Dwight D. Eisenhower combined the NSRB and the ODM into one agency, although its mission did not change. In 1958, U.S. officials decided to merge mobilization and civil defense readiness into one agency when they consolidated the FCDA and the ODM into one unit: the

Office of Civil and Defense Mobilization (OCDM). The OCDM went through several permutations over the years and became more of a disaster relief agency than a civil defense apparatus, especially after nearly all military and civilian defense operations were consolidated into the Federal Emergency Management Agency (FEMA) in 1978.

Most U.S. communities developed their own emergency plans and tasked local civil defense officers with specific functions. Additionally, civil defense volunteers underwent training to complement regular officers. The responsibility of alerting the public of an impending nuclear attack rested with the national, state, and local civil defense offices. These agencies arranged training courses for volunteers who had to be ready to assist authorities in managing existing shelters, decontamination procedures, fire fighting, first aid administration, and recovery efforts.

Adequate advanced warning depends upon the detection of approaching aircraft or missiles as far from the nation's borders as possible. To this end, the National Warning System (NAWAS) was established in 1957. It worked with local warning systems to form the Civil Defense Warning System. Telephones, radios, teletype, and other warning systems were used to transmit urgent civil defense information. Public sirens were also used for early warning. To provide early warning, the North American Air Defense Command (NORAD) maintains a sophisticated surveillance network including ground radar and radar-equipped aircraft deployed across the entire North American continent. Detection first begins at the Distant Early Warning Line, a radar wall extending some 4,000 miles across the Arctic through the Bering Sea and into the North Pacific.

The United States possessed two civil defense alert warning signals. The first was a steady, three- to five-minute siren that indicated an advanced-warning alert signal. This was used if enough time remained for people to seek protection in public or family fallout shelters. The second, a series of short siren blasts for five minutes, meant that immediate cover should be taken, indicating an imminent attack within minutes.

Local alert transmission systems differ from locale to locale. Two main alarm transmission systems were in place: a National Emergency Alarm Repeater (NEAR) system and a Control of Electromagnetic Radiations (CONELRAD) system. NEAR was designed to provide for almost instantaneous warning of an impending attack for the indoor public. NEAR had the capability of reaching 96 percent of the population in homes, offices, factories, schools, and other indoor public places. This system was especially valuable in that it was capable of transmitting alarm signals to rural areas where installation of outdoor alarm systems would be costly. Meanwhile, CONELRAD was invented to assure radio communications in a national emergency and to prevent enemy aircraft from using radio signals in search of targets. CONELRAD's importance decreased as the potential of attack via ballistic missiles increased, but it is still used to ensure more efficient communications between public officials and civilians.

Cold War fallout shelters in the United States were classified on the basis of their protection factor (100 meant the radiation level outside a shelter could

A volunteer in Battle Creek, Michigan, stands beside the fourteen-day emergency food supply for two persons that she purchased in a 1961 test of how much the food would cost, how much it would weigh, and how much space it would take to store it. Her particular supply consisted of 113 articles of 67 foods, cost just under \$28 to buy, and weighed 118 pounds. Such a food supply was recommended by the Office of Civil Defense of the Defense Department. (National Archives and Records Administration)

be 100 times as high as that inside a shelter). During and after the Cuban Missile Crisis of 1962, relaxed civil defense qualifications yielded 110 million shelter spaces, of which more than 70 million had a protection factor of 100 or greater, and an additional 35 million shelters with a protection factor between 49 and 99. The shelters with a protection factor of 100-plus were concentrated in the larger cities of the United States. Only shelters with protection factors of 100 or greater were stocked with food and survival supplies.

Civil Liberties in the United States

Legally codified rules that protect citizens' basic human rights and guard against the abuse of government power. The United States has long prided itself on its representative government and civil liberties enumerated in the U.S. Constitution. During the Cold War, however, domestic concerns regarding communist subversion culminated in security measures that often contradicted the very principles upon which the United States was founded.

Americans' civil liberties are guaranteed by the U.S. Constitution, particularly by the Bill of Rights (the first ten amendments) and the Thirteenth, Fourteenth, Fifteenth, and Nineteenth Amendments. The Bill of Rights guarantees Americans their basic civil liberties including, but not limited to, freedom of speech and association, the right to bear arms, the right against arbitrary search and seizure, and the right not to incriminate oneself. The Thirteenth Amendment outlaws slavery, and the Fourteenth Amendment denies the government the ability to "deprive any person of life, liberty, or property." The Fifteenth Amendment guarantees every citizen the right to vote regardless of "race, color, or previous condition of servitude"; however, it was not until the passage of the Nineteenth Amendment in 1920 that women were granted the right to vote.

As the Cold War began to affect domestic society during the late 1940s and early 1950s, American politicians became increasingly concerned with the possibility of communist subversion within the United States and, more urgently, within the U.S. government. The House Un-American Activities Committee (HUAC) represented perhaps the first overt government institution to challenge the civil liberties of Americans by attacking freedom of speech and association. Established in 1938 to investigate disloyalty and subversion within the government, by the late 1940s HUAC had focused on eradicating domestic communism and in the process fueled the emerging Second Red Scare. The committee became infamous when, in 1947, it attacked Hollywood, accusing some of its more prominent actors, producers, directors, and screenwriters of being communists. After traveling to Washington, D.C., upon being subpoenaed by HUAC, one screenwriter and nine directors refused to respond to the committee's communist allegations. Despite the fact that they cited their Fifth Amendment rights, they were imprisoned for contempt of Congress. Upon their release, the so-called Hollywood Ten found themselves blacklisted and their hitherto promising careers ruined.

In 1948, a conservative Congress pressured the administration of President Harry S. Truman to implement a Loyalty Program applicable to all federally employed personnel. It required that all employees sign a pledge of loyalty to the U.S. government, admit to any past associations with “subversive” organizations, and promise not to join any such organizations in the future. Failure to sign the pledge or to admit to past activities was grounds for summary dismissal. Before long, many state and local municipalities had adopted similar programs, and many people lost their jobs as a result. In the early 1950s, Congress also passed two pieces of legislation containing anti-communist provisions over Truman’s veto. The 1950 Internal Security Act required communists to register with the government, and the 1952 McCarran-Walter Immigration Act (also known as the Immigration and Nationality Act) specified the ability of the U.S. government to deport or deny entry to immigrants deemed “prejudicial to the public interest” or “subversive to national security.”

The most infamous case of a politically motivated communist witch-hunt culminating in blatant disregard of civil liberties occurred during 1950–1954 in what has come to be known as McCarthyism. Senator Joseph R. McCarthy became a household name in February 1950 when, during a West Virginia speech, he waved a document in the air alleging that he had a list of 205 communists in the U.S. State Department. An otherwise obscure Republican senator from Wisconsin, McCarthy was instantly thrust into the national spotlight. Together with HUAC, McCarthy sought to identify suspected communists residing in the United States. In the end, public school teachers, college professors, labor union organizers, radio and television personalities, and even librarians found their careers and reputations ruined by questionable charges of disloyalty or of being a communist.

During the McCarthy era, loyalty oaths were required of immigrants and State Department officials alike. In 1953, even the State Department bowed to congressional pressure and ordered the removal of all books and art by suspected communists from government offices at home and abroad. During this period, basic rights such as freedom of speech, expression, and association were curtailed, and Americans’ Fifth Amendment rights were often ignored, all in the name of national security. Although McCarthy was brought down in 1954 during the Army-McCarthy Hearings, the damage he wrought on the American body politic is incalculable.

American civil liberties were repeatedly breached, however, as anti-communism continued to arouse the suspicions of U.S. government officials, especially within J. Edgar Hoover’s Federal Bureau of Investigation (FBI). Of particular interest here is the FBI’s Counter-Intelligence Program (COINTELPRO). The FBI formed COINTELPRO in 1956 after the Supreme Court challenged the constitutionality of several anticommunist measures, including the Loyalty Program, the 1950 Internal Security Act, and HUAC. COINTELPRO was a covert operations program targeted at American citizens believed to be communists or communist sympathizers. The program not only monitored but would also, in the FBI’s parlance, “disrupt” or “neutralize” individuals or social groups that the FBI deemed threatening.

However, those whom the FBI deemed threatening were often civil rights advocates, antiwar groups, and student organizations. The FBI justified its actions by claiming that groups such as the Black Panthers and Students for a Democratic Society were communist front organizations.

Often resorting to illegal wire taps, unlawful search and seizure, and unconstitutional invasions of privacy to collect intelligence on its subjects, COINTELPRO operated outside the guidelines established by the U.S. Constitution to protect citizens' rights. Although the FBI terminated the program in 1971, COINTELPRO became the focus of the 1975 Senate Select Committee to Study Government Operations with Respect to Intelligence Activities (also known as the Church Hearings). The Senate committee concluded that the FBI had "conducted a sophisticated vigilante operation aimed squarely at preventing the exercise of First Amendment rights of speech and association."

During the Cold War, the United States was also culpable in repressing the civil liberties of citizens of other nations, particularly in the developing world. Through the U.S. Defense Department's Military Assistance Program and the Agency for International Development's Office of Public Safety, Washington changed the orientation of many nations' military forces from external defense to internal security in an effort to extinguish potential communist insurgencies. Although these programs frequently succeeded in repressing the Marxist threat, the trade-off was often military governance resulting in repression and gross human rights violations.

Clark, Mark Wayne
(1896–1984)

U.S. Army general and commander of United Nations (UN) forces in the Republic of Korea (ROK, South Korea). A third-generation soldier, Mark

Wayne Clark was born on 1 May 1896 in Madison Barracks, New York. He graduated from the United States Military Academy, West Point, in 1917 and then fought in France, where he met his future mentor, George C. Marshall. During the interwar years, Clark held various command and staff positions. He was promoted to brigadier general in August 1941 and was working on army expansion when the United States entered World War II. Promoted to major general and named chief of staff for U.S. Army ground forces in April 1942, Clark earned a reputation as an effective troop trainer. In the summer of 1942 Marshall, then U.S. Army chief of staff, appointed Clark to command II Corps in England, where he helped plan the invasion of North Africa. His dramatic submarine voyage to Algiers in October 1942 to coordinate the advance surrender of the French garrison earned him a promotion to lieutenant general in November (the youngest at the time) and the position of deputy supreme commander of the Allied invasion of North Africa.

Following the conquest of North Africa, Clark became commander of the U.S. Fifth Army, providing controversial leadership during the campaign in Italy as a headline seeker, especially when he rejected an opportunity to destroy the German Tenth Army in favor of an American liberation of Rome. Following the German surrender in April 1945, Clark's troops occupied the U.S. sector of Austria, where he was high commissioner. Clark fed hungry locals with survival rations and rebuilt the economy with massive U.S. aid. His stormy relations with the Soviet military demonstrated that his talents did not extend to diplomatic poise and patience. After negotiating the Austrian peace treaty in June 1947, he served as commander of the U.S. Sixth Army and then the U.S. Army Field Forces Training Command.

Postponing plans to retire, in May 1952 Clark assumed command of UN forces in Korea, where he soon began complaining about the lack of men and materials. Reluctantly, he followed orders and continued the truce negotiations but also escalated the bombing of North Korea to force a settlement. Before signing an armistice agreement on 27 July 1953, he played a key role in securing the cooperation of President Syngman Rhee in respecting the armistice and improving the training and equipping of the South Korean Army. Clark never accepted the necessity for an armistice in Korea, believing that Americans lacked the will to win that prevented the United States from using atomic weapons to achieve a decisive defeat of the communists.

Clark retired from active duty in 1953. From 1954 to 1965 he was president of The Citadel in Charleston, South Carolina. He died in that city on 17 April 1984.

As commander of the Fifth Army in Italy during World War II, Lieutenant General Mark Clark was determined to liberate Rome. During 1952–1953 he commanded United Nations forces in the Korean War. (Library of Congress)

Clay, Lucius DuBignon

(1897–1978)

U.S. Army general and military governor of the U.S. occupation zone of Germany (1947–1949). Born on 23 April 1897 in Marietta, Georgia, Lucius Clay was the son of a U.S. senator. After graduating from the U.S. Military Academy, West Point, in 1918, Clay entered the army's Corps of Engineers, making his reputation as a strong administrator rather than as a combat general. In 1942 during World War II, he became assistant chief of staff for materials, service, and supply and was promoted to major general. Following the June 1944 Normandy invasion, Clay took charge of reopening the port of Cherbourg for Allied resupply. He subsequently rose to director of materials, responsible for coordinating all logistical details of army war production and assignment, and eventually, in 1944 on leave from the army, was named deputy director of war mobilization and reconversion.

Clay returned to Europe in April 1945 as General Dwight Eisenhower's civilian affairs deputy, with responsibility for feeding and housing the population in the U.S. zone of Germany. Clay was then military governor in the U.S. zone from March 1947 to May 1949 as a lieutenant general. Clay firmly opposed plans to pastoralize the country by destroying its heavy industry, emphasizing the need for timely restoration of civilian government in Germany, and moved steadily toward a divided Germany and the establishment of a separate Federal Republic of Germany (FRG, West Germany) state. In June 1948, when the Soviet Union interdicted all land movements of supplies into Allied-occupied West Berlin, Clay advocated dispatching an armed supply convoy through Soviet-occupied the Democratic Republic of Germany (GDR, East Germany). His superiors in Washington rejected this forceful advice as overly confrontational but quickly endorsed Clay's independent decision to resupply Berlin by air for almost a year, evidence of America's commitment to the policy of containment of Soviet expansion, which Clay's stance quickly came to symbolize. In May 1949, a few days after the blockade ended, Clay left both the army as a full general and, to rapturous farewells, West Germany, where a civilian high commissioner, John J. McCloy, replaced him.

In retirement Clay served as chairman of Continental Can Company and a senior partner with Lehman Brothers investment bank. Politically active,

in 1952 he helped to persuade Eisenhower to seek the Republican presidential nomination. During the 1961 Berlin crisis President John F. Kennedy dispatched Clay to the city as his personal representative to demonstrate continuing American support for its independence. He died in Chatham, Massachusetts, on 16 April 1978. Clay's career demonstrated both the growing military significance of administrative, organizational, logistical, and engineering abilities within the twentieth-century U.S. Army and the major diplomatic responsibilities increasingly accorded American military representatives.

An outstanding U.S. logistician during World War II, General Lucius DuBignon Clay commanded the U.S. occupation zone of Germany during 1947–1949. (Library of Congress)

U.S. State Department official; served as assistant secretary of state for economic affairs (1944–1946) and undersecretary of state for economic affairs (1946–1947). Born near Tupelo, Mississippi, on 7 February 1880 to a modest cotton farming family, William Lockhart Clayton entered the cotton industry at the age of thirteen. In 1904 he and his brother-in-law established a cotton brokerage, Anderson, Clayton & Company, in Oklahoma City, which within twenty years had become the world's largest such firm, trading extensively with Europe and Asia. In 1916 the business moved to Houston, Texas, Clayton's home for the rest of his life.

A dedicated believer in free markets, during the 1930s Clayton supported President Franklin D. Roosevelt's international tariff reductions while opposing the New Deal domestic statism and welfare programs. In 1940 Clayton joined the Century Group, which supported U.S. aid to Britain and intervention on the Allied side in World War II. Clayton served successively as advisor

Lockhart**
(1880–1966)

to Coordinator of Inter-American Affairs Nelson Rockefeller (August–October 1940), deputy federal loan administrator (October 1940–February 1942), and assistant secretary of commerce (February 1942–January 1944), focusing on procuring international strategic materials for the American war effort.

As assistant (December 1944–August 1946) and then undersecretary of state for economic affairs (August 1946–October 1947) and special advisor to the secretary of state (October 1947–1948), Clayton sought to rebuild the international trading system. As such, he was heavily involved in negotiating the 1948 General Agreement on Trade and Tariffs (GATT), the beginning of forty years of trade liberalization. A strong Anglophile, in December 1945 he arranged a \$3.75 billion loan to Britain, albeit one whose ultimate price was British dismantling of the sterling area in favor of a convertible currency. Clayton's personal observations during a spring 1947 trip to Western Europe impelled him to write a memorandum for Secretary of State George C. Marshall urging a major American economic assistance program for that area, which became an important factor in the secretary's subsequent advocacy of the European Recovery Program (also known as the Marshall Plan).

Retiring to Houston in November 1948, Clayton became a staunch advocate of an Atlantic Union of the Western democracies, while his faith in free trade remained unabated. During the 1950s and 1960s he also repeatedly though unavailingly urged the U.S. government to recognize and trade with the communist People's Republic of China (PRC). Clayton died in Houston on 8 February 1966.

Clifford, Clark McAdams (1906–1998)

U.S. presidential advisor and secretary of defense (1968–1969). Born in Fort Scott, Kansas, on 25 December 1906, Clark McAdams Clifford earned bachelor's and law degrees from Washington University in St. Louis, Missouri. After practicing law, he volunteered for the U.S. Navy in 1943. A posting to the White House in 1945 as assistant naval aide led to his appointment as naval

aide, assistant, and finally counsel to President Harry S. Truman, a position he held until late 1949.

Clifford became an early supporter of the containment strategy. He and presidential aide George M. Elsey drafted a memorandum on Soviet-American relations that urged the Western powers to ally against further Soviet expansion. Clifford was largely responsible for drafting Truman's February 1947 speech that outlined the Truman Doctrine and was a major architect of the 1947 National Security Act.

Clifford contributed to drafting the European Recovery Act of 1948 that put the Marshall Plan into effect and to the establishment of the 1949 North Atlantic Treaty. In 1948 he helped persuade Truman to recognize the new state of Israel. Clifford was one of the planners of the 1949 Point Four Program, whereby Truman promised substantial economic aid to underdeveloped countries.

In early 1950 Clifford left the White House to practice law in Washington, D.C. By 1960 he was widely considered the city's most influential Democratic lawyer. After handling several legal matters for then Senator John F. Kennedy, in late 1960 Clifford headed the president-elect's transition team but refused any formal office. Both Kennedy and his successor, Lyndon B. Johnson, however, called upon Clifford for advice on various matters. After the Bay of Pigs fiasco of April 1961, Clifford advised Kennedy to set up an independent oversight body to supervise the intelligence community. Kennedy then appointed Clifford to the new Foreign Intelligence Advisory Board, of which he became chairman in 1963.

In the early 1960s Clifford did not oppose the initial commitment of U.S. aid to South Vietnam. Together with Undersecretary of State George W. Ball, however, Clifford strongly opposed the major May 1965 deployment of American ground forces in Vietnam. Having lost this argument, Clifford believed that the United States should prosecute the war vigorously.

In late January 1968, Clifford was confirmed as secretary of defense, replacing the conflicted Robert S. McNamara for Johnson's final nine months as president. Clifford set up a Vietnam Task Force to reassess the situation in Vietnam and soon realized that the U.S. military had no concrete plan for victory. In early March 1969, he therefore recommended to the president that the United States commit only those forces necessary to meet immediate needs in Vietnam.

Fearing that victory was unattainable, Clifford summoned another meeting of the so-called Wise Men, most of whom concluded that the United States could not attain its ends in Vietnam and should begin peace negotiations. This contributed to Johnson's public announcement on 31 March 1968 of a unilateral bombing halt and to his decision not to seek the presidency again. Throughout 1968 Clifford battled administration hawks, most notably

Clark Clifford was a trusted advisor in the Truman, Kennedy, and Johnson administrations. Clifford served as secretary of defense during 1968–1969 and advised President Lyndon Johnson that the United States could not secure the ends it sought in Vietnam. (Yoichi R. Okamoto/Lyndon B. Johnson Library)

National Security Advisor Walt W. Rostow and former Secretary of State Dean Rusk, to maintain the bombing halt and continue negotiations with North Vietnam while publicly exerting pressure on South Vietnamese officials to join in peace talks.

In the early months of Richard Nixon's administration, Clifford praised the new president's intention to withdraw American troops. But Clifford alienated both Nixon and Johnson in the summer of 1969 when he publicly urged the unilateral withdrawal of 100,000 American troops by December 1969 and of all ground forces by December 1970. He also condemned the May 1970 U.S. invasion of Cambodia.

Clifford continued to practice law in Washington and play the role of Democratic Party elder statesman. Under President Jimmy Carter, Clifford undertook diplomatic assignments to Greece, Turkey, Cyprus, India, and Pakistan and helped to win Senate ratification of the Panama Canal Treaties. Although he avoided prosecution, in the late 1980s and early 1990s Clifford's involvement with the Bank of Credit and Commerce International, which lost billions of dollars in fraudulent dealings, besmirched his reputation, as did his well-publicized negligence as trustee to the family holdings of deceased elder statesman W. Averell Harriman. Clifford died in Bethesda, Maryland, on 10 October 1998.

Cohn, Roy Marcus
(1927–1986)

Influential attorney and Cold War icon who helped fan the fires of McCarthyism in the early 1950s. Born 20 February 1927 in New York City, Roy Cohn

graduated with a law degree from Columbia University Law School in 1947. He immediately began working in Manhattan for the U.S. Office of the Attorney General, a plum assignment for a young lawyer. There Cohn helped win several high-profile anticommunist cases, which would soon become his stock-in-trade.

By 1950 Cohn had become well known and had successfully prosecuted eleven members of the American Communist Party charged with sedition and treason. His work on the Alger Hiss case also highlighted his skills as a manipulative and cunning prosecutor. But it was Cohn's zealous prosecution of Julius and Ethel Rosenberg in 1951, in one of the most spectacular trials of the century, that made him almost a household name. The Rosenbergs were both found guilty of selling atomic secrets to the Soviets and were later executed.

Federal Bureau of Investigation Director J. Edgar Hoover recommended Cohn to Republican Senator Joseph R. McCarthy, who had launched a zealous and reckless anticommunist crusade in 1950. By 1951, McCarthy was holding ongoing hearings intended to grill individuals about their past affiliations and sympathies in an attempt to expose communists of all stripes. He was in need of an effective attorney to assist him and hired Cohn upon Hoover's personal recommendation. Cohn did not disappoint. His penetrating questioning and aggressive tactics were a perfect complement to McCarthy's loutish behavior, and before long Cohn was McCarthy's chief counsel. Cohn thus became a key player in the agony that was McCarthyism. In 1954, when McCarthy overreached and made a fool of himself, Cohn quietly left his employ and began practicing law in New York City. Although Cohn's celebrity would fade in the years to come, he would always hold the dubious distinction of having aided and abetted the debilitating excesses of McCarthyism.

In private practice, Cohn enjoyed a storied career. His many high-profile clients included the Archdiocese of New York, Donald Trump, and Mafia kingpin John Gotti, among others. Cohn continued to be active in Republican politics and often acted as an informal advisor to Presidents Richard Nixon and Ronald Reagan. But Cohn's apparently unscrupulous practices made him the subject of numerous investigations in the 1970s and 1980s. The New York State Bar Association finally disbarred him just weeks before his death in Bethesda, Maryland, on 2 August 1986.

It was Cohn's zealous prosecution of Julius and Ethel Rosenberg in 1951 that made him almost a household name.

**Cohn-Bendit, Daniel
Marc**
(1945–)

Anarchist leader of the French student rebellion of May 1968 and later a prominent European politician and Green Party representative. Born to German-Jewish parents on 4 April 1945 in Montabaun, France, Daniel Cohn-Bendit spent his early years in Paris but at age thirteen moved with his mother to the Federal Republic of Germany (FRG, West Germany). He graduated from the liberal Odenwaldschule school in 1965 and then went to the University of Paris at Nanterre to study sociology. There he became involved in anarchist student groups and helped create the March 22nd Movement, which sparked the 1968 May student uprising in Paris. During the students' standoff with the government of President Charles de Gaulle, Cohn-Bendit quickly rose to national prominence as the media spokesperson for the protest movement.

After the protests, Cohn-Bendit was expelled from France and relocated to Frankfurt. He was legally barred from France until 1978. In Frankfurt he became a key figure in the local anarchist scene (Spontis) and cultivated a close friendship with Joschka Fischer, later to become minister for foreign affairs. Both men were outspoken critics of leftist-supported terrorism, particularly that of the Red Army Faction in Germany. Although not a founding member, Cohn-Bendit played an important role in the formation of the German Green Party and was appointed Frankfurt's first city councillor for multicultural affairs in 1989.

Cohn-Bendit later embraced European politics and was the first politician to sit in the European Parliament (EP) as a representative of two countries: West Germany and France. After joining the EP as a member of the German Green Party in June 1994, he led the French Greens to a stunning EP electoral success in 1999. In the June 2004 EP elections, Cohn-Bendit was the top candidate of the newly formed European Green Party.

Colby, William Egan
(1920–1996)

U.S. Central Intelligence Agency (CIA) official and then director (1973–1976). Born on 4 January 1920 in St. Paul, Minnesota, William Egan Colby graduated from Princeton University in 1940 and enrolled at Columbia University Law School before entering the U.S. Army during World War II. Trained as

a parachutist, he began his intelligence career when he was transferred to the Office of Strategic Services (OSS).

Following the war, Colby returned to Columbia, earned his law degree in 1947, and practiced law in New York until 1950. Motivated by the 1949 communist victory in China and the outbreak of the Korean War in June 1950, he decided to join the CIA. During the 1950s he was attached to the U.S. embassies in Sweden (1951–1953) and Italy (1953–1958). A defining moment in his career occurred in 1959 when he was assigned to Saigon as head of CIA operations in the Republic of Vietnam (RVN, South Vietnam).

Colby proved to be an aggressive Cold Warrior and was an early critic of RVN President Ngo Dinh Diem's corrupt and ineffectual leadership. Colby returned to the United States in 1962 and served as chief of the CIA's Far Eastern Division from 1962 to 1968. In 1968 he returned to Vietnam, first as deputy director and then director of the Accelerated Pacification Campaign (APC), initiated in November 1968. The APC focused on enhanced security and development within South Vietnam's villages and included such components as the Phoenix Program and the People's Self-Defense Force. The Phoenix Program was a CIA-inspired effort to eliminate the communist Viet Cong (VC) infrastructure within South Vietnam. Between 1968 and 1972 the program may have resulted in the capture of some 34,000 VC, of whom 22,000 rallied to the RVN government. The number of those Vietnamese killed may have reached 26,000.

Colby left South Vietnam in 1971 and was promoted to CIA director-controller in 1972 and deputy director of operations in 1973. He became director of the CIA in September 1973 and held that post until his retirement in January 1976. When Colby became director, the agency's reputation and morale had reached a low point. The CIA's failures and abuses abroad, such as those in Vietnam and Chile, combined with its illegal domestic activities associated with the Daniel Ellsberg (Pentagon Papers) case and the Watergate scandal undermined support for the agency. Although Colby struggled under reduced budgets and continuing political difficulties, he did succeed in making the CIA more open and responsive to Congress. Conversely, this openness earned the opposition of many Cold Warriors and helped end Colby's tenure as director. In January 1976, President Gerald R. Ford appointed George H. W. Bush to be the new director. Colby died on 27 April 1996 while on a canoe trip in Rock Point, Maryland.

Cold War Study Centers, Non-U.S.

The collapse of East European communist governments in 1989 and the Soviet Union in 1991 made it possible for scholars from many countries to begin to study the history of the Cold War with the benefit of access to previously inaccessible archives in countries of the former Soviet bloc. Scholars in the former communist countries as well as in Western Europe have created several new centers for the study of the Cold War with the assistance of the Cold War International History Project of the Woodrow Wilson International Center for Scholars in Washington, D.C.; the National Security Archive at George Washington University; and other institutions.

The Cold War History Research Center in Budapest, founded in December 1998, supports research on Cold War history in Hungary and assists the integration of Hungarian scholars into the international scholarly community. Besides its collaboration with the Cold War International History Project and the National Security Archive, the Cold War History Research Center has established cooperation with several research centers in Canada and Western Europe, with the institutes of contemporary history in both Warsaw and Prague, with the Cold War Research Groups in Moscow and Sofia, and with several Romanian researchers.

The Center for Cold War History at the Institute for Contemporary History in Prague, Czech Republic, collaborates with scholars from many countries to conduct research in Czech archives, prepare publications, and host conferences. The Cold War Research Group–Bulgaria in Sofia was established in 1999 with support from the Cold War International History Project and the following year hosted a conference on the Cold War in the Balkans. The group has published the results of its research in Bulgarian archives in a series of CDs.

The Albanian Cold War Studies Center was established in 2001 with support from the Cold War International History Project. The historians and archivists associated with the center contributed to the successful opening of the Albanian archives in the spring of 2005. Translations of the first research efforts will be published by the Cold War International History Project in 2007.

The Cold War Studies Centre at the London School of Economics has a series of research programs dealing with the Cold War in Europe and the third

world and several programs of cooperation with research institutions in Russia and China. The center hosts visiting scholars and research and postdoctoral fellows and cooperates closely with academic and government institutions and Cold War studies centers worldwide. Each year the center joins the University of California–Santa Barbara and George Washington University in Washington, D.C., in organizing a conference on Cold War topics for graduate students from around the world.

In 2001 a group of Italian Cold War historians established the Machiavelli Center (CIMA), an interuniversity center that includes a number of departments from the universities of Florence, Padua, Pavia, Perugia, Rome Three, and Urbino. This project centers around the activities of the Dipartimento di Studi sullo Stato of the University of Florence, perhaps the most important academic institution for international studies in Italy and the core of a large network of international academic contacts.

In 1999 the Modern History Research Center and Archives was established at Beida University (Beijing). Housed in Beijing University's History Department, the center has begun to collect Western, Russian, and Chinese archival and other materials on the Cold War, and some of its collections are now part of the Beida Main Library. More recently, the Center for Cold War International History Studies was established at East China Normal University (ECNU). The ECNU Center has begun to publish the *Cold War International Studies Bulletin*, which conveys to a Chinese-speaking audience important findings and developments in Cold War studies and introduces new Cold War scholarship into Chinese research and teaching.

The Cold War Working Group of Mongolia, in Ulaanbaatar, hosted an international conference in 2003 and continues to collaborate with scholars in many countries.

Since the 1991 collapse of the Soviet Union and the subsequent declassification of Russian archives, Cold War scholarship has burgeoned in the United States and abroad. Several centers have emerged with the mission of fostering Cold War studies. One of the first was the National Security Archive, founded in 1985 with its headquarters at George Washington University's Gelman Library. The archive, funded largely by private donations, has concentrated on collecting and making available declassified U.S. government

Cold War Study Centers, U.S.

documents obtained through the Freedom of Information Act. By 2000, the National Security Archive had consolidated its place as the foremost non-governmental repository for such materials.

Complementary to the efforts of the National Security Archive has been the Cold War International History Project (CWIHP), begun in 1991 at the Woodrow Wilson International Center for Scholars in Washington, D.C. The CWIHP concentrates in part on accessing the records of former communist regimes as their successor governments open their archives. The CWIHP hosts Cold War conferences, sponsors focused publications, and assembles document collections from both sides of the Iron Curtain on such key events as the Korean War, the 1956 Suez Crisis, the 1979 Soviet invasion of Afghanistan, and the 1980–1981 Polish crisis.

With the end of the Soviet Union and the opening of its archives and those of its satellites, a flood of documentary information has recently become available. To organize this vast body of evidence, Sovietologists founded the Harvard Project on Cold War Studies (HPCWS), which houses the materials at the Widener and Lamont Libraries as well as the HPCWS offices. Seeking to glean lessons for the present from the Cold War era, the HPCWS sponsors a book series that has produced such titles as *Redrawing Nations: Ethnic Cleansing in East-Central Europe, 1944–1948* (2001) and *Resistance with the People: Repression and Resistance in Eastern Germany, 1945–1955* (2003). In 1999 the HPCWS began publication of the peer-reviewed *Journal of Cold War Studies* that features articles based on newly available evidence from both Eastern and Western sources.

Established in 1996 by Francis Gary Powers Jr., the son of the famed U-2 pilot, the National Cold War Museum and Memorial seeks to preserve records and artifacts from the conflict. A prime objective of the organization is the acquisition of a Nike missile base at Lorton, Virginia, for development as a museum and archive. One early initiative was to send a traveling exhibit of U-2 artifacts on a worldwide tour to attract support for the construction of the museum headquarters.

A number of other organizations look at the Cold War through a narrower lens. Texas Tech University in Lubbock houses the Vietnam Center. Since its beginning in 1989, the center has amassed one of the largest collections of materials on Vietnam, from the early days of French colonial rule to the very recent past. The center catalogs 8 million pages of manuscript materials and 12 million pages of documents on microfilm. It has also conducted hundreds of oral history interviews. To make access easier for scholars, the center has put many of these records on the Internet.

Preserving materials on the Korean War is a similar, albeit smaller, organization: the Center for the Study of the Korean War located at Graceland University in Independence, Missouri. It too gathers manuscript materials and conducts interviews of veterans of the conflict.

In 2001 the Department of History at the Virginia Military Institute in Lexington, Virginia, set up the John A. Adams Center of Military History and Strategic Analysis to “promote innovation in military history and strategic studies.” As the center took shape, it began to focus principally on military

aspects, broadly defined, of the Cold War with special emphasis on America's armed forces. Among the center's initiatives have been the organization of conferences on the Cold War, the sponsorship of prizes for Cold War scholarship, and the collection and dissemination of the recollections of Cold War veterans of all U.S. armed forces.

In 2002 the University of Kentucky in Lexington accessioned the Scott Collection, a treasure trove of Soviet military materials. Gathered during two tours of duty in Moscow by Colonel William F. Scott and his wife, Harriet, the collection contains thousands of books and pamphlets on the Soviet defense establishment, doctrine, and equipment.

U.S. Army general and army chief of staff. Born in New Orleans on 1 May 1896, Joseph Lawton Collins graduated from the U.S. Military Academy, West Point, in 1917 and then served at various posts in the United States before occupation duty in Germany. During the interwar years, Collins was an instructor at West Point, the Infantry School, and the Army War College. He also served in the Philippines.

After the United States entered World War II, in 1942 Collins was promoted first to brigadier general and then to major general. From May to December 1942, he commanded the 25th "Tropic Lightning" Infantry Division, leading it with distinction in fighting on Guadalcanal. In December 1943 he went to Britain to command VII Corps, which he led in the landing at Normandy in June 1944. A superior tactician and strategist, Collins was relentless as a battlefield commander, earning the nickname "Lightning Joe."

Promoted to lieutenant general in April 1945, Collins became director of information at the War Department in his first postwar assignment, speaking with force and eloquence to civic groups about military preparedness. He then served as vice chief of staff of the army during 1947–1948. Advanced to full general in January 1948, he became chief of staff of the army in August 1949, replacing Omar N. Bradley who became chairman of the new Joint Chiefs of Staff (JCS). After the Korean War began in June 1950, Collins was the executive agent for the JCS with responsibility for transmitting instructions to the United Nations Command (UNC) and identifying issues for study or action. Collins conducted regular trips to Japan and Korea to assess manpower and materials requirements, consulting with General Douglas MacArthur and his successors and visiting U.S. commanders in the field. In

the May 1951 Senate hearings that followed President Harry S. Truman's recall of MacArthur, Collins explained that MacArthur's violation of orders undermined the administration's limited war strategy necessary for the adequate defense of Western Europe.

In August 1953, Collins became the U.S. representative to the Military Committee and Standing Group of the North Atlantic Treaty Organization (NATO). Having worked closely with Collins during World War II, in November 1954 President Dwight D. Eisenhower sent him on a mission to the Republic of Vietnam (RVN, South Vietnam) to provide a candid evaluation of conditions in order to formulate a program of assistance and military, political, and economic reform. Collins also was to assess the political viability of newly appointed Prime Minister Ngo Dinh Diem. Returning to the United States in May 1955, Collins warned that the chances of Diem creating a strong government were remote, although he favored U.S. aid to South Vietnam. Eisenhower ignored his advice, setting the stage for the eventual conflict in Southeast Asia. Collins retired in 1956 and died on 12 September 1987 in Washington, D.C.

Colombia

South American country covering 439,733 square miles, roughly four times the size of the U.S. state of Nevada. Colombia borders Panama and the Pacific

Ocean to the west, Venezuela and Brazil to the east, Ecuador and Peru to the south, and the Caribbean Sea to the north-northwest. With a 1945 population of approximately 11 million people, Colombia is an overwhelmingly Catholic nation. Spanish is the official and predominant language.

During World War II, Colombia cooperated closely with the United States in hemispheric defense operations, especially in the Panama Canal area. It was the first South American nation to break diplomatic relations with Japan, Germany, and Italy. When the war ended, Colombia strengthened its ties to the United States, both militarily and economically.

Colombia was the only Latin American country to send troops to the Korean War as part of the United Nations Command. Under the Mutual Security Act of 1951, the country became one of the main recipients of U.S. military assistance. The Panama Canal was of vital strategic value for the United States, and given Colombia's geographic proximity to the canal, strengthening Colombia's military capabilities was a U.S. priority.

In 1950, Colombia's economy depended primarily on coffee exports, with the United States as its primary market. Other exports such as bananas, gold, and platinum were also exported to the United States in fairly sizable quantities.

In 1948, Jorge Eliézer Gaitàn, a reformist and candidate of the Colombian Liberal Party for the presidency, was assassinated in Bogotá. A wave of violence swept the country, putting it on the brink of civil war. That episode also influenced relations between the United States and Colombia, as leaders in both countries feared that communists had participated in the destabilization effort. Colombia severed diplomatic relations with the Soviet Union and worked with the United States to contain the threat of communism in South America. Because the Colombian Communist Party was not very powerful in the early 1950s, these efforts were concentrated on Colombian labor movements in which both communists and socialists were active. While violence continued for some years, in 1958 conservatives and liberals came together to create the National Front, a power-sharing arrangement that lasted until 1974 and brought some political stability to Colombia.

In the 1960s, the Cuban revolution served as the ideological underpinning of several guerrilla movements. The National Liberation Army (ELN) and the Revolutionary Armed Forces of Colombia (FARC) emerged as the main guerrilla groups in the country in 1964. Both groups remained active thereafter, with the FARC being the more numerous.

Although President Alberto Lleras Camargo (1958–1962) was a critic of the Cuban revolution and ordered the severing of relations with Cuba, he maintained that it was the Organization of American States (OAS) and not the United States that should take action against the Fidel Castro regime. In 1961, Colombia and Peru called for an OAS meeting to analyze possible sanctions against Cuba. This conference, which took place in Punta del Este in January 1962, resulted in the suspension of Cuba from both the OAS and the Inter-American System. Notwithstanding Colombia's preference for a multilateral approach in hemispheric issues, its relations with the United States remained cordial; in fact, under the Alliance for Progress, Colombia

View from the Granada Hotel of Avenida Jiménez de Quesada in downtown Bogotá, Colombia. Looters and rioters set fires and overturned streetcars on 9 April 1948. (AP/Wide World Photos)

received almost \$900 million in economic aid, loans, and private investments from the United States.

During the 1970s, Colombia's policy toward communist regimes softened. It reestablished diplomatic relations with both the Soviet Union and Cuba and recognized the new Angolan government (Popular Movement for the Liberation of Angola) and the Sandinista government in Nicaragua. The administrations of Alfonso López Michelsen (1974–1978) and Julio Turbay Ayala (1978–1982) sought an independent foreign policy and supported the Non-Aligned Movement, although Colombia did not formally join the latter until 1983.

Turbay shifted his foreign policy in 1981 when he decided to break diplomatic relations with Cuba and aligned his policy with that of the Ronald Reagan administration. This shift occurred chiefly because of alleged Cuban and Nicaraguan support for the April 19 Movement, an urban group that emerged in 1970 and became the second most important guerrilla movement after the FARC. During the Falklands (Malvinas) War (1982), Colombia re-

fused to support the Argentine position in the OAS and abstained on the vote to invoke the Inter-American Treaty of Reciprocal Assistance, the only Latin American state to do so.

Although during the election campaign the new President Belisario Betanour (1982–1986) had not given any indication of wishing to change Colombia's foreign relations, in his inaugural speech he declared that Colombia would join the Non-Aligned Movement. In sharp contrast to his predecessor, he called for Latin American solidarity and reaffirmed Argentina's sovereignty rights over the Malvinas. Betancourt also became one of the chief opponents of Reagan's Central America policy. Escalation of the conflict there led Reagan to encourage a peaceful settlement for the embattled region. Together with Mexico, Panama, and Venezuela, Colombia created the Contadora Group in 1983.

Betanour's active diplomacy in Central America was, however, challenged by domestic realities, particularly drug trafficking and the intensification of guerrilla violence. The connection between the FARC and the drug cartels opened the door for improved U.S.-Colombian relations. In the mid-1980s, drug trafficking replaced other issues in the bilateral agenda. With the end of the Cold War, Colombia's foreign policy turned its focus toward strengthening its fight against drugs.

Regional development program for nations in South and Southeast Asia conceptualized in 1950 and put into force in 1951. The Colombo Plan for Cooperative Economic Development in South and Southeast Asia arose from a meeting of British Commonwealth foreign ministers in Ceylon (Sri Lanka) in January 1950. Less of a plan than an umbrella under which donor countries developed bilateral aid programs with recipient nations, the idea grew from three interrelated aims: the need to alleviate poverty in Asian nations

Colombo Plan

during the transition from colonial to independent status, the need to counter the attraction of communism in the region, and the need to provide conditions conducive to stable, moderate regimes.

Initially restricted to members of the British Commonwealth, the Colombo Plan expanded rapidly to include non-Commonwealth nations such as Indonesia, Thailand, Vietnam, and the Philippines (later extended to the South Pacific) and to donors such as the United States and Japan. Japan's membership in 1954 illustrated briefly held American hopes that the Colombo Plan might become a vehicle for more than bilateral aid projects, in the same way that the Marshall Plan had been in Europe. Washington hoped that Japan's membership would facilitate rapid integration of developing Asian economies with Japan's economy—that is, raw materials flowing into Japan and capital flowing out to developing nations. In the mid-1950s, however, memories of World War II were still vivid, and there was little Cold War consensus among new Asian nations. Thus, Japan's role in the plan remained a minor one.

The Colombo Plan began with two separate operations. One operation was an economic development scheme inviting financial support for developmental projects such as dam and road building. The other operation was technical assistance—the promotion of technical expertise, education, and training in a broad range of activities that logically assisted economic development and sound administration. Separate groups—a Consultative Committee in the case of economic development and a Council for Technical Co-operation for other aid—comprising members of the Colombo Plan met regularly to examine requests for aid and coordinate responses. The development projects were the more expensive, and in the late 1950s and 1960s they included ambitious dam building, agricultural innovations, and other modernizing features. The Canadians built a nuclear power reactor in India, but an even more ambitious plan for a reactor and school in nuclear technology, servicing Southeast Asia and based in Singapore, was not realized.

The Colombo Plan continues today (with twenty-five member countries), but since the 1980s it has become a much-reduced concept, focused on security, drug advisory programs, and the like. It is hard to evaluate its impact up to the 1980s. Most of the more ambitious development schemes depended on U.S. aid that had little to do with the Colombo Plan. In fact, much of the American money labeled as Colombo Plan aid was only loosely associated with it. Some projects made significant differences but, on their own, could hardly be credited with transforming Asian economies. For other donor countries, such as Australia and New Zealand, scholarships granted under the technical assistance side of the plan provided Asian students with study opportunities at a tertiary level and helped foster dialogue while eroding anti-Asian sentiments at home.

Comecon (1949–1991)

Acronym for the Council for Mutual Economic Assistance. The Council for Mutual Economic Assistance (Comecon or CMEA) was founded in January 1949 in Moscow. Its goal was initially to bind the East European satellite states closer economically to the Soviet Union. It was also a response to the U.S.-initiated Marshall Plan. Comecon's timing was critical, as some East European states had shown interest in participating in the Marshall Plan. Overcoming the West's trade restrictions toward the Soviet bloc had been a major goal of Comecon integration since its inception. Among the other stated goals of Comecon were increased trade, extension of technical aid to member states, and the rendering of mutual assistance with respect to raw materials, foodstuffs, machines, equipment, and the like.

The founding Comecon states were Bulgaria, Czechoslovakia, Hungary, Poland, Romania, and the Soviet Union. In February 1949, Albania became a member state (although it became inactive in 1961). In 1950 the German Democratic Republic (GDR, East Germany) joined, followed by Mongolia in 1962, Cuba in 1972, and the Democratic Republic of Vietnam (DRV, North Vietnam) in 1978. Yugoslavia retained the status of associate member by participating in twenty-one of thirty-two key Comecon institutions. Other socialist states, including the People's Republic of China (PRC) and the Democratic People's Republic of Korea (DPRK, North Korea), as well as a number of nonaligned developing countries held observer status.

Comecon was united by a common ideological and economic basis, namely a socialist monoparty system based on Marxism-Leninism, and by an economic system based on state-run central planning. It was not homogeneous in terms of geography or a common stage of economic development. The most important institution of Comecon was the Session of the Council for Mutual Economic Assistance, which decided the broad guidelines of Comecon policies. From 1962, the executive committee of the council guided the execution of Comecon work, which was organized by the secretariat of the council. Four council committees, twenty-four standing commissions organized for different economic sectors according to the model of central planning prevailing in the member states, six interstate conferences, two scientific institutions, and a number of associated organizations supplemented the institutional structure of Comecon.

Billboards at Moscow's Economic Achievement Center extol the virtues of the Five-Year Plan of the Council for Mutual Economic Assistance (Comecon), 1985. (Brian A. Vikander/Corbis)

The history of Comecon can be divided into several phases. In its first phase, from its founding to 1956, cooperation among member states was relatively loose. From 1956 to the mid-1960s, there was a rapid growth of Comecon activities, especially after the adoption of the statutes of Comecon in 1959. Among the projects of these years were the unification of electrical power systems of the member states, coordination in transport, and, in 1963, the creation of the International Bank for Economic Cooperation to facilitate financial settlements among members. However, plans by Soviet leader Nikita Khrushchev to introduce a Comecon-wide system of central planning were rejected by other member states. Subsequently, a dispute broke out about the role of planning versus market relations among the member states. The adoption of the Comprehensive Program for the Further Extension and Improvement of Cooperation and the Further Development of Socialist Economic Integration in 1971 was a compromise, calling for joint planning as well as stressing the role of money, prices, and exchange rates in relations of member states. The joint projects concentrated on the area of joint exploitation of natural resources, such as the much-acclaimed Friendship pipeline project for the transport and distribution of crude oil from the Soviet Union to Eastern Europe. In 1970 the International Investment Bank came into being to finance joint investment projects and to provide cheap credit to developing member states.

Adoption of the phrase “socialist economic integration” pointed to the possible supranational nature of Comecon activities. The early 1980s brought a number of difficulties to the Comecon states, including the Polish and Hungarian debt crisis, the oil price shocks, and the decline of growth rates in centrally planned economies. In 1985, Soviet leader Mikhail Gorbachev tried to revive the Comecon process with the Comprehensive Program for Scientific and Technical Progress, which for the first time included supranational approaches in science and technology policy. However, the decline of Soviet power led to a rapid loss of interest among its member states, and in 1991, when East European states began to redirect their interest toward Western Europe, Comecon was formally disbanded.

From the beginning, there was inherent tension between the so-called sovereign equality of Comecon’s member states, which was expressed in equal representation (one country, one vote) in all Comecon institutions, and the hegemony of the Soviet Union. In decision making, this tension was accommodated by a process whereby a country could declare interest in a matter and then abstain from participating in a Comecon policy. In economic matters, the question of economic benefits from Comecon is much disputed. Basically, the Soviet Union provided cheap raw materials and energy to other member states, which then delivered finished goods to the Soviet Union. The opportunity costs of energy subsidies rose for the Soviet Union with the oil price shocks of the 1970s and early 1980s. Likewise, in terms of technology, the Soviet Union almost certainly transferred more to Eastern Europe than it received.

Despite its shortcomings, Comecon was a cornerstone in the Soviet Union’s strategy to achieve domination of the European continent. Comecon was from the beginning a response to the nascent European integration process. The international socialist division of labor did not, however, bring the same advantages as the division of labor of capitalist states due to the non-convertibility of currencies and the resulting necessity of balancing bilateral trade. Because of the limited number of participants and the limited depth of socialist integration, Comecon’s efficacy, compared to the West European integration process, was limited.

Cominform (1947–1956)

Western acronym for what was officially known as the Information Bureau of the Communist and Workers' Parties. The Cominform's creation in the autumn of 1947 was regarded as a crucial event in the onset of the Cold War. The Cominform's inaugural conference, attended by representatives from nine national communist parties—Bulgaria, Czechoslovakia, France, Hungary, Italy, Poland, Romania, Yugoslavia, and the USSR—met in western Poland at Szklarska Poremba during 22–28 September 1947. Andrei Zhdanov, arguably second in the Soviet hierarchy only to Premier Josef Stalin, gave the opening address while establishing a new benchmark in Soviet foreign policy.

In what soon became a key communist metaphor of the Cold War, Zhdanov promulgated the two camps thesis, which asserted that a democratic and peace-loving Soviet-led camp was in direct conflict with a war-mongering, imperialist camp based in the United States. From 1941 until early 1947, the Soviet Communist Party's official stance had been based upon cooperation with the noncommunist world. But the Cominform jettisoned this position, setting the stage for mutual antagonism between East and West. Zhdanov's postwar division provided the Cominform with its ideological justification: polarized allegiances within social democratic labor movements. It also alarmed the West, which now viewed the Cominform as a resurrected version of the pre-World War II Comintern dedicated to the spread of world communism.

Explanations for the foundation of the Cominform, nominally an information-sharing agency, are in dispute. The prevailing historical interpretation has maintained that it was a response to the introduction of the Marshall Plan in the summer of 1947, which Stalin saw as an attempt by the United States to impose economic and political hegemony in Europe. The formation of the Cominform was the next logical step in consolidating Eastern bloc countries after the Soviets repudiated the Marshall Plan. Recent documents from Hungarian archives suggest, however, that plans to reestablish an international communist organization may have been under way as early as 1946. This would imply that the Cominform was less a response to perceived Western hostility and more a nonmilitary means of Sovietizing Central and Eastern Europe. Whatever motives lay behind it, the Cominform's creation set off alarm bells from Washington to Whitehall in the autumn of 1947. Without doubt, the two camps thesis lent an air of permanency to the evolving Cold War.

The Cominform was initially located in Belgrade, Yugoslavia, rather than in Moscow. This was certainly appropriate given the early and prominent role model provided by Yugoslavia's Josip Broz Tito, although the tacit intention was to obscure the controlling hands of Stalin and Zhdanov. Also influential in promoting adherence to the new communist line was the Cominform's monthly journal, *For a Lasting Peace, for a People's Democracy!* The title was chosen by Stalin himself. The journal was published in fourteen languages and distributed in fifty-seven countries. As the two camps doctrine developed, any nation that supported the United States was deemed to

be allied with American imperialism. Only unwavering support of Soviet foreign policy could prevent such categorization.

Within the so-called people's democracies, the new policy wrought profound consequences. Communist parties discarded any appearance of cooperation with other parties, purged all noncommunists, and seized control of governments. The 1948 coup d'état in Czechoslovakia exemplified this process. The belief that the people's democracies were a new means by which the transition to socialism could be achieved was abandoned. Thus, the notion that different countries could determine their own road to socialism became doctrinal heresy.

On 28 June 1948, Tito's self-declared independence from Moscow triggered the excommunication of the Yugoslav Communist Party from the Cominform. Although Yugoslavia had been the most ardent proponent of the two camps thesis, the archetype had now become the pariah. Apart from the demonization of Tito, Yugoslavia's independence opened the first true schism in the international communist movement. The divide meant that neither Bulgaria nor Yugoslavia would continue to support the Greek communists, whose threats had helped convince the Americans in 1947 that the fate of Europe was still precarious. In October 1949, the Greek Communist Party acknowledged military defeat. Less than two months earlier Cominform architect Zhdanov died unexpectedly, and for the next three years the main thrust of Cominform activity became the peace offensive, which was a conduit for Soviet foreign policy. The Cominform did not long survive the Stalinist era. On 17 April 1956, Soviet Premier Nikita Khrushchev dissolved it as part of his reconciliation with Tito.

Legislation passed by the U.S. Congress ostensibly designed to outlaw the Communist Party in the United States and to deny its members access to other organizations. The Communist Control Act was passed by the U.S. Senate on 24 August 1954 for President Dwight D. Eisenhower's signature.

**Communist
Control Act**
(1954)

The act was an extension in scope of the 1950 Internal Security Act (also known as the McCarran Act). It was also a logical progression in the anti-communist witch-hunt of Senator Joseph R. McCarthy that came to be known as McCarthyism. Perhaps somewhat ironically, the legislation became law only weeks after McCarthy had disgraced himself on national television during the infamous Army-McCarthy Hearings. He was censured by the Senate for his reckless accusations and outlandish behavior. Nonetheless, the fires of McCarthyism still burned with great intensity in the late summer of 1954, and numerous Americans still honestly believed that communists had infiltrated the highest levels of the federal government.

The Communist Control Act built upon the Internal Security Act of 1950, which had been sponsored by staunchly anticommunist Nevada Senator Patrick A. McCarran. The 1950 legislation required, among other things, that all members of or contributors to the Communist Party or like associations be registered with the U.S. Office of the Attorney General. The 1954 act dramatically increased the penalties for those organizations and individuals who failed to register. Although the language of the Communist Control Act was unclear in places, the overall purpose of the legislation was to curtail the activities of the Communist Party. Although the act stopped short of banning communist organizations altogether, it did take away the “rights, privileges and immunities” of the Communist Party as a legal entity, which essentially denied it access to the legal process. In addition, it attempted to keep the party out of politics by forbidding any member of a communist organization to hold public office.

A second component of the Communist Control Act dealt specifically with labor unions, some of which had been infiltrated by communists. Seeking to crush communist influence in the organized labor movement, Congress forbade any member of any communist cause from being employed by a labor organization. It also denied communist-dominated labor unions the right to collective bargaining. Although the act stopped short of banning the Communist Party, it was invoked repeatedly in attempts to harass or bully leftist organizations of all stripes.

Communist Fronts

In the late 1940s and early 1950s, the U.S. Congress identified a number of organizations as fronts, or sponsors, of communist activity in the United States

and around the world. Such organizations were often accused of subversive activity and of receiving support from the Soviet Union. In some cases, these accusations proved groundless. In others, the allegations were more or less on target.

While socialist activity and organizations in the United States date back to the nineteenth century, American communism found its roots in the 1917 Russian Revolution and the organization of the Comintern in March 1919. The Comintern, or Third International, claimed leadership of all true revolutionary socialist parties around the world and brought them under Soviet influence. Initially, Soviet-inspired communism met stiff resistance in the United States, as the Red Scare of 1919–1920 associated communism with violence and subversion. However, the onset of the Great Depression in 1930 increased the status of the Communist Party of the United States of America (CPUSA) and associated organizations.

The Soviet leadership of the Comintern traditionally forbade the formal association of its member parties with other groups on the political Left. This changed in 1935, however, as communist groups were encouraged to work with other sympathetically minded organizations against fascism, forming a so-called Popular Front. In the United States, this resulted in the cooperation of liberals and socialists with the CPUSA. Groups such as the American Labor Party, the American Student Union, and the Workers' Party found common cause with Soviet-sponsored communism. The American artistic and literary communities often demonstrated sympathy for the communist agenda, forming the League of American Writers. The outbreak of the Spanish Civil War in 1936 further enhanced the bond between the various facets of the American Left as they cooperated to foster political and financial support for the republican side in the conflict. During the Spanish Civil War, a varied group of American volunteers (most of them communists), went to Spain to fight the fascists there. The policies of Soviet leader Josef Stalin, however, particularly the August 1939 Nonaggression Pact with Nazi Germany, ultimately alienated many members of the American Popular Front and drove them from continued association with the Communist Party.

The American alliance with the Soviet Union that began in 1940 ensured tolerance for domestic communism during World War II. As tensions with the Soviet Union grew inexorably in the mid- to late 1940s, however, the CPUSA and its associated groups came under great suspicion. In Congress, the House Un-American Activities Committee (HUAC) feared the activities of alleged communist subversives in American government and took drastic steps to expose them, despite damage to the reputations of the innocent. In 1949, eleven leading members of the Communist Party were convicted of subversion, and the U.S. Supreme Court upheld the convictions. The anticommunist accusations of Senator Joseph R. McCarthy, beginning in early 1950, further inflamed the situation.

In the atmosphere of this second Red Scare, which soon came to be known as McCarthyism, organizations with any past affiliation to the Communist Party came under intense suspicion as well. Individuals and groups affiliated with the Popular Front of the 1930s were branded as communists

(some justifiably, others not). The Independent Progressive Party, which had run former Vice President Henry Wallace for president in the 1948 election, was suspected. In 1950, despite President Harry S. Truman's veto, Congress passed the McCarran Internal Security Act, making it illegal to combine or conspire to support totalitarianism in the United States. The law was aimed at combating organizations suspected of subversive communist activity. In 1955 the Senate Internal Security Subcommittee, established to enforce the McCarran Act, issued a list of eighty-two sponsors of such activity in the United States, including labor organizations, youth groups, academic associations, and literary groups, many of them former Popular Front members.

Communist Revolutionary Warfare

A form of communist guerrilla insurgency, based upon rural peasant or urban underclass initiatives. The objective of the insurgency is the overthrow of an existing noncommunist regime and the establishment of a communist state. Communist revolutionary warfare in the Cold War context is usually, though not exclusively, associated with the Chinese communist theoretician Mao Zedong and Vietnamese General Vo Nguyen Giap. Based on his experiences in the Chinese Civil War and against the Japanese in World War II, Mao argued that in predominantly rural countries such as China, the revolution of the masses did not have to be led by the proletariat, as Vladimir Lenin had taught. Rather, the peasantry would be in the vanguard. Giap subsequently showed during the Indochina War against the French that Mao's approach could be adapted to more densely populated regions and that they applied as well when the principal enemy was a colonial power. But Giap's chief contribution to revolutionary warfare came in his assessment of the political and psychological difficulties that confront a democracy in waging a protracted war. Giap believed that public opinion would at some point demand an end

to the bloodshed and that political leaders would find themselves forced to promise an early end to the fighting.

Communist revolutionary warfare required that certain conditions develop, which were clearly evident in the wake of World War II. These included a peasantry dissatisfied with the status quo, the discrediting of colonial regimes, and the rise of nationalism. Mao's views received a further boost following the final Chinese communist victory over the Nationalists in October 1949. Communist revolutionary warfare was also an appealing strategy during the Cold War because it provided a means by which the major communist powers—the Soviet Union and the People's Republic of China (PRC)—could support surrogate movements around the world while minimizing the potential for nuclear confrontation with the United States and its allies. Finally, because it relied on guerrilla warfare, the strategy reduced the advantages that a government and its supporting states might have in terms of firepower and technology and placed the conflict in a venue in which that government was less comfortable.

In its orthodox form, Mao's approach set forth a three-stage progressive process by which the Communist Party would ultimately achieve victory. The transition to a higher stage required that certain conditions be met, but such a move was not irreversible in that reversion to a lower stage could occur if a change in the situation so warranted. In the first stage, subversion, the party established and publicized a basic cause for the insurgency and highlighted the government's contradictions—that is, its weaknesses and inability to meet the needs of the people. It built cells and arms stores, organized and trained guerrilla units, carried out acts of sabotage and terrorism, and generally attempted to reduce public confidence in the regime's ability to both handle the situation and govern the country.

Once insurgency leaders believed that the party had become strong enough to confront the government directly, the second, or guerrilla, stage began. Beginning in remote areas where government control was weakest, the party focused on building up its base areas—a communist underground in the villages—while guerrillas conducted operations, designed to prevent government interference with this process, in the surrounding areas. As success was achieved, the areas under insurgent control expanded, and the costs to the government increased. When these costs began to be unacceptable to the existing government, the insurgents seized the initiative and gained momentum. If the government was unable to reverse the situation, its defeat became inevitable.

Concurrently during the second stage, the insurgents built and trained main force units for commitment during the third stage, the war of movement. When the party leadership believed that the government was on the verge of collapse, the transition to the final stage occurred. Fresh main force units were committed in a general offensive in the expectation that a mass uprising would occur and the government would be overthrown. In sum, communist revolutionary warfare employed the elements of time, space, and cost in protracted warfare to destroy the will and ability of the government to resist. Everything, including military operations, was subordinate to political considerations.

In its orthodox form, Mao's approach set forth a three-stage progressive process by which the Communist Party would ultimately achieve victory.

Viet Cong fighters lie in ambush in a lotus field in South Vietnam during the Vietnam War, 16 August 1969. (AFP/Getty Images)

The methodical, elastic, and relatively low-cost nature of communist revolutionary warfare provided the insurgents with advantages in dealing with a weak government, particularly if that government was unable to develop the proper counterstrategy. The insurgents were not without challenges of their own, however, and a failure to address these satisfactorily could have fatal consequences. Gaining popular support early on was critical. This required identifying a basic cause that generated widespread appeal and exploiting inequities in the country that could be blamed on the government, even if they were not the government's fault. Selecting the right cause was important because it had to promote national unity, even among those who might not be receptive to the communist message. Successful communist insurgent movements, such as those in Vietnam, solved this potential problem by creating fronts such as the Viet Minh, composed of all political groups, and then controlling the fronts from behind the scenes.

The Republic of Vietnam (ROV, South Vietnam) during the latter half of the 1950s provides a classic situation in which this relationship was ripe for exploitation. President Ngo Dinh Diem's rejection of the elections scheduled under provisions of the 1954 Geneva Conference that ended the Indochina War—a course that had the full support of Washington—led to a resumption of fighting. Diem's actions reinforced the impression that his government could not win the election because it was corrupt and oppressive, was uninterested in correcting long-standing inequities such as land ownership, and was unable to address the growing insurgent threat.

Conversely, the effect of a weak-cause contradictions message can be seen in the Malayan insurgency. There, the Malayan Communist Party (MCP) attempted to unite the Malayan people behind an anticolonialist/nationalist banner as well. However, this failed to resonate because the MCP was 93 percent Chinese in an ethnically diverse society where communalism was a deep-seated problem. In addition, the contradictions of the colonial government were offset by the obvious, sustained British effort to prepare Malaya for independence and an effective counterinsurgency campaign.

Success required strong leadership and organization. The presence of a charismatic leader such as Ho Chi Minh in Vietnam was highly beneficial. In addition, the movement had to be well organized and well disciplined, not only to show that it could support a national effort but also to be able to administer territory that came under its control and to demonstrate that it provided a credible alternative to the government. Again, the Malayan communists suffered in this regard because the government's declaration of a state of emergency in the summer of 1948 forced the party to enter the guerilla stage before it was fully prepared to do so.

The strength of an insurgent movement could be further bolstered if it received outside support. Generally this took the form of political or moral support, infiltration of material and personnel assistance, or access to cross-border sanctuaries. The value of such support depended upon whether the insurgents were able to use it to exploit government weaknesses. British counterinsurgency expert Sir Robert Thompson argued that infiltrated assistance was only of use if it could be absorbed, which meant that the insurgency had to be growing. Geography could also have a bearing on the potential success of an insurgency. The presence of difficult terrain such as mountains and jungles, for instance, was beneficial because it provided the insurgents with space in which to work and was more difficult for the government to access, especially if its administrative infrastructure and communications systems were deficient.

Unless a government took immediate action to develop and implement the correct counterstrategy, the situation would progressively deteriorate and inevitably lead to an insurgent victory. The most comprehensive counterstrategy to deal with communist revolutionary warfare was that set forth by Thompson, based on his experiences in Malaya and Vietnam, and sometimes referred to as the oil spot theory. Thompson maintained that an effective counterstrategy had to have a clear aim and had to be comprehensive and based on the rule of law, all of which served to reinforce the government's legitimacy and to differentiate it from the insurgents, who employed terror and other extralegal means. As a first step, the government had to secure its own base areas—the population, economic, and communications centers that formed the base of its support. Once this had been accomplished, it should begin to expand its control progressively, first to the immediate outlying areas that were less infiltrated by the insurgents and then into the more heavily infiltrated regions that lay beyond. In doing so it had to place priority on destroying the subversion, the communist underground, and not on the guerrillas, whose purpose was to protect the underground and to disrupt pacification—the government's effort to establish its control over the area.

In Thompson's view, it was essential that the government counterstrategy be closely coordinated as a single effort: its primary aim was both offensive and constructive, that of nation building; its secondary, defensive aim was destruction of the guerrillas; and the two were joined by pacification.

The high point of communist revolutionary warfare coincided with the era of post-World War II decolonization and nation building. However, it was neither the only form of protracted war pursued by insurgents during the Cold War, as illustrated by revolutionary movements such as those in Algeria and Mozambique, nor the only one employed by communists, as demonstrated in Greece and Cuba. Although its proponents frequently tried to surround it with an aura of invincibility, the record shows that communist revolutionary warfare enjoyed only mixed success. Its most notable victories occurred in the Chinese Civil War and in Indochina, but it was defeated in Malaya, the Philippines (Hukbalahap), Thailand, and Peru (Shining Path).

Comprehensive Anti-Apartheid Act (2 October 1986)

Act passed by the U.S. Congress on 2 October 1986 to pressure the white-minority South African government to end its policy of apartheid. The Comprehensive Anti-Apartheid Act, which overrode the veto of President Ronald Reagan, who did not approve of the sanctions it imposed, marked a significant shift in U.S. policy toward South Africa. Many welcomed it as the end of the policy of constructive engagement with the South African regime.

It is unlikely that the Comprehensive Anti-Apartheid Act would have been passed had the Cold War not begun to wind down, for the United States had long viewed South Africa as a staunch Cold War ally. By 1986, however, pressures to act against the apartheid regime had become too great to resist. The United States did not want to impose sanctions on South Africa through the United Nations Security Council, fearing a potential veto by the Soviet Union. Thus, Congress took it upon itself to act unilaterally.

The Comprehensive Anti-Apartheid Act was passed partly in response to the brutal way in which the South African government, headed by President P. W. Botha, repressed the popular uprising known as the Township Revolt that had begun in September 1984 and had continued to spread across most of South Africa even as Congress debated the act. Many American citizens demanded that sanctions be imposed on the apartheid regime. Reagan had enacted some minor sanctions by executive order in 1985, but few regarded them as adequate. The act aimed to achieve its purpose by encouraging the South African government to take specific steps, such as releasing Nelson Mandela and repealing the apartheid laws. The act reflected true

bipartisan opposition to apartheid and was passed with Republicans controlling the Senate.

The Comprehensive Anti-Apartheid Act (Public Law 99-440) specifically called for an end to the state of emergency and the release of political prisoners; the lifting of a moratorium against dissident South African groups; the revocation of the Group Areas Act and the Population Registration Act; the granting of universal citizenship to all South Africans, including homeland residents; and negotiations to establish power sharing with the black majority. It also called on the African National Congress to condemn and take effective actions against the practice of people being killed by necklacing, in which those alleged to be cooperating with the apartheid regime had tires placed around their necks that were then set afire.

The Comprehensive Anti-Apartheid Act set aside major new funds for the victims of apartheid and for training programs for disadvantaged South Africans. It banned South African Airways from U.S. airports, new U.S. investment in South Africa, arms sales to the police and military, and the issuance of new bank loans unless they were to be used to promote trade. The importation of textiles, steel, iron, uranium, certain agricultural goods, and the products of state-owned corporations was also prohibited.

While South African imports to the United States did decline after the Comprehensive Anti-Apartheid Act was passed, by the end of the 1980s they had again increased, probably because the importation rules were not strictly regulated. One of the act's major weaknesses was that it prohibited few exports to South Africa, and thus some critics pointed out that despite its name, it was far from comprehensive. But had President F. W. de Klerk of South Africa not taken steps to end apartheid in 1990, further sanctions would almost certainly have been imposed by the United States. Even before the formal multiparty negotiations began in earnest, President George H. W. Bush issued an executive order in July 1991 declaring that certain sanctions in the act would be lifted immediately.

As South Africa moved toward a multiracial democracy in 1994, the Comprehensive Anti-Apartheid Act became largely moot. How much of a role it played in influencing change in South Africa remains contested, but that it had some influence cannot be denied.

**Congo, Democratic
Republic of the**

Central African nation. Known as the Republic of Congo-Kinshasa until 1960, the Democratic Republic of the Congo during 1960–1971 and Zaire during 1971–1997, the Republic of the Congo–Kinshasa covers 905,963 square miles and borders on the Central African Republic to the north, Sudan and Uganda to the east and north, Burundi and Tanzania due east, Zambia to the southeast, and Angola to the southwest and has access to the Atlantic Ocean to the far east. The nation had a 1945 population of approximately 11 million people, some 34,000 of whom were Europeans.

The Congo entered the Cold War era as part of the Belgian colonial empire but gained its independence on 30 June 1960. Hopes for a peaceful transfer of power faded as the divisions among the new political leaders manifested themselves in violence and the country descended into civil war. When Katanga and South Kasai, which contained the copper mines that provided Congo's main export, seceded only weeks after independence, President Joseph Kasavubu appealed for international help, and the United Nations (UN) sent in a peacekeeping force in July 1960. By 1965 the seceded provinces had been restored, but disagreements between Kasavubu and the newly elected prime minister, Moïse Tshombé, threatened the fragile peace. Stating his determination to bring order to the Congo, General Joseph-Désiré Mobutu, commander in chief of the armed forces, seized power in November 1965.

Fearing that a power vacuum might develop that would provide fertile ground for further Soviet expansionism in Africa, the United States declared its support for the Mobutu junta, as did most other African countries. Mobutu proclaimed himself "Father of the Nation" and consolidated his hold on power by eliminating the office of prime minister in 1966 and by abolishing all political parties except the newly formed Popular Movement of the Revolution (MPR) in 1967. Although elections took place beginning in 1970, the single-party state plus the fear engendered by the brutality of Mobutu's regime ensured his victory in every election until his overthrow in 1997. In May 1967 he announced the fundamental doctrines that would govern policy: authenticity, nationalism, and revolution. African authenticity came from eliminating the remnants of colonialism, particularly from geographical and personal names. In 1971 the Congo became Zaire, for example, and by the following year the capital, Leopoldville, was Kinshasa; Katanga was Shaba; and the president renamed himself Mobutu Sese Seko.

Nationalism meant, in particular, economic independence. Mobutu began in 1967 with a stabilization plan that nationalized the copper industry and

brought the economy under state control. In November 1973 he took economic nationalism to its extreme with the policy of Zairianization, designed to remove all foreign influences and return control of the economy to Zairians. All land, businesses, and industry were initially taken over by the state and then were made available for purchase by Zairian citizens. However, favoritism and corruption governed the reallocation process, and often the new owners engaged in asset stripping, increasing their personal wealth to the detriment of the country. In November 1975 Mobutu attempted to address the problem by allowing foreign ownership again, but with little success. Instead of demonstrating economic independence, Zaire became more reliant on foreign aid and international loans to prevent economic collapse.

Mobutu publicly proclaimed that revolution signified international independence, but he maintained a special relationship with the United States, which valued Zaire's mineral wealth and strategic location. Although Mobutu's dictatorship and abysmal human rights record often tested the relationship, he was expert at playing the Cold War game to ensure continued American support by threatening to align instead with the Soviet bloc. The importance of the Cold War to Mobutu's foreign policy strategy was highlighted when civil war broke out in neighboring Angola in 1975. While most African nations supported the Popular Movement for the Liberation of Angola (MPLA), Zaire joined the United States in opposition because of the involvement of the communist bloc on the side of the MPLA.

The brutality of Mobutu's dictatorship guaranteed opposition to his rule, and his insecurity was exacerbated by the weakness of the Zairian Army (FAZ), a weakness glaringly apparent when MPLA forces drove the army from Angola in chaos. When in March 1977 the Front for the National Liberation of the Congo (FLNC) invaded Zaire's Shaba province, intent on ousting Mobutu, he feared that the army was incapable of protecting his position. Asserting that the communist-backed MPLA had trained and armed the FLNC, Mobutu demonstrated his competence at playing the Cold War game by successfully appealing for international assistance. The Americans took the lead in providing military aid, while Morocco sent combat troops. In May 1977 a joint Moroccan-Zairian force regained control of Shaba but allowed the FLNC to withdraw to Angola and regroup. A year later, the FLNC invaded Shaba a second time, succeeding in seizing the key mining center of Kolwezi. Again Mobutu received international aid. Troops from Morocco, France, and Belgium helped to repel the invasion, and Morocco agreed to maintain a peacekeeping force in Zaire to deter further attempts.

During the 1980s Mobutu retained U.S. support for his regime, particularly by invoking the Reagan Doctrine, which pledged support to those resisting communism in the developing world, but internal dissent was increasing and, as the Cold War drew to a close, international opposition also intensified. With Soviet expansionism no longer a concern, Congress expressed concern about the human rights record of the Mobutu regime and terminated all but humanitarian aid to Zaire in 1990. With the economy on the brink of collapse and with increasing violence from protesters, Mobutu agreed to political reforms in December 1990, including multiparty elections.

Zairian president Mobutu Sese Seko at Kinshasa Stadium presents to a crowd of 60,000 people the first wounded revolutionist prisoners captured by government forces in secessionist Shaba Province, 20 April 1977. (Henri Bureau/Sygma/Corbis)

Thus Zaire entered the post–Cold War era among rumors of democracy, but Mobutu’s control deteriorated, and he was ousted in May 1997.

Congo, Republic of the

West-central African nation. A part of French Equatorial Africa (AEF) until 1958, the Republic of the Congo formally achieved independence on 15

August 1960. With a 1945 population of just 800,000 people, the country borders the Democratic Republic of the Congo to the east and south, Cameroon and the Central African Republic to the north, and Gabon to the west. To the southwest it occupies a short coastline on the southern Atlantic Ocean.

Perhaps the first Europeans to have contact with the region's Bantu kingdoms were the Portuguese, who located the Congo River in 1482. Soon they were trading with local tribes and began exporting Africans to the New World as part of the burgeoning slave trade. When the slave trade ended in the early nineteenth century, the Bantus went into a sharp decline, as they could no longer sell slaves from the continent's interior.

During the mad dash for colonies in Africa in the late nineteenth century, the French staked out a position in the region. In a race of sorts with Belgian King Leopold, who was also establishing colonies in sub-Saharan Africa, France solidified its control over the areas that it wished to influence. In 1908 the French formally organized their regional possessions into the AEF, with its capital at Brazzaville and including the Middle Congo (now the Republic of the Congo), Gabon, Chad, and Oubangui-Chari (now the Central African Republic). France exploited the AEF for its natural resources, while the inhabitants remained mired in poverty and illiteracy.

Local AEF administrators supported the Free French during World War II, the result of which was a significant shift in French colonial policies there. After 1944, local advisory bodies were permitted, colonial subjects received French citizenship, and forced labor was abolished. Partial self-government was granted in 1956, and after the constitution for the new Fifth Republic was approved in 1958, the AEF was dissolved and the four territories became autonomous members of the French Community. This transition brought violence and riots in Brazzaville in 1959 as ethnic tensions became politicized. When independence came in August 1960, severe rioting took place in the neighboring Belgian Congo, ultimately forcing Belgium to also move toward independence for its African colonies.

The National Assembly elected Fulbert Youlou as the Congo's first president. His tenure was brief and riddled with problems, including rising ethnic rivalries and vicious political infighting. Youlou was ousted in August 1963 in a three-day popular insurrection known as *Les Trois Glorieuses* (Three Glorious Days). The military then installed a provisional government headed by Alphonse Massamba-Débat, a civilian who went on to establish a Marxist-style regime. Massamba-Débat's communist economic policies did little to lift the nation's languishing economy, and he was deposed in a military coup in August 1968. After several months, during which the military sought to aggregate its power under the just-formed National Revolutionary Council, Major Marien Ngouabi, the chief instigator of the coup, became president in December.

In 1969 Ngouabi proclaimed his nation as Africa's first people's republic and changed the name of the lone ruling party to the Congolese Labor Party (PCT). Ngouabi dramatically increased the amount of Marxist-Leninist rhetoric; however, the alleged embrace of the people's best interests usually did

not measure up to expectations. On the other hand, the Left-tilting politics of the Congo attracted both interest and support from communist bloc nations.

In March 1977, Ngouabi was assassinated. An eleven-member military junta became responsible for establishing an interim government under the leadership of Colonel (later General) Joachim Yhombi-Opango, who had been serving as army chief of staff. Less than two years later, in February 1979, Yhombi-Opango was ousted by the PCT's Central Committee. He was accused of having strayed from party directives and of corruption in office. More than likely, his downfall was nothing more than political hardball within the PCT leadership. The constant changes in government, meanwhile, left little time and even fewer resources to devote to economic development or poverty mitigation.

Denis Sassou-Nguesso became interim president in February 1979. He was soon elected president of the PCT Central Committee and president of the republic. For the next decade, the nation's politics remained relatively stable, but the PCT leadership refused to back away from its orthodox Marxist prescriptions, which were proving increasingly ineffective.

The fall of communism in Eastern Europe and the Soviet Union's impending collapse forced major changes in the Congo's political landscape. In July 1990 PCT officials decided to end the one-party political system. The following year, at a national political conference, Marxism was formally renounced, opening the doors to free elections. By then, Congolese leaders knew that their decades-long experiment with orthodox communism had to be aborted. With loss of support from the crumbling Soviet Union and other former communist bloc countries, the handwriting was on the wall—to survive in a post-Cold War world, changes had to be made. The nation's first free elections were held in August 1992. Pascal Lissouba was elected president, defeating Sassou-Nguesso.

The transition to democracy has been anything but easy. After national elections were held in May 1993, the disputed results set off violent protests. In 1997, as the presidential elections neared, strife between the Lissouba and Sassou-Nguesso factions grew ever more bitter. When Lissouba ordered troops to surround Sassou-Nguesso's home in Brazzaville, a four-month civil war ensued that ravaged large parts of the capital city and killed scores of people. The carnage stopped only when Angolan troops intervened. Sassou-Nguesso once again became president in late 1997. Since then, there have been sporadic outbreaks of violence.

Congo Civil War (1960–1965)

The involvement of the United States and the Soviet Union with opposing factions in the Congo Civil War transformed a nationalist struggle for control in the newly independent country into a Cold War battleground. The conflict began in July 1960 and comprised three main phases. The first was the secession of the Katanga and South Kasai provinces and the ensuing struggle to restore them to the nation. The second phase was the battle for control between the opposition governments of Joseph Kasavubu and Patrice Lumumba, and the third was the fight for power between Kasavubu and Moïse Tshombe. Throughout the five-year conflict, the United States supported Kasavubu, while the communist bloc provided assistance to his main opponents. The interlocking conflicts were finally resolved when army chief of staff General Joseph Désiré Mobutu (Mobutu Sese Seko) seized power, with American support, on 24 November 1965, presenting the Americans with a perceived victory.

Hopes of an orderly transfer of power from Belgian colonial rule ended when dissatisfaction throughout the Congo turned violent. An army mutiny on 5 July 1960 was followed by the secession of two provinces: Katanga (Shaba) on 11 July and South Kasai on 8 August. As rioting spread, Belgium sent in troops to protect the lives and property of its citizens. Faced with the disintegration of their country and an unauthorized foreign intervention, President Kasavubu and Prime Minister Lumumba appealed to the United Nations (UN). On 14 July 1960, a UN resolution called for the withdrawal of Belgian troops and organized a UN military force to restore order. Although the United States supported the UN action, there was increasing concern that Lumumba's leftist political orientation might provide an opportunity for communist infiltration. Thus, President Dwight D. Eisenhower authorized covert action to oust Lumumba and cultivate pro-Western leaders, such as Kasavubu and Mobutu.

On 5 September 1960 Kasavubu dismissed Lumumba as prime minister, initiating the next phase of the war. Asserting that this action exceeded Kasavubu's constitutional authority, Lumumba, in return, dismissed the president. As conflict loomed, Mobutu took control and ordered Lumumba's arrest. In response, Antoine Gizenga, as leader of the Lumumbists, established an alternative government at Stanleyville (Kisangani) in November. By the end of 1960, the Congo was divided into four warring regions: Katanga under Tshombe's leadership, South Kasai led by Albert Kalonji, the western Congo under Mobutu's control, and the eastern regions under Gizenga.

When the world learned in February 1961 of Lumumba's death while in government custody, protests erupted against Mobutu's regime. The USSR formally recognized Gizenga's government, while the United States declared its support for Mobutu's government in Leopoldville

His arms roped behind him, ousted Congolese Premier Patrice Lumumba is captured by troops of strongman Colonel Mobutu Sese Seko in 1960. Lumumba was killed in early 1961 under mysterious circumstances, exacerbating the violence that began shortly after independence and continued for years under Mobutu's dictatorship. (Bettmann/Corbis)

(Kinshasa). By the summer of 1961, with direct UN action and indirect U.S. action, Mobutu defeated Gizenga's rebel regime and ended the Kasai secession. Civilian control returned in July when an agreement was reached for the formation of a coalition government containing representatives from all three factions. Kasavubu resumed the presidency, with Cyrille Adoula as prime minister.

Tshombe, however, refused to join the coalition government, continuing to assert Katanga's independence. His recalcitrance encouraged the Lumumbists, and the coalition began to collapse. Gizenga left the government, joined forces with Tshombe, and by November 1962 directly threatened Adoula's rule. When the Soviets offered Adoula military aid, the United States urged the UN to act. On 28 December 1962 Belgian troops supplied and financed by the Americans led the UN operation to restore Katanga to the Congo. On 21 January 1963 Tshombe, realizing defeat was inevitable, surrendered, ending the Katanga secession.

Gizenga, however, continued to oppose the Kasavubu-Adoula regime with support from the communist bloc and by the summer of 1964 controlled more than half of the Congo's territory. Fearing that Kasavubu was not strong enough to withstand the Lumumbist advance, the United States stabilized the government by pressuring Kasavubu to accept Tshombe, a staunch anticommunist, as prime minister while persuading Belgium to provide military support for the Congolese Army, enabling it to defeat the Lumumbist insurgency.

Although 1965 began with a seemingly unified Congo, a power struggle developed between Kasavubu and Tshombe, both of whom wanted executive control. When they attempted to oust each other, civil war again threatened. But on 24 November 1965, Mobutu, allegedly with U.S. support, dismissed all the politicians and assumed power, thereby ending the Congo Civil War.

Constantine II, King of Greece (1940–)

King of Greece from 1964 to 1974. Born in Psychiko, Greece, on 2 June 1940, Constantine was the only son of King Paul and Queen Frederica of Brunswick-Hanover. Following the German invasion of Greece in World War II, Con-

stantine went into exile with his parents in South Africa. After returning to Greece in September 1946, he studied at the Greek Military Academy and won a gold medal in sailing at the 1960 Olympic Games in Rome.

On his father's death, Constantine II ascended the throne as King of Hellenes on 6 March 1964. In September 1964 he married Princess Anne Marie of Denmark. A crisis soon developed between the king and Prime Minister Georgios Papandreou over royal prerogatives, especially the king's leadership of the Greek armed forces. On 15 July 1965 Constantine II dismissed Papandreou. The king then appointed a succession of interim prime ministers before the May 1967 elections, which Papandreou's Center Union Party was sure to win. To forestall this, Constantine and his circle planned a military coup, but before the generals could orchestrate it, on 21 April 1967 another military group of younger officers led by Georgios Papadopoulos executed Plan PROMETHEUS, a North Atlantic Treaty Organization (NATO) operation to forestall a communist takeover. The colonels in this group seized power and established a military dictatorship in Greece.

On 13 December 1967, Constantine attempted an unsuccessful counter-coup, but the majority of the army remained loyal to the new ruling military junta. The next day Constantine and his family fled abroad, first to Rome and then to London. At first the colonels claimed that Constantine was free to return to Greece, but the king refused to subordinate himself to the ruling regime, and on 1 June 1973 Papadopoulos abolished the monarchy. A referendum held on 29 June 1973 supported the regime's decision. After the fall of the dictatorship in July 1974, the new democratic government, led by Konstantinos Karamanlis, held a referendum in December 1974 that rejected the monarchy by an overwhelming majority. In April 1994 the Greek government stripped Constantine of his citizenship and seized his properties. Constantine currently resides with his family in London.

Policy of President Ronald Reagan toward South Africa in the 1980s. As the name implies, the policy called for the United States to engage positively with the South African government to encourage it to end apartheid and the resulting destabilization of its neighbors. This approach was a marked shift from the more antagonistic stance taken by President Jimmy Carter that had

Constructive Engagement

used sticks as well as carrots to influence South African policy. Some critics maintained that the policy of constructive engagement was far too friendly and lenient toward the South African government. Others asserted that the policy was aimed more at Cold War imperatives than anything else.

The main architect of the policy, Assistant Secretary of State Chester Crocker, argued that the United States should, for the moment, accept the reality that the South African government was in power and could not be dislodged. He believed that if it were approached in a hostile manner, it would become even more antagonistic to change. In 1981 Crocker linked Cuban troop withdrawal from Angola to the independence of Namibia, and in 1984 he welcomed the decision to bring Indians and people of mixed race into South Africa's government. For a long time it seemed that the Namibian issue was deadlocked, and those fighting for liberation there blamed the policy of constructive engagement for the delay in the achievement of independence. In 1988 the tide turned, however, and an agreement was reached on a regional settlement in southwestern Africa that meant South African withdrawal from Namibia. Although Crocker was able to argue that his policy had been successful, by then the U.S. Congress had passed the Comprehensive Anti-Apartheid Act, which many saw as a rejection of constructive engagement.

Contadora Group

Organization of Latin American states created in 1983 to advance nonviolent solutions to the conflicts in Central America. The initiative was launched by the foreign ministers of Colombia, Mexico, Panama, and Venezuela who met on the island of Contadora (Panama) in January 1983.

The first Contadora peace proposal was presented in September 1983. The 21 Points of Contadora was a document with objectives that each Central American nation and the United States could endorse. It included such objectives as the reduction of military forces in the region, the elimination of foreign military advisors, and the end of support to insurgent groups operating against governments in Central America. Nicaragua accepted the document and agreed to initiate bilateral negotiations with neighboring

countries and the United States. However, Washington ultimately rejected the proposal.

By September 1984, after months of deliberations on the provisions of a peace proposal, the Contadora Group presented a revised draft approved by the five Central American nations. Its content was based on the same security provisions as the previous 21 Points document, together with issues of regional democratization and national reconciliation. However, Nicaragua's acceptance of the draft in its totality and without modifications raised suspicions among its neighbors and the United States. A counterdraft was submitted by El Salvador, Honduras, and Costa Rica (the Tegucigalpa Group) the following month, omitting some of the security provisions of the September proposal.

During U.S. President Ronald Reagan's second term, the diplomatic efforts of the Contadora Group continued as its support increased in both Latin America and the United States. Conversely, American support for the Nicaraguan Contras and a more active military presence in Central America intensified. In 1985, the newly democratic governments of Argentina, Brazil, Peru, and Uruguay created the Contadora Support Group. In September, the eight Latin American countries produced a new proposal that took into account some of the Tegucigalpa Group provisions and set a deadline for acceptance of forty-five days.

Nicaragua considered the new draft unacceptable because it did not mandate the end of U.S. aid to the Contras. In fact, the main claim of the Sandinistas was that any Contadora proposal should also be signed by the United States. By 20 November, the day of the deadline, no peace agreement had been reached, and the Contadora Group suspended negotiations for five months.

The inauguration of a democratic regime in Guatemala revived the Contadora process. In April 1986, the Contadora Group, the Contadora Support Group, and the governments of Central America met to discuss a new proposal. However, Nicaragua's refusal to sign it without a U.S. commitment to stop aiding the Contras deadlocked the process once more.

After three years of arduous diplomatic negotiations, the Contadora Group unofficially came to an end in June 1986. That same month, the U.S. Congress approved \$100 million in aid to the Contras, despite the pressure of the Contadora Group.

Containment Policy

Key U.S. foreign policy strategy during the Cold War. It is impossible to understand the origins and course of the Cold War without comprehending the policy, or doctrine, of containment. The concept can be traced back to February 1946 when George F. Kennan, deputy head of the U.S. mission in Moscow, sent an 8,000-word telegram to Secretary of State James F. Byrnes. In the message—dubbed the “Long Telegram”—Kennan provided both an analysis of Soviet behavior and a diplomatic strategy to deal with Moscow. Arguing that “at the bottom of the Kremlin’s neurotic view of world affairs is the instinctive Russian sense of insecurity,” Kennan went on to suggest that Soviet leader Josef Stalin required a hostile international environment to legitimize his autocratic rule. Kennan also asserted that the Marxist-Leninist ideology upon which Stalin had built his regime contained elements of a messianism that envisioned the spread of Soviet influence and conflict with capitalism. The only way to stop the communist contagion, Kennan opined, was to strengthen Western institutions, apply appropriate counterforce when needed, and wait for the Soviet system to either implode under its own weight or sufficiently mellow so that it could be rationally bargained with. In short, the Soviets were to be “contained.” Kennan, however, was not at all specific as to how containment was to be achieved.

Although U.S. policy toward the Soviets had already begun to take on elements of containment, Kennan’s missive struck like a lightning bolt in Washington. Indeed, Secretary of the Navy James Forrestal immediately took note of the telegram and used it as further justification for his own hard-line views of the Soviet Union. Kennan returned to Washington something of a hero to anti-Soviet hawks in the Harry Truman administration and became the first director of the U.S. State Department’s policy planning staff. Kennan served in that capacity during April 1947–December 1949.

In the meantime, the containment policy continued to gain traction. The first public invocation of the strategy came in March 1947. Concerned about the communist insurgency in the Greek Civil War and instability in neighboring Turkey, Truman addressed a joint session of Congress, ostensibly to request aid money for Greece and Turkey. Clearly echoing Kennan’s Long Telegram, Truman stated in what became known as the Truman Doctrine that we must “support free peoples who are resisting attempted subjugation by armed minorities or by outside pressures.” The United States had now taken on the responsibility of helping any nation fighting against communism. Next came the June 1947 announcement of the Marshall Plan (of which Kennan was the chief architect). The Marshall Plan aimed at fostering European reconstruction. But it was also a program clearly aimed at containing Soviet influence and keeping it out of Western Europe. In July 1947 Kennan anonymously wrote an article for the influential journal *Foreign Affairs*. Dubbed the “X” article for its supposed anonymity, it went even further than Kennan’s earlier telegram. Using somewhat alarmist language, Kennan asserted that U.S. policy toward the Soviets must be a “patient but firm vigilant containment of Russian expansive tendencies.” The “X” article

President Harry S. Truman meets with his foreign policy advisors, 13 November 1947. Shown (*left to right*) are President Truman; Undersecretary of State Robert Lovett; George F. Kennan, director of the Policy Planning Staff of the State Department; and Charles E. Bohlen, special assistant to Secretary Marshall. (Bettmann/Corbis)

gave full voice to containment, although Kennan would soon argue that policy-makers had unnecessarily militarized the idea.

In November 1948 Truman approved a top secret memo from the National Security Council (NSC-20/4) that made the containment of Soviet influence a key precept of American foreign policy. The formation of the North Atlantic Treaty Organization (NATO) in April 1949 further entrenched containment. But up until 1950, containment had been largely limited to economic and institutional mechanisms. The Korean War would change that forever. In April 1950 the NSC had produced what is considered one of the seminal documents of the early Cold War. The report, known as NSC-68, was a call to arms. It presented in stark terms the low level of U.S. military capabilities while playing up Soviet motives and capabilities. The NSC claimed 1954 to be the “year of maximum danger,” a time during which the USSR would possess sufficient nuclear and conventional military capacity to launch a catastrophic strike against America. The only way to avoid such a possibility was to embark on a massive rearmament program. Truman shelved the project because the political environment would not have tolerated such an expensive program.

After the Korean War began in June 1950, however, the political climate had indeed changed. In September Truman approved NSC-68, and the nation undertook a massive and permanent mobilization, allowing it to react to crises anywhere in the world. Containment was now fully militarized and would remain so (although defense budgets would wax and wane) until the end of the Cold War.

Containment not only produced a permanent and large military establishment—not to mention a constantly expanding nuclear arsenal—but also informed policymakers' thinking toward all type of foreign threats. Indeed, the domino theory, a corollary of sorts to containment, can be traced to the Truman years, although it became *de rigueur* under Dwight Eisenhower and his immediate successors. Concerned that communist insurgencies in Indochina would result in a domino effect in which one nation after the other would fall to communism, U.S. policymakers decided to hold the line in Vietnam. Ultimately, this thinking led to America's long and tortuous debacle in the Vietnam War. The domino theory was also applied in other areas where communist advances were feared, including Africa, the Middle East, and Central and South America.

During the 1970s, as *détente* between the United States and the USSR flourished and while the aftermath of Vietnam was still fresh in Americans' minds, containment appeared less attractive. During President Ronald Reagan's tenure in office (1981–1989), containment was virtually abandoned. In its place was the belief that the Soviet Union should be defeated rather than merely contained. Reagan attempted to do this by engaging the United States in a major military buildup, announcing his controversial Strategic Defense Initiative (SDI), and signaling his intention to employ American nuclear might against any Soviet advance. The theory behind the approach was that the United States would force the Soviets into bankruptcy by forcing them to keep up with U.S. military advances. In the end, the Soviet Union did fall, although it is inaccurate and overly simplistic to suggest that Reagan's policies alone caused the collapse. The Soviet system had within it the seeds of its own destruction. Kennan made that clear fifty years ago. And since Truman's time, every president employed all or part of containment to hasten the demise of the USSR.

Contras

Paramilitary force trained and funded by the United States to challenge Nicaragua's leftist Sandinista regime. The 1979 overthrow of the Anastasio Somoza Debayle regime in Nicaragua resulted in a government committed to socialism and openly allied with Cuba. This government, headed by President Daniel Ortega and leaders of the Sandinista Liberation Front, promised radical social and political reforms. Fearing that leftist and communist regimes would spread revolution across Central America, U.S. President Ronald Reagan created an anti-Sandinista force, known as the Contras. The Central Intelligence Agency (CIA), under authority granted to it by the National Security Decision Directive 17 of 23 November 1981, coordinated the establishment of a force of local combatants capable of carrying out attacks in Nicaragua.

The Contra program had three active fronts. Mercenaries, many of whom were displaced soldiers and officers from the national guard of the deposed Somoza dictatorship, trained in Honduras. Their units, organized as the *Fuerza Democrática Nicaragüense* (FDN, Nicaraguan Democratic Force), launched raids into northern Nicaragua beginning in August 1981. Also, Miskito Indians were encouraged to wage their own resistance movement along Nicaragua's Caribbean coast. Inside neighboring Costa Rica, a more heterogeneous collection of opposition groups, ranging from ex-Somoza followers to disaffected Sandinistas, formed the *Alianza Revolucionaria Democrática* (ARDE, Democratic Revolutionary Alliance) in 1982 and put pressure on the new Nicaraguan government from the South.

The Contras helped drain the military resources of the Sandinista government. By 1984, Contra forces numbered more than 10,000 men. Their leaders promised to overthrow the Sandinista government with help from the United States.

The Contras soon became the target of international protest. Comparing their operations to earlier U.S. interventions in Guatemala and Cuba, the Sandinista government and sympathetic supporters in Canada and Europe challenged the U.S. effort, both in the United Nations (UN) and the World Court. In 1986, the International Court of Justice ruled against the United States and urged it to cease all support. U.S. officials countered that the court had no jurisdiction in the matter, and the U.S. government ignored the verdict.

In the United States, revelations of human rights abuses mobilized opposition to the Contras in Congress. Congress first banned, under the December

1982 Boland Amendment, any funding from the CIA or the Department of Defense for the Contras, and in October 1984 Congress voted to forbid support from any government agency for the Contras. Relying on intermediaries, such as Argentine military officers, to provide training and matériel, the Reagan administration sustained the program for five more years.

To circumvent the congressional restrictions, the Reagan administration developed alternative funding sources, including an exchange of military equipment designated for use by the Israeli Army for cash from Iran. Revenue generated by inflating the price of missiles, spare parts, and other matériel provided profits that staff members in the U.S. National Security Agency diverted to the Contra forces. In 1986, Lebanese press sources revealed this scheme. This forced the Reagan administration to form a special commission, led by ex-Senator John Tower, to investigate and report on the affair in December 1986. Congress conducted its own investigation. The Iran-Contra Hearings concluded in March 1988 with indictments of Oliver North and John Poindexter, who had helped organize the prohibited support of the Contras from their positions within the government.

Despite efforts of Central American leaders to broker a regional peace and despite the Contras' lack of support in Nicaragua, the program remained a core component of U.S. policy in Central America throughout much of the 1980s. The Sandinistas' electoral defeat in 1990 ended their control of the Nicaraguan government. With the *raison d'être* of the Contras gone, UN peacekeeping forces supervised the disarmament of the Contras.

Conventional Forces in Europe Treaty (1990)

Agreement on conventional force reductions in Europe. The failure of the Mutual and Balanced Force Reductions (MBFR) talks to achieve agreement after sixteen years prompted the North Atlantic Treaty Organization (NATO) and the Warsaw Pact to agree to initiate new negotiations on Conventional Forces in Europe (CFE) in January 1989. The CFE talks began in Vienna on 9 March 1989, with members of both alliances in attendance.

The parameters of the CFE negotiations differed significantly from those of the MBFR. The area of geographic coverage was expanded from Central Europe to the region stretching from the Atlantic to the Urals (ATTU),

President George H. W. Bush joins other world leaders for the Conference on Security and Cooperation in Europe in the Elysée Palace, Paris, France, for the signing of the Conventional Forces in Europe Treaty on 19 November 2000. (George Bush Presidential Library)

which implied greater symmetry in force reductions than was the case in the MBFR, with its focus on East and West Germany. Finally, the CFE talks would deal with reductions in equipment rather than personnel, with the goal of parity between the two sides requiring disproportionately deeper cuts in the more numerous Warsaw Pact forces. By the end of May 1989, both sides agreed on the categories of weapons to be cut. The categories included tanks, armored combat vehicles, artillery, and attack airplanes and helicopters. Most subsequent sessions dealt with technical issues on the specific weapons to be included in each category, how different weapons in each category would be equated, and compliance verification.

While the CFE talks were under way, the political environment in Europe changed dramatically with the collapse of communism in Eastern Europe in late 1989, which could have ended the negotiations. Unwilling to sacrifice the progress made and recognizing that an agreement could help stabilize the political situation, however, both sides resolved to continue the talks and worked through 1990 to resolve the remaining technical issues. The CFE Treaty was signed in Paris on 19 November 1990.

The agreement restricted each side to a total of 20,000 tanks, 20,000 artillery pieces, 30,000 armored combat vehicles, 6,800 land-based attack aircraft, and 2,000 land-based attack helicopters in the ATTU region. Specific

caps on each category were established for the United States and the Soviet Union within these limits. Personnel were not limited, but the treaty called for future discussions on the matter. Withdrawal of equipment in excess of the limits would be accomplished in stages over thirty-six months beginning in November 1995, with mandatory on-site inspections. A Joint Consultative Group was established to resolve any disputes that might arise.

The CFE Treaty resulted in significant force reductions in the ATTU area. For example, the number of tanks was reduced by 40 percent for the Warsaw Pact and by 20 percent for NATO. With the CFE Treaty completed, a new round of talks on personnel limits was begun. These negotiations resulted in the CFE-1A Treaty, signed on 10 July 1992 in Helsinki, that placed ceilings on the number of troops allowed in the ATTU region for each of the twenty-nine signatories. Together, the two treaties provided for a significant reduction in armed forces in Europe and helped stabilize the continent's transition to a post-Cold War world. An updated agreement, the Adapted CFE Treaty, was signed on 19 November 1999 and abandoned alliance-based limits in favor of national ceilings.

Costa Rica

Spanish-speaking Central American nation covering 19,730 square miles, about twice the size of the U.S. state of Maryland. Costa Rica, with a 1945 population of some 750,000 people, is bordered by Nicaragua to the north, Panama to the south, the Caribbean Sea to the east, and the Pacific Ocean to the west. The country's population is mostly of mestizo descent, with several

ethnic minorities, including Nicaraguans and English-speaking descendants of Jamaican immigrants.

A Spanish colony until 1 September 1821, Costa Rica became part of the Mexican Empire. In July 1823, the United States of Central America (USCA) was founded, which included Costa Rica. When Honduras left the USCA in 1838, leading to the unraveling of the union, Costa Rica became a stand-alone entity. During 1880–1940 Costa Rica slowly evolved into a fledgling democracy.

In 1940 Costa Ricans elected Dr. Rafael Ángel Calderón Guardia as president, and he began to institute land and economic reforms. Although initially successful, Calderon's popularity declined over the next eight years. To bolster his support, he entered into an alliance with the Costa Rican Communist Party and the conservative Costa Rican Catholic Church.

Despite this unusual coalition, Calderon's United Social Christian Party lost the presidential election of 1948. But Calderon refused to step down. This precipitated a coup after which José Figueres Ferrer became provisional president in May 1948. In short order, Figueres banned the Communist Party as part of a purge against Calderon's supporters and undertook extensive social and political reforms. Figueres gave women the vote, granted full citizenship to African Caribbeans, abolished the armed forces, established a presidential term limit, and nationalized banks and insurance companies. He also founded the Partido de Liberacion Nacional (PLN, National Liberation Party). His socialist leanings, however, made relations with the United States very touchy.

Figueres handed over power to the rightful winner of the 1948 election, Otilio Ulate, at the end of 1949 but then won the presidency in his own right in 1953. Figueres was defeated for reelection in 1958 but regained the presidency in 1970.

From the 1950s through the 1970s, Figueres and other Costa Rican presidents expanded the role of the government, making Costa Rica a model welfare state for Latin America. However, a deep recession during the late 1970s and early 1980s strained Costa Rica's ability to provide expanded state services. During the late 1970s neighboring Nicaragua was embroiled in a civil war that drew the attention of the United States. Costa Rica thus found itself forced to choose between the anti-Anastasio Somoza forces, which it had supported for many years, and the Contras, whom the Americans supported.

In 1982, Luis Alberto Monge Álvarez was elected president. Under increasing pressure from the United States, Monge agreed to let the Americans build airstrips in northern Costa Rica and to allow the Contras to receive training in Costa Rica. Monge lost a reelection bid in 1986, in part because of growing fear among Costa Ricans that U.S. policy would drag the country into the Nicaraguan Civil War.

By 1987, those fears came to pass. The civil war in Nicaragua spilled over into Costa Rica as both the Sandinistas and the Contras set up bases there. Going against American wishes, President Óscar Arias Sánchez embarked on a peace process, establishing the Central American Peace Plan that ended

conflicts in both Nicaragua and El Salvador. Sanchez was awarded the Nobel Peace Prize for his efforts. Over the last fifteen years, Costa Rica has enjoyed a relatively stable political climate and encouraging economic growth.

Council for Economic Mutual Assistance

See Comecon

Council of Europe

Intergovernmental organization established to promote European unity, human rights, democracy, standardized legal practices, and social progress. The Council of Europe was implemented on 5 May 1949 by the Treaty of London and signed by ten states: Belgium, Denmark, France, Ireland, Italy, Luxembourg, the Netherlands, Norway, Sweden, and the United Kingdom. The council chose Strasbourg, France, as its headquarters. It was formed chiefly to act as an additional buttress against communist encroachment in Western Europe by fostering mutual interdependence. The Council of Europe, along with other Cold War organizations, was to provide a united front against internal communist subversion as well as external pressure from the Soviet Union during a time of heightening Cold War tensions. By 2004 the council contained forty-five member nations, including twenty-one from Central and Eastern Europe. The Vatican, the United States, Canada, Mexico, and Japan retain observer status. Belarus became a candidate member in 1993.

On 4 November 1950 the Council of Europe initiated the Convention for the Protection of Human Rights and Fundamental Freedoms, the first international guarantee of human rights. On 18 September 1959 the council established the European Court of Human Rights to guarantee the observance of the council's human rights convention. In January 1957, the council organized the Standing Conference of Local and Regional Authorities that has since developed into the Congress of Local and Regional Authorities of

Europe, which has attempted to guarantee the rights of territorial ethnic and linguistic minorities in Europe. In October 1961, the council's newly created European Social Charter began serving as the economic and social counterpart to the human rights convention. In November 1987 the council's efforts to protect human rights were expanded by the implementation of the European Convention for the Prevention of Torture and Inhuman or Degrading Treatment or Punishment.

As the communist bloc began to disintegrate in 1989, the Council of Europe's Parliamentary Assembly began reaching out to establish links with the parliaments of countries in Central and Eastern Europe that were moving toward democracy. In June 1990 Hungary was the first former Soviet bloc country to be admitted to the Council of Europe, followed by Poland in November 1991.

Influential U.S. think tank, founded at the 1919 Paris Peace Conference after World War I. The Council on Foreign Relations (CFR), a New York group of foreign policy experts, was originally the American Institute of International Affairs, one of two parallel organizations, the other being the London-based Royal Institute of International Affairs, founded by the British and American experts gathered at the 1919 Paris Peace Conference. In 1921 it merged with and took the name of the Council on Foreign Relations, a foreign policy discussion group established by New York bankers and lawyers in 1918. Members included an elite group of government officials, prominent businessmen, media representatives, and academics.

The CFR's series of meetings featuring prominent American and foreign speakers, discussion groups, conferences, and publications, including its influential journal *Foreign Affairs*, established in 1922, soon made the council the leading foreign policy think tank in the United States. Although supposedly committed to no one viewpoint, between the world wars it functioned

Council on Foreign Relations (1919–)

as a nexus for those Americans who believed that their country should take a greater and more assertive role in world affairs.

Before U.S. intervention in World War II, several CFR officials were heavily involved in leading pro-Allied and interventionist groups, working closely with the administration of President Franklin D. Roosevelt. Even before Pearl Harbor, in collaboration with the State Department the CFR launched a major project, the War-Peace Studies, funded by the Rockefeller Foundation, to begin planning for the postwar world, working on the assumption that the United States would take a far more activist international role than in the pre-World War II years.

From 1945 onward the CFR set up numerous study and discussion groups to craft recommendations on U.S. policy regarding international issues, groups whose members included leading government officials such as George F. Kennan, Dwight D. Eisenhower, Allen W. Dulles, Dean Acheson, and John J. McCloy. Topics covered included aid to Europe, American-Russian relations, Europe's economic and political reconstruction, economic aspects of American foreign policy, and the United Nations (UN). These groups, meeting in strict confidentiality, helped to hammer out an elite consensus on Cold War foreign policy, developing the initiatives that would bear fruit in the Marshall Plan, the regeneration of Germany, the North Atlantic Treaty Organization (NATO), American rearmament, and U.S. support for European economic union.

Functioning like a comfortable club, the CFR was a well-connected and unobtrusively elitist organization that provided a springboard for the careers of such academic foreign policy operatives as future Secretary of State Henry Kissinger and National Security Advisor Zbigniew Brzezinski. During the 1950s a CFR study group produced Kissinger's best-selling study of nuclear strategy. In the next decade a major study group on China chaired by Dulles recommended that the United States reopen relations with the communist mainland.

During the 1960s, the CFR began to attract extensive public attention. Like other American institutions, it was fiercely divided over the Vietnam War. In 1972 the decision to appoint a major architect of U.S. policies toward Vietnam, former undersecretary of state for East Asia William P. Bundy, as editor of *Foreign Affairs* provoked fierce though ultimately ineffective protests from CFR members critical of his stance on Vietnam.

Finding the CFR somewhat stuffy, in 1970 younger foreign affairs writers and intellectuals established the rival journal *Foreign Policy*. The CFR, meanwhile, launched initiatives to broaden its membership to include minorities, women, and other underrepresented sectors of the American population who were increasingly engaged in international policymaking. Increasingly facing competition from new rival think tanks of both rightists and leftists, such as the Institute for Policy Studies, the American Enterprise Institute, the Brookings Institution, and the Heritage Foundation, in the early 1970s the CFR opened a Washington office to facilitate communication with government officials.

Throughout the Cold War and beyond, the CFR continued as perhaps the most prestigious American foreign policy think tank. Ironically, it was also a favorite target of fierce criticism from populist extremists and conspiracy theorists on both the Right and the Left, who regarded it as the home of an undemocratic elite committed to promoting the interests of international capitalism and global world government.

Editor, writer, and activist. Born in Union Hill, New Jersey, on 24 June 1915, Norman Cousins graduated from Columbia University Teachers College in 1933. After a period of writing for numerous publications, in 1940 he became editor of the *Saturday Review of Literature* and its editor-in-chief two years later. This publication provided both a base and a forum for his activism. Cousins remained editor of the *Saturday Review* until 1977, with a stint at *World* magazine earlier in the 1970s.

As an activist Cousins had many causes, but much of his work stemmed from his horror at the prospect of nuclear war. He saw disarmament and world government as two means of avoiding that catastrophe. This worldview informed both his writing and his activities, which included founding both the Committee for a Sane Nuclear Policy and the Dartmouth Conference. He also served as president of United World Federalists. Cousins played a small but significant role in making possible the Partial Nuclear Test Ban Treaty by carrying a message from President John F. Kennedy to Soviet leader Nikita Khrushchev in 1963.

After becoming ill in Moscow in 1964, Cousins healed himself with laugh therapy. His experience resulted in his best-selling book *Anatomy of an*

Couve de Murville, Jacques Maurice (1907–1999)

French diplomat, foreign minister (1958–1968), and premier (1968–1969). Born in Reims on 24 January 1907 to a prominent Protestant family, Jacques Maurice Coudé de Murville studied literature and law in Paris and earned a diploma from the École des Sciences Politiques before joining the French civil service in 1932. After rising to a high position within the civil service, in 1943 during World War II he broke with the collaborationist Vichy government, fled to Algiers, and became a leader of the Free French movement and a close associate of General Charles de Gaulle.

In 1944 Coudé de Murville began his diplomatic career by serving as the French representative to the Allied Consultative Council for Italy. In 1945 he entered the Foreign Ministry and during the Fourth Republic served as secretary-general for political affairs and ambassador to Egypt, the United States, and the Federal Republic of Germany (FRG, West Germany).

In 1958, President de Gaulle chose Coudé de Murville to be the first foreign minister of the newly established Fifth Republic, a post he occupied until 1968. As a faithful adherent of de Gaulle's enlarged vision of France's role in the world, Coudé de Murville took the lead on such major initiatives as decolonization, the development of the European Community, diplomatic recognition of the People's Republic of China (PRC), and France's 1966 withdrawal from the North Atlantic Treaty Organization's (NATO) integrated military command. Coudé de Murville shared de Gaulle's concept of a France capable of operating independently of the two Cold War blocs, a stance that often led to friction with Washington.

In May 1968, following the student riots that shook the Fifth Republic, de Gaulle transferred Coudé de Murville from the Foreign Ministry to the Ministry of Economics and Finance. In July 1968, Coudé de Murville was named premier, a post he held until June 1969 when Georges Pompidou was elected president. Coudé de Murville was subsequently elected to the Senate in 1973, where he served until 1995. He died in Paris on 24 December 1999.

Secretary of the Italian Socialist Party (PSI) from 1976 to 1993 and premier of Italy during 1983–1987. Born in Milan on 14 February 1934, Benedetto “Bettino” Craxi took part in socialist youth organizations, worked as a journalist, and in 1957 was elected to the Central Committee of the PSI. He soon became a loyal follower of Pietro Nenni’s faction, known as the Autonomists.

Craxi was appointed secretary of the PSI in July 1976 after the PSI had reached the nadir of its fortunes in national elections. He rescued the party from the political doldrums and succeeded in turning a shaky political force into one that was coherent, united, and firmly oriented toward the West. Craxi failed, however, in his more ambitious design of positioning the PSI as the main party of the Italian Left.

In 1983 Craxi became the first Socialist Party premier in Italian history and presided over one of the Italian republic’s longest-lasting governments. As premier, he tried to implement modernization plans that were aimed primarily at overcoming Italy’s entrenched economic and political problems of the 1970s. This implied stabilization of the country’s domestic politics, based on renewed cooperation between the Christian Democratic (DC) Party and a stronger PSI. Craxi’s plans also included a high-profile foreign policy designed to bolster Italy’s status among the major Western powers. Craxi was thus responsible for some truly remarkable foreign policy choices, including his decision to allow deployment of U.S. cruise missiles in Italy and the reintroduction of majority voting in the European Council in 1985, which set up an intergovernmental conference tasked to draft the European Union Treaty. In spite of his strong pro-Western orientation, Craxi is also remembered for his spirited clash with the U.S. government over the handling of the terrorist hijacking of the Italian cruise ship *Achille Lauro* in October 1985, which resulted in the murder of an American passenger.

When the PSI became involved in a series of scandals that rocked Italian politics in the early 1990s, Craxi was singled out and became the main subject of popular

Craxi, Benedetto (1934–2000)

Cuba

Caribbean island nation comprising 42,803 square miles, about the size of the state of Ohio. The largest and westernmost island of the West Indies chain, Cuba is in the Caribbean Sea, west of Hispaniola and 90 miles south of Key West, Florida. It had a 1945 population of approximately 5.68 million people.

By the early sixteenth century, Spanish conquistadors and traders had already recognized Havana as an ideal port for trade with Spain. Beginning in the early 1800s, sugarcane production boomed, ensuring a huge influx of black slaves and the institution of a plantation economy. During the 1860s–1870s, a growing independence movement brought armed revolt against Spanish rule. Slavery was outlawed in 1886, and in 1895 Cuban nationalist and poet José Martí led the final struggle against the Spanish, which was fully realized as a consequence of U.S. involvement in the 1898 Spanish-American War.

The Spanish-Cuban-American War marked a watershed in Cuban-American relations, as it greatly enhanced American influence on the island. However, the event was controversial because Cuban independence fighters

saw the island's newfound freedom as an outcome of their thirty-year struggle against Spain, whereas many Americans saw Cuban independence as an American victory. The result was an uneasy compromise by which Cuba became an independent republic with limitations to its sovereignty embodied in the 1901 Platt Amendment, an appendix to the Cuban constitution authorizing U.S. intervention in Cuban affairs at its own discretion. Cuba became a politically independent state on 20 May 1902.

The duality of opinions as to Cuban sovereignty was at the heart of the crisis that brought down the Cuban republic. For the first half of the twentieth century, the United States set the standards to which the Cuban population aspired. In this context, the crisis of the Cuban economic model of dependence on the sugar industry was accompanied by a sympathetic attitude in Washington toward anticommunist dictators.

General Fulgencio Batista's military coup on 10 March 1952 occurred only two months before an election in which nationalist forces were within reach of the presidency. In the context of McCarthyism in America, the destruction of the Cuban democracy by Batista's rightist junta did not generate significant opposition in Washington. Indeed, the United States backed Batista as an ally in the Cold War. For its part, the Cuban authoritarian Right manipulated the West by presenting itself as a bulwark against communism. In practice, the Batista government was actually undermining democracy with its repressive policies. And all along, Batista's regime did little to improve living standards for poor Cubans, while the middle class and elites enjoyed a close and lucrative relationship with American businesses.

A potent popular insurrection against Batista's regime had grown in the eastern and central parts of Cuba by 1958. The leaders of the revolution, Fidel Castro and Ernesto "Che" Guevara, questioned Cuban dependence on the United States as well as market economy principles. They perceived their movement as part of a developing-world rebellion against the West and as a natural ally of the communist bloc.

The United States was not prepared to deal with the charismatic and doctrinaire Castro. After his takeover, the United States underestimated the profound grievances provoked by American support for the Batista regime. Some of Castro's early measures such as land reform, the prosecution of Batista's cronies (with no guarantee of due process), and the nationalization of industries were overwhelmingly popular, but at the same time they met stiff U.S. resistance.

Against this backdrop, Castro approached the Soviet Union for support, and in February 1960 a Soviet delegation led by Vice Premier Anastas Mikoyan visited Cuba and signed a trade agreement with Castro's government.

The Soviets then began to replace the United States as Cuba's main trade and political partner. Soviet leader Nikita Khrushchev soon promised Cuba new machinery, oil, consumer goods, and a market for Cuban products now subject to American sanctions.

In April 1961, U.S.-Cuban relations collapsed completely, thanks to the abortive Bay of Pigs fiasco sponsored by the U.S. Central Intelligence Agency (CIA). The assault was condemned to failure, given Castro's popularity and the lack of U.S. air support for the rebel force. The botched attack only encouraged closer relations between the Soviet Union and Cuba. Khrushchev subsequently proposed installing nuclear-tipped missiles in Cuba to ensure a better bargaining position with the United States and as a means of offering protection to Cuba. Castro was elated. Khrushchev naively assumed that the missiles could be installed without U.S. detection. U.S. intelligence quickly discovered the activity, however, leading to the Cuban Missile Crisis, the most dangerous confrontation between the two superpowers of the Cold War. President John F. Kennedy declared a naval quarantine against the island in October 1962. For nearly two weeks the world stood at the edge of a nuclear abyss. In the end, Kennedy and Khrushchev worked out an agreement in which the Soviets withdrew the missiles in return for U.S. promises not to invade Cuba and to withdraw Jupiter missiles from Turkey.

The end of Kennedy's quarantine did not conclude the strife between Cuba and the United States, however. In addition to an embargo that continues to this day, the United States launched additional covert operations against Castro's government. The most important one, Operation MONGOOSE, included fourteen CIA attempts to assassinate Castro. American hostility was reinforced by the Cuban revolution's transformation from a nationalist rebellion against authoritarianism to a totalitarian state aligned with the Soviet Union, with serious shortcomings in civil and political liberties.

The solution to the Cuban Missile Crisis also created serious strains between Havana and Moscow. Cuba's foreign policy was made in Havana, and therefore Castro refused to accept Moscow's or Beijing's directives. In 1968, he cracked down on a group of Cuban communists, accusing them of working with Soviet agents in Havana. In the end, he used the 1968 Soviet intervention in Czechoslovakia against the Prague Spring to broker a compromise by which Cuba preserved its autonomy but promised not to criticize the USSR publicly. Cuba thus became a Comecon member and received significant additional economic aid from the communist bloc.

In Latin America, the Cuban government actively supported revolutionary movements with leftist or nationalist agendas, especially those that challenged American hegemony in the region. But the 1960s witnessed successive failed Cuban attempts to export revolution to other countries. Gue-

vara's 1967 murder in Bolivia concluded a series of subversive projects encouraged by Havana. Cuban revolutionary attempts were part of Cubans' core revolutionary beliefs and also a response to the rupture of diplomatic relations with Havana by all the Latin American countries except Mexico.

From the 1970s to 1990, as part of the Cold War conflict, Cuba played a major role in the international context. A high point of Castro's foreign policy came at the 1979 Sixth Summit of the Non-Aligned Movement in Havana. Cuba became a major conduit of alliance between the developing world and the communist bloc. Havana's diplomatic success and military involvement were accompanied by a massive civilian involvement in aid programs to African, Latin American, and Asian countries in the areas of health and education.

Cuba adopted a foreign policy suited to a medium-sized power. Castro sent 40,000 troops to Angola to support the pro-Soviet Popular Movement for the Liberation of Angola (MPLA) government in its struggle against the National Union for the Total Independence of Angola (UNITA) forces backed by South Africa and the United States. Cuba also dispatched troops to aid the pro-Soviet government of Ethiopia. In all, Cuba deployed more than 300,000 troops or military advisors to Angola, Ethiopia, the Congo, Guinea Bissau, Algeria, Mozambique, Syria, and South Yemen. The fight in southern Africa was ended through a skillfully designed tripartite agreement signed by Cuba, Angola, and South Africa and mediated by President Ronald Reagan's administration that led to the independence of Namibia.

Paradoxically, due in part to these Cold War commitments, Cuba missed its best chance to solve its conflict with the United States. During 1970–1980 the Americans sought serious negotiations with Cuba. This began under Richard Nixon's presidency and saw the most promise during Jimmy Carter's presidency (1977–1981). Carter demonstrated that he was serious in his desire to improve relations among the nations of the hemisphere and promote human rights. In 1977, Carter went so far as to say that the United States did not consider a Cuban retreat from Angola a precondition for beginning negotiations. Castro, however, insisted on continuing what he defined as "revolutionary solidarity" and "proletarian internationalism."

The Cuban government was interested in negotiations with the Americans but insisted on a radical leftist solution to problems. Castro took significant steps in releasing political prisoners and allowing visits to the island by Cuban exiles as goodwill gestures to the United States. In the international arena, Cuba informed the Americans about the Katanga rebellion in Zaire. Nevertheless, Cuba gave priority to its relations with other revolutionary movements, especially in Africa. In 1977, Castro sent 17,000 Cuban troops to Ethiopia to support dictator Mengistu Haile Mariam in his territorial conflict with Somalia. This development, despite the progress in several bilateral issues, represented a major blow to the prospect of improved Cuban-U.S. relations, as did Castro's support for the Sandinista government of Nicaragua in the 1980s.

A new development came in 1976 when Ricardo Boffill, Elizardo Sanchez, and Gustavo Arcos founded the first human rights group in Cuba since

1959. A new generation of opposition groups based on strategies of civil disobedience slowly emerged, gaining strength in the 1990s. Equally, during the 1970s Cuban civil society began to emerge from totalitarian ostracism that had reduced its religious communities to a minimum. This evolution continued, and at the end of the 1980s the religious groups were growing at a fast pace.

The collapse of the communist bloc beginning in 1989 was a major catastrophe for Castro's government, as Cuba lost its major benefactors. At the same time, the international community, particularly Latin America and the former communist countries, adopted general norms of democratic governance opposed to the goals and behavior of the Cuban leadership. Without Soviet backing, Cuba adjusted its economy and foreign policy to survive in a world that was no longer safe for revolution. In 1988 Castro withdrew Cuban troops from Angola and reduced the Cuban military presence in the Horn of Africa.

Cuba's gross domestic product fell by almost one-third between 1989 and 1993. The collapse of the Cuban economy was particularly hard on imports, which fell from 8.6 billion pesos in 1989 to about 2 billion pesos in 1993. In response to the economic collapse, Castro permitted limited private enterprise, allowed Cubans to have foreign currencies, and pushed for foreign investment, particularly in tourism. His reforms, however, did little to stop the economic hemorrhaging. In addition, Cuban troops were withdrawn from wherever they were posted. More than fifteen years after the Cold War wound down, Castro remains one of the last leaders of the old-style communist order.

Cuba and Africa

After Fidel Castro came to power in 1959, Cuba began to identify with radical African regimes, especially those in Egypt, Ghana, and Guinea in West

Africa. Africans began to go to Cuba to study and for military training. Until the mid-1960s, however, Cuba's interest in Africa was relatively minor. It was only in 1964 that Cuba's attention began to shift from Latin America to Africa, which was now seen as the continent most ripe for revolution. Castro's close associate Ernesto "Che" Guevara began a three-month visit to eight African countries at the end of 1964, and in Congo Brazzaville he met with leaders of the Popular Movement for the Liberation of Angola (MPLA). Soon afterward, the first Cubans joined the MPLA guerrillas fighting the Portuguese, and a Cuban force fought in eastern Zaire in support of rebels opposing the government of Moise Tshombe, who was supported by the United States. To the Cubans, Zaire seemed the most ripe for revolution and was significant because of its geographical position at the center of the continent. But Cuba began to lose men in Zaire, and by the end of 1966 the small Cuban force had been withdrawn.

For nearly ten years the only Cuban military presence was in Guinea Bissau in West Africa, where from 1965 the Cubans worked closely with the Partido Africano da Independencia da Guine e Cabo Verde (PAIGC) in its struggle against the Portuguese. Cuba sent doctors, nurses, and other volunteers to half a dozen other African countries and gave financial assistance, most notably to Tanzania, in the interests of solidarity with the developing world and the spreading of anti-Western revolution.

It was the collapse of Portuguese rule in Africa in 1974 that led to the most important Cuban intervention on the continent. As the United States and South Africa intervened in Angola on the side of the opponents of the MPLA in late 1975, Castro responded when the MPLA asked for military assistance and sent thousands of Cuban troops whose intervention saved the MPLA from defeat. In sending troops, the Cuban leader did not act on Soviet orders but rather acted independently, although the Soviet Union supported his move. The Cuban forces halted the South African advance on Luanda in November 1975 and then remained in the country after the MPLA had taken power. This dramatic and successful Cuban intervention shocked the United States, which for a time feared that Cuba might also intervene in the guerrilla war then being fought in Rhodesia. The Cuban intervention in Angola therefore pushed the Americans into trying to resolve other African conflicts to head off further Cuban interventions.

The next major Cuban military intervention was not, however, in southern Africa but far to the northeast, in Ethiopia, where the regime of Mengistu Haile Mariam, which proclaimed itself Marxist and revolutionary, was being threatened by neighboring Somalia, which was backed by the United States. This time the Cubans did coordinate their actions with the Soviet Union. In 1978 some 16,000 Cuban combat troops helped the Ethiopians beat back the invading Somali army in the Ogaden and consolidated Mengistu's hold on power. Although Cuban forces in Ethiopia then withdrew, those stationed in Angola remained and were augmented by an additional 15,000 men in 1987, bringing the total to more than 50,000. From 1981, President Ronald Reagan maintained as a major goal the total withdrawal of Cuban forces from Angola, although ironically some of the Cuban forces were deployed to

protect American oil interests in the Cabinda enclave. Reagan's assistant secretary for African affairs, Chester Crocker, advocated linking a Cuban withdrawal from Angola to a South African withdrawal from Namibia. For many years this seemed impossible to achieve, in part because Angola and Cuba refused to link the two issues and insisted that the Cuban presence in Angola was a matter solely for the two countries.

It was when Castro escalated the Cuban presence in Angola in late 1987, in response to a South African incursion, that Cuban forces, fighting alongside their Angolan allies, prevented the South African army from capturing Cuito Cuanavale and at the same time moved south, close to the Namibian border. By building new airfields there, the Cubans ensured that the South Africans lost air superiority in the border area. This military pressure helped force the South Africans to the negotiating table, and in December 1988, after lengthy negotiations, the South Africans agreed to withdraw from Namibia in return for the withdrawal of all Cuban forces from Angola. This agreement was seen as a major victory for the United States in the waning years of the Cold War.

Cuba then helped supervise the withdrawal of South African forces from Namibia by serving on a joint commission along with the United States and the Soviet Union. A United Nations mission monitored the withdrawal of Cuban troops from Angola, and the last contingent left Africa in 1991. After that, Cuba's role on the continent was chiefly diplomatic, although it continued to supply medical and other personnel to a number of African countries.

Cuban Missile Crisis (October 1962)

This international crisis was the closest that the two Cold War superpowers, the United States and the Soviet Union, came to full-scale nuclear war. In 1958 an indigenous revolutionary movement led by Fidel Castro seized power from Fulgencio Batista, a U.S. client who since 1933 had been dictator of the Caribbean island of Cuba, less than a hundred miles from the American coast. Although Castro initially declared that he was not a communist, in the spring of 1959 he covertly sought Soviet aid and military protection. American economic pressure and boycotts quickly gave him an excuse to move openly into the Soviet camp. In response, the Central Intelligence

CUBAN MISSILE CRISIS, 1962

Agency (CIA) planned to assist Cuban exiles to attack the island and overthrow Castro. Initiated under President Dwight D. Eisenhower and inherited by his successor John F. Kennedy, the April 1961 Bay of Pigs invasion attempt proved a humiliating fiasco for the United States. Kennedy and Secretary of Defense Robert S. McNamara continued to develop plans for a second invasion, and their advisors also devised various ingenious and often far-fetched schemes to overthrow or assassinate Castro, who not unnaturally sought further Soviet aid.

In mid-1961, as the concurrent Berlin Crisis intensified and culminated in the building of the Berlin Wall, military hard-liners in the Kremlin, frustrated for several years, succeeded in implementing a 34 percent increase in spending on conventional forces. Both the Bay of Pigs and Kennedy's bellicose inauguration rhetoric that his country would "pay any price, bear any burden, meet any hardship, support any friend, oppose any foe, in order to assure the survival and the success of liberty," may have energized them. Despite claims of a missile gap between the Soviet Union and the United States, in practice the strategic missile imbalance greatly favored the United States, which had at least eight times as many nuclear warheads as its rival. Even American leaders were unaware of just how lopsidedly the nuclear situation favored them, believing the ratio to be only about three to one. The recent U.S. deployment of fifteen intermediate-range missiles in Turkey, directly threatening Soviet territory, further angered Nikita Khrushchev, the Soviet Communist Party's general secretary, making him eager to redress the

balance. It seems that he also hoped to pressure the United States into making concessions on Berlin while he rebutted communist Chinese charges that the Soviets were only paper tigers who were unwilling to take concrete action to advance the cause of international revolution. In addition, Khrushchev apparently felt a romantic sense of solidarity with the new Cuban state, which reassured him and other old communists that their cause still possessed international vitality.

Early in 1962, Khrushchev offered Soviet nuclear missiles, under the control of Soviet technicians and troops, to Castro, who accepted and oversaw their secret installation. Khrushchev apparently believed that these would deter American plans to invade Cuba. Rather optimistically, he calculated that Kennedy and his advisors would find the prospect of nuclear war over the Cuban missiles so horrifying that, despite their chagrin, once the missiles were in place they would accept their presence in Cuba.

The Bay of Pigs fiasco followed by Khrushchev's June 1961 summit meeting with Kennedy at Vienna apparently convinced the Soviet leader that Kennedy was weak and would be easily intimidated. So confident was

Executive Committee of the National Security Council meeting on 29 October 1962. Clockwise from President John F. Kennedy: Secretary of Defense Robert S. McNamara, Deputy Secretary of Defense Roswell Gilpatric, Chairman of the Joint Chiefs of Staff General Maxwell Taylor, Assistant Secretary of Defense Paul Nitze, Deputy USIA Director Donald Wilson, Special Counsel Theodore Sorensen, Special Assistant McGeorge Bundy, Secretary of the Treasury Douglas Dillon, Attorney General Robert F. Kennedy, Vice President Lyndon B. Johnson (*hidden*), Ambassador Llewellyn Thompson, Arms Control and Disarmament Agency Director William C. Foster, CIA Director John McCone (*hidden*), Undersecretary of State George Ball, and Secretary of State Dean Rusk. White House, Cabinet Room. (John F. Kennedy Library)

Khrushchev that when Kennedy administration officials warned in July and August 1962 that the United States would respond strongly should the Soviets deploy nuclear or other significant weaponry in Cuba, he implicitly denied any intention of doing so. Admittedly, by this time the missiles had already been secretly dispatched, and their installation was at least a partial fait accompli. At this stage of his career, moreover, Khrushchev's behavior tended to be somewhat erratic. In any case, he miscalculated. Instead of treating the Cuban missiles as deterrent weapons, the Kennedy administration regarded them as evidence of Soviet aggressiveness and refused to accept their presence.

In October 1962, U-2 reconnaissance planes provided Kennedy with photographic evidence that Soviet officials had installed intermediate-range nuclear weapons in Cuba. When the president learned on 16 October 1962 of the presence of the missiles, he summoned a secret Executive Committee of eighteen top advisors, among them chairman of the Joint Chiefs of Staff Maxwell D. Taylor, CIA Director John McCone, Secretary of State Dean

Rusk, Secretary of Defense Robert S. McNamara, National Security Advisor McGeorge Bundy, Vice President Lyndon B. Johnson, and the president's brother and closest advisor, Attorney General Robert F. Kennedy, to decide on the American response. President Kennedy also included senior members of the broader foreign policy establishment, including former Secretary of Defense Robert A. Lovett and former Secretary of State Dean Acheson.

Whatever the logical justification for Khrushchev's behavior, politically it would have been almost impossible for any American president to accept the situation. The American military calculated that the missiles would increase Soviet nuclear striking force against the continental United States by 50 percent. Since U.S. officials underestimated their numbers, in reality they would have doubled or even tripled Soviet striking capabilities, reducing the existing American numerical advantage to a ratio of merely two or three to one. Kennedy, however, viewed the missiles less as a genuine military threat than as a test of his credibility and leadership. Taylor, speaking for the U.S. military, initially favored launching air strikes to destroy the missile installations, a course of action that would almost certainly have killed substantial numbers of Soviet troops, was unlikely to eliminate all the missiles, and might well have provoked full-scale nuclear war. So might another option, that of invasion by U.S. ground forces. Discussions continued for several days. Eventually, on 22 October, Kennedy publicly announced the presence of the missiles in Cuba, demanded that the Soviet Union remove them, and announced the imposition of a naval blockade around the island.

Several tense days ensued, in the course of which on 27 October Soviet anti-aircraft batteries on Cuba shot down—apparently without specific authorization from Kremlin leaders, whom this episode greatly alarmed—a U.S. U-2 reconnaissance aircraft. Seeking to avoid further escalation of the crisis, Kennedy refused to follow Taylor's advice to retaliate militarily and deliberately refrained from action. After some hesitation, Khrushchev acquiesced in the removal of the missiles, once his ambassador in Washington, Anatoly Dobrynin, secretly obtained an unpublicized pledge from Robert Kennedy that his brother would shortly remove the missiles in Turkey. Provided that the Soviet missiles were removed and not replaced, the United States also promised not to mount another invasion of Cuba.

Recently released tapes of conversations among President Kennedy and his advisors reveal that to avoid nuclear war, he was prepared to make even greater concessions to the Soviets, including taking the issue to the United Nations and openly trading Turkish missiles for those in Cuba. In so doing, he parted company with some of his more hard-line advisors. Showing considerable statesmanship, Kennedy deliberately refrained from emphasizing Khrushchev's humiliation, although other administration officials were privately less diplomatic and celebrated their victory to the press.

Newly opened Soviet documentary evidence has demonstrated that the Cuban situation was even more dire than most involved then realized. Forty-two thousand well-equipped Soviet troops were already on the island, far more than the 10,000 troops that American officials had estimated. Moreover, although Kennedy's advisors believed that some of the missiles might

already be armed, they failed to realize that no less than 158 short- and intermediate-range warheads on the island, whose use Castro urged should the United States invade, were already operational and that 42 of these could have reached American territory. A bellicose Castro was also hoping to shoot down additional U-2 planes and provoke a major confrontation. The potential for a trigger-happy military officer to set off a full-scale nuclear war almost certainly existed, retrospectively chilling evidence of the dangers inherent in these weapons.

The Cuban Missile Crisis had a sobering impact on its protagonists. Humiliation at American hands was among the factors that compelled Soviet leaders to undertake an expensive major nuclear buildup to achieve parity with the United States, reaching this in 1970. Khrushchev's fall from power in 1964 was probably at least partly due to the missile crisis. Soviet officials also felt that they had come dangerously close to losing control of the actual employment of nuclear weapons in Cuba, either to their own military commanders on the ground or even potentially to Castro's forces. Even though the settlement effectively ensured his regime's survival, Castro, meanwhile, felt humiliated that the Soviets and Americans had settled matters between them without regard for him. Before Khrushchev's fall from power, the two men were reconciled, and Soviet-Cuban relations remained close until the end of the Cold War. To the chagrin of successive U.S. presidents, however, Castro remained in power into the twenty-first century, eventually becoming the doyen among world political leaders.

The Cuban Missile Crisis tested and perhaps weakened the Western alliance. West European political leaders, including Harold Macmillan of Britain, Konrad Adenauer of the Federal Republic of Germany (FRG, West Germany), and most notably Charles de Gaulle of France, felt some discomfort that although Kennedy dispatched Acheson to brief them on the crisis, American officials had not consulted them on decisions of great importance to their own countries' survival. This may have been one factor impelling de Gaulle to follow a highly independent foreign policy line in subsequent years.

The crisis exerted a certain salutary, maturing effect on Kennedy, making the once-brash young president a strong advocate of disarmament in the final months before his untimely death in November 1963. His stance compelled the Soviet leadership to establish a hotline between Moscow and Washington to facilitate communications and ease tensions during international crises. The two powers also finally reached agreement in 1963 on the Partial Test Ban Treaty (PTBT), which halted nuclear testing in the atmosphere, under water, and in space. From then on both superpowers exercised great caution in dealing with each other, and on no subsequent occasion did they come so close to outright nuclear war.

Cultural Exchange

Cultural exchanges between East and West were an important part of the Cold War. Some 50,000 Soviets went to the United States on exchanges

between 1953 and 1988, and thousands more went to Western Europe. These individuals were scholars and students, scientists and engineers, writers and journalists, government and party officials, musicians, dancers, athletes, and more than a few Komitet Gosudarstvennoi Bezopasnosti (KGB) officers. These exchanges prepared the way for Soviet leader Mikhail Gorbachev's glasnost, perestroika, and the end of Cold War. The exchanges were conducted by the United States openly, under agreements concluded with the Soviet government. The result was an increase in Western influence among the intelligentsia as well as the general populace.

Under Soviet leader Josef Stalin, the Iron Curtain was nearly impenetrable. Information about the West was tightly controlled. Foreign travel for Soviet citizens was rare, and few foreigners visited the Soviet Union. Most of Soviet territory was closed to foreigners, except for a few large cities.

Stalin died in March 1953, and three years later Nikita Khrushchev announced a new policy of peaceful coexistence. The Soviets reached out to the West, signing cultural agreements with Norway and Belgium in 1956, the United Kingdom in 1957, and the United States in 1958. Agreements with other countries followed.

The initial U.S.-Soviet agreement, which was valid for two years, later three, and then periodically renewed, provided for exchanges of graduate students, senior scholars, performing artists, motion pictures, exhibitions, and delegations in industry, agriculture, and medicine. Exchanges in the basic sciences began in 1959 with an agreement between the U.S. National Academy of Sciences and the Soviet Academy of Sciences. Exchanges in atomic energy followed with a Memorandum of Cooperation between the U.S. Atomic Energy Commission and the USSR State Committee for the Peaceful Uses of Atomic Energy.

U.S. objectives were to involve the Soviets in joint activities and develop habits of cooperation, broaden contacts with people and institutions, end Soviet isolation and inward orientation by giving it a broader view of the world and itself, improve U.S. understanding of the USSR through access to its institutions and people, and obtain the benefits of cooperation in culture, education, and science and technology.

Soviet objectives were to obtain access to Western science and technology, support a view of the Soviet Union as equal to the United States by engaging Americans in bilateral activities, portray the Soviet Union as a peaceful power seeking cooperation with other countries, demonstrate achievements of the Soviet people, and give vent to the pent-up demand of its scholars, scientists, performing artists, and intellectuals for foreign travel and contacts.

Détente brought a major expansion of exchanges. At the summit meetings of 1972, 1973, and 1974 between Richard Nixon and Leonid Brezhnev, eleven agreements were signed for cooperation in science and technology, environmental protection, medical science and public health, space, agriculture, world ocean studies, transportation, atomic energy, artificial heart research, energy, and housing and other construction. In these agreements, each government would designate a lead agency, and a joint committee would

For most Soviet citizens, foreign travel was a form of shock therapy. The early exchange students, when shown their first U.S. supermarket, saw it as a Potemkin village, a façade designed to deceive them.

be established to meet annually to review ongoing work under the agreements and to plan for future activities. Altogether, some 240 working groups were established, and some 750 Americans and an equal number of Soviets were exchanged annually for one or two weeks to consult on work performed in each country under the agreements. Following the lead of the government, many U.S. nongovernmental organizations also initiated Soviet exchanges.

For most Soviet citizens, foreign travel was a form of shock therapy. The early exchange students, when shown their first U.S. supermarket, saw it as a Potemkin village, a façade designed to deceive them. But the most important impression they brought back from travels in the United States was not amazement at consumer goods but a redefinition of what constituted “normal,” a word with special meaning for the Soviet citizens who wanted to live in normal society.

President Dwight D. Eisenhower was a strong advocate of such exchanges in his people-to-people approach. In 1958, he wanted to bring 10,000 Soviet students to the United States and pay all their expenses, with no reciprocity required. But the State Department, then negotiating with the Soviets, was trying for 100 students, and eventually the Soviets agreed to only 20 students a year. Nevertheless, over the next thirty years, several thousand Soviet graduate students and young scholars came to the United States to study, and an equal number of Americans went to the Soviet Union, although the number agreed to for the official exchange was never more than fifty a year. The exchanges created a pool of American and Russian scholars knowledgeable about the other country and able to distinguish fact from fiction.

Aleksandr Yakovlev is best known as the godfather of glasnost, Gorbachev’s policy of openness in Soviet society. Yakovlev was Gorbachev’s link to Soviet intellectuals and protector of the editors who gave the Soviet Union its first independent press, and he was at Gorbachev’s side in five summit meetings with President Ronald Reagan. In 1958 Yakovlev was one of four Soviet graduate students at Columbia University in the first year of the new cultural agreement. He spent most of his time in the library, where he read more than 200 books that he could not read in the Soviet Union. He returned to Moscow, still a convinced communist but deeply influenced by his year at Columbia. He has described it as more meaningful to him than the ten years he later spent as Soviet ambassador to Canada.

Oleg Kalugin, who studied with Yakovlev at Columbia, would later reach the rank of KGB major general before aligning himself with the Democratic Platform of the Communist Party, winning election to the Soviet parliament, and then defecting to the United States. In his memoirs Kalugin writes: “Exchanges played a tremendous role in the erosion of the Soviet system. They opened a closed society. They greatly influenced younger people who saw the world with more open eyes, and they kept infecting more and more people over the years.”

For Soviet performing artists and their audiences, isolated from the West since the 1930s, visits by Western performers brought a breath of fresh air as well as new artistic concepts in music, dance, and theater to a country where

Touring band leader Benny Goodman smiles following two solos on his clarinet during an outdoor concert in Red Square in Moscow. Goodman led the first American jazz band to visit the Soviet capital, June 1962. (Bettmann/Corbis)

orthodoxy and conservatism had long been guiding principles in the arts. Among the American ensembles that performed in the Soviet Union under the cultural agreement were symphony orchestras, dance groups, and jazz orchestras. Benny Goodman's highly successful thirty-two-concert tour in 1962 signaled Soviet official acceptance of jazz. For Duke Ellington's Moscow performances in 1971, tickets sold on the black market for eighty rubles, when the usual price for a theater ticket was seldom higher than four.

"Of all the arts," wrote Vladimir Lenin, "the most important for us is the cinema." But the founder of the Soviet state did not foresee the influence that foreign films would have on the Soviet Union. From foreign films, Soviet audiences learned that people in the West did not have to stand in long lines to purchase food and did not live in communal apartments. People in the West dressed fashionably, owned cars, and lived the normal life so sought by Russians. Audiences were not so much listening to sound tracks or reading subtitles as watching the daily lives of people in the films: their homes, the clothes they wore, and the cars they drove. And when refrigerators were opened in Western films, they were always full of food. Such details were very revealing.

Four or five American films were purchased by the Soviets each year. Most were pure entertainment—comedies, adventure stories, musicals, and

science fiction—that met the interests of Soviet audiences. Among the more popular were *Some Like It Hot*, *The Apartment*, *The Chase*, and *Tootsie*. Although few were purchased, hundreds of copies were made for distribution to cinemas throughout the Soviet Union. And many foreign films, although not purchased, were copied and screened at closed showings for high officials and their spouses. The intelligentsia also viewed foreign films at members-only showings at professional clubs for writers, scientists, architects, journalists, cinematographers, and other privileged people of the Soviet Union.

Another means of reaching the Soviet mass audience was the month-long showings of thematic exhibitions that displayed life in America and recent developments in specialized fields, among them medicine, architecture, hand tools, education, outdoor recreation, technology for the home, photography, and agriculture. Russian-speaking American guides answered questions from the crowds. For most Russians, it was their first and only opportunity to talk with an American. The exhibitions were seen, on average, by 250,000 visitors in each city. All told, more than 20 million Soviet citizens saw twenty-three U.S. exhibitions over a thirty-two-year period.

Exchanges enabled the United States and the Soviet Union to learn more about each other. That knowledge provided some assurance that the two governments would not misjudge each other's actions and intentions, as they had so often in the past. Exchanges also provided a framework for increased bilateral cooperation. Each country learned that it could accept large numbers of foreign visitors without threat to its national security. Were it not for the experience of exchanges, there probably would have been no intrusive military inspections under arms control agreements. And as more and more Soviets traveled to the West and made the inevitable comparisons with their own country, the Soviet media had to become more honest with their readers and viewers at home.

Exchanges encouraged pressure for reform. They prepared the way for Gorbachev's reforms and the end of the Cold War. And they cost the United States next to nothing compared with its expenditures for defense and intelligence over the same period of time.

Cultural Revolution

(1966–1969)

Political movement launched in the People's Republic of China (PRC) by Chinese leader Mao Zedong during 1966–1969, although its influence was felt into the mid-1970s. Mao termed the Cultural Revolution (CR) his “lifetime achievement” apart from leading the successful 1949 revolution. Some have compared its significance to the 1917 Bolshevik Revolution in Russia, but it has also been seen as a clash of personalities, ideologies, and policies between Mao and President Liu Shaoqi, the second most powerful figure in the PRC. Mao sought to use the CR to enhance his authority. High-ranking CR proponents included Mao, Premier Zhou Enlai, Foreign Minister Chen Yi, and Defense Minister Lin Biao. On the other hand, the so-called capitalists who opposed the CR dominated the Chinese Communist Party's (CCP) Politburo, Central Committee, regional bureaus, and provincial party committees, including the crucial Beijing unit. They included Liu, General Secretary of the CCP Deng Xiaoping, Beijing Mayor Peng Zhen, chief of the People's Liberation Army (PLA) General Staff Luo Ruiqing, and Marshal He Long.

These groups differed over the handling of contradictions inside and outside the CCP in regard to society, culture, and the economy. Among the contentious issues was whether the CCP should be revived with new socialist ideals or maintained predominantly as a bureaucratic entity. The two sides also clashed on the collectivization of agriculture, moral/material incentives, and self-reliance versus free markets. The rift also pitted the Maoist mass line model advocating a continuing class struggle against those capitalists who advocated economic development and modernization as a means to achieve superpower status.

External factors also drove the CR, including the Sino-Soviet split, the Soviet Union's revisionism peaceful coexistence with the West, and antipathy toward supporting developing nations. Liu was labeled a “Chinese Khrushchev” during the CR, in reference to Soviet leader Nikita Khrushchev's reforms of the 1950s.

The sixteen-point guidelines issued on 8 August 1966 initiated the CR, although the more immediate catalyst was Beijing Vice-Mayor Wu Han's play *Hai Rui's Dismissal from Office*, an allegory about a Ming Dynasty official's vindication after being forced from his post. The play indirectly referred to former Defense Minister Peng Dehuai's 1959 removal from office following the Lushan Conference, when Peng criticized Mao for the disastrous Great Leap Forward. Radicals within the Politburo, including the Gang of Four clique comprising Mao's wife Jiang Qing and Shanghai-based Communist Party members Wang Hongwen, Zhang Chunqiao, and Yao Wenyuan, responded in late 1965 with countercritiques, one by Yao to the Shanghai newspapers and a literary critique from Jiang, that rallied the opponents of Peng.

Once Mao in August and September 1966 accorded legitimacy to the CR through the medium of the big-character poster, the movement spread across the PRC. Soon, a three-in-one system was formed, comprised of the military, revolutionary cadres, and representatives of the masses. In March 1967, they were tasked with carrying forward the revolution. The CCP's Central

CULTURAL REVOLUTION IN CHINA

Committee thereby lost its influence to the Central Cultural Revolution Small Group—radicals loyal to Mao. The so-called Red Guards, tasked with replacing “old world with new world,” were one of the main proselytizers of the CR movement.

Beginning in August 1966, the Red Guards carried out actions against the Four Olds: old ideas, old culture, old customs, and old habits. In the process, they condemned, humiliated, and often brutalized or killed Communist Party cadres and corrupt revisionist authorities accused of taking the capitalist road and criticized petit bourgeois teachers. PRC military and security forces were ordered to support the revolutionary masses of the Left and, in the latter phases of the CR, to restore order in the chaotic society and economy. In January 1967, Mao pressed the PLA to restore order in the country, and by April 1969 the CCP’s Ninth Congress declared the CR at an end.

The effects of the CR were numerous. Liu, in ailing health, was imprisoned and denied medical treatment. He died in prison of diabetes in 1969. Peng, Luo, and others were purged. Many students were sent to rural outposts to learn from peasants in 1968. Thousands of households considered bourgeois were ransacked and their occupants killed. Priceless cultural artifacts, regarded as feudal or capitalist anachronisms, were smashed or otherwise destroyed. Over the long term, the CR also led to the erosion of the CCP’s political authority. The CCP’s 27 June 1981 Resolutions on Questions of Party History stated that the CR imposed a “severe setback and the heaviest losses suffered by the party, state, and the people” since 1949.

Portuguese writer, communist, and general secretary of the Portuguese Communist Party (PCP) from 1961 to 1992. Born on 10 November 1913 in

Cunhal, Álvaro
(1913–)

Coimbra, Portugal, Alvaro Cunhal studied law at the University of Lisbon and, in 1931, joined the PCP, then an illegal organization. The PCP, established in 1921, was dedicated primarily to overthrowing the right-wing dictatorship of António de Oliveira Salazar, who rose to power in 1932.

In 1935, Cunhal graduated from the University of Lisbon and was elected general secretary of the Portuguese Communist Youth. Because of his political activities, he was arrested in 1937 and imprisoned until 1940; in 1949 he was once again sent to prison for his political proclivities. In 1960, Cunhal escaped from prison, fled Portugal, and went on to live in Moscow and Paris. In 1961, while living in exile, he was appointed general secretary of the PCP.

After the Carnation Revolution of April 1974, Cunhal returned to Portugal, now free from Salazar's oppressive rule. The revolution precipitated a two-year period of communist-dominated military governments that transformed Portugal from an authoritarian dictatorship to a liberal democracy. Cunhal's charismatic leadership, strongly influenced by orthodox Marxist-Leninism, set the agenda for the PCP during much of the Cold War. Cunhal served as a minister without portfolio in the transition governments.

During the 1970s Cunhal supported Soviet leader Leonid Brezhnev's political agenda and during the 1980s strongly opposed Mikhail Gorbachev's perestroika policies. Although Cunhal no longer held office within the PCP, he continued to be an influential member of the party. He died in Lisbon on 13 June 2005.

Curcio, Renato (1941–)

Italian leftist agitator and founder of the terrorist organization Red Brigades. Born in Monterotondo, Italy, on 23 September 1941, Renato Curcio attended Catholic primary schools and high school at Albenga. He then studied sociology at the University of Trentino, where he immersed himself in the writings of Karl Marx, Vladimir Lenin, and Mao Zedong. Curcio urged his fellow students to form a new proletarian party and reject the revisionist philosophy of the Italian Communist Party.

In 1966 Curcio became involved in protests against U.S. involvement in the Vietnam War. In 1969 he refused to apply for a degree from the uni-

versity, married fellow leftist Margherita Cagol, and went to Milan, where he and his wife joined the violent extremist organization the Metropolitan Political Collective (MPC). Embracing the idea of armed revolt against the state, Curcio, Cagol, and Alberto Franceschini formed the Red Brigades in 1970. It would become Italy's major leftist terrorist organization in the post-war years.

The Red Brigades was a highly secretive and well-structured organization. Its activities included bombings, robberies, kidnappings, and maiming as terror weapons against the government. The Red Brigades' terrorist tactics reached a peak with the kidnapping of Judge Mario Sossi, who was later freed without any concessions being granted the terrorists. On 8 September 1974, Curcio was arrested as part of an undercover sting. But in February 1975 a commando-like operation led by Cagol succeeded in freeing him.

Police activity against the Red Brigades became more effective following the kidnapping of industrialist Vallarino Gancia on 5 June 1976; the following day a Carabinieri raid freed the hostage and killed Cagol. In January 1976 Curcio was wounded, captured by police, and jailed. With its leader and ideological head in captivity, the Red Brigades went into decline. Curcio remains in prison but in 1994 was allowed to take up day work as a publisher in Rome, infuriating many Italians.

Boundary between Poland and Russia drawn after World War I that figured in discussions during and after World War II over Poland's eastern frontier. The Curzon Line was a major factor in the tangled issue of Poland's post-World War II borders.

In the fluid situation in the East following World War I, leaders of the Big Four powers of Britain, France, Italy, and the United States, meeting at Paris, decided to leave the boundary between Poland and Russia to subsequent demarcation. In December 1919, a commission headed by British Foreign Secretary Lord Curzon proposed a boundary line. Known as the Curzon Line, in the north it divided Suwalki Province between Poland and Lithuania, then extended southward toward Grodno before running west to the Bug River. It followed the Bug past the great city of Brest-Litovsk to Sokoly,

Curzon Line

then ran west around Przemyśl before heading south to the Carpathians and the border of the new state of Czechoslovakia.

Neither Poland nor Russia accepted the Curzon Line. Poland won the Russo-Polish War (1919–1921) and, in the resultant Treaty of Riga of March 1921, pushed its eastern border well to the east of the Curzon Line, near to what had been the Polish-Russian frontier of 1792. Recovering territory to the Curzon Line was a major goal of post–World War I Soviet diplomacy.

In late August 1939 Germany and the Soviet Union concluded a nonaggression pact that made it possible for Germany to invade Poland, beginning World War II. The treaty also included a territorial division of Poland and the Baltic states in which the Soviet Union received much of eastern Poland. Soviet troops invaded and seized this territory in mid-September 1939, but the Germans then took it during their June 1941 invasion of the Soviet Union.

In subsequent discussions between the Soviet Union and its Western allies, Soviet leader Josef Stalin insisted that the Curzon Line be the western boundary for the Soviet Union. It was difficult for the Western powers not to agree with this, for the line had been drawn by the Western powers themselves, but such an agreement would sanction Soviet incorporation of its 1939 gains at the expense of Poland. At the Tehran Conference of November–December 1943, there was much discussion of Poland's borders. Stalin, British Prime Minister Winston Churchill, and U.S. President Franklin Roosevelt all agreed on the Oder River as the future boundary of Poland with Germany. There was, however, no agreement by the Western leaders on a tributary of the Oder, the Western Neisse River, as the southern demarcation line. Nor did the West sanction Poland taking from Germany the important port of Stettin on the west bank of the Oder. The three did agree that Poland would receive most of East Prussia, although the Soviet Union claimed the Baltic port of Königsberg (later renamed by them Kaliningrad) and land to the northeast. There was no major opposition from Western leaders to the Curzon Line as the eastern boundary of Poland, although the British did object to Soviet seizure of the predominantly Polish city of L'viv.

Stalin insisted that the Soviet Union required security against a future German attack. Obviously, a Poland that would be compensated for the loss of eastern territory to the Soviet Union by being given German territory in the west would necessarily have to look to the USSR for security, and Churchill had the difficult task of having to sell all these arrangements to the Polish government-in-exile in London. Stalin refused normal diplomatic relations with the so-called London Poles because no independent Polish government could ever concede changes that put the country at the mercy of the USSR. But a Polish government subservient to Moscow proved inevitable.

The Yalta Conference of February 1945 confirmed the decisions reached early at Tehran regarding Poland's eastern border, with but slight modification. This meant the loss to Poland of some 52,000 square miles of territory in the east. The Allies were more strenuous in objecting to the Oder-Neisse Line as its western boundary, and there was no agreement on this matter at Yalta.

Cyprus

The island of Cyprus is situated in the eastern Mediterranean Sea about 40 miles south of Turkey and 60 miles west of Syria. Inhabited by both Greeks and Turks, it covers a land mass of 3,572 square miles and in 1945 had a population of some 460,000 people, 80 percent of them Greek.

The Turks conquered Cyprus and a large, separate Turkish community developed there. In 1878 at the Congress of Berlin, the Ottoman Empire placed Cyprus under British administration in return for British support against Russia. In 1914 Britain annexed Cyprus outright, and in 1925 it became a Crown colony. Until 1960, Cyprus was under British rule and was an important strategic base for defense of the Suez Canal in both world wars. During the Cold War the West used the island to monitor Soviet activities in the Middle East. Britain launched its 1956 abortive Suez invasion from Cyprus.

Under British rule, the movement for enosis, or union of the island with Greece, spread among the majority Greek population. The island's Turkish population, supported by the Turkish government, vowed to resist any such step. At first the Greek agitation was aimed at ending British control. Greek Orthodox Archbishop Makarios III became the leader in this effort, condoning terrorism and reprisals against the British. General Georgios Grivas led the terrorist campaign to expel the British. Born in Cyprus, Grivas had fought against both the Germans in World War II and the communists in the Greek Civil War. Beginning in 1955, his National Organization of Cypriot Fighters (EOKA) launched widespread terrorist attacks against the British. The terrorist activity expanded, especially after 1956 when British authorities exiled Makarios to the Seychelle Islands in the Indian Ocean. Negotiations in 1955 between Britain, Greece, and Turkey broke down completely, abetted by Ankara's demands for partition of the island.

British soldiers stand behind a barbed-wire barricade during an imposed curfew in Nicosia, Cyprus, in 1956. (Hulton-Deutsch Collection/Corbis)

Finally, in the Zurich Agreement of 1959, a settlement was reached for a new constitution for Cyprus. On 16 August 1960, the island became the Republic of Cyprus, an independent state with two distinct ethnic entities. Britain, Greece, and Turkey retained limited rights to intervene in Cypriot affairs in order to guarantee the basic rights of both ethnic communities.

Archbishop Makarios became the first president of Cyprus, and in 1961 the island state became a member of the United Nations (UN). The Cypriot constitution provided for a presidential system of government with independent executive, legislative, and judicial branches as well as a complex system of checks and balances, including a weighted power-sharing ratio designed to protect the interests of the Turkish Cypriots. The executive, for example, was headed by a Greek Cypriot president and a Turkish Cypriot vice president, elected by their respective communities for five-year terms and each possessing a right of veto over certain types of legislation and executive decisions. The House of Representatives was elected on the basis of separate voters' rolls, but since 1974 the Turkish seats in the House have been vacant.

Originally, there were two Communal Chambers, but the Greek Cypriot Chamber was abolished in the 1960s. In 1962 and 1963, Greek and Turkish leaders held a series of meetings but were unable to resolve their differences in terms of taxation, municipal councils, and local government. In 1963, the Green Line was established in the capital city of Nicosia to separate the Greeks and Turks. In November 1963, Makarios proposed a series of constitutional amendments designed to restrict the rights of the Turkish community. The Turkish Cypriots opposed these changes, and consequently, widespread intercommunal fighting began in December 1963. Turkish Cypriot participation in the central government ceased, and the Turkish parliament voted in favor of occupying Cyprus in 1964.

Turkey could not find support for its occupation plans from either the UN or the North Atlantic Treaty Organization (NATO), and U.S. President Lyndon B. Johnson warned Turkish premier Ismet İnönü that his country would resist a Turkish occupation. Turkey did not make good on its threat. In March 1964 the UN Security Council established the UN Peacekeeping Force in Cyprus (UNFICYP) to ward off potential trouble, although fighting continued between the Greeks and Turks. Following another outbreak of intercommunal violence in 1967–1968, a Turkish Cypriot provisional administration was formed, and by the early 1970s Makarios had resigned himself to a separate Cypriot state not directly tied to Greece, which infuriated many Greek Cypriots.

On 15 July 1974, a coup fomented by disaffected Greeks overthrew Makarios. A puppet regime, under control of the junta in Greece, was imposed under Nicos Sampson, a former EOKA fighter. Rauf Denktaş, the Turkish Cypriot leader, called for joint military action by the United Kingdom and Turkey as a way to prevent the unification of Cyprus with Greece. Although Turkey agreed to intervene, Britain could not be persuaded to follow suit, so on 20 July 1974 Turkey landed 40,000 troops on the northern coast of Cyprus.

The Turkish force occupied 37 percent of the island in the north. To date some 30,000 troops remain in northern Cyprus. Turkey described its occupation as a “peace operation” to restore constitutional order and protect the Turkish Cypriot community. The ensuing UN-led talks failed to resolve matters, and the Turks continued to control the northern parts of the island, forming a *de facto* Turkish Cypriot state there.

The area occupied by the Turkish Army proclaimed its independence in 1975 under the name of the Turkish Federated State of Northern Cyprus. Denktaş became its leader. Some 20,000 people, mainly subsistence farmers from mainland Turkey, were brought in to settle and work the underpopulated land. Those who stayed more than five years were granted citizenship in the Turkish Federated State. In the Karpaz region, located on the Turkish side of Cyprus, a Greek-speaking minority remains under UN supervision.

In 1983, the Turkish Republic of Northern Cyprus was established to replace the Federated State. But it was only recognized as a legitimate independent state by Turkey and members of the Organization of the Islamic Conference. In the period since the Turkish invasion, the northern third of

Cyprus has become almost exclusively Turkish while the southern two-thirds is almost exclusively Greek, so the territories are now sometimes referred to as the “Greek part” and the “Turkish part” of Cyprus. Except for occasional demonstrations and infrequent confrontations between border soldiers, few violent conflicts took place after 1974.

In 1975, the Cyprus issue caused the U.S. Congress to impose an embargo on the sale of military equipment to Turkey, which badly strained Turkish-U.S. relations. The embargo lasted until 1978 and was lifted by President Jimmy Carter. In November 1993, Greek Cypriots formed a Joint Defense Pact with Greece following the election of Cypriot President Glavkos Klerides. Turkish Cypriots responded by entering into a joint defense and foreign policy program with Turkey. In May 2004, the Greek two-thirds of the island became a member of the European Union as the Republic of Cyprus.

Czechoslovakia

Central European nation covering 49,383 square miles bordering on Germany and Poland to the north, Austria and Hungary to the south, and Ukraine to the east. Czechoslovakia had a 1945 population of 14.2 million people (10.7 million in the Czech lands and 3.5 million in Slovakia). In 1947, however, the population had fallen to 12.2 million people as a result of the expulsion of Germans. Czechoslovakia was dissolved on 1 January 1993.

Constructed from the ruins of Austria-Hungary at the end of World War I, Czechoslovakia was composed of Czechs, Slovaks, Ruthenians, Germans, Jews, Hungarians, and Roma (Gypsies). Between the two world wars, Czechoslovakia was a liberal democracy with an advanced industrial economy. The British, French, and Italian attempt to appease German dictator Adolf Hitler by sacrificing Czechoslovakia in the 1938 Munich Accords led to the dismemberment of the country and, consequently, to the popularity of the Communist Party in the reconstituted postwar Czechoslovakia, ultimately controlled by the Soviets.

Czechoslovakia was liberated at the end of World War II by the Red Army to the east and American forces to the west. It became a binational Czech and Slovak state because most of the Jews and many of the Roma had been exterminated by the Nazis. The Ruthenian part of eastern Czechoslovakia was annexed by Soviet Ukraine, and the Sudeten Germans were expelled following the Edvard Beneš decrees of 1946.

Czechoslovak democracy was limited after the war to a handful of parties within the Soviet-backed National Front, led by the Communist Party of Czechoslovakia (CPCz). In October 1945 the National Front nationalized all enterprises that employed more than fifty workers. In the May 1946 elections, the CPCz won a plurality of the popular vote with 38 percent. CPCz leader Klement Gottwald thus became prime minister and consolidated power by controlling key ministries, the police, and mass media as well as the Communist People's Militia (supported by 1.5 million party members, about 10 percent of the population).

In February 1948, Gottwald implicitly threatened civil war and Soviet intervention to pressure President Beneš to accept the resignation of non-communist ministers. Later that year, when Foreign Minister Jan Masaryk was found dead and Beneš died, nobody of stature was left to oppose the communists, who built a Soviet-style state.

The communists established a political monopoly by absorbing the Social Democrats and turning the few parties not already banned into their puppets. Favors and threats increased membership in the CPCz to 20 percent of the population and led to a large influx of communists into governmental institutions. Five-year plans redirected the nationalized Czechoslovak economy toward heavy industry and integrated it into the Comecon system of production and trade.

Soviet advisors instructed Czechoslovak communists and established direct control over security services and the armed forces. Ideological dogma dictated the purging of prewar culture from schools, art, and books. Political control of educational institutions ensured that only the children of politically reliable (communist) parents would have access to the professions. A system of terror and labor camps was established, most notoriously in uranium mines where many thousands became terminally ill. Initially, the terror campaign was directed at political opponents, organized religion, prewar elites, independent intellectuals, bourgeois peasants, and soldiers who had fought with the Allies during the war. Eventually, however, the communists turned on themselves according to the demands of the Kremlin. Show trials of leading communists, mostly of Jewish descent, led to their execution in 1952. Such random purges continued until the late 1950s.

After Antonín Novotný succeeded Gottwald in 1953, the Czech communist leadership managed to remain united and survived the winds of change blowing from Soviet leader Nikita Khrushchev's Moscow. A new constitution was introduced in 1960, marking "the end of class struggle" and the achievement of a socialist society.

From the mid-1960s, growing discontent manifested itself among communist and intellectual elites. A new generation that had grown up under

A system of terror and labor camps was established, most notoriously in uranium mines where many thousands became terminally ill.

communism found its upward mobility blocked by the revolutionary generation that became the elite in 1948. Middle-aged communists who became disillusioned with the system also began to agitate for liberalization. Czechoslovak economists sought to decentralize the failing system of central planning without abolishing it and introduced confused and inconsistent experimental measures. Influential writers such as Milan Kundera, Pavel Kohout, and Václav Havel began to criticize the regime publicly. Others called for the release of political prisoners. In January 1968, a broad coalition of anti-Novotný party functionaries finally replaced him with Alexandr Dubček, leader of the Slovak branch of the CPCz. Thus, the Prague Spring went into full bloom.

On 25 February 1968 Major General Jan Šejna, a high official in the Czech Ministry of Defense and a friend of Novotný, defected to the United States, one of the greatest successes of the Central Intelligence Agency (CIA) during the Cold War. This revelation unleashed a new wave of public criticism of the regime's corruption, inefficiency, and Stalinist tactics. Growing divisions among the communist elite paralyzed their decision-making abilities, and they soon lost control as the reformers demanded complete political and press freedoms.

In March, Soviet leader Leonid Brezhnev pressured the Czechoslovak leadership to reestablish control of the press and quash the Prague Spring. Czech reformers believed that the Soviets would not intervene. But conservative leaders invited the Soviets to intervene and, in the Soviet embassy in Prague, prepared plans for an invasion.

The Soviet leadership concluded that the Czechoslovak communists could not control the situation. A final meeting on 29 July failed to bridge the differences between the reformers and conservatives. Consequently, Brezhnev lost all confidence in Dubček and ordered an invasion.

On 21 August 1968 a mostly Soviet force of 165,000 soldiers and 4,600 tanks invaded Czechoslovakia. The Soviet-led invasion force eventually numbered 500,000 soldiers and 6,000 tanks. While Czechoslovak radio broadcast protests against the invasion, the party leaders were detained and taken to Moscow, prompting more resistance and protest. Under enormous pressure, the Czechoslovak leadership acceded to Soviet demands to normalize the situation in Czechoslovakia according to the Soviet model, purge the party and the security services, muzzle the press, and reassert control. As a result, some 500,000 of the most reform-minded citizens crossed the still-open borders to the West. In October the Czechoslovak communist leadership agreed to the indefinite stationing of 75,000 Soviet troops in the country. Consequent public protests were violently suppressed by the Czechoslovak police.

The communist leadership was divided between reformers and realists, the latter of whom accepted the Soviet invasion and made the best of it for themselves and their clique. After Dubček's April 1969 resignation, Slovak Communist Party boss Gustáv Husák emerged as the realist leader, becoming first secretary and then president. He held power for twenty years. Under Husák's normalization policy (1969–1970), 20 percent of the Communist Party was purged. During the 1970s, the party attracted 500,000 new (and younger)

members. Without gulags but also without any prospects for influencing their society, Czechoslovaks increasingly turned inward. Family became very important, and the average age of marriage and motherhood declined. A culture of weekend recreation in the country also evolved, while the stagnating centrally planned economy offered opportunities for personal enrichment through widespread corruption.

The main voice of protest amid the general passivity of the population was the 2,000 dissident signatories of Charter 77, which encompassed a broad coalition of former reform communists, artists and intellectuals, and religious dissidents. They frequently suffered sanctions such as professional demotions and exclusion from higher educational opportunities. Top dissidents were jailed or expelled from the country. But they nevertheless managed to keep Czechoslovak culture alive. The stale Husák regime was ill-prepared for the glasnost and perestroika reforms that Soviet leader Mikhail Gorbachev initiated beginning in 1986. Tentative liberalization in later 1988 gave way to renewed repression of dissidents and civil protest in early 1989.

The beginning of the end of communism in Czechoslovakia came on 17 November 1989 when a student demonstration was violently suppressed. This led to large protests and the creation of the Civic Forum, an umbrella group of anticommunist Czechs, and the corresponding Slovak group, Public Against Violence. No longer able to rely on Soviet troops, the communist elite was virtually powerless to stop the growing anticommunist fervor. On the 20 November, 150,000 people demonstrated in St. Wenceslas Square in

Mass demonstration in Prague against the communist regime in Czechoslovakia during the Velvet Revolution, 25 November 1989. (Peter Turnley/Corbis)

Prague. Similar nightly mass demonstrations followed, culminating in a demonstration of 750,000 Czechs in Letná fields and a two-hour mass strike on 27 November. By 10 December, when Husák resigned, the CPCz was falling apart and losing control over the country.

A new, pluralistic government was rapidly put in place, headed by Slovak communist Marián Čalfa. The border with Austria was thrown open, censorship was ended, and all of the main figures of normalization were purged from the party. When Charter 77 leader Havel was elected president on 29 December by the partly reconstructed parliament, the revolution was all but complete. It was legitimized by democratic elections in June 1990. The Czechs and Slovaks subsequently embarked on the bumpy road of reform that led them eventually to join the North Atlantic Treaty Organization (NATO) and the European Union (EU). The two peoples arrived there separately, however. Growing nationalist sentiment in Slovakia led to the peaceful division of Czechoslovakia on 1 January 1993.

D

Tibetan head of state in exile and Buddhist spiritual leader. His Holiness the Dalai Lama was born on 6 July 1935 in Taktser, Tibet, the fourth child of a peasant family. His birth name was Lhamo Dhondrub. In 1937 he was recognized by Buddhist monks as the reincarnation of the thirteenth Buddhist Lord of Compassion, and on 22 February 1940 he was enthroned as the Fourteenth Dalai Lama, beginning his reign in the Potala, a 1,000-room palace in Lhasa, Tibet. The Dalai Lama's education began when he was six years old, directed by Buddhist monks. It ended in 1959 when he was awarded the Geshe Lharampa degree (doctorate of Buddhist philosophy).

In 1950 Mao Zedong's Chinese communist forces invaded Tibet. By late 1950 a guerrilla war had erupted there as Tibetans resisted coercive modernization efforts by the Chinese Communist Party (CCP). On 17 November 1950, the Dalai Lama was called upon to assume the role of Tibetan head of state in order to give voice to Tibetan demands for political and religious autonomy. Until 1959 the Dalai Lama engaged in a careful policy aimed at preserving Tibet's traditional religious and political structures while attempting to negotiate with CCP leaders. In March 1959, however, the Tibetan capital of Lhasa erupted in violence after a huge anti-Chinese demonstration was savagely crushed by the Chinese Army. Fearing for the Dalai Lama's life, his advisors counseled him to flee Tibet, which he reluctantly did. He took up residence in Dharamsala, India, the official seat of the Tibetan government-in-exile.

Since his forced exile, the Dalai Lama has constantly sought to focus the world's attention on the plight of the Tibetan people, even appealing to the United Nations for support. He has also encouraged Tibetans to engage in nonviolent civil disobedience against Chinese communist rule. He displayed considerable diplomatic and political

In 1989 the Dalai Lama was awarded the Nobel Peace Prize for his non-violent opposition to the Tibetan occupation.

skill in presenting Tibet's case on the international stage and won widespread respect. In 1989 the Dalai Lama was awarded the Nobel Peace Prize for his nonviolent opposition to the Tibetan occupation. He has been widely received in capitals around the world and has met with all of the world's major religious leaders, including Pope John Paul II five times during 1980–1990.

The numerous publications of the Dalai Lama—both political and spiritual in nature—as well as his constant travel to make personal appeals for support and his nonconfrontational approach began to bear fruit in 2002. That year he again undertook negotiations with the Chinese government for Tibetan autonomy that are still ongoing.

Debray, Régis
(1940–)

French revolutionary theorist, writer, and presidential advisor. Born in Paris on 2 September 1940, Régis Debray graduated from the École Normale Supérieure in 1965 with a degree in philosophy. In 1961 he visited Cuba and volunteered to teach in a rural education program. Because of a close association with Jean-Paul Sartre, Debray was able to secure lengthy interviews with Cuban leader Fidel Castro. These led Debray to become a supporter of revolutionary movements in Latin America.

In 1966 Debray became a professor of philosophy at the University of Havana, and he began to write at length about the foco theory of revolution, based on guerrilla bands. Debray gained international recognition when he went to Bolivia to interview Cuban revolutionary Ernesto “Che” Guevara. After interviewing Guevara, Debray was arrested by Bolivian authorities, tried, and sentenced to thirty years in prison. He is best known for his book *Revolution in the Revolution?* (1967).

Upon his release from prison in 1970, Debray went to Chile and there interviewed Marxist President Salvador Allende Gossens. This led Debray to conclude that radical socialist reform was possible through democratic, parliamentary systems.

Returning to France, in 1974 Debray joined the Socialist Party headed by François Mitterrand. Debray also served as an advisor to Mitterrand's presi-

dential campaign of the same year. Debray then returned to writing, producing on average more than a book a year. His works included commentaries on revolution as well as fiction and works of philosophy.

On the election of Mitterrand to the presidency in May 1981, Debray was named a special assistant in the Office of the President, responsible for advising Mitterrand on policy toward the third world and especially Latin America. The next year Debray also became advisor to Mitterrand on cultural matters. By the 1990s, however, Debray had moved considerably to the Right politically. Among other indications, he wrote favorably about Charles de Gaulle's presidency in *À demain, de Gaulle* (1990). More recently, he presented a critical portrait of Guevara, seemingly rejecting the revolutionary icon he had done so much to help create.

Proposed by U.S. President Franklin D. Roosevelt and accepted by British Prime Minister Winston Churchill and Soviet Premier Josef Stalin at the February 1945 Yalta Conference, the Declaration on Liberated Europe pledged the three governments to aid all peoples liberated from Nazi German control. In it the three leaders pledged that the provisional governments of liberated areas would be “representative of all democratic elements” and that there would be “free elections . . . responsive to the will of the people.” But such lofty phrases were, of course, subject to different interpretations.

Drafted by the U.S. State Department, the declaration represented Roosevelt's response to the situation in Eastern Europe, where Red Army advances had virtually guaranteed that Stalin would determine the political futures of Poland, Romania, Bulgaria, and Hungary. Although it is difficult to determine whether Roosevelt actually expected Stalin to allow free elections and self-government in Eastern Europe, Roosevelt's successor, Harry S. Truman, took the declaration seriously and held the Soviets accountable for fulfilling its provisions. Stalin's subsequent imposition of pro-Soviet regimes throughout Eastern Europe during 1945–1948 elicited charges from Washington that the Soviets had violated commitments undertaken at Yalta. This

Declaration on Liberated Europe (February 1945)

situation greatly accelerated the deterioration of U.S.-Soviet relations and the onset of the Cold War.

Decolonization

Decolonization was the process by which European nations granted independence to their colonial possessions. Much of this occurred during 1945–1960. In 1945, when the United Nations (UN) came into being, roughly one-third of the world's population—750 million people—resided in non-self-governing colonial dependencies. By the end of the twentieth century, fewer than 2 million of the world's 6.1 billion people remained in colonial territories. The former colonies varied greatly in their ability to overcome entrenched social and political problems.

During the era of mercantilism, empire building appeared desirable as a means of building up a nation's wealth. In addition to economic motives, colonies were held to be useful for naval bases and as a sign of national prestige. The impulse peaked in the eighteenth century and waned on the impact of free enterprise economics. Colonies were found to be an economic burden and of scant benefit to the mother country. Late in the nineteenth century a new age of imperialism began. Much of the impulse was geopolitical, based on the desire to control key resources, geographical locations, and populations and deny these to a rival. The first colonial era had generated extensive migrations of Europeans. The second wave, however, was more along the lines of a commercial and political arrangement. Europeans exploited their colonies as they were; they usually did not seek to make them over in the image of the homeland. This was particularly true of the British, but the French did at least profess to believe in their civilizing mission, and Germans spoke about exporting their *Kultur*. Investments in infrastructure and social programs were limited, and the co-option of elites was a preferable means of gaining local cooperation in exploiting a colony's natural resources. When the Europeans, Japanese, and Americans largely concluded the race for empire by 1914 or so, almost all of Africa and much of Asia were under the control of colonial powers. European states had approximately eighty colonies, with the British Empire far and away the largest and the only one that really formed anything approaching an economic unit.

World War I encouraged nationalist forces in colonies around the world, who took inspiration from U.S. President Woodrow Wilson's Fourteen Points speech on war aims, while World War II broke the existing system apart. Colonial powers such as France and Britain emerged from World War II in a greatly weakened state and with their prestige in tatters. The war also heightened nationalism in the colonies, as it severed or severely weakened ties with the mother countries. The defeat of France by Germany in 1940 sent shock waves through the French Empire, and Free French leader General Charles de Gaulle acknowledged that there would have to be a new relationship after the war between Metropolitan France and its overseas empire, which had helped keep the struggle against Germany alive in the name of France. The Japanese, who brought their own form of colonial domination, nonetheless skillfully exploited resentment of European control in such places as Malaya, Indochina, and the Dutch East Indies. The emergence, for very different reasons, of U.S. President Franklin D. Roosevelt and Soviet leader Josef Stalin as staunch opponents of colonialism also did not help the colonial powers.

In many colonies by the 1940s and 1950s, elites seized the opportunity to play the nationalist card. Often the colonizing power simply granted independence and the transition was peaceful, as in the case of the United States and the Philippines. The UN 1960 Declaration on the Granting of Independence to Colonial Countries and Peoples stated that all people have the right to self-determination. A Special Committee on Decolonization came into existence in 1962 to observe its implementation and recommend ways to apply the declaration.

The British had already begun decolonization well before the UN declaration. In the 1931 Statute of Westminster, Britain had granted virtual full independence to the self-governing dominions of Canada, Australia, New Zealand, and South Africa. Egypt received nominal independence in 1922, although the British continued to dominate Egyptian affairs until after World War II, and the last British hold on that country did not end until after the 1956 Suez Crisis. Indian independence came in 1947, but only amid sectarian Muslim-Hindu religious bloodshed and considerable chaos that produced India and Pakistan, states that remained bitter rivals thereafter. Burma and Sri Lanka became independent in 1948. Ghana and Malaya followed in 1957. British decolonization accelerated after 1960, the focus switching primarily to Africa as the following nations became independent: Nigeria (1960); Sierra Leone and Tanzania (1961); Jamaica, Trinidad, Uganda, and Western Samoa (1962); Kenya and Zanzibar (1963); Malawi and Zambia (1964); and Gambia, Lesotho, and the Cook Islands (1965). Guyana, Barbados, Lesotho, and Botswana were decolonized in 1966, and Mauritius and Swaziland were decolonized in 1968. Next came Fiji in 1970, followed by Tuvalu in 1978, Kiribati in 1979, Zimbabwe and Vanuatu in 1980, and finally Hong Kong in 1997.

Because Britain had prior experience and less at stake in its overseas possessions, decolonization was usually a matter of negotiation, transfer of sovereignty, and little resistance. Europeans recognized that negotiation was

Jomo Kenyatta, newly elected prime minister of Kenya, waves to his supporters on 19 June 1963. (Library of Congress)

more palatable than forced decolonization through internal resistance. Generally, the transfer was gentle enough in the British Empire that a representative of the royal family could attend the ceremonies.

Indicative of this process was the new appellation that the British had for their holdings. Previously the British Empire, during World War II it became the British Commonwealth of Nations, and in 1945 it became simply the Commonwealth of Nations. This implied that Britain was merely one member.

Similarly, the French Empire became the French Union in 1945. Under President de Gaulle in 1958, it became The Community. But French decolonization was far more turbulent than its British counterpart. The French controlled their possessions tightly from Paris, whereas the British tended to grant considerable self-government and autonomy. The French attitude toward decolonization was colored in part by their defeat by Germany in 1940 and the belief among many French leaders that only with its empire could France continue to be counted as a major power. Thus, Paris declined to recognize the inevitable in Indochina. The French refused meaningful concessions to the new government of the Democratic Republic of Vietnam

(DRV, North Vietnam) led by veteran communist Ho Chi Minh. Mistrust and miscalculation led in November 1946 to the eight-year Indochina War. The 1954 Geneva Conference called for independence for Cambodia, Laos, and Vietnam, with elections set to occur in a divided Vietnam two years later.

In 1956 France gave independence to Morocco and Tunisia, but no peaceful transition occurred in the case of Algeria. The French had acquired Algeria in 1830, and the modern Algerian political entity was largely their creation. Algeria was technically an integral part of France, formed into three French departments, but the Muslim Algerians did not have full rights, and Algeria was in effect controlled by the European minority there. The French had crushed an Algerian nationalist outbreak at Sétif in 1945, but in November 1954 the National Liberation Front (FLN) began a guerrilla war against the French to bring about Algerian independence.

The ensuing Algerian War was long and bloody. Successive French leaders were determined to hold onto this possession, seeing it, as Premier Guy Mollet put it, as “France’s California.” The French Army was also determined that it would not again be betrayed by the politicians, and when it appeared as if Paris might open negotiations with the FLN, the army professionals teamed up with the Europeans in Algeria to overthrow the Fourth Republic and bring de Gaulle back to power. De Gaulle announced an ambitious developmental program for Algeria known as the Constantine Plan, but it came too late. Finally, he entered into negotiations with the FLN that saw Algeria independent in 1962.

Portugal also fought long, costly colonial wars in Africa, for Portuguese dictator António Salazar was determined to maintain control of his nation’s considerable overseas empire. Fighting began in Angola in 1961, in Guinea in 1963, and in Mozambique in 1964. Ultimately, Portugal committed a sizable force of manpower and routinely spent half of its national budget on the fighting. In consequence, pressing problems in Portugal itself went unaddressed. A revolution in Portugal in 1974 brought about by younger army officers who were convinced that the colonial struggles could not be won led, by the end of 1975, to independence for its two giant African colonies of Angola and Mozambique as well as for Portuguese Timor in Southeast Asia.

In 1945 Belgium still retained control of the mineral-rich Belgian Congo in central Africa. The colony was among the worst-administered of any in Africa, and virtually nothing had been done to prepare it for independence, with few university-educated native doctors and lawyers or trained administrators present. In December 1959 riots broke out in the capital of Leopoldville (Kinshasa), sparked by the French grant of independence for the neighboring French Congo (Congo-Brazzaville). In January 1960 King Baudouin of Belgium announced his intention to end colonial rule, leading to independence for the Congo in June 1960. Soon the Congo lapsed into a bloody civil war.

The UN played an important role in the decolonization process. Articles 73–74 of Chapter XI of the UN Charter called for self-determination and set guidelines for decolonization. The UN set up a new format of trust territories to replace the mandate system set up after World War I. These included

Congolese parade through the streets in Leopoldville in the Belgian Congo celebrating their coming independence, 1960. (Library of Congress)

territories taken from the Axis powers or placed into the trusteeship system voluntarily. The term “trust” implied that these territories would work their way toward self-rule.

Nations administering trusteeships had an obligation to help the territories develop self-government and educational institutions as well as to foster social and economic development. Periodically the UN received and reviewed reports on the trust territories and their progress toward self-rule. Trusteeships that became independent included British-administered Togoland, which joined the Gold Coast in 1957 to form Ghana; Somaliland, which joined British Somalia in 1960 to create Somalia; French-administered Togoland, which became Togo in 1960; French-administered Cameroon, which became independent under the same name in 1960; and the British-administered Cameroons, which split in 1961, with the north combining with Nigeria and the south joining Cameroon.

Tanganyika won independence in 1961 and combined in 1964 with Zanzibar, independent in 1963, to create the United Republic of Tanzania. Belgian-administered Ruanda-Urundi split into the independent Rwanda

and Burundi in 1962. In the Pacific, Western Samoa became Samoa in 1962. Nauru became independent in 1968. New Guinea joined with Papua to become Papua New Guinea in 1975. Micronesia (1990), the Marshall Islands (1990), and Palau (1994)—three states of the Trust Territory of the Pacific Islands—became self-governing in free association with the United States in the 1990s. The Northern Mariana Islands became self-governing in commonwealth with the United States in 1990.

Decolonization left a mixed legacy. During the Cold War years, in Asian nations such as Vietnam, the Philippines, and China and also throughout much of Latin America, the United States was often perceived as seeking to substitute its own brand of anticommunist imperialism in place of Western colonialism. The Soviet Union, on the other hand, sought to encourage and align itself with nationalist movements in the developing world and to win the loyalties of such nations once they gained independence.

Some of the new states prospered, while others remained poor and backward. India and some Pacific Rim states such as Hong Kong, Singapore, and Malaysia adjusted well and played important economic roles in the 1980s and 1990s. Poverty continues to plague the nations of sub-Saharan Africa, where the states are often artificial constructs carved out by the European imperialist powers with no regard for tribal or cultural boundaries and with few or no economic resources. Often the leaders of such states were able to work the Cold War to their advantage, playing the superpowers against one another. After the end of the Cold War, the Americans and Russians lost interest in the developing world, and long-standing rivalries reemerged as foreign aid was sharply reduced. Often civil war and famine were the result.

The postcolonial era saw the developing world's debts grow at a rate that made them impossible to repay. Much of the debt was owed to the most powerful states economically, the so-called G-8 countries. Nations in the developing world faced soaring oil prices in the 1970s, and they were forced to borrow heavily to stay afloat. Debt during 1973–1993 grew at more than 20 percent a year. With compound interest, the area's total debt by 1993 was \$1.5 trillion. After renegotiation in 2000, the debt was still \$350 billion. Only in the first decade of the twenty-first century did the G-8 states begin to take steps toward canceling that debt and developing coherent aid programs that had the potential to lift much of Africa from poverty and end the negative legacy of decolonization there.

Defections

The term “defector” came into practical use after World War II to distinguish Soviet soldiers moving to the West from civilian refugees and often carried with it an ambiguous and negative connotation, suggesting that the person was “defective.” The context often determined how a person was categorized, whether as a displaced person, refugee, or defector. Defectors were often viewed as traitors, political opportunists, or less-than-forthright individuals.

The first wave of Soviet defections began prior to World War II, primarily in response to Soviet dictator Josef Stalin’s political purges. One of the earliest Soviet defectors was Boris Bajanov, once Stalin’s personal secretary, who fled to France in 1928. A key early Cold War defector was Igor Gouzenko, who in September 1945 left his job as cipher clerk at the Soviet embassy in Canada and afterward revealed secrets about the Venona code used for sending Soviet diplomatic cables. He also exposed a Soviet spy ring operating in Canada and brought to light Soviet atomic espionage activities.

The total number of Cold War defectors from the Soviet Union and the Eastern bloc countries remains to be determined. It has been estimated that about 50 Soviets successfully defected each year, the majority seeking political asylum in the United States. According to a sketchy report issued by the Jamestown Foundation to the U.S. Senate in 1986, however, in the four decades following World War II, there were 434 defections from the Soviet Union. The same report tabulated other Eastern bloc defection figures for the period 1946–1986: the Democratic Republic of Germany (GDR, East Germany), 431; Poland, more than 900; Hungary, 176; Czechoslovakia, more than 1,300; Bulgaria, 42; and Romania, 144. These numbers do not include the 3.5 million who fled East Germany to the Federal Republic of Germany (FRG, West Germany) between 1949 and 1961 or the 80,000 Czechs who fled their country or stayed abroad during the Prague Spring of 1968.

The Democratic Republic of Korea (DPRK, North Korea), China, Vietnam, and Cuba also suffered defections. Conservative estimates, covering the period from the end of the Korean War in 1953 to 1989, reveal more than 600 defectors from North Korea, with a majority settling in the Republic of Korea (ROK, South Korea). Following the final prisoner exchange at the end of the Korean War, 14,200 Chinese prisoners of war (POWs) chose not to return to their country. In November 1982, after completing his studies at McGill University in Montreal, Canada, Wang Bongzhang defected from China in order to stay in the West and to agitate for greater freedom in his homeland. After the Tiananmen Square Massacre in June 1989, a number of Chinese

Cuban defectors picked up by the Coast Guard, 1980. During the Mariel Boatlift, 125,000 Cubans defected to the United States. (U.S. Coast Guard)

dissidents, such as the prodemocracy activists Wuer Kaixi and Li Lu, escaped arrest by fleeing via Hong Kong to the West. Between 1975 and 1989, more than a million Vietnamese left their country in three different waves, some 275,000 finally settling in the United States. Cubans escaping Fidel Castro's regime also headed for America's shores, most notably 125,000 in the 1980 Mariel Boatlift.

In the West, defectors from communist countries were cast as symbols of ideological disillusionment. So it happened with Svetlana Alliluyeva, Stalin's daughter, who during a 1967 trip to India obtained American asylum. Western nations viewed high-profile defectors such as diplomats, artists, musicians, athletes, and authors as proof of Marxist failings. This mind-set of Western superiority suffused the film *Moscow on the Hudson*, which portrays a Soviet circus saxophonist who defects inside a New York City department store.

However, not all defectors went from East to West. Even some Americans switched sides. During the prisoner exchange at the end of the Korean War, twenty-one American POWs reportedly elected to stay. Later, a small number of American soldiers crossed the demilitarized zone and defected to North Korea, including Charles Robert Jenkins, who remained there during 1965–2004. In 1985, Edward Lee Howard, a spurned CIA analyst, defected to

the Soviet Union after evading the FBI in New Mexico and flying to Europe.

Relaxed Cold War tensions during détente prompted some American officials to advocate turning away Soviet defectors. This happened in November 1970 to the Soviet fisherman Simas Kudirka, who was returned after he boldly leaped from his fishing vessel onto the deck of a U.S. Coast Guard cutter off the coast of Martha's Vineyard, Massachusetts. Defectors were still warmly received when state secrets were involved, as in September 1976 when President Gerald R. Ford granted asylum to Lieutenant Viktor Belenko after he flew his Soviet MiG-25 jet fighter to Japan. These and other defection dramas were part of the larger Cold War political and ideological struggle in which the two superpowers vied for world supremacy.

Italian politician, leader of the Christian Democratic Party, and premier (1945–1953). Born in Pieve Tesino, Trento, on 3 April 1881, when that region was still part of the Austrian Tyrol, Alcide De Gasperi graduated from the University of Vienna in 1905. He founded the Partito Popolare Trentino (PPT, Trentine Popular Party) and was elected to the Austrian parliament in 1911. When Trentino became part of Italy in 1919, De Gasperi joined Luigi Sturzo's Partito Popolare Italiano (Italian Popular Party). De Gasperi was elected to the Chamber of Deputies in 1921 and emerged as one of Italy's foremost antifascist leaders. In 1927 he was incarcerated by Italian dictator Benito Mussolini's government, but intercession by the Catholic Church secured his release. De Gasperi was allowed to live in the Vatican and worked in its library, under surveillance, until 1943.

With the end of fascism, De Gasperi became the undisputed leader of the Democrazia Cristiana (DC, Christian Democratic Party), which replaced the Partito Popolare and established itself as a pivotal force in Italian politics. From December 1944 to December 1945 he was foreign minister in the governments of Ivanoe Bonomi and Feruccio Parri. In December 1945 De Gasperi replaced Parri as premier, a position he retained until 1953. A moderate, centrist politician with a clear vision of Italy's future as a pro-Western country, De Gasperi skillfully led Italy through postwar reconstruction and the early years of the Cold War.

As Italian premier, De Gasperi immediately began the hard work of transforming a defeated nation into a legitimate member of the international system. His 1947 state visit to the United States earned him the political and economic support of President Harry S. Truman. In May 1947, De Gasperi's decision to form a new cabinet without the Italian Communist Party (Partito Comunista Italiano, PCI) broke the wartime antifascist coalition and ushered in a period of strong disagreement between the DC and the communist-led opposition. De Gasperi led the DC to an undisputed victory in the dramatic elections of April 1948.

De Gasperi, Alcide (1881–1954)

Alcide De Gasperi, leader of the Christian Democratic Party and prime minister of Italy (1945–1953). (National Archives and Records Administration)

De Gasperi signed on to the 1947 Marshall Plan but in early 1948 exhibited hesitation in joining the Brussels Treaty. He also authorized Italy's inclusion in the North Atlantic Treaty Organization (NATO) in 1949. His efforts to rebuild Italy's international reputation were matched by his interest in the early stages of European integration. After Italy joined the European Coal and Steel Community (EEC) in 1950, De Gasperi became a leading proponent of European unity.

De Gasperi's concerns over the growing tensions in Italian politics led him to propose an electoral reform that was defeated at the polls in June 1953, thus ending his political career. He died in Pieve, Tesino, on 19 August 1954.

De Gaulle, Charles (1890–1970)

French Army general, head of the French government-in-exile during World War II, provisional president of the Fourth Republic (1944–1946), and president of the Fifth Republic (1958–1969). Born in Lille, France, on 22 November 1890, Charles André Marie Joseph de Gaulle was arguably France's greatest statesman of the twentieth century.

In 1909 de Gaulle joined the French Army and three years later graduated from the French military academy at Saint-Cyr. He fought in World War I and was severely wounded twice. Promoted to captain in September 1915, he was wounded a third time and then captured by the Germans at Verdun in March 1916. He was a prisoner of war for the remainder of the conflict. Following the war, he returned to Saint-Cyr as professor of history. Later he taught at the École de Guerre, the French war college, then served as aide-de-camp to French Army commander Marshal Henri Philippe Pétain. De Gaulle also became an important theorist of armored warfare and in 1934 published a book on the subject, arguing for a fully motorized and mechanized professional army with organic air support. Had his ideas been implemented, the 1940 defeat of France might never have occurred.

When the May 1940 battle for France opened, de Gaulle received command of the 4th Tank Division. It achieved one of the few successes scored by the French Army in the campaign, bringing him promotion to brigadier general on 1 June. Within a week Premier Paul Reynaud brought de Gaulle

into his cabinet as undersecretary of state for national defense.

Reynaud rejected de Gaulle's advice to fight on, and on 17 June the general left Bordeaux for London. A day later he spoke over the British Broadcasting Company and urged his countrymen to continue the war against Germany. He headed the French Resistance in World War II, but his wartime relations with the British and Americans were strained and often difficult. De Gaulle acted as if he were a true head of state, while the British and Americans persisted in treating him as an auxiliary. He was embittered by blatant British efforts to dislodge the French from prewar positions of influence in Syria and Lebanon and by the failure of the Anglo-American powers to consult him in matters regarding French national interests.

From late August 1944 de Gaulle ruled France as provisional president. He was determined that France would retain its role as a great power and serve as a bridge between East and West, a point that he stressed during a week-long meeting with Soviet dictator Josef Stalin in Moscow in December 1944. De Gaulle also concluded a twenty-year treaty of alliance and mutual security with the Soviet Union. At the same time, he sought to reassert French control over Indochina. In August 1945 he sent an expeditionary corps of two divisions under General Jacques Philippe Leclerc as well as a naval squadron to Indochina and appointed Admiral Georges Thierry d'Argenlieu high commissioner to Indochina to restore French sovereignty over its colonial territory.

In January 1946 when a French constitutional convention rejected de Gaulle's calls for a strong presidency, he abruptly resigned. He spent the next years writing his war memoirs as the French Fourth Republic stumbled from one crisis to another. In May 1958, having survived the long and unsuccessful war in Indochina, the Fourth Republic finally collapsed under the weight of another war, this time in Algeria. De Gaulle then returned to power, technically as the last premier of the Fourth Republic.

Although at the time there were serious doubts in France and abroad about the general's intentions, de Gaulle's preservation of the democratic process was in fact his greatest legacy to France. His Fifth Republic ushered in the strong presidential system and political stability that he had long advocated as well as a degree of domestic tranquility.

The most intractable problem facing de Gaulle, however, remained Algeria. The army had brought de Gaulle back to power ostensibly to maintain Algeria as a French territory. But in a convoluted process, options for the disposition of Algeria were systematically eliminated. There were terrorist activities in France itself as well as several revolts by the generals and Algerian

One of the greatest French statesmen of the twentieth century, Charles de Gaulle led the Free French against the Axis powers during World War II and was provisional president of France during 1944–1946. In 1958 he established the Fifth Republic and served as its president until 1969. (Library of Congress)

settlers and attempts on de Gaulle's own life. Algeria became independent in 1962.

In international affairs de Gaulle was arguably less successful, largely because he sought to reassert a French greatness that had vanished. He saw France as leader of a third European force between the two superpowers. He pushed the development of a French atomic bomb and then the nuclear strike force, the Force de Frappe, to deliver it. De Gaulle's entente with Chancellor Konrad Adenauer's Federal Republic of Germany (FRG, West Germany) was a significant achievement, and it was de Gaulle who began the process of détente with the Soviet Union and Eastern Europe. More questionable was his withdrawal of France from the North Atlantic Treaty Organization's (NATO) military command, although he gave strong support when the West was pressured by the Soviet Union. De Gaulle twice vetoed British entry into the European Common Market, and he cut France's close ties to Israel and called on Quebec to secede from Canada. De Gaulle also lectured the Americans on Vietnam, warning President John F. Kennedy that intervention in Indochina would be "an endless entanglement."

With the defeat in 1969 of a national referendum on administrative reform, which de Gaulle made a litmus test of his leadership, he again resigned and retired to write his final set of memoirs. De Gaulle had completed two volumes and part of the third when he died at his home at Colombey-les-Deux-Églises on 9 November 1970.

Demirel, Süleyman
(1924–)

Turkish politician, prime minister, and ninth president of Turkey (1993–2000). Born on 6 October 1924 into a peasant family in İslamköy, Isparta, in

southwest Anatolia, Süleyman Demirel received his bachelor's degree in civil engineering from Istanbul Technical University in 1949 and pursued postgraduate studies in the United States during 1950–1951. Upon his return to Turkey, he served as the head of the department of dams and director of the department of irrigation. In 1962, he joined the center-rightist Justice Party and became its chairman in 1964.

Demirel's life vividly exemplified the chaotic, unstable nature of Turkish politics during the Cold War. From 1965 to 1980, he formed six coalition governments, all of which had to be disbanded because of parliamentary politics or military coups. His three administrations during the 1970s were plagued with high inflation, trade deficits, and either leftist or rightist extremism. In 1971, Turkish military leaders demanded his resignation, claiming that he was unable to suppress escalating civil strife. In 1980, the military intervened once again for similar reasons and placed Demirel under house arrest in Zircirbozan. He was forbidden from participating in politics for the next ten years.

When the political ban was lifted after a popular referendum in 1987, Demirel became chairman of the True Path Party and was elected to parliament. In 1991 the party won a majority of seats in parliament, elevating Demirel to the premiership for the seventh time. Upon the sudden death of President Turgut Özal, Demirel was elected president in 1993. He served a full seven-year term and left office in 2000.

As prime minister, Demirel implemented developmentalist agricultural and economic policies and pursued a pro-Western foreign policy, advocating the strengthening of Turkey's ties to the Western alliance. As president, he fostered the smooth functioning of the government through an effective coordination of public institutions. Demirel now resides in Ankara.

Vice premier of the People's Republic of China (PRC) and secretary-general of the Chinese Communist Party (CCP). Born in Guang'an, Sichuan Province,

Deng Xiaoping
(1904–1997)

Chinese leader Deng Xiaoping speaks at the Great Hall of the People in Beijing. (Wally McNamee/Corbis)

China, on 22 August 1904, Deng Xiaoping traveled to France in 1920 on a work-study basis, and there he joined the CCP in 1922. In 1927 he returned to China and was assigned to oversee the CCP's political operations. During the Chinese Civil War (1947–1949), Deng, as political commissar of the People's Liberation Army (PLA), fought hard in central China, ensuring the CCP's victory over the Nationalist forces.

After the PRC's birth in October 1949, Deng became a member of the Central People's Government Council and the Revolutionary Military Council. He also became vice chairman of the Southwest China Military and Administrative Council, responsible for reorganizing southwestern China. In August 1952 Deng became vice premier and the next year finance minister and chairman of the Financial and Economic Affairs Committee. He was instrumental in preparing the first Five-Year Plan (1953–1958) to reform the Chinese economy.

In May 1954, Deng was identified as secretary-general of the CCP's Central Committee, a post that brought him to the command level of the party's hierarchy. Until the mid-1960s he assumed more posts, including membership in the Politburo. He was also active in foreign affairs, accompanying a number of delegations abroad. His tenure witnessed the emergence of the Sino-Soviet split.

Deng was purged three times during the Cultural Revolution (1966–1976) on charges that he was a bourgeois reactionary. He eventually reassumed the

vice premiership in mid-1977 when Hua Guofeng, the new PRC chairman, called on him to rehabilitate the Chinese economy. Returned to power, Deng inaugurated the Four Modernizations of agriculture, industry, defense, and science and technology. In foreign matters, he was equally innovative. In February 1978, he visited the United States, which resulted in full U.S. diplomatic recognition of the PRC on 1 March 1978. In terms of the PRC's reunification project, Deng developed the one country–two systems model, to be applied to Hong Kong, Macau, and Taiwan.

Beginning in 1981, Deng retreated from the limelight, first resigning the vice premiership, then succeeding Hua as chairman of the Central Military Commission, a post he held until 1990. During his tenure as chairman, he ordered the crackdown against demonstrators in the June 1989 Tiananmen Square incident. Deng died on 19 February 1997 in Beijing.

Constitutional monarchy situated in northern Europe. Denmark proper has a land area of 16,639 square miles. The Kingdom of Denmark also includes the Faeroe Islands in the North Atlantic (540 square miles) and Greenland (839,900 square miles). Denmark is bordered by Germany to its south; the remainder is surrounded by the North Sea to the west, north, and east and the Baltic Sea to the southeast. As a European frontline state, Denmark, with a population of only some 3.8 million people in 1945, was hesitant to take sides during the Cold War but, as a North Atlantic Treaty Organization (NATO) member from 1949, generally supported NATO policies including détente and disarmament. A consensus on Denmark's position in the Western alliance, in military, political, and cultural terms, included most mainstream political parties.

In 1945, Denmark strongly supported a collective security system within the framework of the United Nations (UN). When relations between the great powers began to sour in 1946, however, it became clear that the UN would not be able to fulfill this role. At the same time, communist takeovers in Central and Eastern Europe were, by 1948, worryingly close to Denmark.

Denmark

A division of Europe into two rival blocs would place Denmark on the front lines of the Cold War. Although both the Soviet Union and the Western powers saw Denmark within the Western sphere, Danish postwar governments attempted to maintain a third position between the emerging blocs. Danish military participation in the administration of Britain's German occupation zone and, later, acceptance of the Marshall Plan did, however, position Denmark unequivocally in the Western bloc well before Denmark signed on with NATO in 1949.

Nevertheless, Danish membership in NATO was contested. During 1948–1949, Danish Social Democratic Prime Minister Hans Hedtoft worked hard to establish a Scandinavian Defense Union that would have maintained a somewhat neutral status. Only when this failed did he favor the NATO solution. Danish membership was opposed not only by the Communist Party but also by the Social Liberal Party, which traditionally had strong links to the Social Democrats. Thus, the emerging Cold War not only forced the Danish government to give up a long tradition of neutrality but also placed long-established alliances in Danish politics under considerable strain.

There were a number of areas where Danish governments were at odds with the Americans. In 1953, the government vetoed the establishment of NATO bases in Denmark. In 1957, it refused to allow nuclear weapons on Danish territory. From the mid-1950s, Danish military expenditures were cut, and the Danes had strong reservations about a joint German-Danish Command within NATO before finally acceding to it in 1961.

There are more nuances to the Danish position, however. Although Danish governments often disagreed with their American counterparts and preferred *détente* to rearmament during the Cold War, Danish membership in NATO was never questioned. Furthermore, Denmark proved amenable when it came to U.S. demands regarding Greenland. Especially in the 1950s, Danish governments clearly used the American interest in military bases in Greenland as part of the U.S. polar strategy to negotiate for political concessions in other areas. Finally, Denmark waged an efficient struggle against local communists in the first decades of the Cold War.

By the 1950s the Danish Communist Party became marginalized in Danish politics and society. A relentless Social Democratic campaign against communist strongholds in the Labor Movement is one explanation. Another is that Danish communists closely followed Moscow's line, which made them vulnerable to criticism. The making of a modern welfare state in Denmark also made the Soviet Union much less of a role model to Danish workers. When the social security of the welfare state was supplemented by the development of an American-style consumer society beginning in the early 1960s, only a small and isolated congregation continued to look eastward for salvation.

From the 1950s to the early 1970s, Denmark experienced high economic growth rates and almost full employment. During this period, Denmark was gradually transformed from an agrarian-based economy to a modern industrial society. In the same years, a series of reforms in social policy transformed Denmark into a modern welfare state with a strong public services sector. Beginning in the early 1970s, however, Danish domestic policies came under

increasing debate from all political parties due to the economic pressures caused by rising unemployment.

Although international tensions began to decline in the 1960s, such was not the case in the Baltic Sea, where Danes were alarmed by growing Warsaw Pact activity. Consequently, Denmark became more closely integrated militarily within NATO. Cooperation within the Baltic Sea Command was strengthened, and Denmark's NATO membership was renewed without debate in 1969. In 1973 and 1977 new defense budgets and agreements underlined the importance of the NATO membership, and the Danish military was modernized with new weapon systems, such as American F-16 fighters. On the other hand, Denmark in the same period was actively trying to formulate new security policies focusing on disarmament and détente. Thus, Denmark was a strong supporter of the Helsinki Process, which culminated with the 1975 Helsinki Final Act.

The general climate of détente made Danish alliance policies less controversial domestically and at the same time offered more space for maneuvering internationally. Danish criticism of American foreign policy in Vietnam was especially pronounced, although this did not engender anti-Americanism *per se*. Indeed, most criticism was based on the Danish perception that the United States did not live up to its professed democratic ideals.

When the Cold War intensified beginning in 1979 and détente between the Americans and Soviets seemed all but over, domestic political conflicts in Denmark also grew. The Danish peace movement gained momentum and was committed to setting a new security policy agenda. The Social Democratic government at first backed NATO's official policies (including the Double-Track Decision of 1979). After losing power in 1982, the party adopted a more critical line, which during 1982–1988 became so influential that Danish security policy toward NATO was decided by opposition parties rather than by the Conservative-Liberal minority government. The breakdown of a broad national consensus on security policy forced the government—on more than twenty occasions—to emphasize Danish disagreement with NATO policies, especially those concerning nuclear weapons. NATO membership as such was never questioned, however, and the issues involved were mainly ones that represented a domestic political struggle for power.

The end of the Cold War offered new opportunities to small nations with big ambitions such as Denmark. Building on NATO as the cornerstone of Danish security policy, Denmark has been active in developing closer cooperation with former adversaries such as Poland and the Baltic states. Denmark also became a compliant member of NATO activities in out-of-area operations such as the interventions in the former Yugoslavia. The heretofore “reluctant ally” has thus become one of America's closest allies.

DePuy, William Eugene (1919–1992)

U.S. Army general who played a pivotal role in rebuilding the army following the Vietnam War. Born in Jamestown, North Dakota, on 19 October 1919, William DePuy joined the National Guard before World War II and later graduated from South Dakota State University with an ROTC commission as an infantry officer. Assigned to the 90th Infantry Division, he initially served as an operations officer during the division's landing on Utah Beach on 8 June 1944. Shortly before the start of the Battle of the Bulge in December 1944, DePuy became a battalion commander at age twenty-five. By the end of the war, he had earned the Distinguished Service Cross, three Silver Stars, and two Purple Hearts.

Following World War II, DePuy studied the Russian language, served several tours as an attaché, and was attached to the Central Intelligence Agency (CIA) working in China operations. He went to Vietnam in May 1964 as the chief of operations (J-3) at the Military Assistance Command, Vietnam (MACV). In March 1966, as a major general, he assumed command of the 1st Infantry Division ("The Big Red One"), quickly establishing the division's reputation for agility and rapid response with airmobile assets to overwhelm the Viet Cong. DePuy led the division through the critical battle of Ap Tau O and Operations GOLDEN STATE and ATTLEBORO. He earned his second Distinguished Service Cross in Vietnam.

In February 1967 DePuy returned to Washington as the assistant to the vice chief of staff of the army. He was one of the key promoters of the Big Five Weapons Systems—the Apache attack helicopter, the Abrams main battle tank, the Bradley armored fighting vehicle, the Patriot air defense system, and the Blackhawk utility helicopter—that proved so successful in the Persian Gulf and Iraq Wars.

DePuy's greatest influence on the post-Vietnam army came with the establishment of the Training and Doctrine Command (TRADOC) in July 1973 and his appointment to head it as a full general. He forced the army to examine thoroughly and overhaul completely its war-fighting doctrine. The resulting 1976 edition of the capstone manual *FM 100–5 Operations* reoriented the army from fighting a guerrilla war in Asia to fighting and winning on the continent of Europe against Warsaw Pact forces that were overwhelmingly superior in numbers of equipment and men.

DePuy's concept of active defense was highly controversial and was widely criticized as being too mechanistic and dependent on firepower at the expense of maneuver. Nonetheless, his reforms and the debate that surrounded them generated a renaissance in American military thinking that very shortly led to the recognition of the Operational Level of Warfare and the AirLand Battle doctrine with which both Gulf wars were fought. DePuy retired from the army in July 1977 as a full general. He died in Arlington, Virginia, on 9 September 1992.

Period of relaxed Cold War tensions between the United States and the Soviet Union that began in the late 1960s and ended by 1980. A French word, “détente” originally referred to the slackening of tension on the string of a crossbow. To release the tension on the string meant that the crossbow could not be fired quickly, as it would have to be cranked up again before it could be used. This explains the application of the term to warfare and to the Cold War.

Although President Richard Nixon and National Security Advisor Henry Kissinger rightfully laid claim to the implementation of détente, a Cold War thaw was clearly well under way as early as 1967, the year that President Lyndon B. Johnson and Soviet Prime Minister Alexei Kosygin met at Glassboro, New Jersey, in a summit that produced little of substance but was nonetheless hailed as a breakthrough in superpower diplomacy. That same year saw the superpowers sign the Outer Space Treaty, which forbade the placement of nuclear missiles and other weapons of mass destruction in space.

When Nixon took office in January 1969, he and Kissinger immediately began to sketch out their grand design for the recasting of East-West relations. Part of the plan was to engage the Soviets in trade agreements, increased cultural exchanges, and arms limitation negotiations. Another piece of détente would capitalize on the growing Sino-Soviet split by simultaneously reaching out to the People's Republic of China (PRC), which the United States had heretofore refused to officially recognize. Nixon and Kissinger hoped to play

Détente

the Soviets and Chinese against one another in order to entice both nations to alter their policies toward the West and its proxies.

Larger international developments also played a part in the development of détente. Chancellor Willy Brandt (1969–1974) of the Federal Republic of Germany (FRG, West Germany) and his successor Helmut Schmidt (1974–1982) helped ease East-West tensions with Brandt's policy of *Ostpolitik*, which sought to smooth relations with the German Democratic Republic (GDR, East Germany) and the Soviet Union. *Ostpolitik* successfully drew West and East Germany closer together and undoubtedly added urgency to Nixon and Kissinger's détente. The fact that the Soviets and Americans had reached rough nuclear parity by 1968 and were both eager to implement the Nuclear Non-Proliferation Treaty, which went into effect in March 1970, suggested that détente was a necessary and desirable progression for both sides.

Clearly, both the United States and the Soviet Union stood to gain from détente. The Soviets saw it as a way to boost East-West trade and to buy badly needed agricultural products, particularly grain, from the Americans. The Americans in turn viewed détente as a way to seal lucrative, large-scale trade deals and to lessen the burden of high defense budgets resulting from the Vietnam War. Obviously, all benefited by reducing Cold War antipathies that might escalate to nuclear war. For his part, Nixon used détente for political gain. Seeking a way to boost his reelection chances in 1972, the president employed his high-profile trips to Beijing and Moscow to focus public attention on foreign policy triumphs during a time in which the economy was faltering, the backlash against Vietnam was increasing, and race relations were still at a slow boil. Soviet Premier Leonid Brezhnev also employed détente for political expediency. Indeed, given the rocky relations with China, Brezhnev saw in détente a way to boost his popularity at home, elevate the Soviet position within the communist bloc, and consolidate his power within the Kremlin.

Nixon visited Beijing in February 1972, a widely publicized spectacle in which two former enemies—Nixon and Chairman Mao Zedong—were seen amiably toasting one another. That the opening of relations with China began before Nixon first visited Moscow was not lost on the Soviets, who showed a renewed commitment to détente, fearing that the Americans and Chinese would conspire against them.

Nixon and Brezhnev's first summit took place in Moscow in May 1972. The meeting was a cordial one that resulted in concrete diplomatic achievements. Altogether the two leaders arrived at seven separate agreements ranging from the Strategic Arms Limitation Talks (SALT I) Interim Agreement and the beginning of SALT II talks to expanded commerce, limiting the likelihood of accidental war, and promoting cooperative research projects. That summer, the U.S. Congress approved the SALT I accords and a three-year grain deal with the Soviets. In the meantime, both nations became signatories to the Anti-Ballistic Missile Treaty and the Biological Warfare Convention in 1972. Brezhnev visited Washington in June 1973 for the second summit. The meeting was a generally productive one, and both men

Soviet General Secretary Leonid Brezhnev and U.S. President Richard M. Nixon meet during Brezhnev's 1973 visit to the United States. (National Archives and Records Administration)

had obviously developed a considerable personal rapport. Both sides agreed to redouble their efforts in negotiating a second SALT agreement, which had run into technical problems over the existence of multiple independently targeted reentry vehicles (MIRVs).

The third and last summit between Nixon and Brezhnev—occurring in June 1974—was the least productive. By then, Nixon's personal and political fortunes as well as other roadblocks conspired to work against a broadening of détente. Although the Americans and Chinese continued to inch their way toward normalized relations, after 1974 the forward momentum of the U.S.-Soviet détente began to falter. By the summer of 1974, Nixon was clearly preoccupied with the Watergate crisis, which was about to doom his presidency; he was a lame duck. The SALT II talks were stalled, and neither side seemed willing to break the logjam. The U.S. Congress, which already had its sights on Nixon, balked at making any further trade or arms deals with the Soviets as long as they continued to mistreat their Jewish population.

Nixon's successor, Gerald R. Ford, was committed to détente. But his uneasy and brief term, seen by many as a caretaker presidency, did not give him much clout with a hostile and Democratically controlled Congress. When Jimmy Carter became president in 1977, he too supported détente. However, his administration's emphasis on human rights soon strained relations

The 1979 Iranian Revolution hamstrung Carter, compelling many Americans to conclude that America had become a toothless tiger.

with Moscow. Détente came unglued in 1979. The 1979 Iranian Revolution hamstrung Carter, compelling many Americans to conclude that the United States had become a toothless tiger. Deteriorating relations with the Soviets became a full-blown crisis when they invaded Afghanistan in December 1979. Carter, now under enormous pressure to act tough, condemned the Afghanistan invasion, initiated a substantial military buildup, and pointedly boycotted the 1980 Moscow Olympics. Détente was all but finished.

When Ronald Reagan came to office in January 1981, he took a hard-line stance with the Soviets. He engaged the nation in a massive conventional and military buildup, resorted to bellicose anti-Soviet rhetoric reminiscent of the early Cold War, and refused to negotiate with the Soviets. The doomed SALT II Treaty was abandoned, and U.S.-Soviet relations reached a nadir not known since the early 1960s. Only after Soviet General Secretary Mikhail Gorbachev came to power in late 1985 did superpower relations improve, beginning the final phase of the Cold War that ended with the dissolution of the Soviet Union on 31 December 1991.

De Valera, Eamon
(1882–1975)

Irish politician, founder of the Fianna Fáil party, and prime minister (1932–1948, 1951–1955, 1957–1959) and president (1959–1973) of Ireland. Eamon De Valera was arguably one of the most important politicians in twentieth-century Irish history, a leading figure in the Irish struggle for independence, and one of the architects of the Republic of Ireland. Born Edward George De Valera on 14 October 1882 in New York City, he went to Bruce, Ireland, at age two with his parents. Educated in Charleville and Dublin, he became

a mathematics teacher. In his twenties, he became involved in Irish nationalist politics.

De Valera joined the Gaelic League as well as the Irish Volunteers on its creation in 1913. In April 1916, he commanded a unit of the Irish Volunteers in the Easter Uprising in Dublin, for which he was arrested and imprisoned. Released in 1917, De Valera, now president of Sinn Féin, entered the British House of Commons in the 1918 general elections. Following another short imprisonment during 1918–1919, he assumed the office of president of the Dáil Éireann (Irish parliament), of which he was a member until 1959.

During the Anglo-Irish War (1919–1921), De Valera's task was to raise funds among Irish Americans to support Ireland's fight for independence. Shortly after his return to Ireland, the war ended with the establishment of the Irish Free State (which became Eire in 1937). This dominion status was bitterly opposed by De Valera and his republican followers in the ensuing Irish Civil War (1922–1923). After another brief period in prison, De Valera and his supporters gave up their fight and formed a new party, Fianna Fáil, in March 1926. Upon accepting the de facto existence of the Free State, it entered the Dáil in August 1927. In February 1932 the party won a majority, and De Valera became prime minister in March 1932. That same year he also became president of the Council of the League of Nations, and in 1938 he assumed the presidency of the league's assembly. De Valera's international reputation, combined with skillful politics, helped him realize Ireland's de facto independence by passing a new Irish constitution in 1937.

De Valera kept Eire strictly neutral during World War II, in part because of a fear of German invasion. The inability of the Royal Navy to use Irish ports was a serious blow to the Allies in the Battle of the Atlantic. Protests by De Valera also prevented the British government from introducing conscription in Northern Ireland. De Valera's stance may have prevented reunification of Northern Ireland with Eire in return for Eire's participation in the war. In 1948 the last ties with Britain were severed, and Eire became the Republic of Ireland. After sixteen consecutive years in power, De Valera stepped down following defeat in the Irish elections of February 1948.

De Valera headed two further governments (1951–1955 and 1957–1959) and was president of Ireland from June 1959 to June 1973. Successful in his goal of ending all ties with Britain (which many Irish would later question), he had failed in his other two chief tasks of reunifying the island and making Gaelic the official language of the republic. His influence had helped keep hatreds inflamed for too long and had retarded the modernization of his country. De Valera died in Dublin on 29 August 1975.

Determined, resourceful, and stubborn, Eamon De Valera was an important leader in Ireland's fight for independence during the first half of the twentieth century. He served extended terms as both prime minister and president. (Library of Congress)

Dewey, Thomas Edmund

(1902–1971)

Elected governor of New York three times and twice the Republican candidate for president of the United States, Thomas E. Dewey is remembered for his unexpected presidential election loss to Democrat Harry Truman in 1948. (Library of Congress)

Attorney, governor of New York (1943–1955), Republican leader, and unsuccessful presidential candidate (1944, 1948). Born in Owosso, Michigan, on 24 March 1902, Thomas Edmund Dewey received his undergraduate degree in 1923 from the University of Michigan and earned a law degree from Columbia University in 1925. As special prosecutor for New York, he soon earned a reputation as a tenacious fighter and an extraordinarily well-disciplined public servant. He also became famous for taking on organized crime and other illegal syndicates.

In 1937 Dewey was elected district attorney of Manhattan, arguably the most prestigious district in the nation. He continued his efforts to clamp down on organized crime, and in 1938 he ran unsuccessfully for the governorship of New York. In 1942 his perseverance paid off when he was elected governor of New York on the Republican ticket. This was no small feat in a heavily Democratic bastion. Dewey, a progressive Republican, introduced the nation's first civil rights legislation and earmarked substantially more money for education.

In 1944 Dewey won the Republican presidential nomination. He waged a valiant campaign that year and managed to garner 46 percent of the vote. But it was unlikely that any candidate would have unseated President Franklin D. Roosevelt, a native New Yorker, during World War II.

Undeterred, Dewey again ran for president in 1948 against President Harry S. Truman. Dewey's only strong foreign policy difference with the president was over the extent of U.S. aid to the Republic of China (Nationalist China), which Dewey sought to expand. He refused to attack Truman on foreign policy issues during the campaign, however, believing that this would only work to the advantage of the Soviet Union. Dewey was expected to

win the election, but Truman came on strong at the end and defeated him, albeit with just 49 percent of the vote.

Dewey turned his energies back to the New York State House, which he ran until 1955 when his third term ended. He subsequently practiced law in the private sector and remained fully engaged in Republican politics. Dewey died on 16 March 1971 in Bal Harbour, Florida.

One of the most decisive battles of the twentieth century, signaling the end of the Indochina War and of Western colonialism in Asia. The Battle of Dien Bien Phu, lasting from 13 March to 7 May, pitted the Vietnamese nationalist forces, the Viet Minh, against the French Army and allied indigenous forces.

In early 1954 Viet Minh commander General Vo Nguyen Giap planned to invade Laos with five divisions. He hoped to take all of Laos and perhaps Cambodia and then link up with Viet Minh forces operating in southern Vietnam. In response, French commander in Indochina General Henri Navarre implemented Operation CASTOR, the establishment of a base in the village of Dien Bien Phu in far northwestern Vietnam. Navarre hoped to use this as a blocking position astride the chief Viet Minh invasion route into northern

Laos but also as bait to draw into battle Viet Minh forces and destroy them with superior French artillery and airpower.

Located in a remote valley some 200 miles by air from Hanoi, Dien Bien Phu had a small airstrip. On 20 November 1953, 2,200 French paratroopers dropped into the valley and easily swept aside a small Viet Minh contingent. Navarre assumed that at most Giap would commit one division to Dien Bien Phu. The French were confident that in any case, the garrison could easily be evacuated. Navarre did not worry about controlling the hills around Dien Bien Phu because, as he pointed out, the Viet Minh did not have any artillery there. This turned out to be a serious misapprehension.

Colonel Christian de Castries commanded the French forces at Dien Bien Phu. The men there were entirely dependent on air supply by some 75 C-47 Dakotas. For ground support, the French could call on 48 B-26 and Privateer bombers, 112 Bearcat and Hellcat fighter-bombers, and several helicopters. Castries established his central command post in the village and ordered construction around it of a series of strong points, reportedly all named for his mistresses: Beatrice, Gabrielle, Anne-Marie, Dominique, Huguette, Françoise, Elaine, and Isabelle. The location of Isabelle was unfortunate; it was 3 miles to the south, separated from the others. Easily cut off, it also tied

down a third of the French forces. The French fortifications were also inadequate (all equipment had to be brought in by air), but Castries assumed that his artillery could quickly knock out any enemy guns that could be brought against him. By mid-March the French had nearly 11,000 men in the valley, a third of them ethnic Vietnamese. Ultimately the French committed 16,544 men there.

Giap accepted the challenge, but there was political pressure on him to do so. A diplomatic conference among the great powers to discuss Asia was about to begin in Geneva, and Viet Minh leader Ho Chi Minh believed that a major military victory might force the French into negotiations to end the war. Giap committed four divisions of some 49,500 combat troops, along with 31,500 support personnel.

The siege opened on 13 March 1954 with a heavy Viet Minh bombardment. Although the French added 4,000 men during the battle, Giap more than offset this with increases of his own and steadily strengthened his artillery, with thousands of porters dragging the guns by hand there. Ultimately the Viet Minh deployed more artillery pieces at Dien Bien Phu and fired more rounds than did the French. The French possessed only four 155mm howitzers, twenty-four 105mm howitzers, and four 120mm mortars. The Viet Minh deployed twenty to twenty-four 105mm howitzers, fifteen to twenty 75mm howitzers, twenty 120mm mortars, and at least forty 82mm mortars along with eighty Chinese-crewed 37mm antiaircraft guns, one hundred antiaircraft machine guns, and twelve to sixteen 6-tube Katyusha rocket launchers.

On the very first night of the siege, 13–14 March, the Viet Minh took Beatrice. Gabrielle fell two days later. The Viet Minh also shelled the airstrip, destroying or driving away French aircraft and knocking out the radio direction beacon, which was critical for aerial resupply. C-47s still flew in supplies and evacuated wounded, but at great risk. The last flight in or out of the fortress occurred on 27 March. During the battle, the Viet Minh shot down forty-eight French planes and destroyed another sixteen on the ground.

On 22 March the French used the last four of their ten U.S.-supplied M24 Chaffee light tanks to counterattack Viet Minh troops that had cut off Isabelle. The first French success of the battle, it also claimed 151 French dead. The arrival of the rainy season made conditions miserable for defender and attacker alike. Heavy casualties from costly Viet Minh human-wave tactics created morale problems and forced Giap to call a halt and then shift to classic siege warfare of trenches inching ever closer to the French lines. The final assault occurred on 6 May, and the last French troops surrendered on the evening of 7 May.

In the battle the French sustained some 20,000 casualties: 2,242 killed, 3,711 missing, 6,463 wounded, and 6,500 prisoners, not counting those forces lost in relief operations. The Viet Minh took some 22,900 casualties: 7,900 killed and 15,000 wounded. A plan to rescue the garrison or to break out came too late. Meanwhile, the Viet Minh immediately sent their 6,500 prisoners off on foot on a 500-mile trek to prison camps from which fewer than half would return.

Although the battle had tied down Viet Minh resources, it had not helped the French situation elsewhere in Indochina. The outcome of the battle also allowed French political leaders to shift the blame for the defeat in Indochina to the French Army. Pierre Mendès-France became premier and announced his intention to secure a peace settlement at Geneva. Although the peace agreement was reached that July, it proved to be only a truce.

Dillon, Clarence Douglas

(1909–2003)

Influential financier, diplomat, undersecretary of state for economic affairs (1959–1961), and secretary of the treasury (1961–1965). Born in Geneva, Switzerland, on 21 August 1909 to the immensely wealthy and powerful financier Clarence Dillon, Clarence Douglas Dillon attended the exclusive Groton School and graduated from Harvard University in 1931. That same year, his father gave him \$185,000 to buy a seat on the New York Stock Exchange. In 1936 he began serving as director of the United States and Foreign Securities Corporation. Later he was its president. In 1938 Dillon joined his father's New York investment firm of Dillon, Read & Company.

During World War II, Dillon served in the U.S. Navy. In 1946 he was selected chairman of the board of Dillon, Read & Company. In the late 1940s, he became active in Republican politics. His many contacts with Washington power brokers resulted in his being named ambassador to France in 1953. Beginning in 1957 he began consulting with the State Department on economic matters. In 1959 he resigned his ambassadorship to become undersecretary of state for economic affairs. In this capacity he directed the Mutual Security Program and played a key role in the creation of the Organization for Economic Cooperation and Development (OECD), formed in 1961. He was also a founder of the Inter-American Development Bank. Dillon's work did not go unnoticed by incoming President John F. Kennedy, who took the unusual step of appointing Dillon, a Republican, to head the U.S. Treasury.

Dillon pursued aggressive economic policies that paid handsome dividends in the long term. He was a strong proponent of free and unfettered

trade and championed European economic integration. Indeed, under his direction the United States worked more closely than ever with the European Economic Community (EEC). Dillon's policies also produced an overhaul of U.S. trade policy. In addition, he became the chief point man for Kennedy's Alliance for Progress. Dillon stayed on after Kennedy's 1963 assassination but decided to leave his post in April 1965. He went on to serve on many corporate boards, remained active in Republican Party politics, and became a major patron of the arts, donating \$20 million to the New York Metropolitan Museum. To this day, Dillon's policies during the early 1960s are credited with helping to create the tremendous economic boom that the United States enjoyed throughout the 1960s. Dillon died in New York City on 10 January 2003.

Controversial Bulgarian patriot, founder of the Bulgarian Communist Party, and Bulgaria's first post–World War II prime minister (1946–1949). Born on 18 June 1892 in Kovachevsti, Bulgaria, Georgi Dimitrov began his storied career as a typographer at age fourteen, soon becoming active in the labor union movement and the Bulgarian Social Democrat Party. At the age of twenty-one he was instrumental in forming an offshoot party that favored Leninist organizational ideology over milder socialist prescriptions. A member of the Bulgarian parliament since 1913, Dimitrov was briefly jailed for his vehement antiwar stance during World War I. In 1919, he helped found the Bulgarian Communist Party, which gave the impression that he was closely tied to Moscow, but he was, in fact, more in line with the growing agrarian-populist movement. Dimitrov became a forced expatriate after having led a failed communist coup against the Bulgarian government in 1923. He spent his exile in both Yugoslavia and Austria.

By the 1930s Dimitrov had become an ardent opponent of Nazism and after nearly a decade of antifascist agitation finally sought refuge in the Soviet Union. He gained Soviet citizenship in 1934 and served as the general secretary of the Comintern during 1935–1943. Still the titular head of the Bulgarian Communist Party, during this period he enjoyed a meteoric rise to power under Soviet leader Josef Stalin's tutelage and ultimately became a member of the Supreme Soviet just prior to World War II.

**Dimitrov, Georgi
Mikhailovich**
(1892–1949)

Georgi Dimitrov, founder of the Bulgarian Communist Party and his nation's first post-World War II prime minister (1946–1949). (Library of Congress)

After the war, Dimitrov's patriotism drew him back into Bulgarian politics. He was soon elected to parliament and in July 1946 moved to liquidate the country's monarchy. In November 1946, he was elected Bulgaria's new prime minister. Although he preferred a federation of Balkan states only nominally controlled by the Soviets, Moscow pressured him not to follow in the path of Yugoslavia's Josip Broz Tito. Thus, Dimitrov was compelled to denounce all social-democratic ideas as well as the so-called Yugoslav alternative. In so doing, he embraced Stalinist policies against his will at the cost of true Bulgarian independence. Embittered and disillusioned by his forced sellout to the Soviets, he was summoned to the Soviet Union. Dimitrov died a suspicious death in Moscow on 2 July 1949.

Dirty War

(1974–1983)

Campaign launched by the Argentine military against its political opponents during 1974–1983. The roots of the Dirty War (Guerra Sucia) stretch back to the early 1930s, when the military became active in Argentine politics. Ultra-conservative elements within the Argentine Army argued that the political process was beyond redemption and that elections and political pluralism threatened to move Argentina in the wrong direction. General José Félix Uriburu's dictatorship (1930–1932), which openly embraced such antidemocratic viewpoints, appears to have foreshadowed the Dirty War.

The Perónist movement, led by President Juan Perón, emerged out of a military dictatorship beginning in 1946 and helped polarize Argentine politics and society. After a military coup forced Perón from power in 1955, his supporters fought successfully to limit the ability of any party, group, or force to rule effectively in Argentina. Anti-Perónist factions within the military became increasingly frustrated with decades of struggle against the Perónist forces, which dominated labor unions.

As the military became more involved in Argentine politics, the political scene became increasingly violent and unstable. Student groups, Catholic reform groups connected to working-class and rural communities, and factions within the Perónist movement became radicalized. Influenced by successful guerrilla strategies in other settings—most notably the 1959 Cuban Revolution as assessed by Ernesto “Che” Guevara—opponents of the Argentine military armed themselves and trained for battle in the 1960s.

With the political process wholly discredited, groups on the Right and Left clashed violently beginning in 1969. On the Left a number of groups, led by the Montoneros and the Ejército Revolucionario del Pueblo (ERP, Revolutionary Army of the People), kidnapped business leaders and government officials, robbed banks and businesses, attacked government sites, and challenged the authority of the military and its civilian allies. On the Right, groups such as the Argentine Anti-Communist Alliance, with ties to the military, police force, and conservative factions within the Perónist movement, also emerged.

The political chaos and violence had reached a crucial point by 1972. Pressure from all sides forced government authorities to allow Perón’s return from exile, as activists across the political spectrum had fought to bring the ex-president back to power. The polarization of the political process had frustrated anti-Perónist elements in the military. Having failed at their attempts to rule without the Perónists, they accepted his return and inevitable election in 1973.

Perón’s return brought no solution. Political and economic mayhem continued as rival factions fought for positions within the Perónist movement after 1973. Perón’s 1974 death only added to the volatile environment. Behind the scenes, the military once again moved to take control of the country.

The Dirty War began in earnest with military-sponsored campaigns against guerrilla operations in northwestern Argentina in 1974. Combining political and security operations, military commanders seized authority across provinces and systematically detained, interrogated, and killed thousands of “subversives” whom its officers had identified as “enemies of order.”

By 1975, using clandestine operations against real and suspected terrorist cells, the military had neutralized guerrilla forces throughout the country. At this juncture a second phase of the Dirty War began. Commanders of the armed forces deposed María Estela Martínez de Perón’s government in 1976. The army, navy, air force, and police throughout the country then deployed antisubversive units that targeted enemies of the state for detention. The ensuing kidnappings, tortures, and murders launched a wave of state-sponsored terrorism that aimed at “disciplining” the population.

It is estimated that as many as 40,000 Argentines may have been murdered in the Dirty War during 1974–1983. Working with military officials in Brazil, Chile, Uruguay, and Paraguay, the Argentine military dictatorship shared intelligence and coordinated actions against targeted enemies who had fled across borders to avoid capture. The military junta speciously justified its abhorrent actions as a broad and just campaign against international communism and in support of Christian civilization.

Hundreds of parents whose children disappeared during the Argentine armed forces' Dirty War against terrorism march from Congress to the palace in Buenos Aires to demand that the government reveal what happened to as many as 20,000 people who disappeared during 1976–1979. (Bettmann/Corbis)

Understandably, the Dirty War generated significant domestic and international opposition. Although many of the dictatorship's officers had received training at the U.S.-backed School of the Americas, U.S. President Jimmy Carter cited human rights violations as justification for limiting aid to Argentina. The Mothers of the Plaza de Mayo, an organization of mothers of victims of the regime's policies that held silent marches near the presidential palace, led a growing domestic opposition that pressured the dictatorship.

Ultimately, economic mismanagement and military blunders forced the dictatorship from power and ended its campaign of political violence in 1982. Already by 1980, its misguided fiscal policies created inflation and capital flight that had destroyed Argentina's economy. In the hopes of distracting popular attention, the armed forces launched an expedition that captured the Falkland and South Georgian Islands in 1982. Believing that Great Britain lacked both the will and the interest to contest this move, Argentine military commanders hoped to build national support for their evolving political ambitions.

Before the dictators could capitalize on their "liberation" of these islands, however, the British government mounted a methodical campaign to take back the Falklands. The decision by U.S. President Ronald Reagan to assist the British with logistical support for their transatlantic campaign surprised

the Argentine dictatorship and demoralized the operation's commanders. The success of the British invasion both discredited the regime and forced the military to accept a return to civilian rule.

Efforts to bring those involved in the Dirty War to justice continue. In turn, the term "Dirty War" has developed a broader connotation as revelations of government actions against political opponents in other Latin American countries during the 1960s–1980s have come to light.

Refugees are defined by various international agreements as those people forced by war, human rights abuses, or political repression to flee their home nations. Those people who leave their homes for the same reasons but remain within their home country are now defined as displaced persons (DPs). Because international laws are often not applied within nations, DPs often lack the protection to flee a nation because of war, human rights abuses, or political repression. Although the 1948 Universal Declaration of Human Rights and the 1951 United Nations (UN) Refugee Convention established the universal right of asylum and defined the legal status of refugees, protections afforded to refugees do not apply to DPs, more recently called internally displaced persons (IDPs). When not ignored by one or more of the 140 signatory nations, the UN Refugee Convention applies to those who cross an international border. DPs remain subject to the laws of their particular country. All they can hope for is that the country will honor their basic human rights, either voluntarily or under pressure from world opinion.

Of the 7–9 million people dislocated by World War II, most returned home. But some 1.5–2 million DPs remained homeless in 1945. Among the DPs were Jewish survivors of the Holocaust, East Europeans whose countries were being overrun by Soviet-imposed communism, and people who simply had no place to go. DP camps were located in factories, army barracks, and even concentration camps. The camps were crowded and unsanitary and were plagued by food and clothing shortages. The UN Relief and Rehabilitation Administration (UNRRA) helped DPs in the immediate aftermath of the war, but it shut down its own camps in early 1947, forcing DPs to fend for themselves.

The conditions in the camps came to the attention of U.S. President Harry S. Truman, who sent Earl G. Harrison to Europe in June 1945 to

Displaced Persons

Among the DPs were Jewish survivors of the Holocaust, eastern Europeans whose countries were being overrun by Soviet-imposed communism, and people who simply had no place to go.

German displaced persons, carrying their few belongings, crowd behind a rope and double strand of barbed wire as they wait in Berlin's Anhalter Station to leave the German capital in 1945 after the end of World War II. (Library of Congress)

investigate conditions. Harrison reported two months later that conditions were comparable to the Nazi concentration camps, except for extermination. The Harrison Report led Truman to demand changes in the way the camps operated. Jews were later separated from non-Jewish Poles and Germans.

In 1946 the DP population doubled because of difficulties in Eastern Europe, with 150,000 Polish Jews repatriating from the Soviet Union to where they had escaped at the war's onset. By the winter of 1946, Europe had about 250,000 DPs, with more East Europeans than Jews. Truman loosened U.S. immigration laws, giving priority to orphans. During 1946–1950, 100,000 Jews made their way to the United States. The United States further modified its immigration laws with the 1948 Displaced Persons Act, which allowed 341,000 immigrants into the country during 1948–1952.

For many Jewish death camp survivors, the desired solution was emigration from Europe to Palestine. Thus, the Harrison Report recommended the relocation of 100,000 Jewish DPs from Europe to Palestine. But this created significant problems. The British feared alienating the Arabs and losing con-

trol over Middle East oil, and Palestinians living in the British mandate were hostile to the Jewish immigrants. London placed the conundrum in the hands of the UN, which sought to partition Palestine into a Jewish and an Arab state. Meanwhile, Britain maintained the Jewish immigration quota to Palestine of 18,000 people per year through 1948. After the British left their Palestinian mandate and Israel became an independent nation in May 1948, 13,500 Jewish immigrants per month entered Israel through the end of the year.

The many Cold War armed conflicts led to a change in the treatment of those uprooted by violence. Millions of Koreans, Vietnamese, Palestinians, Lao, and Congolese fled to refugee camps in neighboring countries, there to remain for years if not longer. When late in the Cold War many nations experienced internal wars, the neighboring states closed their borders instead of accepting refugees as they had done in the past. In the 1970s the international community began applying the term “internally displaced persons.” International agreements dealing with refugees did not apply to IDPs. This meant that the developed world could ignore the 1949 Geneva Conventions, two 1977 protocols pertaining to victims of armed conflict, and the mandate of humanitarian organizations to safeguard IDPs.

The UN attempted to define the status of IDPs under international law in 1992, and in 1998 the UN established a special advisor for IDPs and attempted to expand authority to aid refugee-like situations. It allowed the same level of support for DP camps as for refugee camps, but it failed to establish any basis in international law for protecting the DPs or the camps themselves.

A string of radar stations stretching just above the Arctic Circle and extending from Alaska to Greenland, positioned to provide warning of an intercontinental ballistic missile or bomber attack from the Soviet Union against North America. U.S. President Harry S. Truman approved construction of the Distant Early Warning (DEW) Line in late 1952. Following considerable public debate, the initial line of fifty-seven sites came into operation in 1957.

The U.S. Air Force Continental Air Command hoped that the DEW Line would provide five to six hours' warning of a bomber attack from the

Distant Early Warning Line

Soviet Union. Such time would allow U.S. interceptors to scramble and meet the attackers and would also permit the dispersal and protection of U.S. Strategic Air Command bombers. The DEW Line was constantly upgraded during the course of the Cold War and reached its maximum extent in the early 1960s with seventy-eight radar stations. Supplementing the DEW Line were the Mid-Canada and Pinetree radar nets as well as seaward extensions in the form of platforms known as Texas Towers, navy picket ships, and aircraft. The DEW Line remained in place during the entirety of the Cold War, but from the late 1980s to the mid-1990s it was gradually replaced by the North Warning System, which actually made use of many of the DEW Line installations.

Djilas, Milovan (1911–1995)

Yugoslav communist revolutionary, advisor to Josip Broz Tito, Yugoslavia's press czar in charge of propaganda, writer, and noted dissident. Born to a Serbian family on 12 June 1911 in Podbišće in Montenegro, Milovan Djilas studied law and philosophy at the University of Belgrade, became a communist student leader, and was imprisoned during 1933–1935 for his radical politics. In 1937 he met Josip Broz Tito, then head of the illegal Communist Party, and soon became his chief assistant and close friend. Tito appointed Djilas to the Yugoslav Communist Party Politburo in 1940.

During World War II, Djilas played a major role in organizing the Partisan Uprising and took an active leadership role in the resistance to the German Army occupation. In 1944 he traveled to Moscow, where he held the first of a series of meetings with Soviet dictator Josef Stalin. Djilas later described these in his dissident manifesto *Conversations with Stalin* (1962).

In Yugoslavia's postwar government, Djilas became a cabinet minister in charge of propaganda and was noted for his ruthless imposition of cultural subjugation. He greatly influenced Tito's 1948 decision to break with the

Soviet Union in order to pursue an independent, socialist path. But by the end of the decade, Djilas had grave doubts about both Stalinism and Yugoslavia's ability to implement self-managed socialism.

Because of his calls for increased liberalization and his criticism of the Communist Party that were published in the party daily *Borba* in April 1954, Djilas was ousted from the party and received an eighteen-month suspended sentence. However, when his article "The Storm in Eastern Europe" appeared in a major American magazine supporting the 1956 Hungarian Revolution, he was imprisoned for three years. In 1957, his prison sentence was increased to seven years after the manuscript of his book *The New Class* was smuggled to the West and published. This work was the first authentic exposure of Eastern bloc communists as a "new elite" dedicated to self-aggrandizement and power and therefore not so different from the capitalists they had replaced. Djilas was released in 1961 but imprisoned again in 1962 after the publication of the disdainful *Conversations with Stalin*. He received a pardon in 1966, was allowed to travel, and held a visiting professorship at Princeton University in 1968.

Djilas renounced communism entirely in *The Imperfect Society*, published in 1969, and became a hero among communist dissidents. During the 1990s he opposed the breakup of Yugoslavia and decried the fervent nationalism that precipitated the bloody Balkan conflicts that soon ensued. Djilas died in Belgrade on 20 April 1995.

Balkan territory located between the lower Danube River and the Black Sea. Dobruja's 9,000 square miles are today divided between Romania and Bulgaria. In 1945 the aggregate area held some 860,000 people. The population is principally Romanian in the north and Bulgarian in the south, with pockets of Turks and Tartars dispersed throughout. The principal city of Dobruja is Constanța (population of 79,000 in 1945), Romania's principal port. Always of strategic importance, the area was in dispute between the Byzantine and Bulgarian Empires but fell to the Turks in 1411. It remained part of the Ottoman Empire until the Russo-Turkish War of 1877–1878. The Treaty of

Dobruja

Romania lost 2,970 square miles and 875,000 people of the Dobruja to Bulgaria.

Berlin in 1878 assigned the bulk of Dobruja to the Kingdom of Romania and a smaller southern section to the new autonomous Principality of Bulgaria.

While Bulgaria was hard-pressed by the Serbs during the Second Balkan War in 1912, Romania occupied the southern section to a line between Silistra and Balchik. The Treaty of Bucharest in 1913 confirmed Romanian control over all of Dobruja, but Bulgaria refused to reconcile itself to the loss of the southern portion, the richest agricultural land of Bulgaria. When Romania joined the Entente in 1916, Bulgaria, one of the Central Powers, invaded Dobruja with the intention of regaining its lost territory. The defeat of the Central Powers, however, thwarted Bulgarian hopes, and Dobruja remained Romanian.

On 7 September 1940, Bulgaria, with the backing of Nazi Germany, was able to regain southern Dobruja. The Germans forced Romania to accept the Treaty of Craiova but mandated an exchange of population. Some 110,000 Romanians were forced to relocate from the south to the north, and 62,000 Bulgarians were forced to leave their homes in northern Dobruja and resettle in the south. Overall, Romania lost 2,970 square miles and 875,000 people of Dobruja to Bulgaria.

Bulgaria, which had not declared war on or participated in the invasion of the Soviet Union, joined the Soviet military campaign against Nazi Germany in the fall of 1944. Although Bulgaria was not recognized as a cobelligerent, Soviet treatment of Bulgaria differed from the treatment of Romania and Hungary. Reparations were demanded of both, and Romania was forced to return Bessarabia to the Soviet Union. With the support of the Soviet Union, the Paris Peace Treaties of 1947 confirmed Bulgaria's retention of the territory it had gained in southern Dobruja through the Treaty of Craiova. During the policy of forced collectivization and Bulgarization under Bulgarian Premier Vulko Chervenkov in the early 1950s, more than 100,000 Turks were displaced from Dobruja and immigrated to Turkey.

Dobrynin, Anatoly Fyodorovich
(1919–)

Soviet diplomat and ambassador to the United States. Born on 16 November 1919 in Krasnaya Gorka, Anatoly Dobrynin studied engineering at the Ordzhonikidze Moscow Aviation Institute and worked as a designer at Experimental Aircraft Plant No. 115 in Moscow before being selected by the Personnel Department of the Communist Party of the Soviet Union (CPSU)

Central Committee to attend the Higher Diplomatic School in 1944. He joined the CPSU the following year. In 1946 he graduated with a doctorate in history, having written a thesis on U.S. policy during the Russo-Japanese War of 1904–1905 that was published in 1947.

Dobrynin joined the Ministry of Foreign Affairs as assistant chief of the Education Department while also serving as an assistant professor of U.S. foreign policy at the Institute of International Relations. From 1947 to 1952 he worked on the staff of Deputy Foreign Minister Valerian Zorin, ultimately becoming his first assistant. Dobrynin was posted to Washington as counselor at the Soviet embassy in 1952 and served as minister-counselor from 1954 to 1955. Returning to Moscow in 1955, he was promoted to the rank of ambassador extraordinary and plenipotentiary in the Foreign Ministry before becoming an assistant to Foreign Minister Dmitri T. Shepilov. In 1957, Dobrynin was posted to the United Nations (UN) Secretariat as an undersecretary-general, becoming director of the Department of Political and Security Council Affairs the next year.

In February 1960 Dobrynin was recalled to Moscow to head the Foreign Ministry's American Department, where he served until January 1962. He returned to the UN briefly in the summer of 1960 to help Foreign Minister Andrey Gromyko lodge complaints regarding American U-2 overflights of the Soviet Union. In January 1962 Dobrynin was appointed Soviet ambassador to the United States. He presented his credentials to President John F. Kennedy on 31 March. Dobrynin served in this post until 1986, playing a critical role in the Cold War era and in almost every aspect of Soviet-American relations. His private discussions with U.S. Attorney-General Robert F. Kennedy were instrumental to the peaceful resolution of the Cuban Missile Crisis in October 1962. During Richard Nixon's presidency, Dobrynin worked with National Security Advisor Henry Kissinger to resolve disputes in the SALT I negotiations and became an informal channel for American communications with North Vietnam leading to the Paris Peace Talks. During the presidencies of Jimmy Carter and Ronald Reagan, Dobrynin provided a degree of stability in the deteriorating Soviet-American relationship that followed the 1979 Soviet invasion of Afghanistan.

Dobrynin became a candidate member of the CPSU Central Committee in 1966 and a full member in 1977. In March 1986, new Soviet leader Mikhail Gorbachev recalled Dobrynin to join the CPSU Central Committee as secretary for foreign affairs and head of the International Department. He was also elected a deputy to the Supreme Soviet, serving until 1989. Dobrynin retired from the Central Committee in 1988 but continued to serve as a foreign policy advisor to Gorbachev until the collapse of the Soviet Union at the end of 1991. Beginning in 1995, Dobrynin became a consultant to the Russian Foreign Ministry.

Doe, Samuel Kanyon (1951–1990)

Liberian dictator. Born on 6 May 1951 to a poor family of the Krahn tribe in Tuzon, Grand Gedeh County, in southeastern Liberia, Samuel Kanyon Doe dropped out of high school in 1967 and two years later joined the army. In October 1979 he was promoted to master sergeant.

A career soldier who seized power in a bloody coup in 1980, Samuel Doe was president of Liberia until his murder in 1990 by rebel forces. He is shown here during a state visit to Washington in 1982. (U.S. Department of Defense)

On 12 April 1980 Doe led a military coup of enlisted soldiers against President William R. Tolbert Jr. The coup toppled the Liberian government and murdered Tolbert. A brutal purge of Tolbert's cabinet and the senior ranks of the military soon followed. Doe established himself as chairman of the People's Redemption Council, which promised to free the nation from the dominance of the nation's minority Americo-Liberians (descendants of the former U.S. slaves who founded the nation in 1847).

Doe adopted a strong pro-American stance, and President Ronald Reagan rewarded him with substantial economic and military aid. Doe even received an invitation to the White House. Despite Liberia's abysmal human rights record, lack of democratic institutions, and increasing political instability, Doe continued to enjoy U.S. support throughout his rule.

Doe promised to relinquish power to a popularly elected government, and in 1984 a new constitution was drafted. When the elections were held in October 1985, however, Doe engaged in widespread fraud to guarantee his victory, which was nevertheless embraced by the United States and much of the international community. Over the next several years, increasing disaffection with Doe's rule led to the formation of several regional and tribal rebel groups. On 24 December 1989, these groups, allied with disaffected Americo-Liberians led by Charles Taylor, launched a well-coordinated uprising that Doe could not quell.

As Doe's government lost control of the country, he appealed to the Economic Community of West African States (ECOWAS) to help stabilize the situation. In response, ECOWAS sent a peacekeeping force of 4,000 men to Liberia in August 1990. On 9 September 1990, as fighting continued, Prince Yormie Johnson's rebel group captured Doe in Monrovia, where he was tortured and, in the early morning hours of 10 September, killed.

Spanish-speaking Caribbean nation occupying the eastern two-thirds of the island of Hispaniola. The Dominican Republic, with an area of 18,815 square miles, is bordered by Haiti to the west, the Atlantic Ocean to the north and east, and the Caribbean Sea to the south. It had a 1945 population of 1.8 million people. The United States was long involved in Dominican affairs. Both security and economic concerns compelled President Theodore Roosevelt to send U.S. military forces to the nation in 1904, as Washington feared that European nations would capitalize on instability there. In December 1904 Roosevelt issued his Corollary to the Monroe Doctrine, namely that the United States had an obligation to prevent chaos (while ensuring a pro-American order) in the Western Hemisphere. During 1916–1924, U.S. military forces again occupied the Dominican Republic, aiming to foster stability but instead creating *antiyanqui* hostility.

General Leonidas Rafael Trujillo Molina, who came to power in 1930, sought a close relationship with the United States. Trujillo had entered the Dominican National Guard in 1919, quickly working his way up through the ranks. Beginning in 1933, with President Franklin Roosevelt's Good Neighbor policy, U.S. policymakers pledged not to intervene in Latin America. U.S. officials instead chose to depend on strongmen such as Trujillo, whose rule often rested on repression, self-aggrandizement, and militarism, to ensure stability and prevent communist insurgencies.

Although U.S. policy toward Latin America in the 1950s included support for anticommunist dictators, Trujillo's brutality ultimately coerced both Washington and the Organization of American States (OAS) to consider ways of undercutting his regime. With Fidel Castro's 1959 triumph in Cuba, U.S. policymakers were concerned that Washington's support for dictatorships such as Trujillo's would foster Castroism in the region. Trujillo incurred the ire of many by sponsoring an attempt to assassinate Venezuelan President

Dominican Republic

In early 1961, the Central Intelligence Agency (CIA) provided small arms and other materiel to a Dominican opposition group in hopes that it would oust the dictator.

Rómulo Betancourt in late June 1960. For the first time the OAS, which normally hewed to a strict noninterventionist line, imposed sanctions on the military strongman. In addition, the United States severed diplomatic relations with the Trujillo regime in August 1960 and added a punitive surtax on imported Dominican sugar. In early 1961, the Central Intelligence Agency (CIA) provided small arms and other matériel to a Dominican opposition group in hopes that it would oust the dictator. Trujillo was assassinated on 30 May 1961, although it remains unknown whether the dissidents who killed the aging dictator actually used the CIA-provided weapons.

After Trujillo's murder, U.S. warships hovered off the Dominican coast while American officials discussed with various Dominican groups the formation of a new government, helping to set up the 1962 elections. President Juan Bosch, a left-wing nationalist, won the presidency and took power in February 1963, but he was ousted by a right-wing cabal in September 1963. Bosch had incurred the wrath of the Dominican elite and many members of the military and did not endear himself to Washington with his call for land reform and his support of strong labor organizations. After Bosch's ouster, Donald J. Reid Cabral's Constitutionalist government briefly held power, a nominal civilian government installed by military leaders. Continued economic and political problems led to civil war, and on 24–25 April 1965 the Cabral government was toppled. Pro-Bosch and anti-Bosch groups sprung up, each vying for power.

Fearing even more instability, President Lyndon B. Johnson deployed a contingent of U.S. troops to the Dominican Republic on 28 April 1965. In all, 23,000 troops from OAS nations were sent. Because a congressional investigation at the time revealed that the Dominican Republic's communist movement was small and inconsequential, some members of Congress severely criticized the intervention, which was the first time U.S. troops had occupied a Latin American nation since the early 1930s. After the troops pulled out in early 1966 and moderate Joaquín Balaguer took office on 1 July 1966, U.S.-Dominican relations remained generally cordial.

Balaguer, who stayed in power until 1996, often resorted to Trujillo-style authoritarianism, and the Dominican economy remained unstable, particularly during the late 1970s and 1980s. Political stability during the Balaguer years remained somewhat precarious, although he was able to exert enough influence to maintain a certain modicum of control and, to placate the Americans especially, to keep left-wing movements at bay.

Occupying the eastern two-thirds of the island of Hispaniola, the Dominican Republic has witnessed two large-scale U.S. military interventions. The first occurred during 1916–1924 and the second in 1965. The first American intervention, when U.S. President Woodrow Wilson sent U.S. Marines to the island nation in 1916, was justified as being necessary to terminate lawlessness and Dominicans' failure to meet their financial obligations to the United States. As early as 1905, the Americans had taken over the receivership of the Dominican Republic's customs, which lasted until 1940.

While the military occupation improved the island republic's infrastructure to some degree, nationalist opposition to U.S. rule was especially focused on the U.S.-established National Guard, which oftentimes acted with considerable brutality. When the United States withdrew its forces from the country, it left power in the hands of the National Guard, led by Rafael Trujillo. Trujillo ruled the Dominican Republic for more than three decades, from 1930 until his assassination in May 1961.

During World War II the Dominican Republic was one of the first Latin American countries to declare war on the Axis powers, and Trujillo paid brief lip service to democratic principles. After the war, however, beginning in 1947 he moved to reverse his toleration of opposition parties and for the next twenty years relied on his powerful allies in Washington to neutralize international opposition to his regime.

Trujillo ruled with considerable savagery, using the National Guard and his feared secret police force to suppress and eliminate any political dissent. Meanwhile, he treated the Dominican Republic as his personal fiefdom. Until the late 1950s, Trujillo enjoyed the uncritical support of the United States. He also quickly learned how to exploit Cold War fears of communism in the Caribbean to secure favors from Washington.

The removal of Trujillo in May 1961 was partly assisted by the growth of inter-American and U.S. opposition to his brutal rule and a decision by the John F. Kennedy administration to reduce American support and impose economic sanctions. The period between Trujillo's assassination and the 1965 U.S. military intervention was marked by a complicated history of attempts to create a stable political climate in which Trujillo's cronies and relatives tried, unsuccessfully, to continue the dictator's rule.

In national elections in 1962, the first democratic elections in nearly four decades, a nationalist-reformist coalition, the Dominican Revolutionary Party

Dominican Republic, U.S. Interventions in

(PRD), came to power with the support of middle-class sectors and some populist movements. The new government was headed by the Dominican novelist Juan Bosch. After an initial honeymoon period in which the Kennedy administration responded warmly to the new government, relations with Washington began to deteriorate, especially when Bosch made clear his intentions to recognize the Cuban government of Fidel Castro. Bosch's economic reforms, which included modest land reform and the nationalization of several major enterprises, further aroused anticommunist fear within the Dominican Republic and in the United States.

With signs of U.S. approval, in September 1963 elements of the nation's armed forces led by archconservative General Elias Wessin y Wessin overthrew Bosch, who went into exile in Puerto Rico. The coup installed a military triumvirate headed by businessman Donald Reid Cabral.

The leaders of the new regime abolished the constitution, but nearly two years of corruption and brutal internal repression produced a popular uprising on 24 April 1965, which restored Bosch and his Constitutionalist

A U.S. Army soldier patrols the streets of Santo Domingo, Dominican Republic, on 9 May 1965 during a period of civil unrest. The message "Yankees come back" is scrawled on the wall of a building where food is being distributed. (National Archives and Records Administration)

movement to power. For four days the Constitutionalist and their military and civilian supporters, led by Colonel Francisco Caamaño, fought to prevent a counterattack led by Wessin y Wessin.

The fighting in Santo Domingo soon took on the characteristics of a popular insurrection and began to spread to other regions of the country. Despite their use of tank assaults and aerial bombing, the Wessin-led forces were on the verge of defeat. The impending collapse of the Wessin forces and faulty intelligence supplied by U.S. Ambassador William Tapley, who reported to the U.S. State Department that the lives of American citizens were imperiled by communist-led hordes, set the scene for a full-scale U.S. intervention.

On 28 April 1965, a clearly panicked President Lyndon B. Johnson ordered 20,000 U.S. troops into the Dominican Republic. The Americans' official rationale was that the action was needed to prevent a communist takeover of the country and the emergence of a "second Cuba." Evidence of communist influence within the insurrection was, however, very thin. The Communist Party's small number of militants and the members of the Castroite June 14 Movement certainly played a role in the Constitutionalist resistance, but the popular insurrection was overwhelmingly made up of the urban poor of Santo Domingo. The American intervention in practice seemed designed to prevent a return to Constitutional government by Bosch and to block radical social and economic change in the island republic.

U.S. intervention forces were soon aided by an Organization of American States (OAS) intervention peace force. The OAS force was the result of vigorous U.S. lobbying and was in violation of inter-American prohibitions on foreign military intervention in the affairs of the region. American and OAS forces took a month to defeat the Constitutionalist insurrection and impose an interim administration before new elections were convened. In the elections of June 1966, a large majority of voters elected Joaquín Balaguer, a former Trujillo loyalist, and his Reformist Party. Balaguer remained in power for most of the next twenty-eight years. Systematic police terror, an astronomical increase in political corruption, and the transformation of the Dominican Republic into a secure location for foreign investors were the main legacies of the U.S. intervention.

Domino Theory

American theory of international relations first publicly propounded by President Dwight D. Eisenhower in 1954 as a corollary of sorts of containment. According to the domino theory, nations in a given region are inextricably linked to others within that region. If one were to fall to communism, then the others would fall one after another, like dominoes. The theory was a guiding force for several American overseas interventions, especially in Vietnam. It has also been applied to the Middle East. The U.S. containment policy, as the name implies, was designed to contain or quarantine the Soviet Union and the spread of communism. It dates to 1946, when American diplomat George F. Kennan wrote his Long Telegram. Thus, through containment the much-feared falling dominoes would be prevented by the rigorous application of containment.

As the Cold War progressed, the two monoliths of the Soviet bloc and the Allies faced one another, each unable to confront the other directly without potentially triggering a nuclear Armageddon. They thus battled indirectly, using surrogates and proxies and jockeying for world position and control of the emerging nations of the postcolonial era. The Americans sought to contain communism by propping up potential dominoes, such as Greece in 1947 to safeguard neighboring Turkey and the Middle East.

At the outset, American liberals and conservatives alike accepted the domino theory. During a 1954 press conference, President Eisenhower defined Indochina in terms of the domino theory, which quickly became part of the U.S. foreign policy lexicon. In October 1949, one Asian domino had already fallen, namely China and its 450 million people. Adjacent Indochina, where nationalists and communists were engaged in a power struggle with France, would be the next domino that could well topple Burma, Thailand, and then Indonesia. The West stood to lose millions more people to communism as well as access to important sources of raw materials were this to occur. As communism toppled more dominoes, Japan, Taiwan, and the Philippines might have been next, in turn making Australia and New Zealand vulnerable. To head off this perceived catastrophe, the Eisenhower administration believed that the United States had no choice but to support France in its struggle against the Viet Minh.

In the early 1960s, President John F. Kennedy viewed Laos as such a domino. Its loss to communism would put pressure on first Thailand, then Cambodia, Vietnam, and Malaysia.

President Ronald Reagan used the domino theory to justify efforts to topple the Sandinistas in Nicaragua, and President George H. W. Bush employed it in the Persian Gulf War.

December 1979 North Atlantic Treaty Organization (NATO) decision to deploy U.S. Pershing II and cruise missiles in Europe to counter Soviet SS-20 missiles. The decision was a carrot-and-stick approach to arms reduction. NATO threatened to deploy 572 theater nuclear-force missiles in Europe while at the same time trying to coax the Soviets to engage in negotiations over medium-range arms in Europe. The aim was to eliminate all such missiles from the continent. If arms talks failed, the NATO missiles would be deployed in 1983. The situation was risky, as NATO was essentially trying to persuade Moscow to dismantle its SS-20 missiles by bargaining with missiles that had yet to be deployed.

The moving force behind the policy was Federal Republic of Germany (FRG, West Germany) Chancellor Helmut Schmidt, who in a 1977 speech had warned NATO about the political pressure arising from the Soviets' SS-20 deployment. After NATO announced the Double-Track Decision (DTD), mass protests against it spread across Europe, most notably in the FRG and the Netherlands. The ensuing antinuclear movement mobilized hundreds of thousands of people, including many in Schmidt's own party, against the NATO deployment. The FRG nevertheless began deployment of missiles in 1983, and the Soviets consequently broke off arms talks. In December 1987, however, Soviet leader Mikhail Gorbachev and President Ronald Reagan signed the Intermediate-Range Nuclear Forces Treaty, effectively reversing NATO's Double-Track Decision.

Double-Track Decision, NATO

Douglas-Home, Sir Alexander Frederick (1903–1995)

British Conservative Party politician, foreign secretary, and prime minister (1963–1964). Born into an aristocratic family in London on 2 July 1903, Alexander Frederick Douglas-Home was educated at Eton College and Christ Church, Oxford University. In 1931 he stood for Parliament and was elected as a member of the Conservative Party. From 1935 to 1940 he served as parliamentary private secretary to Prime Minister Neville Chamberlain. Douglas-Home was defeated in the 1945 elections but won back his seat five years later. In 1951 he resigned his parliamentary seat following the death of his father and his becoming the 14th Earl of Home. Over the next decade he held a variety of ministerial posts, including lord president of the council and commonwealth secretary.

In 1960, Prime Minister Harold Macmillan appointed Home foreign secretary. A committed anticommunist, Home harbored deep suspicions of détente with the Soviet Union. He also championed close U.S.-British ties and was a proponent of a modernized and expanded British nuclear arsenal.

Home succeeded Macmillan as prime minister in October 1963 following the Profumo Affair, which had driven Macmillan from office. John Profumo, secretary for war, had had an illicit affair with Christine Keeler, a young woman with romantic links to a Soviet embassy attaché. Profumo resigned after it emerged that he had lied about his relationship with Keeler on the floor of the House of Commons, and Macmillan, under heavy pressure from his Con-

servative Party, was forced to resign. Following a bitter political battle, Home was elected as a compromise choice.

As prime minister, Home's first order of business was to heal the divide in the Conservative Party and restore public faith in the government. He had only a year until the next general election. During that time, he had difficulty accomplishing anything of substance, as his own party remained hopelessly divided and the opposition Labour Party took the high ground in cultivating popular support. In the October 1964 general elections, Labour won a majority, pushing Home and the Conservatives out of office. In 1965, he ceded leadership of the Conservative Party to Edward Heath.

When the Conservatives returned to power in 1970, Prime Minister Heath appointed Home foreign secretary, a position he held until 1974 when he left the House of Commons. In 1975 Queen Elizabeth II named him Baron Home of the Hirsel, a peerage that carried a seat in the House of Lords. Home died in Coldstream, Berwickshire, Scotland, on 9 October 1995.

Romanian interior and state security minister (1953–1965). Born in the Wallachian town of Tisău on 27 September 1913, Alexandru Drăghici attended primary school until the age of eleven and within a few years found work as a railway locksmith. He took part in the Grivița railway strike at Galați on 2 February 1933, which ignited industrial action also in Cluj and Iași. He joined the Romanian Communist Party (RCP) in 1934 and in 1936 was imprisoned as a “notorious communist” along with Ana Pauker, among others, and became a close associate of Gheorghe Gheorghiu-Dej.

Following his release in August 1944 from internment at Tîrgu-Jiu, Drăghici served briefly as a public prosecutor, and in October 1945 he joined the RCP Central Committee, becoming a full member in 1948. In December 1950 he was appointed head of the Political Directorate of the Ministry of the Interior. In May 1952 he became interior minister and in September 1952 head of the new Ministry of State Security (the Securitate) as well. The power of these combined positions allowed Drăghici a free hand in undertaking a massive search for enemies of the state at Gheorghiu-Dej’s behest, during which about 100,000 persons were arrested and imprisoned by 1958. Drăghici’s fortunes were directly linked with those of his patron, so when Gheorghiu-Dej died in March 1965 and was succeeded by Nicolae Ceaușescu, Drăghici was removed from his ministerial posts and replaced by Ceaușescu protégé Ion Iliescu. Ceaușescu began a campaign critical of the alleged abuses of the interior ministry during the former regime, and implicitly of Drăghici, so that by 1967 Drăghici was thoroughly discredited, finally giving up his Presidium seat on 26 April 1968.

Just after Ceaușescu’s death in December 1989, Drăghici and his Hungarian wife Marta quickly left Romania, taking up residence in Budapest, where he died on 12 December 1993, bringing to an end efforts by the new Romanian regime to extradite him.

(1913–1993)

Drug Trafficking

The Cold War played a direct and prominent role in the production and trafficking of illicit drugs.

The Cold War played a direct and prominent role in the production and trafficking of illicit drugs. Indeed, the financing of many anticommunist covert operations, such as those led by the U.S. Central Intelligence Agency (CIA), relied on the drug economy of various proxy states in which drug trafficking was often condoned and even encouraged. Specific historical cases illustrate how the anticommunist agenda of the CIA played a decisive role in spurring the global illicit drug trade. These include the French Connection and the role of the Corsican mafia against communists both in France and in Southeast Asia (Laos and Vietnam), the propping up of the defeated Chinese Guomindang (GMD, Nationalists) in northern Burma, the Islamic mujahideen resistance in Afghanistan, and the Contras in Nicaragua.

The United States, as the leader of the global struggle against communism, largely used its special services and intelligence agencies to conduct covert operations worldwide. To contain communism, however, local aid was needed and was widely found in local criminal organizations. In the early 1930s, organized crime kingpins Charles “Lucky” Luciano and Meyer Lansky trafficked heroin exported from China to support Jiang Jieshi’s Guomindang in the civil war there. In 1936 Luciano was jailed, and trafficking in Chinese heroin was considerably disrupted by World War II.

It was during World War II that the American Office of Naval Intelligence cooperated with Luciano. He was to be freed after the war provided that he order his thugs to watch U.S. docks and ports to protect them from Nazi saboteurs. The Office of Strategic Services (OSS), the precursor to the CIA, thus used Mafia assistance in the Allied invasion of Sicily. Such activities initiated what was to be a long-term feature of covert operations led by American intelligence services when consent of the U.S. Congress could not be obtained: the enlistment of nefarious groups engaged in illicit activities in order to wage secret wars through both proxies and alternative funding. Basically, drug traffickers were useful to special services and politicians, and they relied on such connections to expand their activities.

Luciano was freed in 1946 and was sent to Sicily, where he was to cooperate with the CIA. Indeed, to counter the growing communist influence in France and Italy, the CIA turned to the Mafia and condoned its drug-trafficking activities. The CIA soon asked Luciano to use his connections in France to break the strikes led by socialist unions in Marseille’s docks, from which arms and supplies were sent to Indochina. The sometimes-violent assistance of Corsican mobsters in cracking down on the unions was notably motivated by their involvement in the opium business in Indochina and in the smuggling of raw opium from Turkey to Marseille, where it was refined into heroin for export to the United States. Luciano took advantage of such high refining capacities and helped turn Marseille into the heroin capital of Europe. These Marseille syndicates, dubbed the French Connection, supplied the American heroin market for two decades.

The CIA most significantly influenced the drug trade in Southeast Asia, Southwest Asia, and Latin America. Its anticommunist covert operations

benefited from the participation of some drug-related combat units who, to finance their own struggle, were directly involved in drug production and trafficking. Considering the involvement of different groups in the drug trade (for example, the Hmong in Laos, the Guomintang in Burma, and the mujahideen in Afghanistan), their CIA backing implied that the agency condoned the use of drug proceeds and considerably increased opiate production in Asia. However, no evidence has surfaced to suggest that the CIA condoned or facilitated the exportation of heroin to the United States or Europe, as happened with the Nicaraguan Contras.

In October 1949, the communists defeated the Nationalist Guomintang in China, and in the years that followed they cracked down on what was then the world's largest opium production network. Opium production then shifted to the mountainous and frontier areas of Burma, Laos, and Thailand, where Guomintang remnants had fled and had become deeply involved in drug trafficking. Beginning in 1951, the CIA supported the Guomintang in Burma in an unsuccessful effort to assist it in regaining a foothold in China's Yunan province. Arms, ammunition, and supplies were flown into Burma from Thailand by the CIA's Civil Air Transport (CAT), later renamed Air America and Sea Supply Corporation, created to mask the shipments. The Burmese Army eventually drove the Guomintang remnants from Burma in 1961, but the latter resettled in Laos and northern Thailand and continued to run most of the opium trade.

CAT not only supplied military aid to the Guomintang but also flew opium to Thailand and Taiwan. There is no doubt that the CIA sanctioned both the Guomintang's opium trade and the use of CAT, and later Air America aircraft, in that trade. The Guomintang would eventually increase its role in the opium trade after the CIA withdrew its financial and logistical support, and Burma eventually became one of the world's two main opium producers.

Following the 1954 French defeat in Indochina, the United States gradually took over the intelligence and military fight against communism in both Laos and Vietnam. It also took over the drug trafficking business developed by the French by buying the opium produced by the Hmong and Yao hill tribes to enlist them in counterinsurgency operations against the Viet Minh. To meet the costs of this war, the French Service de Documentation Extérieur et de Contre-Espionnage (External Documentation and Counter-Espionage Service) allied itself with the Corsican syndicates trafficking opium from Indochina to Marseille in order to take over the opium trade that the colonial government had outlawed in 1946. The CIA ran its secret army, composed largely of Hmong tribesmen led by General Vang Pao, in Laos. Air America would fly arms to the Hmong and take their opium back to the CIA base at Long Tieng, where Vang had set up a huge heroin laboratory. Some of the heroin was then flown to the Republic of Vietnam (ROV, South Vietnam), where part of it was sold to U.S. troops, many of whom became addicts. After the Americans pulled out of Vietnam in 1975, Laos became the world's third largest opium producer.

However, Vietnam was not the only battleground of Cold War drug operations. The CIA launched a major new covert operation in Southwest Asia in the early 1980s to support Afghanistan's mujahideen guerrillas in their fight

A young Lao girl sells bundles of marijuana and opium on the street in front of the Pathet Lao embassy in Vientiane, April 1970. (JP Laffont/Sygma/Corbis)

against Soviet occupation. U.S. President Ronald Reagan was determined to counter what he viewed as Soviet hegemony and expansionism, a goal shared by his CIA director, William Casey. To support the mujahideen with arms and funds, the CIA resorted to the Pakistani Inter-Services Intelligence (ISI) that chose which Afghan warlords to back and used trucks from Pakistan's military National Logistics Cell (NLC) to carry arms from Karachi to the Afghan border. However, the ISI not only chose Gulbuddin Hekmatyar, a leading opium trafficker, as its main beneficiary, it also allowed NLC trucks to return from the border loaded with opium and heroin. After the Soviet withdrawal from Afghanistan in 1989, U.S. aid to the mujahideen stopped, and the internecine conflict that ensued in the country favored an increase in opium production in order to maintain rival warlords and armies. Afghanistan eventually became the world's biggest opium-producing country, a situation that still existed in 2007.

In Europe and in Southeast and Southwest Asia, the Cold War saw many drug-related covert operations and secret wars in which the CIA clearly and deliberately ignored evidence of drug production and trafficking by its allies. South America, however, was not to be excluded, and when Reagan vowed to topple the pro-Marxist Sandinista regime in Nicaragua, Vice President George H. W. Bush approved the creation of the anti-Sandinista Contra force to which the CIA allied itself. Of course, the CIA had full knowledge that the Contras were involved in drug trafficking and that the planes bringing them arms were

returning to the United States loaded with cocaine. However, the Boland Amendment of 8 December 1982 effectively cut off funding to the Contras. This led the Reagan administration to undertake arms-for-drugs deals that involved illegal weapon sales to Iran.

Illicit drug production and trafficking increased during the Cold War. During this period, the U.S. government was less interested in waging the so-called war on drugs begun in 1971 than in using drug traffickers to support its wars abroad. Indeed, had the CIA cracked down on drug trafficking during the Cold War, it would have forgone valuable intelligence sources, political influence, and much-needed funding for its covert, and sometimes illegal, operations. Ironically, there is no evidence that the Soviet Union or its intelligence service, the Komitet Gosudarstvennoi Bezopasnosti (KGB), resorted to drug sales to fund activities during the Cold War.

Czechoslovakian politician and first secretary of the Communist Party of Czechoslovakia (CPCz) during 1968–1969. Alexander Dubček presided over the 1968 Prague Spring, a brief era of liberalization quashed by a Soviet-led Warsaw Pact intervention.

Dubček was born on 27 November 1921 in Uhrovec, Slovakia, in the state of Czechoslovakia. His father, a dedicated socialist, moved the family to the Soviet Union in 1925. There the Dubčeks remained until spring 1938, when they returned to Czechoslovakia just as the Germans invaded.

During World War II, Dubček joined the underground Slovak Communist Party, committed acts of sabotage against the collaborationist regime headed by Monsiegnur Tiso, and participated in the Slovak national uprising against the Germans in August 1944. After the communists assumed power in Czechoslovakia in 1948, Dubček entered the party bureaucracy and rose rapidly through its ranks, his ascent interrupted only by three years of study at Moscow Higher Political School during 1955–1958.

In 1963 Dubček was elected first secretary of the Communist Party in Slovakia. In this position, he championed societal reform and allowed limited criticism of the rigid Stalinist policies of Antonín Novotný, longtime first secretary of the ruling CPCz. On 5 January 1968, Dubček became first secretary of the Czechoslovakian Communist Party. In March 1968 Novotný, stripped of his power, was ousted from the party. Although committed to maintaining Czechoslovakia's relationship with Moscow and its place in the world socialist system, Dubček spoke of "socialism with a human face" and implemented political, social, cultural, and economic reforms first enunciated in his Action Plan of 9 April 1968. This plan included greater personal liberties, tentative moves toward a multiparty political system, reductions in censorship, and economic liberalization. His efforts were known as the Prague Spring, a time of unprecedented freedom in the history of communist-ruled Czechoslovakia.

Although Dubček assured Moscow that his reforms should not be construed as anti-Soviet and that he had no intention of withdrawing Czechoslovakia from the Warsaw Pact, the Soviets grew increasingly concerned, as did leaders in other Warsaw Pact countries, who feared that Czech reforms might snowball into a larger uncontrollable liberalization movement. When Dubček

Dubček, Alexander
(1921–1992)

Czechoslovak Premier Alexander Dubček smiles as he speaks to Communist Party leaders in Prague. Dubček tried to reform socialism in the country, but the so-called Prague Spring of 1968 was crushed by Soviet intervention. (Bettmann/Corbis)

refused to abandon reform, Soviet leaders took matters into their own hands. On 20 August 1968, approximately 500,000 Warsaw Pact troops invaded Czechoslovakia.

Arrested and transported to Moscow on 21 August, Dubček gave in to Soviet leader Leonid Brezhnev's demands that he halt the reform movement. Returning to Prague on 27 August, a tearful Dubček informed the Czech people that the Prague Spring was over.

Replaced as first secretary in April 1969 by Gustáv Husák, Dubček presided over the Czechoslovak Federal Assembly until September 1969, when he was named ambassador to Turkey. His tenure in Ankara lasted only until June 1970, when he was recalled to Prague and unceremoniously expelled from the party. For the next two decades, Dubček languished as a forestry official in Bratislava. He returned to political prominence in 1989 during the Velvet Revolution that toppled the Czech communist regime and spoke at mass prodemocracy rallies. On 28 December 1989 he was elected chair of the Czech Federal Assembly, retaining that post until June 1992, when he was elected to parliament. Dubček died in Bratislava on 7 November 1992 from injuries sustained in a car crash. Not only a national hero but the embodiment of humanity and courage within the communist bloc, Dubček, had he lived, might have been able to prevent the subsequent breakup of Czechoslovakia.

Duck and Cover Drill

Civil defense training exercise to prepare U.S. civilians to respond to nuclear explosions as part of the American Civil Defense preparedness activities of the 1950s and early 1960s. The drill required individuals to find potential shelter, such as a wall or a desk, and curl up with their faces down and away from the direction of the initial flash that immediately precedes a nuclear detonation. The duck and cover maneuver was intended to reduce the potential injuries from the heat, blast, and flying debris created by a nuclear explo-

sion. The drills were designed to develop awareness of warning alarms, including civil defense air-raid sirens, and to condition individuals to react to an unexpected flash, which could be the initial indication of a surprise nuclear strike.

The duck and cover concept is most famously remembered through the 1950 U.S. government-released training film *Duck and Cover*, which featured an animated character named Bert the Turtle. The film was designed to teach schoolchildren about the protective procedure as well as civil defense activities in general. As part of the Federal Civil Defense Administration's education program, the technique and the training were part of a serious effort to reduce injuries during a nuclear attack; however, the concept clearly had limited value and has served as a source of many jokes. Duck and cover drills were most notably lampooned in the 1982 film *The Atomic Café*. Antinuclear activists and critics of civil defense often used the drill as a symbol of the futility of preparing for a nuclear conflict, especially when policymakers debated whether a nuclear war could be fought and won. Critics of the duck and cover training also expanded their argument, claiming that the drill was intended to induce fear in the population, produce compliance with government security programs, and influence American behavior.

American schoolchildren practicing duck and cover during a Civil Defense drill, 1 February 1951. (Bettmann/Corbis)

French Communist Party leader. Born on 2 October 1896 in Louey-par-Jullan (Hautes Pyrénées), Jacques Duclos was apprenticed at age twelve to a pastry cook. Duclos fought in World War I at Verdun, where he was wounded and taken prisoner by the Germans.

Returning to his profession as a pastry cook after the war, Duclos became active in the left-wing Association Républicaine des Anciens Combattants

Duclos, Jacques
(1896–1975)

Jacques Duclos, a leader of the French Communist Party, remained a staunch Stalinist who preached subservience to Moscow. (Bettmann/Corbis)

(ARAC), in which he rose to a leadership position. He then joined the new French Communist Party (PCF). In 1924 he went to work for the PCF full time, and in 1926 he was elected as a Paris representative to the French Chamber of Deputies.

Increasingly active in antimilitarist activities, by 1928 Duclos had received jail sentences totaling forty-seven years and heavy fines, although he was freed by parliamentary immunity. He won reelection to the Chamber in 1928 (against socialist leader Léon Blum) but was defeated in the March 1932 elections and lost his parliamentary immunity. He then worked for the Comintern's West European bureau in Berlin and in 1935 was elected to the Comintern's Executive Committee.

In November 1932 the leftist French government annulled Duclos' sentences, and he resumed his political activities in France. By 1935 he had become the most powerful figure in the PCF after Secretary-General Maurice Thorez. When the government outlawed the PCF shortly after the start of World War II and Moscow ordered Thorez to come to the Soviet Union, Duclos became the party's principal leader in France, first in opposing the war and then, after the German invasion of the Soviet Union, in resistance to the Germans.

Following the war, Duclos was elected to the two Constituent Assemblies as well as to all National Assemblies during the Fourth Republic. Upon Thorez's return from Moscow, Duclos resumed his place as the number-two man in the PCF, although he was again acting head of the party during Thorez's illness and absence in Moscow during 1950–1953. On Thorez's return, he and Duclos rejected suggestions from Moscow that they de-Stalinize the PCF. Thorez moved Waldeck Rochet into the number-two position in the PCF, and Rochet succeeded Thorez on the latter's death in 1964. Duclos, a senator since 1959, led the Stalinists in the party who sought to keep it closely allied with Moscow. Despite Duclos' reputation as a Stalinist, the PCF chose him as its candidate to run for president of France following the resignation of Charles de Gaulle in 1969. Although Duclos failed to make it into the second round of voting, he received more than 21 percent of the vote, more than socialist candidate Gaston Defferre. Duclos remained faithful to the Soviet doctrine of obedience to Moscow until his death in Paris on 26 April 1975.

Office of Strategic Services operative during 1942–1945 and director of the U.S. Central Intelligence Agency (CIA) during 1953–1961. Born in Watertown, New York, on 7 April 1893, Allen Dulles obtained BA and MA degrees in international law from Princeton University and in 1916 joined the U.S. Foreign Service. Assigned first to Vienna, by the time the United States entered World War I Dulles was in Berne, Switzerland, where he nurtured U.S. embassy contacts with Austro-Hungarian and Balkan exiles. He served on the U.S. delegation to the 1919 Paris Peace Conference and in various positions overseas, but in 1926 financial considerations caused him to join the prominent New York law firm of Sullivan and Cromwell, where his brother John Foster Dulles was a leading partner. Allen Dulles remained deeply interested in foreign affairs, focusing on international business and becoming active in the New York–based Council on Foreign Relations.

A strong supporter of American intervention in World War II, in 1942 Dulles joined the newly created American intelligence agency, the Office of Strategic Services (OSS), headed by Colonel William J. Donovan, and spent most of the war based in Berne in neutral Switzerland. Here Douglas ran a network of intelligence agents in Germany who brought him clandestine copies of numerous secret documents. In spring 1945 Dulles helped to negotiate the surrender of Germany's remaining forces in northern Italy, an operation independently initiated by American and British forces that alarmed Soviet leader Josef Stalin, who feared that his allies intended to negotiate a separate peace with Germany, and that has sometimes therefore been perceived as the opening move of the Cold War.

By 1944 the prospect of communist and Soviet expansion in Europe troubled Dulles. Shortly after he returned to the United States in summer 1945, President Harry S. Truman disbanded the OSS. Dulles remained a strong advocate of a permanent U.S. foreign intelligence service, and he helped to draft the 1947 National Security Act that created the CIA.

From 1950 Dulles was CIA deputy director, and from 1953 to 1961 he served as the agency's third director. He deliberately publicized his agency's existence and accomplishments and was responsible for building its permanent

Dulles, Allen Welsh

(1893–1969)

Allen Dulles played a major role in the creation and organization of the Central Intelligence Agency (CIA) and served as the first civilian director from 1953 to 1961. (Dwight D. Eisenhower Library)

headquarters in Langley, Virginia. President Dwight D. Eisenhower's 1953 appointment of John Foster Dulles as secretary of state, a post that he held until his death in 1959, further enhanced the CIA director's official influence.

Among the CIA's better-known successes under Allen Dulles was the Anglo-American construction of a tunnel in Berlin that for more than a year (1955–1956) allowed Western intelligence operatives to eavesdrop on Soviet military communications. Besides analyzing intelligence, under Dulles the CIA mounted extensive covert operations, among them successful antileftist coups against the governments of Mohammed Mossadegh in Iran in 1953 and Jacobo Arbenz in Guatemala in 1954. Dulles later authorized a similar effort to overthrow the radical new regime headed by Fidel Castro in Cuba. In March 1961 a poorly planned and botched U.S.-backed invasion attempt by Cuban exiles landing at the Bay of Pigs ended in highly publicized failure, a major international humiliation for the United States. President John F. Kennedy publicly accepted full responsibility but privately blamed Dulles, who resigned a few months later. In the early 1970s congressional investigations uncovered evidence on some of the CIA's past excesses overseas during the Dulles years that severely damaged the organization's reputation.

Dulles subsequently served on the Warren Commission that investigated Kennedy's assassination, undercutting the credibility of its testimony when he admitted that in the interests of what they considered to be national security, CIA operatives might well lie even when giving evidence before the commission. In retirement Dulles wrote several books on intelligence. He died in Washington, D.C., on 7 April 1969.

U.S. secretary of state (1953–1959). Born in Washington, D.C., on 25 February 1888, John Foster Dulles studied under Woodrow Wilson at Princeton University and at the Sorbonne, earned a law degree from George Washington University, and in 1911 joined the prestigious Wall Street law firm of Sullivan and Cromwell. Appointed to the U.S. delegation at the 1919 Paris Peace Conference, Dulles unsuccessfully sought to restrain Allied reparations demands on Germany.

Active between the wars in internationalist organizations, Dulles initially opposed American intervention in World War II. Once American belligerency seemed probable, however, he focused intensely on postwar planning. A prominent Presbyterian, in 1941 he became chairman of the Commission to Study the Bases of a Just and Durable Peace, established by the Federal Council of Churches of Christ in America, representing 25 million American Protestants. Its blueprint for international reform, finished in 1943, urged the creation of international organizations to facilitate peaceful resolution of disputes among states, economic integration, arms control, and religious, intellectual, and political freedom, objectives all consonant with the 1941 Atlantic Charter.

Dulles also became prominent in Republican politics, advising presidential candidate Governor Thomas E. Dewey on international affairs. Seeking to secure bipartisan political support for his foreign policy, President Harry S. Truman included Dulles in virtually all major international meetings, beginning with the 1945 San Francisco Conference that drafted the final United Nations Charter. Briefly appointed Republican senator for New York in 1948–1949, Dulles strongly supported creation of the North Atlantic Security Organization (NATO). He also supported European integration as a means of strengthening the continent's economies and militaries, a policy advocated by his friend, Frenchman Jean Monnet.

By the late 1940s Dulles had become a dedicated anticommunist. When Chinese communists won control of the mainland in 1949, he advocated American backing for Jiang Jieshi's Guomindang (Nationalist) regime on Taiwan. In June 1950, when the Democratic Republic of Korea (DPRK, North Korea) invaded the Republic of Korea (ROK, South Korea), Dulles urged U.S. intervention and the extension of protection to Taiwan. As a foreign affairs advisor to the Republican presidential campaign in 1952, Dulles argued that the Truman administration had been timorous in merely containing Soviet communism when it should have moved to roll back Soviet influence in Eastern Europe.

Named secretary of state by President Dwight D. Eisenhower in 1953, Dulles deferred to the president's leadership, although the two men were very different in style. A supporter of Eisenhower's New Look defense policy of heavy reliance on nuclear weapons, Dulles rhetorically threatened to wreak "massive retaliation" against American enemies, tactics nicknamed "brinkmanship." In practice, however, he was often more cautious. Although Dulles's bellicose anticommunist rhetoric alarmed many European leaders, his policies proved pragmatic, effectively respecting established Soviet interests

Dulles, John Foster
(1888–1959)

John Foster Dulles was a U.S. diplomat and senator. He is best remembered as secretary of state in the Eisenhower administration, where he was well known for his strong anticommunist views. (Library of Congress)

in Europe. When discontented East Berlin workers triggered an uprising in the Democratic Republic of Germany (GDR, East Germany) in 1953 and again when Hungarians rebelled against Soviet rule in 1956, Dulles and Eisenhower welcomed refugees but offered no other support.

Dulles and Eisenhower ended the Korean War in 1953, pressuring both sides to accept an armistice, and established a series of alliances around Asia, supplementing the 1951 United States–Japan Security Treaty and Australia, New Zealand, United States Security Treaty (ANZUS) Pact with bilateral security treaties with South Korea and Taiwan and with the Southeast Asia Treaty Organization (SEATO). When possible, Eisenhower avoided direct major military interventions, preferring to rely on covert operations orchestrated by the Central Intelligence Agency (CIA), headed by Dulles's younger brother Allen. The CIA played key roles in coups that overthrew Left-leaning governments in Iran in 1953 and Guatemala in 1954.

In Indochina in 1954, Dulles and Eisenhower withstood pressure from U.S. military leaders and, after Britain had declined to assist, refused to authorize air strikes to rescue French troops surrounded by insurgent Viet Minh forces at Dien Bien Phu. Dulles attended the 1954 Geneva Conference but would not sign the resulting accords that partitioned Vietnam but called for countrywide elections within two years, a contest that Viet Minh leader Ho Chi

Minh was widely expected to win. Instead, Dulles and Eisenhower broke the accords and provided economic aid to the noncommunist Republic of Vietnam (ROV, South Vietnam), seeking to build it up to ensure its independence.

Dulles and Eisenhower considered strengthening America's West European allies as their first priority. In March 1953, Soviet dictator Josef Stalin died, and new Soviet leaders advanced suggestions for German reunification and neutralization. Distrust on both sides made such proposals ultimately fruitless, although the former World War II allies agreed on a peace treaty with Austria that left that state neutral throughout the Cold War. Seeking to reinforce NATO, Eisenhower and Dulles backed proposals for a multinational European Defense Community (EDC), a plan that France vetoed in 1954.

Dulles's relations with Britain and France, whose imperialism he deplored, reached their nadir in 1956. In 1953 Egyptian nationalist Gamal Abdel Nasser came to power. Initially, he sought military and economic aid from the United States, but the Israeli lobby prevented such aid. He then obtained arms from the Soviet bloc. This, in turn, led Dulles in 1956 to rescind an earlier American pledge to provide Nasser with funding for his Aswan Dam project, whereupon Nasser nationalized the Suez Canal, co-owned by the British and French governments. While openly joining Dulles in negotiations with Egypt, Britain and France covertly agreed with Israel on war against Egypt to regain the canal, mounting an invasion in early November 1956 just before the

U.S. presidential election. Dulles and Eisenhower strenuously pressured all three powers to withdraw, which they eventually did, but the episode soured Anglo-American relations. Although Dulles hoped to align the United States with nationalist forces around the world, the open growth of Soviet interest in the Middle East brought the announcement the following spring of the Eisenhower Doctrine whereby the United States claimed the right to intervene militarily against indigenous or external communist threats in the region. This provoked significant anti-Americanism throughout the world.

The emergence of Nikita Khrushchev as top Soviet leader in the mid-1950s seemed to promise a relaxation of Soviet-American tensions, as Khrushchev openly repudiated Stalinist tactics and called for peaceful coexistence between communist and noncommunist nations. Eisenhower hoped to conclude substantive disarmament agreements with Khrushchev. In practice, however, Khrushchev was often far from accommodating. The USSR's success in launching the first space satellite (*Sputnik*) in 1957, Soviet possession of nuclear and thermonuclear weapons, and Khrushchev's seeming readiness from late 1958 onward to provoke an international crisis over Berlin all alarmed American leaders, including the ailing Dulles, diagnosed in 1957 with cancer.

Although American nation-building efforts in both Taiwan and South Vietnam enjoyed apparent success, during the Second Taiwan Strait Crisis (1958) Dulles was notably more cautious about gratuitously challenging either communist China or possibly, by extension, the Soviets. When his cancer worsened, he resigned as secretary on 15 April 1959. Dulles died in Washington, D.C., on 24 May 1959.

Dutschke, Rudi
(1940–1979)

Leader of the Federal Republic of Germany (FRG, West Germany) Sozialistischer Deutscher Studentenbund (SDS, German Socialist Students Federation) and arguably the most prominent figure in the German New Left during the 1960s. Born on 7 March 1940 in Schoenfeld, later part of the German Democratic Republic (GDR, East Germany), Rudi Dutschke turned against Soviet-style Stalinism and toward Marxist socialism as a consequence of the 1953 East Berlin Uprising and the 1956 Hungarian Revolution. In 1960 Dutschke escaped East Germany to West Berlin, where he took up studies at the Free University. There he cofounded SDS and became head of its West Berlin chapter.

By 1965 Dutschke had achieved a reputation as a charismatic speaker and radical thinker. He campaigned against the authoritarianism of universities, U.S. involvement in Vietnam, the conservative German press, and the Establishment. He termed democracy in West Germany a hoax. After a student was shot dead by police during demonstrations against a visit by the Shah of Iran to West Germany in 1967, Dutschke took center stage in the increasingly radical German student movement. On 11 April 1968 he was shot and seriously wounded by a neo-Nazi fanatic in West Berlin.

Dutschke spent the rest of 1968 and 1969 recovering. In 1970 he enrolled at Cambridge University but was deported in 1971 because of his radicalism. He then went to Denmark, where he taught sociology at the University of Aarhus. By the late 1970s his radicalism had faded somewhat, and he became drawn to the environmental politics of the Green Party. Never fully recovered from the wounds he suffered during the 1968 assassination attempt, Dutschke lost consciousness in his bathtub and drowned on 24 December 1979 in Aarhus, Denmark.

Duvalier, François
(1907–1971)

Haitian dictator and president (1957–1971). Born in Port-au-Prince on 14 April 1907, François “Papa Doc” Duvalier received a medical degree in 1934 from the University of Haiti. He served as a hospital physician until 1943, when he became politically active.

Duvalier became a leading proponent of black nationalism in Haiti during the 1940s and early 1950s. He strongly criticized and derided Haiti's light-skinned elite for repressing the black—or dark-skinned—population, which far outnumbered the elite then in control. Backed by the army, Duvalier came to power in 1957 via a fraudulent election in which he promised honesty in government and policies that would benefit the country's black population at the expense of the light-skinned ruling elite.

Duvalier rapidly established the trappings of a personalist dictatorship, silencing the press and courts, neutralizing the army, and creating a secret police made up of plainclothes thugs, the notorious Tontons Macoutes, to enforce his often brutal rule. Duvalier sought and received political and military support from Presidents Dwight Eisenhower and John Kennedy. The United States believed that supporting Haiti's right-wing regime would ensure regional political stability and block the spread of Cuban influence after Fidel Castro's successful January 1959 revolution.

The Eisenhower administration provided significant economic aid to Duvalier and sent a U.S. Marine mission to train the Haitian Army. U.S. policymakers hoped that a stable, black-ruled state in the Caribbean would win the United States valuable diplomatic leverage in the developing world. This was especially the case in Africa, where decolonization had created a fierce Soviet-American rivalry.

Increasing criticism of Duvalier's authoritarian policies led the Kennedy administration to reduce the scale of its aid to Haiti and to pressure Duvalier to leave office. In 1963 the United States cut off most of its assistance to Haiti. But in the absence of alternative liberal or democratic figures to replace Duvalier, the Americans subsequently tempered their insistence on reform and continued to provide support for Duvalier, even as he groomed his son Jean-Claude ("Baby Doc") as his successor. Upon Duvalier's death on 21 April 1971 in Port-au-Prince, the transition to rule by Baby Doc occurred peacefully, and full U.S. military cooperation with Haiti resumed.

E

Portuguese military officer, key participant in Portugal's revolutionary Armed Forces Movement (MFA), and two-term president of Portugal (1976–1986). Born in Alcains, near Castelo Branco, on 25 January 1935, António dos Santos Ramalho Eanes enrolled in the Colégio Militar (Military College) in 1953. After graduation, he attended Lisbon Faculty of Law and the Institute for Applied Psychology. As with most Portuguese Army officers, he spent many years abroad in Portugal's shrinking empire. He served in Portuguese Goa just before it was lost to India and spent much of the 1960s and early 1970s in Portuguese Africa, including Mozambique, Guinea-Bissau, and Angola, largely before those regions attracted significant attention from the United States, the Soviet Union, Cuba, or China.

Eanes played important roles both in the MFA, which toppled Marcelo Caetano's dictatorship in the so-called Revolution of Carnations in 1974, and in the defeat of a leftist military coup the following year. Consequently, in December 1975 he was promoted to general and named chief of staff of the army. In 1976 he was elected president and was reelected in 1981. Following the MFA's widely popular coup, he helped to reestablish a subordinate role for the military in Portuguese politics. It was also during his tenure as chief of staff and during his presidential administration that Portugal committed to complete and unconditional withdrawal from its African colonies. Subsequently, these conflicts, especially the Angolan civil war, became extensively internationalized.

(1935–)

East Asia

East Asia comprises the major powers of China, Korea, and Japan. The region was the scene of major confrontations and armed conflict in the Cold War. On the one side, there were the communist People's Republic of China (PRC) and the Democratic People's Republic of Korea (DPRK, North Korea). On the opposing side were the Republic of Korea (ROK, South Korea) and Japan. Post–World War II East Asian history can be divided into three phases, based on changing regional and global geopolitics: V-J Day to mid-1950, a period of uncertainty and frustration; mid-1950 to mid-1969, during which East-West confrontation was intertwined with the growing independence of client states; and mid-1969 to 1991, which featured an easing of tensions through *détente* and the triumph of East Asian independence movements.

From V-J Day to June 1950

Wartime discussions regarding the post–World War II East Asian order had been brief and amorphous. Nevertheless, there was a general agreement that Japan, once defeated, would be stripped of its overseas territories and placed under foreign occupation. China, at that time the Republic of China (ROC) under Jiang Jieshi's Guomindang (GMD, Nationalist) party and identified as one of the Big Five powers, would assume Japan's former role in enforcing Asian stability and order.

Because of the Allies' Germany First strategy, the end of the war in the Pacific in August 1945 left many issues regarding the postwar order in East Asia undecided, including Korea's postwar disposition. According to the 1943 Cairo and 1945 Yalta agreements, Korea, which had been annexed by Japan in 1910, would again become independent under the guidance of an Allied trusteeship. When Japan surrendered, the Allies hastened to cobble together an interim agreement regarding Korea. Soviet and U.S. troops would take the surrender of Japanese forces, Soviet troops north of the 38th Parallel and U.S. troops south of it. This division was to be temporary, pending the independence of Korea.

On 2 September 1945, Japan formally surrendered. According to the August 1945 Potsdam Protocol, the Soviet Union took possession of Sakhalin and the Kurile Islands (the latter never having been Russian before). The United States assumed responsibility for the occupation of the Japanese home islands, with General Douglas MacArthur, supreme commander for the Allied Powers (SCAP), supervising the occupation and implementation of the Potsdam directives governing Japanese disarmament, demilitarization, and democratization.

MacArthur, supported by 350,000 U.S. troops, installed a temporary military government. Japanese armed forces and national police forces were dissolved, the *zaibatsu* (military-industrial companies) were dismantled, and war criminals were tried and executed. In 1947 a new constitution, along a British-style constitutional monarchy and parliamentary system, came into force. Under MacArthur's guidance, a peace clause was incorporated into the constitution forbidding Japan from waging war and restricting military expenditures to no more than 1 percent of its national budget.

In light of the onset of the Cold War in Europe, Japanese occupation policy was modified. A reverse course was set into motion by 1948, halting dissolution of the zaibatsu and relying upon rapid economic recovery to keep communism at bay. U.S. authorities also carried out drastic reforms in education, land redistribution, and economic liberalization to ensure that Japan would remain firmly in the Western bloc.

The occupation of the Korean Peninsula was, by contrast, frustrating. Because Japan had invaded the Asian mainland through the Korean Peninsula, the Soviet Union sought a pro-Soviet satellite to safeguard its security, as it had sought a cordon sanitaire in Eastern Europe. The Soviet Union installed veteran communist and anti-Japanese guerrilla leader Kim Il Sung, who had fought with the Red Army as an officer in World War II, to head the provisional government in its zone. The Soviets also helped organize the Korean Workers' Party (KWP), which ultimately became the sole political party of North Korea.

In their zone, American occupation forces worked to install in power the staunchly anticommunist Syngman Rhee, who had spent a number of years in the United States. Both Kim and Rhee wanted to reunify Korea but under their own leadership. Conflicting ideologies and strategic concerns thus conspired to doom efforts to reunify Korea. In September 1947, the United States handed over the Korean question to the United Nations (UN). In accordance with a November 1947 UN resolution, elections were held in South Korea in early summer 1948 (North Korea refused to admit the UN team), leading to the establishment of the ROK in August 1948, with Rhee as the first president. In response, the Soviets helped create the DPRK that September, with Kim as premier. The birth of these new nations marked the end of the joint occupation, followed by the pullout of Soviet and U.S. occupation forces in the winter of 1948–1949. With European concerns paramount and anxious not to provide Rhee with sufficient arms by which he might begin a war of reunification, the United States pursued a hands-off policy toward Korea. Kim, meanwhile, embarked on an arms buildup using Japanese arms and weapons left behind by the departing Red Army.

Postwar developments in China were both troubling and disappointing. The Allies' vision of a strong, united, and democratic China quickly faded. Indeed, as soon as the war had ended, Jiang renewed the decades-old struggle against the Chinese Communist Party (CCP), headed by Mao Zedong. As V-J Day approached, Jiang secured a U.S. pledge to extend Lend-Lease aid in the name of postwar reconstruction. To secure Soviet leader Josef Stalin's neutrality, Jiang made critical concessions to the Soviets in September 1945, including the granting of de facto Soviet control over key industries and communication lines in Chinese northeastern and western provinces, and recognition of Mongolian independence, a buffer between the ROC and the Soviet Union. Having secured support from both the United States and the Soviet Union, Jiang renewed his anti-CCP campaign, culminating in a full-scale civil war (1947–1949).

Most of China's former allies adopted a neutral stance toward the civil war except for the United States, which provided additional assistance to

Under MacArthur's guidance, a peace clause was incorporated into the constitution forbidding Japan from waging war and restricting military expenditures to no more than 1 percent of its national budget.

Jiang under the Economic Cooperation Act of April 1948. By late 1948, however, the Americans were convinced that Jiang would lose the war due to his unpopularity, dictatorial nature, lack of meaningful reforms, and the corruption in the GMD government. The CCP, meanwhile, was able to win mass support. Concurrently preoccupied with the Berlin Blockade (1948–1949) and believing that it had done enough, Washington refused to provide additional assistance to Jiang. Beginning in early 1949, the United States withdrew its personnel from China, and in August 1949 it declared a hands-off policy.

On 1 October 1949, Mao proclaimed the PRC, which was immediately followed by Soviet recognition and the conclusion of the February 1950 Sino-Soviet Treaty. The defeated Nationalists fled to the island of Taiwan, refusing to concede defeat and acting as if they were still the legitimate rulers of China.

June 1950–mid-1969

On 25 June 1950, having secured the approval of Stalin, Kim ordered his troops to cross the 38th Parallel to bring South Korea under his control, provoking the Korean War. When U.S. and UN forces defeated the invading

North Koreans and then began their own invasion of North Korea, the PRC entered the war. The war soon became a protracted three-year-long military confrontation between the United States and the PRC. The Korean War came to a halt on 27 July 1953 when both sides signed an armistice that virtually restored the status quo ante bellum. No peace settlement has yet been concluded.

The Korean War, widely perceived as an unanticipated hot war in an area of peripheral concern, dramatically polarized East Asia into another Cold War front. Perceiving Kim's attack as the beginning of Soviet expansionism in Asia, Washington drastically reoriented its Asian foreign policy, which evolved from indifference into overt commitment and even military activism. Japan was assigned a new strategic role as a military base and arsenal for U.S. forces and as a bastion to contain communism. As a consequence, the United States hastened a peace treaty with Japan, culminating in the 8 September 1951 San Francisco Peace Treaty that ended the occupation in 1952 and granted full Japanese sovereignty. Later the same day, the United States–Japan Security Treaty was signed. Japan was now required to rearm to cope with internal threats and disorder, while the United States maintained the right to deploy military forces on Japanese soil. As a sovereign power, Japan was entitled to seek out foreign and collective defense assistance in case of external invasion. By these terms, the Americans assured themselves of a military presence in East Asia.

Regarding South Korea, the United States also reversed its previous policy of disengagement. The Americans extended substantial military assistance to enhance the ROK's armed forces. In October 1953 the two states concluded the U.S.-ROK Mutual Security Treaty, the terms of which were similar to those of the U.S.-Japan pact. This in effect shifted the U.S. defensive perimeter onto the East Asian mainland to the demilitarized zone (DMZ) at the 38th Parallel of Korea, part of a forward deployment strategy to contain communism.

The Korean War simultaneously consolidated Soviet-PRC-DPRK ties. Although Soviet wartime contributions were limited to small-scale aircraft and air force assistance, the Soviets nonetheless solidly confirmed their commitment to their socialist allies in Asia. Stalin had encouraged Mao and the Chinese to intervene when the war had turned sour for the DPRK in the fall of 1950. During the war, the Soviet Union greatly accelerated its assistance to North Korea and the PRC.

This solidarity began to recede following the Korean War, however. Nikita Khrushchev succeeded Stalin, who died in March 1953. The new Soviet leader's policies of peaceful coexistence with the West, de-Stalinization, collective leadership, and economic liberalism deeply irritated both Mao and Kim. Perceiving Khrushchev as a revisionist, both the PRC and DPRK decided to pursue their own paths. While Kim kept a low profile, Mao chose to openly compete with the Soviet Union as leader of the communist bloc, sowing the seeds for the Sino-Soviet split.

To enhance its international standing and to lessen its reliance on the Soviets, the PRC sought diplomatic relationships with nonsocialist nations.

At the 1955 Bandung Conference, the PRC cultivated ties with the developing world and opened a dialogue with the United States to discuss the Taiwan issue. At home, Mao accelerated the socialist transformation, ending the First Five-Year Plan a year ahead of schedule.

Responding to the growing stature of the PRC, in 1957 Khrushchev promised to share nuclear technology with that country. Mao, however, continued his antipathy toward the Soviets. In 1958, without consulting the Soviet leadership, Mao provoked the Second Taiwan Strait Crisis and launched the Great Leap Forward program to accelerate socialization. These actions enraged Khrushchev, who then withheld nuclear and other technology. In 1960, Khrushchev withdrew all Soviet personnel from the PRC. Mao continued to challenge the Soviet Union by provoking a border crisis in 1960, establishing private trade ties with Japan in 1965, and intensifying attacks on Khrushchev's revisionism while waging the Cultural Revolution in 1966.

Kim, on the contrary, preferred self-reliance, an ideology known as *juche* that is built on four principles: ideological autonomy, political independence, economic self-sufficiency, and military self-reliance. Kim's first goal was to tighten his control over North Korea. Countering de-Stalinization and collective leadership, Kim carried out massive political purges in 1956 to eliminate communist Chinese and Soviet elements. This upset Mao, who in 1958 withdrew troops stationed in the DPRK, an act that only reinforced Kim's streak of independence.

To achieve self-sufficiency and independence, the DPRK adopted a neutral stance in the developing Sino-Soviet split, intending to play one nation against the other. During 1956–1959, North Korea secured several agreements from the Soviets and Chinese to develop nuclear power. In 1961, when the Sino-Soviet split became permanent, Kim negotiated separate mutual security treaties with the PRC and the Soviet Union, securing continued economic and technical assistance. When Soviet and PRC aid diminished in the mid-1960s, Kim turned to other nations to obtain nuclear technology. North Korea's neutrality did not last long. In view of the PRC's 1964 detonation of its first atomic bomb and the beginning of the Cultural Revolution, Kim moved closer to the Soviet Union.

Similar nationalistic sentiments also developed in Japan and in South Korea. Capitalizing on constitutional restraints on rearmament, Japan pursued a course of minimalism in international affairs, allowing the country to concentrate on economic recovery. The Korean War was a tremendous assist in this. During the war, Japanese industrial output doubled. This progress encouraged Japan to adopt an omnidirectional economic foreign policy, enabling it to rejoin the world community and rebuild its international status. During 1954–1959, Japan concluded peace treaties with its former victims, including Burma, the Philippines, Indonesia, and South Vietnam. In 1956, Japan restored normal ties with the Soviet Union.

Throughout the 1960s, Japan joined a number of international economic organizations, such as the Organization for Economic Cooperation and Development and the International Monetary Fund. In 1964 Japan hosted the

Olympic Games, and in 1966 it hosted the inaugural meeting of the Asian Development Bank, which launched the country's status as a regional economic power.

At the same time, Japanese-U.S. relations were showing signs of strain, centering on two issues. First, Japan saw the U.S. military occupation of Okinawa as an infringement of Japanese sovereignty. Moreover, the potential installation of U.S. nuclear facilities there aroused deep resentment among pacifists. Mounting anti-Americanism culminated in large-scale street protests on the eve of the renewal of the United States–Japan Security Treaty in 1960. Given the mutual desire to keep a U.S. military presence in Japan, some revisions occurred to pacify the Japanese public. In the revised January 1960 Treaty of Mutual Cooperation and Security, Japan became an equal partner with the United States. Despite U.S. concessions, the treaty nevertheless proved incapable of mollifying the Japanese electorate. The second issue plaguing U.S.-Japanese relations was the Japanese export of textiles to the United States, which accounted for the growing trade deficit between the two nations.

To the South Koreans, American commitments were a blessing. As with Japan, South Korea secured U.S. assistance to build a mighty economic engine while leaving costly defense responsibilities to the Americans. Politically, occasional armed clashes along the DMZ and North Korean subversion and infiltration activities gave ROK presidents the justification to rule in dictatorial fashion, ranging from Rhee's to Park Chong-hee's (1961–1979) authoritarianism.

This bilateral harmony, however, was undermined in the mid-1960s, thanks to America's changing Cold War strategy and growing anti-Americanism among the South Korean public. Owing to American preoccupation with the Vietnam War, the Park government concluded that South Korea should become more self-reliant in defense matters. In 1965, South Korea normalized diplomatic ties with Japan in order to gain Japanese economic assistance and investment especially in steel and chemical production, both of which were sources of national strength.

The second issue straining U.S.–South Korean relations was a growing ROK resentment toward the U.S. military presence. Having been ruled by foreigners for centuries, the South Koreans were eager to be rid of the Americans. To pacify the nationalists, the United States negotiated the 1966 Status of Forces Agreement, which legitimized the deployment of U.S. forces on the peninsula to cope with the threat from the DPRK. Pursuant to this agreement, an ROK-U.S. Security Consultative Committee was established in 1968 that met annually to discuss defense matters of common interest and on an equal basis.

The year 1969 proved difficult for East Asia in that the solidarity of each bloc was on the verge of collapse. First, the Sino-Soviet split culminated in a series of large-scale armed clashes along the Sino-Soviet border. By late summer, these two communist nations were on the brink of a nuclear confrontation, rendering North Korea a likely battlefield. Second,

Having been ruled by foreigners for centuries, the South Koreans were eager to be rid of the Americans.

in the U.S.-led camp, resentment against American troops on Okinawa re-surfaced as American-Japanese negotiations for the renewal of the 1960 security treaty were under way.

Mid-1969–1991

The years 1969–1970 also marked the beginning of détente in East Asia, with the initiative coming from the big powers. In September 1969, the Soviet Union reached an agreement with the PRC to settle their ongoing border dispute through peaceful means. The Nixon Doctrine of July 1969 was of far-reaching significance, altering the geopolitics of East Asia.

Because of declining economic performance and military setbacks in the Vietnam War, President Richard Nixon intended to curtail America's overseas obligations through a division of defense responsibility, regional alliances, and rapprochement with the communist bloc.

The renewal of the 1960 Mutual Security Treaty with Japan was the first U.S. attempt to induce its client states to assume more defense responsibility. In November 1969, Nixon urged Japan to expand its Self-Defense Forces and assume an active part in maintaining East Asian stability. As a gesture of goodwill, Nixon promised to return Okinawa, provided that America retained the right to deploy military forces and introduce nuclear facilities there in case of emergency and after prior consultation. Japan agreed to revise the security treaty as such, and on 15 May 1972 Okinawa was returned to Japanese sovereignty. In return, the Self-Defense Forces were expanded. Nixon had also mentioned the problem of Japanese textile exports during the summit meeting and pushed for the imposition of a voluntary quota. Japan, however, refused to yield. It was left to Nixon's successors to resolve these differences. In 1976, the United States successfully pressed Japan to share patrolling duty in Japanese waters. In 1981, the Americans secured Japan's commitment to defend its sea-lanes up to 100 miles. The dispute over textiles was resolved in 1979 when the Japanese government voluntarily restricted exports.

The Sino-American rapprochement of the 1970s did much to stabilize East Asia. On 15 July 1971, after one and a half years of secret contacts with the PRC, Nixon announced his plan to visit Beijing in 1972. To show its sincerity, the United States lifted its veto of the PRC's UN membership and reduced military forces in South Korea by one-third in early 1971. In February 1972, Nixon made the historic visit to Beijing, resulting in the Shanghai Communiqué of 27 February 1972, which pledged the mutual desire to normalize PRC-U.S. relations and to maintain peace and stability in Asia. On 1 January 1979, the two nations established formal diplomatic relations.

The PRC-U.S. détente triggered a reorientation of America's client states' policies toward their neighbors. Following the American lead, Japan sped up its efforts to formalize its ties with the PRC, largely for economic reasons. In September 1972 Japan and the PRC reached an agreement on normalization and in August 1978 concluded a Treaty of Peace and Friendship.

The Sino-American rapprochement, on the other hand, alarmed both the North and South Koreans, who felt betrayed and abandoned by their protectors. Both Korean governments then pursued their own course to stabilize

the peninsula. In August 1971 the two sides opened a dialogue through their respective Red Cross societies, resulting in the July 1972 Joint Communiqué. They agreed on three principles for reunification: unification by independent effort without foreign interference, denial of the use of force for unification purpose, and mutual respect of the existing differences in ideology.

Regional tensions continued, however, with the major threat coming from the Soviet Union, which found itself in an increasingly isolated position. To counter the PRC-U.S. rapprochement, the Soviet Union accelerated its military buildup along the border of North Korea and in southern Sakhalin. To break their diplomatic isolation, the Soviets renewed their attention on North Korea, which was once again caught between the Sino-Soviet split.

North Korea continued its policy of oscillating between the PRC and the Soviet Union to advance its interests. Earlier in 1971, when the PRC decided to normalize its relationship with the United States, the Chinese assured Kim of their continued friendship by concluding a fifteen-year agreement on military assistance to North Korea. Meanwhile, Kim did not preclude continued cooperation with the Soviet Union in nuclear development. Owing to historical-cultural ties and the Soviet nuclear threat, Kim valued the PRC even more. In 1975, however, Kim reversed his policy by staying close with the Soviet Union and protesting the PRC's refusal to support his decision to renew the Korean War, an ambition inspired by the fall of Saigon and the unification of Vietnam. Beginning in the late 1970s, in line with the *juche* ideology, North Korea launched a nuclear weapons program, seeking aid from the Soviet Union and West European nations.

The DMZ remained a dangerous spot despite the calm brought about by the PRC-U.S.-Japan détente. Beginning in 1974, U.S.-ROK forces discovered several North Korean-constructed tunnels under the DMZ, giving rise to the suspicion that Kim was planning an underground attack. This suspicion became real as DPRK troops intensified disturbances along the DMZ during 1976–1977. In response, U.S.-ROK forces increased their forces along the DMZ and tightened their military alliance. In November 1978, the U.S.-ROK Combined Forces Command came into being to improve logistics and coordination in case of an invasion. In 1981, the Americans increased their military presence in South Korea. On its own, South Korea expanded its forces and sought cooperation with France to develop nuclear power to counter North Korea. As a result, South Korea's military expenses in 1979 dramatically expanded.

Meanwhile, the PRC touted itself as an “honest broker” between South Korea and North Korea as a way to ease tension on the peninsula, but neither side showed interest. Breakthroughs in resolving North-South differences finally came in the mid-1980s. In 1984, North Korea offered relief assistance to South Korea, which had suffered massive casualties and damage in a disastrous flood. In 1985, both sides exchanged hometown visiting groups. The greatest impetus for the easing of tensions came from the Soviets. In July 1986, new Soviet leader Mikhail Gorbachev announced that the Soviet Union intended to reorient its East Asia policy. To prevent economic depression at home, Gorbachev slashed Soviet military budgets and overseas obligations

Republic of Korea Army (ROKA) soldiers inspecting one of two tunnels discovered deep in the rugged mountains astride the Korean demilitarized zone (DMZ). Illegal under the terms of the Korean armistice, the tunnels extended about 2 miles from North Korea well into the South Korean area of the DMZ. The tunnels were discovered in November 1974, but the North Koreans denied any knowledge of them. (Bettmann/Corbis)

and pursued economic liberalism and *détente* with the West. In view of its economic success, Gorbachev approached South Korea. To show his goodwill, he had pressured North Korea a year earlier to join the Nuclear Non-Proliferation Treaty, thereby lessening the threat of nuclear war on the Korean Peninsula.

The new Soviet initiative was welcomed by other East Asian nations. In July 1987, the PRC announced that it would not support any North Korean military action on the peninsula and simultaneously began secret negotiations with South Korea with a view toward speeding up Chinese economic modernization. In South Korea, military rule gave way to a new liberal democracy with the 1987 election of Roh Tae Woo. On assuming the presidency, Roh actively pursued a policy called *Norpolitik*, or northern policy, that sought *détente* and cooperation with the communist bloc. In 1989 and 1990, South Korea established formal diplomatic ties with East European nations and the Soviet Union.

Beginning in 1988, South Korea established informal trade ties with North Korea, the economy of which was in serious trouble. At the same time, both the PRC and the Soviet Union stepped up their efforts to persuade North Korea to pursue North-South *détente*. Finding itself being increasingly isolated, North Korea finally yielded. In December 1988, North Korea and the

United States began nonofficial negotiations in Beijing; the North Korean nuclear weapons program proved to be the most irreconcilable issue.

As the 1990s opened, North Korea made greater progress toward seeking a rapprochement with South Korea. It first lifted its objection to the dual entry of both Koreas into the UN. In September 1991, both North and South Korea were given UN membership, and for the first time each recognized the legitimacy of the other. That same month they opened a dialogue at the prime ministerial level in Seoul that resulted in two understandings: the Agreement on Reconciliation, Nonaggression, Exchanges, and Cooperation—also called the Basic Agreement—and the Joint Declaration on the Denuclearization of the Korean Peninsula. Progress proved illusory, however. By the end of the decade, with the Cold War but a memory, the DPRK had once again become isolated and increasingly belligerent.

Mass antigovernment protests in the German Democratic Republic (GDR, East Germany) during 16–17 June 1953 that triggered Soviet military intervention. The government of the GDR, like all the other states in the Soviet bloc, dramatically altered its policies in the wake of Soviet dictator Josef Stalin's death in March 1953. This new course, announced on 9 June 1953, shifted the emphasis in both production and investment from heavy industry to consumer goods and mandated lower prices for those goods. It also rescinded restrictions on religious activities. Most important, however, was the admission by the ruling Socialist Unity Party (SED) that its previous policies were flawed.

East Berlin Uprising (16–17 June 1953)

East German demonstrators, some carrying banners, march through the Brandenburg Gate into the western sector of Berlin, 17 June 1953. What began as a general strike because of a rise in production quotas in East Berlin evolved into a protest against the government that spread to many cities in East Germany. (Bettmann/Corbis)

This development opened the door to criticism of the SED and led GDR citizens to demand additional concessions, ranging from the revision of the Oder-Neisse border to the holding of new elections. What actually triggered the East Berlin Uprising, however, was the government's refusal to rescind a recent increase in the production quota for its workers.

In protest, construction workers in East Berlin laid down their tools on the morning of 16 June 1953 and marched to the government building to demand better working conditions. Workers from other areas of Berlin, both East and West, soon joined them. Official announcements that the production expectations had been reduced, however, were ignored. The demonstrations grew larger and continued through the evening. The following day, thousands of workers across the GDR, informed of the developments in Berlin by Radio in the American Sector (RIAS), joined in demonstrations against the SED regime. More than 300,000 citizens of the GDR participated in strikes and marches in some 350 cities and towns, including traditional communist strongholds such as Halle, Leipzig, and Magdeburg.

What had begun as an economic protest quickly took on political overtones. Among other things, protestors called for the release of all political prisoners, a general strike against the government, the resignation of Walter Ulbricht, new elections, and German unification. Some protesters turned to

vandalism and violence, with government and SED offices serving as primary targets. Units of the GDR People's Police (Volkspolizei) that tried to intervene often were chased off; in some instances, the police actually joined the demonstrators.

Only the arrival of Soviet tanks and troops reversed the tide of revolution in many areas. By all accounts, the forces of the Red Army acted with restraint and discipline. Nevertheless, 28 people lost their lives during the East Berlin Uprising, and more than 400 were wounded. Although there were a few wild-cat strikes across the GDR the following day, the Soviet action effectively restored order in East Germany on 18 June.

The SED regime denounced the events as the work of fascist provocateurs in the service of the Allies who aimed to bring about the destruction of socialism in Germany. More than 6,000 people were arrested in connection with the East Berlin Uprising, and more than 1,300 eventually received prison sentences. Many SED members participated in the demonstrations, and several party leaders privately acknowledged that, by and large, the protests had been justified.

SED leaders could not, of course, admit these facts publicly. The East Berlin Uprising thus became a Cold War icon for both sides. The SED regime now had "proof" that the Federal Republic of Germany (FRG, West Germany) sought to overthrow socialism and restore fascism in Germany. The FRG, meanwhile, mourned the "martyrs" of communist oppression. The street leading west from the Brandenburg Gate was renamed "The Street of 17 June 1953" in their honor. After the collapse of the GDR, that name became the subject of a highly politicized debate, as did the East Berlin Uprising itself, concerning the nature of the Cold War and the justification for the division of Germany.

East Timor

The island of Timor is located at the southeastern edge of the Indonesian archipelago. East Timor became a Portuguese colony in the sixteenth century, while the western portion of the island was controlled by the Dutch. During World War II, East Timor was occupied first by Australia and then by Japan. After the Japanese surrender in August 1945, the Portuguese returned to East Timor. But when the Portuguese dictatorship was overthrown in the April 1974 Carnation Revolution, the new military rulers were determined to grant independence to Portugal's colonial possessions, including East Timor. That set the stage for a brief power struggle over who would rule a newly independent East Timor.

The local independence movement was badly split, and the pro-Portuguese conservative Timor Democratic Union (UDT) staged a coup on 11 August 1975, allegedly to preempt a communist takeover. The Left-leaning Revolutionary Front for an Independent East Timor (best known under the name Fretilin, derived from its Portuguese abbreviation) proved ultimately victorious and soon controlled most of East Timor. Because the Portuguese had left the island, Fretilin proclaimed independence on 28 November 1975. The new state was not officially recognized by the United Nations (UN), which still regarded Portugal as the administering power.

Fearing a potentially communist regime in the region, Indonesia sent military forces (Operation KOMODO) to occupy East Timor on 7 December 1975. Recently released documents show that U.S. President Gerald Ford and Secretary of State Henry Kissinger had given a green light for the invasion during their visit to Jakarta, Indonesia, the day before. The Indonesian Army encountered fierce and prolonged Fretilin resistance, which was finally broken with brute force. By 1979, official Indonesian figures reported 372,921 civilians in refugee camps, while at least 100,000 people of a population of some 680,000 Timorese had been killed since the beginning of the invasion. The UN Security Council deplored and denounced the situation, calling upon Indonesia to withdraw its troops, but failed to formally condemn the invasion in a December 1975 resolution. While the UN never recognized Indonesian sovereignty, several Arab and Asian states recognized the occupation.

In the years following the invasion, the United States, Canada, Japan, and Australia were among powers recognizing *de facto* Indonesian sovereignty. Australia granted *de jure* recognition in February 1979 when it opened negotiations for the exploration of oil fields off the Timorese coast. Washington regarded Indonesian dictator General Suharto as a bulwark against Soviet influence in Southeast Asia. Furthermore, the Ombai-Wetar Straits off the coast of East Timor permitted undetected submarine passage between the Pacific and Indian Oceans, an important element in U.S. Navy strategy. Lacking international support, the Timorese resistance movement, led by Xanana Gusmao, had little prospect of winning independence, even after its international spokesmen, José Ramos-Horta and Bishop Belo, were awarded the Nobel Peace Prize in 1996.

East Timor Falintil (Armed Forces for the Liberation of East Timor) guerrillas drill at their base in the Viqueque district in East Timor on 7 August 1999. Falintil fought to win independence for East Timor from Indonesia. (Reuters/Corbis)

Subsequent to Suharto's resignation in May 1998, his successor B. J. Habibie surprisingly offered to stage a referendum on the future of East Timor. The vote went ahead on 30 August 1999, and 78.5 percent opted for independence. Only hours after the vote had been tallied, however, pro-Indonesian militias began to engage in violence and looting. After a UN fact-finding mission concluded that the violence had been orchestrated by the Indonesian Army, international pressure persuaded Habibie to accept a UN peacekeeping force; it arrived on 20 September 1999. East Timor was placed under UN supervision and finally achieved independence on 20 May 2002.

Ecuador

South American nation. Covering 109,483 square miles, Ecuador is equivalent in size to the U.S. state of Nevada and had a 1945 population of approximately 3.2 million people. Ecuador is bordered by Colombia to the north, Peru to the east and south, and the Pacific Ocean to the west. Its population is composed mainly of mestizos and indigenous peoples. Spanish and Quichua are the two official languages. Ninety-five percent of the population is Roman Catholic.

Following the Japanese attack on Pearl Harbor in December 1941, Ecuador declared war on Japan and granted the United States access to the Galapagos Islands. There the Americans built a military base. From that moment on, Ecuador aligned its foreign policy with that of the United States. By 1950 Ecuador occupied a seat as a nonpermanent member of the United Nations (UN) Security Council.

At the outbreak of the Korean War, Ecuador voted favorably on the U.S. resolution in the UN to send troops to Korea. Although the government of President Galo Lasso (1948–1952) initially supported the United States, it did not send troops. Relations between the two countries were further tightened in 1952 when Ecuador became the first Latin American nation to sign a mutual defense agreement with the United States. Military cooperation continued until the 1970s, when the United States decided to withdraw its Military Advisory Group from Ecuador because of a conflict involving tuna fishing.

The Guatemalan crisis, however, created a shift in Ecuador's foreign policy. In 1954, President José Velasco Ibarra expressed criticism of the American intervention in Guatemala. During the 1960s, Ecuador sought to maintain neutrality in the East-West conflict but still took part in it. Ecuador's chief concern was not communism in Cuba but rather its own historical border dispute with Peru. Velasco Ibarra wanted a revision to the 1942 Rio Protocol and wanted to take the dispute to the UN. However, the 1961 Bay of Pigs invasion led the president to condemn the American action and declare his support of Cuba's Fidel Castro. Later in 1961, when Ibarra was ousted in a coup, Carlos Arosema surprised even his own supporters by establishing diplomatic relations with Cuba, Czechoslovakia, and Poland.

In 1968, Ibarra won the presidency for a fifth time. Unable to implement an austerity program, in 1970 he assumed dictatorial powers. In 1972, however, the Ecuadorian military intervened. It had originally supported Velasco's dictatorship but had been alienated by his management of Ecuadorian oil resources.

The military junta, led by General Guillermo Rodríguez Lara (1972–1976), initiated a state-run development program. Revenues from oil concessions to multinational companies helped finance this economic modernization program, but when the junta fixed production and prices above the standards of the Organization of Petroleum Exporting Countries (OPEC), the companies reduced their exports. Although the junta decided to review its oil policy in the mid-1970s, it had lost support among the population and had to call elections in 1978.

In the 1980s, Ecuador again strengthened its ties to the United States. Neoliberal economic programs were planned by President León Febres Cordero (1984–1988), but the consequences of a debt crisis and the 1987 earthquake made it almost impossible to implement them. Febres-Cordero maintained a dual position in relation to other Latin American nations. In 1985 he visited Castro in Cuba and initially supported the peace process in Central America; months later Febres-Cordero broke diplomatic relations with Nicaragua. The fragile relation between Ecuador and Latin America was reversed at the end of the decade when newly elected President Rodrigo Borja (1988–1992) proclaimed a nonaligned foreign policy.

British Conservative Party politician, foreign secretary, and prime minister (1955–1957). Born at Windlestone Hall near Bishop Auckland, County Durham, England, on 12 June 1897, Robert Anthony Eden attended Eton during 1914–1915. He then served in World War I. He became an infantry lieutenant and rose to the rank of brigade major in 1918, at age twenty the youngest in the British Army.

Eden then studied Oriental languages at Christ Church, Oxford University (1919–1922), before entering politics in 1923, when he was elected to the House of Commons as a Conservative. Interested in foreign affairs, during 1931–1934 he was undersecretary for foreign affairs. In December 1935 he became secretary for foreign affairs in Prime Minister Stanley Baldwin's government.

In May 1937 Neville Chamberlain became prime minister, and before long Eden found himself at odds with what he saw as Chamberlain's appeasement of Nazi Germany and resigned in protest in February 1938. Upon the outbreak of war in September 1939, Eden was recalled to office and took up his former post of foreign secretary in December 1940 under the coalition government of Prime Minister Winston Churchill.

Following the Labour Party victory in 1945, Eden served as shadow prime minister. In October 1951 he became foreign secretary for a third time when Churchill led the Conservatives to victory. As foreign secretary, Eden brokered negotiated settlements concerning Trieste and the Anglo-Iranian oil

**Eden, Sir Anthony,
1st Earl of Avon**
(1897–1977)

Anthony Eden was a central figure in foreign policy for Great Britain in the years leading up to and during World War II. He was British prime minister during 1955–1957 and is best remembered for his role in the 1956 Suez Crisis. (Library of Congress)

crisis, thereby helping to heal rifts in the Western alliance. On 6 April 1955, Churchill resigned and Eden replaced him. Eden's secret deal with the French and Israelis to attack Egypt and retake the recently nationalized Suez Canal led to his downfall. From the start, Eden was determined to recover control of the canal and, if at all possible, remove Egyptian President Gamal Abdel Nasser from power.

In November 1956, without consulting any of their allies—including the United States—Israel, Britain, and France attacked Egypt, but they were soon forced to retreat in the face of U.S. pressure. In a private phone conversation, President Dwight D. Eisenhower lambasted Eden for taking such unilateral action, purportedly reducing the prime minister to tears. The Suez Canal thus remained in Egyptian hands, while Eden had suffered a humiliating political defeat. With his reputation in tatters and his health declining, Eden had little choice but to resign from office in January 1957. His fiasco notwithstanding, he was granted the title of Lord Avon in 1961. He wrote several volumes of memoirs while in retirement and died in Alvediston, England, on 14 January 1977.

Egypt

North African nation. Egypt encompasses 386,660 square miles and it also covers the Sinai Peninsula, which is geographically part of Asia. With an estimated 1945 population of 20.5 million people, Egypt is bounded by the Mediterranean Sea to the north, Libya to the west, Sudan to the south, and the Red Sea, the Gulf of Aqaba, and Israel to the east and northeast. Egyptians call their country the “mother of the world.” The nation's ancient civilization was closely tied to the Nile River, which runs from south to north into the Mediterranean Sea.

Egypt was a tributary province of the Roman Empire. Arab armies conquered the country in the seventh century. Various Muslim nonindigenous dynasties such as the Mamluks then ruled Egypt. From the sixteenth century, the Mamluk and Ottoman ruling classes were political leaders, the military, religious leaders, and merchants, who intermarried and were linguistically and ethnically distinct from the masses.

In 1798 Napoleon invaded Egypt, defeating its Mamluk rulers. Upon the French departure, Muhammad Ali Pasha, a military envoy of the Ottomans, gained control over the country. Through the use of conscription, Pasha developed a more disciplined army, bargaining for his right to serve as Egypt's viceroy in return for suppressing rebellions in other Ottoman territories, the Arabian Peninsula, and Syria. His descendants ruled Egypt, modernized Cairo, and built the Suez Canal, thereby acquiring large debts.

The Suez Canal became of immense importance to Britain, and British troops arrived in 1882 to suppress the Urabi revolt, named for one of its instigators. Britain then assumed control of Egypt's finances and bureaucracy and reformed the army. Britain considered Egypt a key economic and strategic base. British textile industries benefited from a monopoly over Indian and Egyptian sources of raw cotton. The Suez Canal was so important to the British that they maintained troops there for decades. The British ceded independence to Egypt in 1922 but received an indemnity payment, kept control over the Sudan, retained troops and bases in the Suez Canal zone, and periodically exerted their will over the Egyptian king and his government. In the twentieth century, Egyptian nationalism took up the theme of resistance to lengthy foreign domination, which prevailed until 1952.

In World War II, Egypt was technically neutral. But when Italian forces invaded Egypt in 1940, British, Australian, and other Allied forces responded to this and successive Axis campaigns. German General Erwin Rommel drove east all the way to al-Alamein but was forced to retreat west following the British offensive there in November 1942. The expanded presence of Western troops in Egypt and their behavior angered the Muslim Brotherhood, an antisecularist party that struggled with the government.

Requirements that Egyptian officers own property were changed, permitting men such as Gamal Abdel Nasser, the son of a postal clerk, to rise to officer status. Nasser fought along with Egyptian forces in Palestine in 1948. Greatly dissatisfied with the Egyptian monarchy and the defeat of Arab forces in Palestine, he and other officers planned a coup, which they carried out in 1952 in the wake of disturbances in the Suez Canal zone and in Cairo. These so-called Free Officers set up a Revolutionary Command Council and exiled King Farouk. In 1954 Nasser became president in place of a more senior officer, Muhammad Naguib. The military in Egypt has served as the primary source of political leadership ever since; Nasser once explained that the military was the vanguard of a political and social revolution.

Nasser preached a populist, anti-imperialist, pro-Arab philosophy that became known as Arab Nationalism and that was expressed in the policies of Arab socialism. However, he suppressed Egyptian Marxists, the labor movement, and the Muslim Brotherhood. In 1955, he signed an agreement with

The Suez Canal became of immense importance to Britain, and British troops arrived in 1882 to suppress the Urabi revolt, named for one of its instigators.

Czechoslovakia to purchase \$250 million worth of Soviet arms. His 1955 refusal to sign the pro-Western Baghdad Pact and his association with the Non-Aligned Movement ran counter to British aims and to concerned Americans who feared communist influence in the region.

Given Nasser’s turn to the Soviet bloc, the United States went back on its pledge to assist in funding for the ambitious plan to build a high dam on the upper Nile at Aswan. Nasser, as with other neutral developing-world leaders, sought to play the Western and communist blocs against each other. When Nasser realized that U.S. aid was not forthcoming, he announced the nationalization of the Suez Canal. The revenues from this would benefit Egypt, enabling development schemes such as the Aswan Dam. This nationalization angered the British, who with France and Israel helped precipitate the 1956 Suez Crisis. The French were upset over Egypt’s proclaimed support for rebels in Algeria, while the Israeli government was angry over Nasser’s efforts to unify the Arab states, his decision to blockade the Gulf of Aqaba (Israel’s entry into the Indian Ocean), and Egyptian sponsorship of fedayeen (Arab commando) raids. Israeli forces then invaded the Sinai. When Egypt refused to allow the British to intervene to protect the Suez Canal, Britain bombed the Egyptian airfields and, together with France, landed troops at Port Said.

The Soviet Union openly supported Egypt, and the administration of President Dwight D. Eisenhower demanded that the British withdraw. Under heavy U.S. economic pressure, Britain, France, and Israel did so. Far from overthrowing Nasser as they had hoped, the three had made him a hero in the Arab world. Nasser now expelled many foreigners and minorities and seized their property.

Nasser’s government turned increasingly to the East for military aid, weapons, and technical expertise. Some 17,000 Soviet advisors eventually arrived in Egypt, and Egyptians received advanced military training in the Soviet Union. In 1958, Syrian officers and politicians prevailed on Nasser to join their country in the United Arab Republic, a three-year experiment in Arab unity. Syria withdrew from the union in 1961. That same year, the Egyptian government pursued more aggressive Arab socialist policies in the form of land reform, government seizure of private holdings, and further nationalizations. After 1962, the Arab Socialist Union, a single political party, dominated Egypt’s bureaucratic and governmental structures. It became even more important, for a time, after 1965.

The Egyptian military expanded throughout the Cold War and grew to 320,000 men by 1989. Equipped primarily by the Soviets, Egypt began to replace that weaponry as it turned Westward in the 1970s and 1980s. Egypt’s primary military challenge was Israel’s better funded and far better trained armed forces. During the Cold War, a struggle between more progressive Arab

states such as Egypt and Western-aligned monarchies such as Saudi Arabia took place; some scholars termed this the “Arab Cold War.” The Arab Cold War led Nasser to pursue secondary aims against dominating Saudi proxies such as the royalists in Yemen in 1962. Egyptian forces were not highly successful in their intervention in Yemen, however. Egyptian troops were still bogged down there when the 1967 war with Israel broke out.

An Israeli preemptive strike destroyed most of the Egyptian air force at its bases on 5 June 1967 and defeated the Arab forces in the six-day conflict. Egypt lost the Sinai, and Nasser announced his resignation, setting off mass demonstrations by citizens who refused to let him step down. His primary military commander, Marshal Hakem Amr, also resigned and allegedly committed suicide.

Nasser supported a war of attrition against Israel that continued until 1970. His Pan-Arab ideals also committed Egypt to a key role regarding the Palestinian leadership. Palestinian and Syrian offensives led to an inter-Arab crisis known as Black September (1970) in which the Palestinians were expelled from Jordan. Nasser was personally involved in negotiating the aftermath of this crisis just prior to his death in 1970. Succeeded by President Anwar Sadat, another member of the Free Officers group, Egypt gradually moved away from several of its Cold War ideals, received more Arab aid and tourism in the 1970s, and courted Western powers.

In 1973 Sadat decided to join forces with Syria and launched the 1973 Yom Kippur War against Israel. This time the Egyptians struck first, catching the Israelis off-guard. Egyptian troops crossed the Suez Canal, a triumph for them, but the Israelis soon retook the Sinai and crossed the canal themselves, frustrating both the Soviet Union, which backed Egypt, and the United States, which had sent more weapons to Israel. But negotiations at the end of the conflict improved Egypt’s strategic position and control over the Suez Canal.

Sadat had already made administrative and political changes, ousting socialist radicals, opening Egypt’s closed economy with Law No. 44, and modernizing the military. Because Egypt’s army had suffered most heavily from its role in the Arab-Israeli wars, Sadat decided to pursue a different strategy. He traveled to Jerusalem in 1977 to lay the groundwork for a peace agreement with Israel that was ultimately achieved in the 1979 Camp David Accords. This agreement returned the Sinai Peninsula to Egyptian control. Egypt’s participation in a bilateral agreement with Israel was very unpopular with other Arab nations, however, who promptly cut off aid and tourism to the country for a time and expelled Egypt from the Arab League. Because of other political issues, including factionalism and chafing at the paternalism of the political order, the peace agreement became unpopular with many Egyptians who had not initially opposed it.

Islamic fundamentalist groups began to emerge in Egypt in the 1970s. Elements of the Muslim Brotherhood had been radicalized by exile or imprisonment during the Nasser era. New groups arose too, and one attempted but failed to kill Sadat at the Military Technical Academy. The radical Jihad Organization grew in the late 1970s, and one of its members, an Egyptian army officer, assassinated Sadat at a military review in October 1981.

Under Sadat's successor, Hosni Mubarak, the country continued its economic opening to the West via privatization and joint ventures, stressing defense while maintaining a large army. The most important challenge to the state in the 1980s and early 1990s came from Islamist groups, which mounted attacks against local officials and tourists and opposed normalized relations with Israel.

Egypt, Armed Forces

In 1823, Egyptian ruler Muhammad Ali Pasha established a modern army as well as military schools and missions. After the British took control of Egypt following their 1882 intervention, however, they dismantled and reorganized the army, placing British officers in command. They also maintained their own troops in the Suez Canal region until well after World War II.

In 1952, Egyptian military officers carried out a bloodless coup d'état. They called this event a revolution since it dislodged from power the former regime and the upper class and because they claimed legitimacy in the name of the common Egyptian in place of the elite. Military and security considerations dominated political life thereafter, and the armed forces grew considerably. In fact, since that date all four Egyptian presidents have been military officers.

When he came to power in 1954, President Gamal Abdel Nasser wished to dominate regional politics. Wars with Israel as well as political and military involvement in other Arab states, such as Yemen, Syria, Jordan, and Algeria, and vigorous propaganda were all fueled by this desire. Egypt's anti-imperialist

SINAI CAMPAIGN, 1956

and anti-Israel crusades as well as American Cold War imperatives meant that until the decade of the 1980s Egypt secured its aid, weapons, equipment, and training largely from the Soviet bloc.

This relationship with the USSR significantly affected the Egyptian armed forces. Officers had attended Western academies in Britain before 1952, but afterward they went to the Soviet Union for training. Some 20,000 Soviet advisors ultimately arrived in Egypt, remaining there until 1971–1972 and serving down to the company level. These advisors were often resented for their patronizing attitudes. Soviet training tended to produce a less flexible military, a problem that Egyptians sought to redress after 1980. For much of the Cold War period, Soviet influence on the Egyptian military produced a Middle East arms race in which Soviet bloc nations supplied Egypt and the United States and Western Europe supplied arms to Israel.

A 1955 Soviet arms deal provided 100 T-54A and PT-76 tanks, 6 torpedo boats, 2 submarines and 200 jet aircraft, including MiG-15 fighters, IL-28 bombers, IL-14 transports, and Yak-11 trainers, at reduced prices to be paid in Egyptian cotton. To help alleviate Egyptian equipment losses following the 1956 Suez Crisis, the Soviets supplied additional equipment: MiG-21 aircraft, T-54 tanks, and SA-2 surface-to-air missiles (SAMs). By the time of the Suez War, Egyptians had built Czech-designed trainer aircraft.

In 1962, Nasser dispatched troops to Yemen to fight royalist forces there. This force grew to 30,000 men, and the Egyptians were still bogged down there five years later when the 1967 war began with Israel. That June, Israel launched a preemptive attack in the form of air strikes that destroyed some 300 Egyptian aircraft, most of them on the ground. Israel invaded the Sinai Peninsula the same day. Seven Egyptian divisions of about 100,000 men equipped with 1,000 tanks then fought the Israelis in the Sinai and the Gaza Strip, only to be defeated. Soviet T-54/T-55 tanks formed the bulk of Egyptian armor in the 1967 and 1973 wars with Israel. Egypt also employed modified former U.S. Army M4 Shermans in both wars and the Soviet T-62 in the 1973 war.

Following the 1967 defeat, the Soviet Union again stepped in and replaced the equipment losses from the war. The defeat of the Arab armies by Israel in 1967 brought a great loss of public confidence and resulted in a purge within the Egyptian military. The army was reorganized, and new educational programs were initiated. The length of service for conscripts was also temporarily extended to up to seven to eight years.

Egyptian morale was, however, subsequently boosted by small victories during the War of Attrition (1967–1970), as in the sinking of the Israeli destroyer *Eilat* by Soviet-supplied missile boats. The Soviets also deployed an antimissile system in Egypt in 1970, and the Egyptians used SAMs and antitank missiles with devastating effectiveness at the beginning of the 1973 war.

The Egyptian armed forces consisted of the army, navy, air force, and air defense forces. The army predominated. Recruits, conscripts, or better-paid volunteers could serve in any service, including as police, in the military economic service, or as prison guards. Male conscripts without higher education normally served three years; those with college or vocational degrees served eighteen months. Relatively small reserve forces existed. Military benefits such as partially subsidized housing were introduced in the 1980s. Nonetheless, low salaries were common prior to the 1980s, and soldiers often moonlighted in second jobs. Officer training was provided by the Military Academy in Cairo, the Naval Academy at the Ras al-Tin naval base, the Air Force Academy at Bilbays, the Military Technical Academy at Heliopolis, the Air Defense Academy at Alexandria, the Command and General Staff College in Cairo, and the Nasser Higher Military Academy. Prior to 1967 the army had four regional commands. After 1967, it was organized into two field armies, the Second and Third Armies, both located in Egypt's eastern region, with troops also based in the Delta, near the Libyan border, and in Upper Egypt near the Nile.

The 1973 Ramadan War, also known as the Yom Kippur War, began with a surprise Egyptian attack and crossing of the Suez Canal. Early Egyptian success and the fact that the war was halted before Israel could deliver a decisive blow boosted Egyptian military morale.

Arab socialist policies encouraged defense manufacturing. Five ordnance and two aircraft factories were operating by the mid-1960s. From 1967 to 1970 the Soviets insisted that all maintenance and overhauls be completed

in the USSR. By 1970, the Soviets permitted some licensed production in Egypt of radar systems, helicopters, armored personnel carriers, and ammunition. Certain joint Arab efforts faltered after 1979, when the United States began to supersede the Soviets in terms of arms deliveries, military advice, and training.

Egyptian scientists, with some foreign assistance, began working on ballistic missile systems in the 1950s and 1960s. Israel's Mossad allegedly targeted this research and threatened the scientists involved in 1962 and 1963. Covert missile-building programs began in the 1970s, and in the 1980s Egypt and Iraq were cooperating to develop the Badr 2000, a long-range missile based on the Argentine Condor II. Argentina never tested the Condor II and shifted its development to a shorter-range missile. Egypt dropped out of the project in 1989. In 1988, some Egyptian officers, agents, and scientists were arrested for exporting rocket fuel and other materials needed for a Pershing II missile, and in 1990 Egypt reportedly reached agreement with the People's Republic of China (PRC) to produce the DF4 Silkworm antiship missile and three types of Saqr rockets.

Egypt allegedly developed biological weapons by 1973 and employed mustard gas in the Yemeni conflict. Egypt was caught attempting to import feedstock for nerve gas from Canada in 1988, and in 1989 Egypt reportedly ordered pesticides, poisons, and manufacturing elements for what is thought to be a poison gas facility near or at the Ben Youssef Air Base south of Cairo.

At the end of the Cold War, in 1992, the active Egyptian military numbered 420,000–430,000 men, of whom 252,000 were conscripts. The Egyptian Army numbered some 290,000 active personnel and 2,500–3,000 tanks, including 1,100–1,150 T54/T55s, 1,000 M-60A3s, 700 M-60A1s, and 500–600 T-62s. The Egyptian Air Force had 28,000 personnel, and its land-based air defense had another 80,000. The air force had approximately 495 combat aircraft, making it one of the largest in the Middle East. Frontline aircraft include F-16s, Mirage 2000Cs, Mirage 5Es, MiG-21s, J-7s, Mirage 5E2s, F-4Es, Alphajets, and J-6s. The air defense command still operates many outdated SA-2 and SA-3 SAMs as well as SA-6, Hawk, Chaparral, Crotale, and Amoun (Skyguard/RIM75) systems. The navy and coast guard had 19,500 personnel in 1992 manning 1 destroyer, 5 frigates, 21 guided missile patrol craft, 18 patrol boats, and 8 submarines, 4 of which were updated yet unserviceable Romeos and 4 of which were modernized. About half of Egypt's weaponry was Soviet-made at the end of the Cold War, but the nation was converting to U.S.-made military equipment.

German-American physicist, developer of the general and special theories of relativity, Nobel Prize winner, and vocal post–World War II peace and nuclear disarmament activist. Albert Einstein was born in Ulm, Württemberg, Germany, on 14 March 1879. When he was fifteen years old, his family moved from Germany to escape a failed business venture. They settled in Pavia near Milan, Italy. At about the same time, Einstein, a Jew, renounced his German citizenship. In 1900, Einstein received his undergraduate degree from Zurich Polytechnic with majors in mathematics and physics. His first few years out of college were unhappy ones during which money was very tight. Einstein became a Swiss citizen in 1901 and finally found work the next year in the Swiss Patent Office. In 1905 he was awarded his PhD in physics from his undergraduate alma mater.

That same year, Einstein authored a series of pioneering articles in physics that would revolutionize the field and science as a whole. In 1908 he became an unsalaried university professor, and in 1911 he became an associate professor at the University of Zurich. From there, he enjoyed a storied academic career, holding teaching positions in Germany, Czechoslovakia, and Switzerland. By the early 1920s he had become perhaps the most famous scientist in the world. In 1921 he was awarded the Nobel Prize in Physics, although he earned this honor not for his theory of relativity but rather for his work on the photoelectric effect.

Einstein reapplied for German citizenship in 1914 to facilitate his work at the University of Berlin. However, the rise of the Nazi regime forced him to flee the country in 1933. He settled in the United States, where he became a professor of theoretical physics at the Princeton University Institute for Advanced Study. He retired from the post in 1945, although he would remain active in the sciences and in various international causes until his death. He was also famous for having given impetus to the Manhattan Project, which produced the world's first nuclear bomb.

Einstein, Albert

(1879–1955)

Albert Einstein was one of the most renowned scientists of the twentieth century, indeed one of the greatest of all time. His remarkable insights and creative imagination enabled him to bring about great advances in theoretical physics. (Library of Congress)

Using his fame and alarmed at the aggressiveness of the Axis powers, Einstein wrote a letter to President Franklin D. Roosevelt in 1939 urging him to explore—for military purposes—the possibility of harnessing nuclear fusion to make bombs. By 1942, the Manhattan Project was in high gear.

After World War II, Einstein became active in both the Zionist cause and the incipient civil rights movement in America. In 1952, the leaders of the newly created State of Israel asked Einstein to be the nation's second president. The famed physicist declined the offer. By the early 1950s, he had come under scrutiny by right-wingers and acolytes of Senator Joseph McCarthy for his leftist political views. These included the advancement of socialist ideals, world government, and the abolition of institutionalized racism. When the civil rights leader W. E. B. Du Bois was accused of being a communist, an outraged Einstein stated that he would be a character witness in any potential trial. The charges against Du Bois were unceremoniously dropped.

Ironically perhaps, Einstein became an ardent proponent of nuclear disarmament after the war. He is famously quoted for having said, "I don't know how the Third World War will be fought, but I can tell you what they will use in the Fourth—rocks!" Einstein joined with social activist Bertrand Russell and noted physician Albert Schweitzer to lobby hard for the abolition of nuclear tests and the immediate dismantlement of all nuclear weapons. Only a few days before his death, Einstein signed the Russell-Einstein Manifesto, which unambiguously called for a halt to all nuclear testing and worldwide nuclear disarmament. The manifesto helped give rise to the ongoing Pugwash Conferences on Science and World Affairs. Indeed, Einstein lent considerable credence to the postwar peace and nuclear disarmament movements. Einstein died in Princeton, New Jersey, on 18 April 1955.

Eisenhower, Dwight David

(1890–1969)

U.S. Army general and president of the United States (1953–1961). Born in Denison, Texas, on 14 October 1890, Dwight Eisenhower grew up in Abilene, Kansas, and graduated from the U.S. Military Academy, West Point, in 1915. Posted to France during World War I, he arrived only after the end of combat operations.

Following the war, Eisenhower served in a variety of assignments and attended both the Command and General Staff School at Fort Leavenworth and the Army War College. In 1930 he was assigned to the War Department in Washington, D.C. In 1936 he accompanied General Douglas MacArthur to the Philippines to train the new commonwealth's army.

In 1939, Eisenhower became chief of staff to the new Third Army. Transferred to the War Department in Washington following the Japanese attack on Pearl Harbor, he held increasingly responsible staff jobs, working in the War Plans Division, where he helped to plan the Europe First strategy before his summer 1942 transfer to London as commander of American and Allied forces in Britain. In November 1942 he organized the North African campaign and in late 1943 launched the invasion of Italy. In December 1943 he was named to command the Allied forces scheduled to invade Western Europe in 1944, and in spring 1945 he was promoted to general of the army.

From 1945 to 1948 Eisenhower served as chief of staff of the army. He was president of Columbia University from 1948 to 1952. During this time he was actively involved with the Council on Foreign Relations and spent time in Washington, informally chairing the Joint Chiefs of Staff during Admiral of the Fleet William D. Leahy's illness. Eisenhower strongly endorsed President Harry S. Truman's developing Cold War policies, including intervention in Korea. Eisenhower's focus, however, remained the European situation and Soviet-American rivalry. In January 1951 he took leave from Columbia to serve as supreme commander of the armed forces of the North Atlantic Treaty Organization (NATO).

In 1952 the Republican Party, desperate to choose a candidate who would be assured of victory, turned to Eisenhower. As a candidate, he promised to end the Korean War but otherwise continued Truman's Cold War policies. Eisenhower won the November elections, defeating Democrat Adlai Stevenson.

Some early scholars of the Eisenhower presidency suggested that Eisenhower ceded responsibility for foreign policy to Secretary of State John Foster Dulles, but as more archival material became available, it became apparent that Eisenhower was in fact quite actively engaged in foreign policy decisions. Under Eisenhower, U.S. defense commitments around the world solidified into a network of bilateral and multilateral alliances. While maintaining its existing commitments to NATO, the Rio Pact, Japan, and the ANZUS South Pacific alliance, the United States established the Southeast Asia Treaty Organization (SEATO) in 1954, associated itself with the Middle Eastern Baghdad Pact in 1959, and signed bilateral security treaties with South Korea and the Republic of China on Taiwan.

General of the Army Dwight D. Eisenhower commanded the Western Allied forces in the invasion of Europe and defeat of Germany in World War II and was the first supreme commander of North Atlantic Treaty Organization (NATO) forces (1950–1952). Eisenhower served two terms as president of the United States (1953–1961). (Library of Congress)

United States Presidents during the Cold War

<i>Name</i>	<i>Party</i>	<i>Term</i>
Harry S. Truman	Democrat	1945–1953
Dwight D. Eisenhower	Republican	1953–1961
John F. Kennedy	Democrat	1961–1963
Lyndon B. Johnson	Democrat	1963–1969
Richard M. Nixon	Republican	1969–1974
Gerald Ford	Republican	1974–1977
Jimmy Carter	Democrat	1977–1981
Ronald Reagan	Republican	1981–1989

A fiscal conservative uncomfortable with high defense budgets, Eisenhower introduced the New Look strategy of relying heavily on nuclear weapons rather than on conventional forces. Critics of the New Look defense strategy complained that it left the United States unprepared to fight limited wars.

In March 1953 Soviet dictator Josef Stalin died, to be replaced first by a triumvirate of Soviet officials headed by Georgy Malenkov and then in 1955 by Nikita Khrushchev.

Stalin's death may well have facilitated efforts to end the Korean War, although Soviet proposals in 1953 to neutralize and reunite all Germany proved fruitless. As president, Eisenhower fulfilled his campaign pledge to end the Korean War, seemingly threatening to employ nuclear weapons unless an armistice agreement was concluded.

Alarmed by the increasing destructiveness of nuclear armaments, Eisenhower was the first president to attempt, albeit rather unsuccessfully, to reach arms control agreements with the Soviet Union. British Prime Minister Winston Churchill, in office when Eisenhower first became president, strongly urged him to reach such understandings. Eisenhower's efforts began with his "Atoms for Peace" speech of December 1953, developed into his Open Skies Proposal at the 1955 Geneva Conference, and evolved into lengthy negotiations for a treaty to restrict atmospheric nuclear testing, which by the time the 1959 Geneva Conference was held seemed likely to be successful.

In February 1956, Khrushchev repudiated much of Stalin's legacy, including his personality cult and his use of terror against political opponents, a move suggesting that the potential existed for a Soviet-American rapprochement. Soon afterward, Khrushchev expressed his faith that it might be possible for the East and West to attain a state of peaceful coexistence with each other. Progress toward this end was patchy, however. From 1958 until 1961, Khrushchev made repeated attempts to coerce and intimidate the Western powers into abandoning control of West Berlin.

In September 1959, after a protracted Geneva conference on disarmament, Khrushchev visited the United States, a trip that included an address to the United Nations, an apparently fruitful meeting at Camp David, a stay on Eisenhower's Maryland farm, and a presidential tour of the nearby Gettysburg battlefield. The much-vaunted Spirit of Camp David, however, soon evaporated. In May 1960, a long-planned summit meeting between Eisenhower and Khrushchev ended in fiasco after Russian artillery shot down an American U-2 spy plane over Soviet territory on 5 May, shortly before the meeting began. Eisenhower took full responsibility for this event but refused to yield to Khrushchev's demands that the United States apologize and cease all such overflights. In response, Khrushchev angrily canceled the summit.

As the Bandung Non-Aligned Movement gained strength around the developing world, especially in decolonizing Asia, Africa, and the Middle East where nationalist sentiments frequently ran high, Eisenhower sought to entice third world nations into the U.S. camp. In July 1956 the United States

rescinded an earlier offer to grant Gamal Abdel Nasser, Egypt's new and fiercely nationalist president, a loan for the Aswan Dam project, leading Nasser to seize the Suez Canal from France and Great Britain. Eisenhower nonetheless refused to endorse the invasion of Egypt by those two nations, in conjunction with Israel, in late October 1956 and instead put heavy pressure on them to pull their forces back, which soon proved effective.

Shortly afterward, the Soviet Union issued a statement threatening to intervene should there be any further Western threats to Middle Eastern countries. The United States, suspicious of any Soviet initiative that might jeopardize Western control of Middle Eastern oil, responded promptly in January 1957 with the Eisenhower Doctrine, pledging American military and economic assistance to any Middle Eastern country that sought to resist communism. Except for Lebanon and Iraq, few nations welcomed this doctrine, since most countries in the region believed that they had more to fear from Western imperialism than from Soviet expansionism. In 1958 Egypt and Syria encouraged Pan-Arab sentiment by their brief union in the United Arab Republic. Civil war broke out in Lebanon as Muslims sought to replace the predominantly Christian government with an Arab state. Eisenhower responded by landing U.S. Marines on Beirut's beaches to restore order.

As president, Eisenhower was generally cautious in risking American troops in overseas interventions. He boasted proudly that during his presidency no American soldier lost his life in combat duty. Despite Republican claims during the 1952 presidential campaign that they would roll back communism across Eastern Europe, when workers rose against Soviet rule in East Berlin in June 1953 and again when Hungarians attempted to expel Soviet troops in the autumn of 1956, Eisenhower refused to intervene. Although he would not recognize the People's Republic of China (PRC), he reacted cautiously in the successive Taiwan Straits crises of 1954–1955 and 1958, leaving ambiguous the likely U.S. reaction to a Chinese attack on the Guomindang-held offshore Jinmen (Quemoy) and Mazu islands.

In 1954, Eisenhower declined to commit American forces in Indochina after French troops were defeated at Dien Bien Phu. When the 1954 Geneva Accords ending the First Indochinese War and temporarily partitioning Vietnam until countrywide elections could be held were announced, Eisenhower refused to recognize them. His administration encouraged the government of the southern Republic of Vietnam (ROV, South Vietnam) in its refusal to hold the elections mandated for 1956 and provided military and economic assistance to bolster its independence. Eisenhower justified these actions by citing the domino theory—that if the United States permitted one non-communist area to become communist, the infection would inevitably spread to its neighbors.

Eisenhower also relied heavily on covert activities, authorizing the Central Intelligence Agency (CIA) to back coups in both Iran and Guatemala in 1953 and 1954 and encouraging it to undertake numerous other secret operations. These included plans for an ill-fated coup attempt against Cuba's communist leader, Fidel Castro.

Eisenhower expressed concern that high levels of defense spending had created a military-industrial complex.

Rather ironically, in his Farewell Address of January 1961 Eisenhower warned that Cold War policies tended to undercut the democratic values that the United States claimed to defend. He also expressed his concern that high levels of defense spending had created a military-industrial complex with a vested interest in the continuation of international tensions. Nevertheless, Eisenhower himself contributed to its development by engaging the United States in the Space Race and mounting a major educational and industrial drive to enable the United States to surpass Soviet scientific achievements.

After leaving office in 1961, Eisenhower backed American intervention in Vietnam, an area that he specifically warned his successor John F. Kennedy not to abandon. In retirement Eisenhower wrote two volumes of presidential memoirs. He died in Washington, D.C., on 28 March 1969.

Eisenhower Doctrine

(1957)

Foreign policy position enunciated by President Dwight D. Eisenhower that sought to limit communist influence and the effects of Arab nationalism in the Middle East. On 5 January 1957 Eisenhower addressed a joint session of Congress. In that address, he requested a congressional resolution empowering him to increase economic and military aid to nations in the Middle East. More important, he also asked that he be given the authority to dispatch U.S. troops to any Middle Eastern country that acknowledged a credible threat from communist pressures. On 9 March, Congress passed the resolution, almost unchanged from the original request, thereby codifying what by then had been dubbed the Eisenhower Doctrine.

The main catalyst of the doctrine was the 1956 Suez Crisis. In response to Egyptian President Gamal Abdel Nasser's July 1956 nationalization of the strategically important Suez Canal, Great Britain, France, and Israel conspired to invade Egypt and retake the canal by force. The invasion, which began on 29 October 1956, infuriated and embarrassed the Eisenhower administration, which immediately pressed for a cease-fire. On 7 November the Israelis, French, and British reluctantly acceded and withdrew their forces. The ignominious end of the Suez Crisis especially humiliated Great Britain. In its aftermath the British lost much of their clout and prestige in the Middle East, an area over which they had long had a dominant role. Concerned that Nasser would continue to tilt toward the Soviets and export his vision of Pan-Arab nationalism to other nations in the region, U.S. Secretary of State John Foster Dulles decided that the United States must supplant the British in the Middle East. Thus, the United States became the preponderant Western power in the region beginning in 1957.

Although the Suez Crisis had directly influenced the enunciation of the Eisenhower Doctrine, other Cold War exigencies were also at play. In a significant way, the doctrine was a key corollary to the U.S. containment policy, which had undergirded American foreign policy since 1946. U.S. policymakers had already demonstrated their willingness to meet communist aggression in Europe and Asia. Now they were making clear their intentions to do the same in the Middle East. At the same time, Eisenhower and Dulles intended to contain Nasser's brand of nationalism, which incorporated alarmingly socialist economic prescriptions. Of course, oil was also a factor in Eisenhower's thinking. Because the Middle East was already supplying Western Europe with much of its energy needs (and a growing amount of that for America as well), U.S. policymakers had to ensure that oil supplies and shipping routes stayed out of the hands of Nasser and the Soviets.

In April 1957, U.S. policymakers put the Eisenhower Doctrine to its first test. When Jordan's King Hussein came under increasing fire from leftist groups, the United States immediately lent him economic and military aid to fend off leftist and ultranationalist threats. But the real test came in 1958. In February of that year, Egypt and Syria, both supported by the USSR, merged to form the United Arab Republic (UAR). In July, the pro-Western Iraqi monarchy fell to a nationalistic military junta. Indeed, it looked as if

Nasserism were spreading throughout the Middle East. When Lebanon's President Camille Chamoun asked Washington for help in putting down a Muslim insurrection that threatened his regime, Eisenhower dispatched 10,000 U.S. Marines there on 15 July. The revolt was quickly extinguished.

In the immediate term, the events of 1957–1958 and the attendant Eisenhower Doctrine helped the United States to stabilize the Middle East during a tumultuous period. In the longer term, however, U.S. policies alienated many in the Middle East—particularly Muslims—and fanned the flames of anti-Americanism. In recognition of this, by early 1959 the Eisenhower administration changed course. While it would not tolerate further Soviet encroachments in the Middle East, it did decide to seek some accommodation with Arab nationalism, to include dialogue with Nasser himself. The Eisenhower Doctrine largely languished after 1959, only to be partly resurrected again in Lebanon in 1982 when the Ronald Reagan administration dispatched troops as part of a multilateral contingent to oversee the removal of thousands of besieged Palestinians.

Elizabeth II, Queen of Great Britain (1926–)

Queen of Great Britain (1953–present). Born in London on 21 April 1926 to the Duke and Duchess of York, Elizabeth Alexandra Mary was not expected to be the future queen, but when her uncle, Edward VIII, abdicated in 1936, her father unexpectedly ascended the throne as King George VI. It was at that point that Elizabeth became the presumptive royal heir. Elizabeth was educated at home, and when it had become clear that she was heir to the throne, she studied constitutional history and law to prepare for her future responsibilities.

In 1944 during World War II, Elizabeth served in the Auxiliary Territorial Service. In November 1947 she married Lieutenant Philip Mountbatten of Greece, who became Prince Philip, Duke of Edinburgh. George VI died in February 1952, and Elizabeth duly ascended the throne and was officially crowned as Queen Elizabeth II on 2 June 1953.

The new queen's reign began with high hopes of a new Elizabethan age. Some of the initial euphoria was dampened by the 1956 Suez Crisis. It was also unclear how much the queen knew about Prime Minister Anthony Eden's secret negotiations with France and Israel prior to the crisis.

As the queen ruled Britain while raising her family, she faced increasing criticism regarding the necessity of the monarchy, discontent fueled by the somewhat scandalous marital difficulties of several of her children. Also, the rise of the Labour Party brought more public scrutiny of wealth and privilege, especially toward excesses of the queen's household.

Although she did not engage directly in politics, Elizabeth II still played a crucial public role, as her royal visits became extensions of British foreign policy. She also took an active role in trying to strengthen the British Commonwealth of Nations. Many former colonies tended to adopt positions more in line with those of the Soviet Union than with the Western democracies, and Elizabeth used royal visits to instill a sense of goodwill, particularly in those countries with geographic proximity to the Soviets. Without doubt, the queen's quiet, determined spirit helped to lead Britain through the Cold War.

Spanish-speaking Central American nation covering 8,124 square miles, slightly larger than the U.S. state of New Jersey. El Salvador, with a 1945 population of nearly 2 million people, is bordered to the west by Guatemala, to the north and east by Honduras, and to the south by the Pacific Ocean. After independence from Spain in 1821, the phenomenal rise of coffee consumption greatly transformed El Salvador in the last thirty years of the

El Salvador

nineteenth century. For much of its subsequent history, the country would be dominated by a small group of wealthy coffee growers and their military allies. Representatives of the Fourteen Families (the economic elite) monopolized politics through the 1920s and retained considerable power until the 1980s.

In 1932, after the collapse of coffee prices precipitated by the Great Depression, a peasant uprising erupted that was supported by the Communist Party of El Salvador. The rebellion was led by Augustín Farabundo Martí. The army's repression of the uprising (known as *La Matanza*, or *The Slaughter*) resulted in 30,000 deaths and inaugurated several decades of harsh military rule. Martí was executed by the army, but his name was preserved in the title of the Farabundo Martí Liberation Front (FMLN) guerrilla organization.

During 1959–1965, modest economic growth increased the size of the Salvadoran middle class. In spite of this modest progress, however, poverty and high unemployment continued to polarize society. The peasantry was especially oppressed, as there was precious little land available to them for independent cultivation. In 1972 the military arrested and removed from power the popularly elected civilian president José Napoleón Duarte. Army repression quickly radicalized the population, and the first armed-struggle movements began to coalesce by the mid-1970s.

In October 1979, alarmed by signs of growing violence and revolutionary upheaval, army officers carried out a coup against the government of General Humberto Romero. The coup brought to power a series of military-civilian juntas whose reformist officers and civilians were weakened after only a few months in power. By the mid-1980s, political power had fallen to conservative military figures in alliance with the Christian Democrats, with Duarte as president.

As the country sank into civil war, the Duarte government implemented wide-ranging social and economic reforms. These focused particularly on land and agrarian reforms. However, Duarte was unable to control the paramilitary terror waged by the armed forces against civilians suspected of sympathizing with the FMLN. On 28 March 1980, a right-wing death squad murdered Catholic Archbishop Oscar Romero, who had criticized the military's terror tactics and the U.S. support for the government.

With the advent of Ronald Reagan's presidency in 1981, the civil war in El Salvador became a central piece in what became known as the Second Cold War in the Americas. The U.S. government accused Cuba, the Soviet Union, and the newly installed Sandinista government in Nicaragua of supporting and arming FMLN guerrillas in El Salvador. To counter this, the Reagan administration provided the country with \$6 billion in military and economic aid during 1981–1992.

The growing evidence linking the Salvadoran military and government to the death squads led to widespread criticism of U.S. policy in El Salvador. The uproar over the army's murder of six Jesuit academics in November 1989, the 1990 electoral defeat of the Sandinistas in Nicaragua, the collapse of the Soviet Union in December 1991, and the sense that a stalemate had

Civilians running from clashes between FMLN guerillas and the Salvadoran Army in San Miguel, El Salvador, 18 November 1989. (Patrick Chauvel/Sygma/Corbis)

been reached in the civil war encouraged moves for a negotiated settlement of the conflict. In April 1990 the United Nations (UN) began to supervise negotiations between the Salvadoran government and the FMLN, and a cease-fire was signed in January 1992.

Under the UN-brokered end to hostilities, the Salvadoran Army and police forces were purged of their worst human rights violators, and the FMLN became a legalized political party. Measures to achieve national reconciliation and to reincorporate FMLN guerrilla and army forces into civilian life have only been partially successful, however. The end of the civil war has not been able to resolve the conflicts created by a legacy of more than 75,000 war-related deaths.

Ély, Paul (1897–1975)

French Army general, army chief of staff (1953–1954, 1956–1958), high commissioner and commander in chief of French forces in Indochina (1954–1955), and chief of National Defense Staff (1959–1961). Born on 17 December 1897 in Salonika, Greece, where his father was a French civil servant, Paul Henri Romuald Ély spent much of his early childhood in Cyprus, where he learned Greek and developed an interest in the culture and literature. In March 1915 during World War I he enlisted in the French Army. Wounded in battle, he won the Croix de Guerre with two citations for bravery.

In 1917 Ély entered the French military academy at Saint-Cyr, from which he graduated in 1919 as a second lieutenant. Assigned to the army General Staff, in 1928 he attended the École de Guerre. He was promoted to captain in 1930 and major in 1939.

In June 1940 during the Battle for France, Ély was so severely wounded in his right hand that it was permanently disabled. Again awarded the Croix de Guerre for bravery, he joined the Resistance in 1942, becoming a lieutenant colonel and deputy head of the French Forces of the Interior (FFI), the military arm of the French underground. In 1944 he was promoted to colonel and served as liaison between the National Resistance Council in France and Charles de Gaulle's Free French government, making a number of hazardous cross-Channel trips carrying military intelligence vital to the Normandy invasion.

In 1945 Ély was promoted to brigadier general, and in 1947 he was advanced to major general in command of the 7th Military Region. In 1948 he became chief of staff to the inspector-general of the French Army, General Jean de Lattre de Tassigny. In 1949 Ély was advanced to lieutenant general and was sent to Washington as the French representative to the three-man Standing Group of the North Atlantic Treaty Organization (NATO). In August 1953 he returned to Paris as chief of staff of the French Army. That December he also became president of the military committee of NATO.

In February 1954 Ély and Defense Minister René Pleven undertook a fact-finding mission to Indochina. Convinced that France could not win the war there without massive military assistance, Ély arrived in Washington on 20 March 1954 in an effort to secure that aid. He candidly informed his American counterpart, Admiral Arthur W. Rad-

State of Vietnam premier Ngo Dinh Diem and French high commissioner and commander of French Forces in Indochina General Paul Ély during ceremonies marking the end of French administration in Vietnam, 1954. (Bettmann/Corbis)

ford, of the likely fall of the French fortress of Dien Bien Phu and the dire consequences that this would have for the Indochina War and perhaps for all of Southeast Asia. It quickly became apparent to President Dwight D. Eisenhower that the only way to save the French would be massive U.S. military intervention, possibly including nuclear weapons. With the British government opposed and the battle apparently too far gone, Eisenhower decided against U.S. intervention, although he did agree, after Ély's return to Paris, to supply twenty-five additional B-26 bombers.

After the fall of Dien Bien Phu, Ély again went to Indochina with Generals Raoul Salan and Pierre Pélissier to prepare a military report on which the French government might base requests to its allies for aid. Ély returned to France three weeks later to recommend that France immediately evacuate northern Vietnam and replace General Henri Navarre as commander in chief. On 3 June 1954 the French government named Ély to succeed both Navarre as military chief and Maurice Dejean as French high commissioner. On 11 June French and Vietnamese troops in the southern Red River Delta began Operation AUVERGE, the last major battle of the war, in which they fought their way toward the Hanoi-Haiphong lifeline. On 17 June 1954 Ély returned to France to present alternate military plans to the government of Premier Pierre Mendès-France and then returned to Indochina. The 21 July 1954 Geneva Accords brought the Indochina War to an end.

The pro-American Ély contributed much to State of Vietnam Premier Ngo Dinh Diem's consolidation of power, and the training of the Vietnamese Army came under Ély's overall authority. But friction between the French and Americans as well as the presence of French troops wounded the nationalist sensibilities of the Diem government. Ély departed in 1955, and the last French troops left Vietnam in April 1956.

During 1956–1958 Ély was president of the Chiefs of Staff Committee. In 1958 during the Algerian War (1954–1962) when French settlers and army professionals in Algiers made common cause against the French government in order to keep Algeria an integral part of France, Ély resigned to resolve his conflict of loyalties. De Gaulle brought Ély back as chief of the National Defense Staff in 1960 and sent him to Algiers to sound out French Army leaders there about a truce and proclamation of an autonomous Algerian government. Ély retired in 1961, the year before Algeria became independent. He died in Paris on 16 January 1975, widely respected for his high principles, modesty, ability to work with others, and capacity for hard work.

Élysée Agreement

(8 March 1949)

Treaty during the Indochina War (1946–1954) signed at the Élysée Palace in Paris on 8 March 1949 between French President Vincent Auriol and Vietnamese Emperor Bao Dai. In the Élysée Agreement, France recognized Vietnam as an associated state within the French Union and promised to support its application for membership in the United Nations. The treaty was formally ratified by the French Chamber of Deputies in January 1950. Under the agreement's provisions, France promised to incorporate within the new State of Vietnam the Republic of Cochinchina, which it had created out of Vietnamese territory in 1946. Paris lauded the agreement as proof that Vietnam was independent, and it no doubt helped achieve one of its goals of convincing U.S. officials that the war in Indochina had been transformed from a colonial conflict into a civil war between Vietnamese democrats and Vietnamese communists.

The reality was quite different. Under the constitutional framework of the French Union, Vietnam could receive only autonomy rather than full independence. France recognized Vietnam's right to have diplomats only in a few specified countries: China, Thailand, and the Vatican. (Because of the subsequent victory of the communists in China, India was substituted for China, but India did not recognize the Bao Dai regime.) Proof that the new State of Vietnam was not independent was seen in the fact that it recognized Paris's right to control its army and foreign relations, and French economic domination of Vietnam was preserved.

Stanley Karnow quotes Bao Dai as remarking soon after the treaty was signed that "what they call a Bao Dai solution turns out to be just a French solution." Indeed, Bao Dai was unable to offer Vietnamese nationalists any alternative to the communists. The French had, however, recognized the territorial unity of Vietnam. By the end of 1949 Laos and Cambodia signed treaties similar to the Élysée Agreement.

Entebbe Raid

(3–4 July 1976)

Successful Israeli hostage rescue resulting from a 1976 airliner hijacking. On 27 June 1976, Air France Flight 139 from Tel Aviv to Paris made its usual

stop in Athens to refuel and pick up passengers. Lax airport security failed to detect four well-armed terrorists (three men and a woman) who boarded the flight. All claimed membership in the Popular Front for the Liberation of Palestine (PFLP), although the woman and one of the men, Wilfried Boese, were former members of Germany's Baader-Meinhof Gang.

Once airborne, the terrorists produced weapons and hijacked the plane and its 246 passengers and 12 crew members, ordering the pilot to Benghazi, Libya. Following refueling, the plane flew to Entebbe, Uganda, leaving behind 1 passenger who had feigned illness.

Six additional terrorists boarded the plane at Entebbe as Ugandan troops surrounded it. Ugandan dictator Idi Amin visited the hostages and announced his support for the PFLP. The terrorists released one hundred non-Jewish passengers on 1 July but threatened to kill the remainder unless Israel and other nations released fifty-three convicted terrorists.

While the Israeli government negotiated with the terrorists, the Israel Defense Forces (IDF) planned a rescue. Spearheaded by members of Sayeret Matkal, Israel's elite counterterrorism force, the assault team commanded by Jonathan Netanyahu left Israel and flew to Entebbe in four C-130 Hercules aircraft on the night of 3–4 July. At Entebbe, the first C-130 cut its engines and glided to a quiet landing. Netanyahu and his team then raced to rescue the hostages in two land rovers and a black Mercedes, disguised to resemble those driven by Ugandan officials, with which they hoped to bluff their way past any guards. The other C-130s then landed with more soldiers who secured the airport, refueled the planes, and destroyed several Ugandan aircraft to prevent pursuit.

Netanyahu's ruse failed, however, and after sentries challenged them, the Israelis fought their way to the old terminal building where the terrorists were holding the hostages. In several intense firefights, the Israelis killed nearly forty Ugandan soldiers and six terrorists, including Boese as he attempted to murder the hostages. Netanyahu and two hostages were fatally wounded in the fighting, and a third hostage, Dora Bloch, remained behind in a hospital where the terrorists had moved her after she became ill. Amin later ordered her murdered. Ninety minutes after landing, the IDF soldiers and rescued hostages took to the air and flew to Israel after refueling in Nairobi, Kenya.

This daring mission, originally code-named Operation THUNDERBOLT but renamed Operation JONATHAN in honor of Netanyahu, established the standard for long-range hostage rescue operations that other nations would seek to emulate.

Erhard, Ludwig (1897–1977)

Federal Republic of Germany (FRG, West Germany) politician, minister of economics (1949–1963), vice chancellor (1957–1963), and chancellor (1963–1966). Born on 4 February 1897 in Fürth (Bavaria), Germany, Ludwig Erhard was educated at the commercial college in Nuremberg and at the University of Frankfurt, where he received a doctorate in political science in 1925. Influenced by ideas of liberal socialism and by his own experiences with the crisis economy of the Weimar Republic, he became convinced that the political economy of a state should form a cohesive whole but with economic considerations taking precedence. During 1928–1943, he was a research assistant at the Nuremberg Institute for Economics.

Ludwig Erhard was a German politician and economist who oversaw the Federal Republic of Germany's (FRG, West Germany) postwar economic recovery and also served as West Germany's second chancellor. (Library of Congress)

In April 1945 Erhard went to work rebuilding the German economy, and in September 1945 he became the first minister of economics of Bavaria. In winter 1947 he headed an expert commission on money and credit in the financial division of Bizonia, the authority for the British and U.S. zones of Germany that was preparing to implement currency reform.

Erhard's principles of a so-called social market economy, based on a free-market system combined with social welfare responsibility, were introduced in June 1948. The following month, the Christian Democratic Union (CDU) under Konrad Adenauer's direction implemented Erhard's economic principles in the party platform. Erhard entered the Bundestag in September 1949 and was a member of the Christian Democratic/Christian Social Union (CSU) group until his death. Chancellor Adenauer appointed him minister of economics that same year, a post he held until 1963. Erhard became vice chancellor in October 1957.

When Erhard's book *Wohlstand für alle* (Prosperity for Everyone) was published in February 1957, he was already regarded as the father of West Germany's "economic miracle" and enjoyed great popularity. Upon Adenauer's resignation, Erhard was elected chancellor on 16 October 1963. Four major concerns marked his tenure. First, Erhard's hands-off leadership style tended to leave problems unresolved, which encouraged a lack of discipline in his cabinet. Second, new international realities, especially the reorientation of American foreign policy, led to the diminution of FRG influence among the Western Allies. Third,

economic problems in the mid-1960s, which Erhard was unable to resolve, precipitated an acute recession. The public's reaction resulted in the loss of power for the CDU in North Rhine-Westphalia in July 1966. Finally, the relentless political intrigues of Adenauer, Franz Josef Strauss, and others, coupled with growing tensions between the CDU and the Free Democratic Party (FDP), demonstrated signs of disarray inside the long-governing CDU.

Despite Erhard's electoral success in September 1965, the CDU regained some of the ground it lost without winning a majority. Thus, his second term was under constant pressure from those in his own party, and his election as CDU chairman in March 1966 did not prevent the waning of his personal authority. When FDP ministers refused to compromise over tax increases and resigned on 27 October 1966, the CDU, without consulting Erhard, designated Kurt Kiesinger to succeed him as party chief and initiated negotiations with the Social Democratic Party (SDP). Pressure on Erhard intensified after November 1966 when the CDU lost the regional elections in Hesse. The beleaguered chancellor resigned on 1 December 1966. Erhard died in Bonn on 5 May 1977.

East African nation, formerly part of Ethiopia, with a land mass of 46,842 square miles, roughly the size of the U.S. state of Mississippi. Eritrea is bordered to the west by Ethiopia and Sudan, to the east by the Red Sea, and to the south by Djibouti. In 1945 it had an estimated population of 1.1 million. An Italian colony during 1889–1941 and under British-administered control during 1941–1952, Eritrea became federated with Ethiopia in September 1952 but lost all autonomy in 1962, when it was reduced to province status. Several armed groups ideologically committed to the communist bloc fought for independence from 1952 until the fall of Addis Ababa and Asmara in 1991.

Eritrea

An Eritrean provisional government was then established until 1993, when a referendum granted the country official independence.

Disagreement over the 1945 United Nations provisions for Eritrean sovereignty and a desire for independence resulted in the creation of the Muslim League (ML) in 1946. The ML was replaced by the Eritrean Liberation Front (ELF), formed in 1961, and the Eritrean Liberation Movement (ELM), a secular movement founded in 1958 by activists in neighboring Sudan.

From the beginning, Osman Solih Sabbe was a key figure in the ELF. He secured financial assistance from states hostile to Ethiopia. To drum up support, the ELF emphasized Ethiopia's links to the United States and, subsequently, Israel. This strategy resulted in the perceived association of Eritrean nationalism with Islam.

A 1974 coup in Ethiopia overthrew the pro-Western Emperor Haile Selassie. Replacing Selassie's government was a nominally socialist-oriented military junta called the Derg (Committee) chaired by Colonel Mengitsu Haile Mariam. This also meant a change of policy for Sudan, which had supported Ethiopia since the 1972 Addis Ababa Agreement (leading to a period of peace in Sudan).

Following this radical change in regimes, the Tigray People's Liberation Front (TPLF) was established in 1975 in the province of Tigray in northern Ethiopia, while by 1974 the Eritrean People's Liberation Front (EPLF) emerged from disenchanted members of the ELF. Disagreements between existing armed groups led to a civil war in 1972–1973 and eventually, by 1981, to expulsion of the ELF from Eritrea, making the EPLF the dominant military and political force there. Both the TPLF and EPLF were Marxist in orientation and opposed the Mengitsu regime, but while the EPLF favored independence, the TPLF remained undecided between independence and a role within Ethiopia.

Organizational and leadership differences eventually led to a three-year breach between the two organizations in 1985, when the TPLF began supporting Eritrean opposition movements against the EPLF's perceived hegemony. Disagreements escalated after the creation of the Derg and as the result of Soviet support for Ethiopian military offensives against the Eritrean independence groups, especially during 1977–1979. In this period the EPLF carried out a strategic withdrawal from central and southern Eritrea into the northern province of Sahel, while the TPLF continued to fight the Ethiopian Army, despite the latter's initial victories.

From the beginning, the TPLF was more sympathetic to an Albanian model of self-reliant communism, whereas the EPLF continued to regard Soviet-style communism with favor. In addition, the TPLF interpreted the independence struggle within a neo-Marxist-Leninist framework, with differences based not on class but rather on ethnicity. It also favored an ethnic federal system, which the EPLF sought to avoid.

From 1978 onward the EPLF consolidated its position until in 1980 it drove back Ethiopian forces on all fronts. Finally, in March 1988 the EPLF defeated Ethiopian forces at Afabat. Within a year the Ethiopian Army had evacuated Tigray province. The EPLF conquered the northwestern part of

Eritrea, and it took the port of Massawa in 1990 and entered Asmara in May 1991. The same year, the Ethiopian People's Revolutionary Democratic Front (EPRDF), an umbrella organization founded in 1989 gathering all anti-Derg movements, captured the Ethiopian capital of Addis Ababa, imposing its rule and forcing Mengistu to flee the country.

In May 1991 a conference was held in London to resolve the situation. It was chaired by the United States, which held out the promise of aid. The conference was successful, formally ending the war. That July in another conference, at Addis Ababa, an Ethiopian provisional government was established, and Eritrea was granted the right to hold a referendum on independence, with the EPLF as the provisional government. In 1993, 99.8 percent of the population voted for Eritrean independence, whereupon the EPLF transformed itself into the People's Front for Democracy and Justice (PFDJ) and became the sole legal and ruling party of Eritrea.

Swedish prime minister and head of the Social Democratic Party (1946–1969). Born on 13 June 1901 in Ransäter, Sweden, Tage Erlander studied natural and social sciences at the University of Lund, graduating in 1928. He was elected to parliament in 1932. Beginning in 1937, he held a succession of posts in the Ministry of Social Affairs. In 1944 he became a minister without portfolio and in 1945 the minister of education.

Erlander was unexpectedly elected prime minister in October 1946 and also became chairman of the Social Democratic Party. Having been responsible for Sweden's security police during World War II, he took a decidedly tough anticommunist stance in domestic affairs. He adhered to the idea of Swedish armed neutrality and coined the concept of a "strong society," referring both to a robust welfare state and strong national security.

In the 1960s Erlander left Foreign Minister Torsten Nilsson and intellectual sparring partner and protégé Olof Palme responsible for developing

Erlander, Tage
(1901–1985)

more activist foreign and domestic policies. Erlander's years in office constituted the heyday of the Swedish welfare state. At the same time, Sweden retained its neutrality policy while Erlander's government maintained a cautious and informal entente with the West. After having served in office longer than any other democratically elected prime minister in the twentieth century, in 1969 Erlander left office, handing over the post to Palme. In 1970, Erlander won election to the new single-chamber legislature, which he had supported. He resigned from the Swedish parliament in December 1973. Erlander died in Huddinge, Sweden, on 21 June 1985.

Espionage

During the Cold War, the shifting fronts of espionage extended over both the industrialized and the developing worlds, going beyond the traditional roles of intelligence, that is, information derived from either human agents (HUMINT) or technical means (TECHINT) and counterintelligence. Disinformation abounded, and covert operations demonstrate that intelligence often became paramilitary in nature. In spite of the expanded role of espionage, intelligence failures were common during the Cold War. Undue reliance on TECHINT, failings in HUMINT, and analysis influenced more by ideological preconceptions or political aims than by objective assessment are evident, and frequent information leaks suggest that secret operations were far from secret.

Major Intelligence Agencies

East-West tensions well before the end of World War II prompted the Allies to revamp their intelligence organizations during the early Cold War.

The United States. After the abolition of the wartime Office of Strategic Services (OSS), in January 1946 President Harry S. Truman established the Central Intelligence Group under the direction of the National Intelligence Authority. These were replaced by the Central Intelligence Agency (CIA) and the National Security Council (NSC) via the September 1947 National Security Act. Responsibility for domestic counterintelligence fell on the Federal Bureau of Investigation (FBI). The Defense Intelligence Agency (DIA),

President Harry S. Truman with members of the National Security Council, 19 August 1948. From left to right, clockwise around the table: Assistant Secretary of the Air Force Cornelius Vanderbilt Whitney, Secretary of the Army Kenneth Royall, Executive Secretary of the National Security Council Sidney Souers, National Security Resources Board Chairman Arthur M. Hill, Director of Central Intelligence Roscoe Hillenkoetter, Secretary of Defense James Forrestal, Secretary of State George C. Marshall, President Truman, and Undersecretary of the Navy W. John Kenney. (Harry S. Truman Library)

founded in 1961, controlled military intelligence, while the National Security Agency (NSA), formed in 1952, dealt with foreign signals intelligence (SIGINT). All services were subordinated to the NSC.

The United Kingdom and Canada. Cold War reorganization in the United Kingdom (UK) began in the summer of 1944, when Secret Intelligence Services (SIS, MI6) set up an anti-Soviet section and recruited new agents, absorbing some members of the disbanded wartime Special Operations Executive (SOE). While MI6 was responsible externally for intelligence, counter-intelligence, covert action, and clandestine communications support, the Security Service (MI5), responsible for domestic security, evolved from the Home Section of the Secret Service Bureau, and the Special Branch of Scotland Yard was made its executive arm. The British code-breaking organization, Government Communications Headquarters (GCHQ), emerged from the control of SIS to become an independent service, answerable to the Foreign

U.S. Citizens Convicted of Espionage Activities during the Cold War

<i>Name</i>	<i>Trial Date</i>	<i>Initial Sentence</i>
David Greenglass	1951	15 years imprisonment
Julius and Ethel Rosenberg	1951	executed by electrocution
Morton Sobell	1951	30 years imprisonment
Vilyam Fisher (Rudolf Abel)	1957	30 years imprisonment
John Walker	1985	life imprisonment
Ronald Pelton	1987	life imprisonment
Clayton Lonetree	1987	30 years imprisonment
Richard Millar	1991	life imprisonment
Aldrich Ames	1994	life imprisonment
Earl Pitts	1996	27 years imprisonment
Robert Hanssen	2001	life imprisonment

Office and responsible for armed services' signals interception. The 1947 British-American Security Agreement, or Secret Treaty, formalized collaborative signals communication among the British and American intelligence organizations.

In Canada, counterintelligence was largely handled by the Intelligence Section of the Royal Canadian Mounted Police (RCMP) Criminal Investigation Branch from 1946 to 1981, when the civilian Canadian Security Intelligence Service (CSIS) was established.

Other Western-allied agencies. Secret services among other Western countries included the French Service de Documentation Extérieur et de Contre-Espionnage (SDECE, External Documentation and Counterespionage Service) and the Federal Republic of Germany's (FRG, West Germany) Bundesnachrichtendienst (BND, Federal Intelligence Service of the Republic of Germany). Chief among pro-Western nations, the newly formed State of Israel reorganized its defense systems and formed the Mossad in 1951.

Soviet networks. Unlike the CIA, Soviet intelligence and counterintelligence networks were of long standing, with sweeping powers domestically and abroad. Descended from the Cheka, Soviet security services had undergone a complex series of organizational and name changes. In 1946, the Stalinist Narodnyi Komissariat Vnutrennikh Del (NKVD, People's Commissariat for Internal Affairs) had been transformed into the Ministerstvo Vnutrennikh Del (MVD, Ministry of Internal Affairs), which in turn evolved into the Komitet Gosudarstvennoy Bezopasnosti (KGB, Committee for State Security) after the 1953 death of Soviet dictator Josef Stalin. From 13 March 1954 to 6 November 1991, the KGB was responsible for foreign intelligence, counterintelligence, and countersubversion. The MVD remained in charge of internment camps, known as gulags, and border and domestic troops. In 1957, control of border forces reverted to the KGB. A smaller military intelligence body, Glavnoe Razvedyvatelnoe Upravlenie (GRU), was responsible for signals and overhead intelligence.

Among the countries of the Warsaw Pact, Poland maintained from three to four secret police and intelligence organizations, the chief of which was Informacja (Military Counterintelligence), later called Wojskow Sluzba Wewnetrzna (WSW, Military Internal Service). Other Soviet bloc intelligence

services included Romania's Securitate (Security Service); Czechoslovakia's Státní Tajna Bezpečnostní (STB, State Secret Security Forces) and the military secret service, Obranne Bezpečnostní Zpravodajství (OBZ, Committee of Defense Security Information); Hungary's Államvédelmi Hivatal (AVH, State Security Authority); and Bulgaria's Durzhavna Sigurnost (DS, Security Service). The Soviet bloc's best-known and most effective intelligence service was the German Democratic Republic's (GDR, East Germany) Ministerium für Staatssicherheit (Stasi, Ministry for State Security), established on 8 February 1950 and modeled after the then-operating NKVD. Its foreign wing, Hauptverwaltung Aufklärung (HVA, Information Headquarters), was headed by Markus Wolf.

Other agencies. In the developing world, Soviet- and Western-backed governments alike had active intelligence services, including the security forces of the Ngo Dinh Diem administration in South Vietnam (among these the American-backed Military Security Service and the Office Six of Diem's Army of the Republic of Vietnam) and the North Vietnamese Cong An Vu Trang Nhan Dan (PASE, People's Security Force), a border gendarmerie and security network that linked remote villages.

1945–1960: Spy Scandals, Defectors, and Covert Operations

Venona, Chambers, Bentley, and Gouzenko. The suspicion that marked the Soviet-Allied relationship during World War II only deepened during the Cold War. Venona, a collaboration between American and British intelligence agencies, had been launched on 1 February 1943 to gather and decrypt Soviet messages. Human error—the Soviet agents' reuse of one-time pads—led cryptanalysts almost two years later to make breakthroughs in the code, which aided in identifying a number of spies. These discoveries overlapped with other major counterintelligence revelations in 1945, developments that involved or affected Venona.

First, the FBI followed up on a 1942 interrogation of Whittaker Chambers, whose accusations centered on Alger Hiss, soon to be director of the State Department's Office of Special Political Affairs. Venona documents later indicated that "ALES," a code name for Hiss, had been working in the communist underground since 1935. Second, Elizabeth Bentley, formerly connected with Jacob Golos, U.S. Chief of Soviet Espionage Operations, approached the FBI and later the House Un-American Activities Committee (HUAC) to name Julius Rosenberg among others, an accusation later backed by Venona decryptions. Third, in September 1945, Igor Gouzenko, a GRU code clerk at the Soviet embassy in Ottawa, defected to the RCMP. His revelations exposed the Soviet spymaster in Ottawa, Colonel Nicolai Zabotin, and led to sweeping arrests in Canada. More important, Gouzenko informed on Operation CANDY, an NKVD/GRU attempt to gain information on the Manhattan Project, which had developed the atomic bomb. His information exposed the British nuclear scientist Dr. Alan Nunn May and led to the conviction of Klaus Fuchs, a physicist in Los Alamos, New Mexico.

Gouzenko's revelations were reinforced in 1948 by further Venona deciphers. Subsequent FBI arrests included those of Harry Gold (Fuchs's courier),

Whittaker Chambers (*right*), senior editor for *Time* magazine, takes the stand before the House Un-American Activities Committee on 25 August 1948. In his testimony, Chambers identified Alger Hiss, a State Department official, as a member of the American Communist Party assigned to infiltrate the U.S. government. (Library of Congress)

Julius and Ethel Rosenberg, and David Greenglass. On the evidence of Greenglass and Gold, the Rosenbergs were executed by means of electrocution on 19 June 1953 for espionage. Also convicted were Theodore Hall, who leaked Manhattan Project plutonium details, and aeronautical engineer William Perl. Another scientist, Bruno Pontecorvo, fled to the Soviet Union.

The Cambridge Five. Perhaps the most notorious spy ring of the Cold War was the Cambridge Five, which included Kim Philby, an MI6 agent; Donald Maclean, a British Foreign Office secretary; Guy Burgess, MI6 agent and Foreign Office secretary; Anthony Blunt, art historian; and John Cairncross, a member of the Defence Division of the Treasury who was concerned with the Radioactive Substances Act. By the summer of 1944, Maclean had already supplied atomic and political intelligence to Moscow and, until exposure, had access to details of the North Atlantic Treaty Organization (NATO) and the British atomic bomb project. Philby was doubtless the most useful to the Soviets. As early as September 1945, he ensured that Konstantin Volkov, deputy resident in Turkey, was abducted before his would-be defection; in Washington during 1949–1951 Philby furnished CIA as well as British information; and in Albania he alerted Soviet intelligence to SIS-sponsored sea-borne landings and of a CIA parachute drop in November 1950. The spy

network fell apart in 1951, when Venona evidence exposed Maclean. Warned by Philby, he fled with Burgess to Moscow. Philby's recall and dismissal culminated in his 1963 defection.

Intelligence failure in Korea. The Democratic People's Republic of Korea (DPRK, North Korea) invasion of the Republic of Korea (ROK, South Korea) in June 1950 highlighted Western intelligence shortcomings. Although reports had noted the North Korean troop buildup, CIA analysts discounted their significance. A similar lapse occurred in November 1950, when United Nations (UN) forces under General Douglas MacArthur had pushed the North Koreans toward the Yalu River and discounted the possibility of Chinese intervention, ignoring the data of Chinese spies regarding troop buildups on the North Korean–Chinese border. Consequently, UN forces were overwhelmed by a Chinese offensive in late November.

The Berlin Tunnel and George Blake. One of the earliest major intelligence initiatives in Berlin was compromised by a mole in MI6, George Blake, who had also reported the earlier Operation SILVER, the wiretapping of Soviet lines in Vienna, to his KGB controllers. In the spring of 1954, a joint SIS/CIA venture launched Operation GOLD to build a 500-meter tunnel to Stasi-KGB headquarters in Karlshorst. The project was completed on 22 February 1955 and provided what appeared to be a fruitful yield of information on Soviet military movements until its “accidental” discovery in April 1956. In 1961, evidence from a defector revealed that Blake had informed the Soviets of the operation from its inception, but the KGB apparently failed to pass on this information to the Soviet military.

Other Soviet penetrations in Europe and North America. In France, a strong postwar Communist Party facilitated infiltration, and many moles were not caught. The most important conviction, that of Georges Pâques, occurred only after a twenty-year career of passing on defense secrets, particularly during the presidency of Charles de Gaulle (1958–1969) onward.

In the FRG, floods of East European refugees made Soviet penetration relatively easy. No sooner had the Gehlen Organization been established than it was riddled with Soviet agents, a situation that continued after the organization's restructuring into the BND. Although two former Nazi SS officers, Hans Clemens and Heinze Felfe, were acclaimed for their anti-Soviet espionage, they were simultaneously forwarding copies of BND documents to Stasi headquarters in Karlshorst. Apart from the KGB and Stasi, other Soviet bloc nations also deployed spies in the West. For example, Alfred Frenzel transmitted FRG and American defense data to the STB until his arrest in 1960.

Spies and moles also continued to target the UK. Konon Trofimovich Molody ran a number of agents, including the Americans Peter and Helen Kroger (formerly part of the Rosenberg spy ring) and a British pair, Harry Houghton and Ethel Gee, who transmitted information on antisubmarine warfare and nuclear submarines. A lead from a CIA mole in Poland led to the conviction of the group, but Molody was freed in a spy exchange in 1964.

Although the Soviet Union lacked the technical resources of the West, TECHINT nevertheless posed a formidable threat. The U.S. embassy in

Moscow, constructed in 1953, was riddled with electronic listening devices, as were other embassies, notably that of Japan. In addition, by 1960 three agents were monitoring NSA cryptanalysis at Fort Meade.

The mole and spy hunts. After Yugoslavia's break with Moscow in 1948, the Soviet world became obsessed with the search for moles and spies. Show trials abounded, such as that of Hungarian interior minister László Rajk, who was accused in 1948 of subversive connections with Yugoslavia, and that of Noel Field, an alleged CIA agent. The hunt for subversives took an anti-Zionist bent, as in Stalin's 1951 removal of Rudolf Slánský, the secretary-general of the Communist Party of Czechoslovakia. At the climax of Stalin's anti-Jewish witch-hunt during 1952–1953, many Soviet Jewish doctors were accused of being foreign agents.

In the United States, espionage fears culminated in an almost simultaneous Red Scare, marked by HUAC hearings and McCarthyism. Shortly after Congressman Richard Nixon's appointment to HUAC, Hollywood fell under investigation; the ten who refused to answer questions about their political allegiances were jailed for contempt of Congress. The Red Scare reached a new level with Senator Joseph R. McCarthy's February 1950 charge that 205 communists or communist sympathizers were in the State Department. The hunt extended to writers, teachers, academics, and UN personnel, and it stopped only in 1954 when McCarthy falsely claimed that the U.S. Army had been infiltrated.

Covert operations. After the creation of the Office of Policy Coordination (OPC), American intelligence was active overseas in a series of covert operations: influencing the 1948 Italian elections to ensure the defeat of the communists, intervening in Iran in 1953 to overthrow Premier Mohammed Mossadegh, assisting in the election of Ramon Magsaysay in the Philippines (1953) through disinformation campaigns, and backing the 1954 coup to overthrow Guatemala's President Jacobo Arbenz. The most devastating consequences of these operations occurred in Hungary during the revolution of 1956. Under Frank Wisner, the CIA had begun Operation RED SOX-RED CAP to train an army of East European refugees. The group was not ready for action when the Mossad supplied CIA Director Allen Dulles with the text of Soviet leader Nikita Khrushchev's speech to the Twentieth Party Congress, which condemned Stalinism. The text was leaked to the *New York Times* and then broadcast on Radio Free Europe to the Soviet bloc, which helped convince Hungarian revolutionaries of Western support for an anti-Soviet uprising. On 4 November 1956, Soviet tanks moved into Hungary, but no help came from the West.

Aerial photo reconnaissance: The Powers Case. After CIA-SIS reconnaissance flights of RB-57 aircraft over the Soviet nuclear test site at Kapustin Yar had proved nearly disastrous, U-2 reconnaissance aircraft took to the air and initially proved immune to Soviet attack. Then on 1 May 1960, a U-2 flown by Francis Gary Powers was shot down over the Soviet Union. Two NSA moles, Bernon Mitchell and William Martin, had probably warned the KGB in December 1959 about forthcoming U-2 flights. Soon thereafter, Soviet and Western satellite space surveillance replaced aerial reconnaissance.

Hollow nickels connected to the espionage case involving Colonel Rudolf Abel. The nickels carried codes inside.
(Bettmann/Corbis)

Reino Hayhanen, hollow coins, and Colonel Abel. On 10 February 1962, Colonel Rudolf Abel (Vilyam Genrikovich Fisher) was traded for U-2 pilot Powers. The investigation that led to Abel's October 1957 espionage conviction began as early as 1953, when an American paperboy discovered a hollow nickel containing an encrypted message. Five years later, defecting KGB agent Reino Hayhanen supplied the key to the code and led to the FBI's arrest of one of Hayhanen's controllers, code-named "Mark."

1960–1975: The Crisis Years

The Cuban Crises, Bay of Pigs, and Operation MONGOOSE. Fidel Castro's January 1959 seizure of power in Cuba ushered in the turbulent 1960s. In May 1960, Khrushchev announced that he would defend Cuba against "American aggression"; this was followed two months later by Castro's trip to Czechoslovakia to purchase arms. Meanwhile, since March 1960, the CIA had been engaged in the ZAPATA Plan, a CIA-backed invasion force of expatriate Cubans. The resultant April 1961 Bay of Pigs invasion was a disaster that discredited the CIA and embarrassed President John F. Kennedy.

Nevertheless, covert action against Cuba continued with Operation MONGOOSE, launched in November 1961 to overthrow Castro through such bizarre methods as injecting a cigar with poison or placing a booby-trapped seashell on the ocean floor to explode while the dictator scuba-dived.

Berlin standoff. Shortly after the Bay of Pigs fiasco, a Berlin crisis caught Western and Soviet intelligence off guard. American intelligence sources were unaware of the decision to construct a wall in August 1961; similarly, Soviet military intelligence, after monitoring the American exercise that preceded

Soviet citizen Oleg Penkovsky shown as his sentence of death by firing squad is pronounced on 11 May 1963. Penkovsky admitted to collaborating with British businessman Greville Wynne in spying for British intelligence. Wynne received an eight-year prison term. (Bettmann/Corbis)

the tank standoff of 27 October 1961, were mistaken in assuming that U.S. objectives were offensive. An armed clash was averted by a diplomatic channel in the form of GRU Colonel Georgi Bolshakov, who informed Kennedy that, thanks to Soviet intelligence, Khrushchev was aware of America's nuclear superiority. Consequently, both sides drew back their tanks.

Aerial reconnaissance, Oleg Penkovsky, and the Cuban Missile Crisis. A full-scale superpower conflict was again averted some months later by aerial reconnaissance and the reports of Soviet informant GRU Colonel Oleg Penkovsky. In mid-July 1962, American intelligence learned of Soviet cargo vessels bound for Cuba and evacuations from the port of Mariel. On 29 August 1962, aerial photographs revealed surface-to-air missile (SAM) sites. CIA analysts at first viewed these as purely defensive, reinforced by Soviet disinformation. Later analysis of U-2 photographs, however, showed intermediate-range ballistic missile (IRBM) sites. On 22 October 1962, President Kennedy threatened a U.S. response if the nuclear-tipped missiles were not dismantled and withdrawn. Vital intelligence underlay Kennedy's threat. Two years earlier, Penkovsky had offered to work for the British SIS as a Soviet mole. His U.S. intelligence debriefing had confirmed that the Soviet Union had several thousand fewer intercontinental ballistic missiles (ICBMs) than previously believed. Subsequently, the Soviets withdrew the IRBMs from Cuba.

Vietnam: Ignored intelligence and covert activity. A less-positive intelligence outcome ensued in Vietnam, where the CIA's Office of Current Intelligence and Board of National

Estimates had warned against escalating involvement, predicting that it would spur the Democratic Republic of Vietnam (DRV, North Vietnam) infiltration of the Republic of Vietnam (ROV, South Vietnam). The Kennedy administration ignored this warning, and subsequently CIA personnel were involved in questionable covert operations, such as the ouster of President Diem and Operation PHOENIX, a program to eradicate the Viet Cong infrastructure.

Other covert operations. During the 1960s, the CIA was involved in coups in the Dominican Republic (1963, 1965), Ecuador (1963), Brazil (1964), Indonesia (1965), the Congo (1965), and Greece (1965, 1967). Covert actions continued in 1970 with the overthrow of Cambodia's Prince Sihanouk, a 1971 coup in Bolivia, and the 1973 overthrow and assassination of Chile's Salvador Allende.

The CIA discredited: James Angleton, Watergate, Operation CHAOS, and the Middle East. After the Philby case, the CIA head of counterintelligence, James Angleton, became obsessed with the idea that moles had penetrated the CIA, a view reinforced by Anatoly Golitsyn, who had defected from the KGB in 1961. In addition, Yuri Nosenko, a KGB defector in 1964, claimed that

John Vassal, assistant to the UK naval attaché in Moscow, was a spy. Nosenko also revealed that the U.S. embassy in Moscow was bugged and provided clues that led to Sergeant Robert Johnson, a Soviet mole at NATO headquarters in Paris.

Soon, however, Angleton was to be fired in the wake of developments that greatly discredited the CIA. Negative publicity from the involvement of former CIA agents in the Watergate wiretapping of Democratic Party headquarters in 1972 mounted with journalist Seymour Hersh's coverage of Operation CHAOS, which revealed CIA surveillance and infiltration of antiwar and civil rights groups. At the end of 1974, articles accusing the CIA of domestic surveillance, mail interception, wiretapping, and break-ins appeared in the *New York Times*, a leak from a list known as the "Family Jewels," which CIA director William Colby had been preparing since 1973. Angleton's fate was sealed with the CIA's failure to predict the outbreak of the October 1973 Arab-Israeli War.

Disquiet in the Soviet bloc. While scandal rocked the American intelligence establishment, the Soviet Union faced unrest in Czechoslovakia. The 1968 Prague Spring led to increased KGB surveillance, a steady flow of SIGINT from diplomatic missions, and the infiltration of agents posing as Western tourists. KGB analysts attributed unrest to the CIA. In the wake of the Warsaw Pact invasion on 20 August 1968, STB and KGB officials arrested leading reformers, reinstalled KGB intelligence heads, and purged the Communist Party, professionals, and universities.

Soviet involvement in Asia, the Middle East, and the third world. After the Sino-Soviet split began in the late 1950s, little intelligence emanated from the People's Republic of China (PRC). Soviet advisors and KGB agents were recalled. Stringent controls during the 1960s' Cultural Revolution only reinforced the lack of intelligence. Nevertheless, satellite reconnaissance revealed that the Chinese were developing their own satellite, launched in 1970.

India, where the KGB distilled disinformation during the 1967 election campaign, served as a somewhat more fertile intelligence field. A friendship treaty between the Soviet Union and India in 1971, alongside India's lax security, enabled the influx of KGB and GRU officers.

Meanwhile, Soviet intelligence focused on the Middle East, encouraged by growing American unpopularity in that region and the 1956 Anglo-French-Israeli failure to control the Suez Canal. Egyptian intelligence officers went to Moscow for training, and Egyptian President Gamal Abdel Nasser appointed a Soviet agent, Sami Sharaf, as his intelligence head. These intelligence inroads were not reliable, however, as the Arab-Israeli War of June 1967 demonstrated. Although reports claimed that Soviet equipment and training had transformed the Egyptian Army, the first three hours of Israeli air raids determined the outcome of the Six-Day War. Soon after Nasser's death in 1970 and the succession of President Anwar Sadat, Soviet intelligence suffered a major setback with the arrest of pro-Soviet agents and the installation of a CIA-backed director of intelligence. Following the Kremlin's estrangement from Egypt, the Soviet sphere of influence moved to Palestine, and the KGB began training guerrillas of Yasir Arafat's Palestine Liberation Organization (PLO).

During the 1960s, the CIA was involved in coups in the Dominican Republic, Ecuador, Brazil, Indonesia, the Congo, and Greece.

Soviet influence in Africa during the 1970s extended to Angola, where KGB talks led to Soviet arms deliveries and the arrival of Cuban troops. In the Sudan, a Soviet-backed coup failed in July 1971 and led to the discovery and flight of CIA agent Vladimir Sakharov. Moscow also sent arms to Mozambique and in Rhodesia (now Zimbabwe) backed first Robert Mugabe and then Joshua Nkomo. In South Africa, Moscow supported the South African Communist Party, which played a key role in the African National Congress (ANC).

Soviet involvement in the UK and Europe. As in the earlier years of the Cold War, Soviet intelligence in the UK focused on defense-related science and technology. Intelligence officers flooded the country, and three Labour Party members of Parliament—Will Owen, John Stonehouse, and Tom Driberg—were recruited to provide classified information. Three British spies convicted during the early years of the Soviet Leonid Brezhnev era included Frank Bossard, for passing on secrets of guided weapon development (1965); Douglas Britten, for providing Royal Air Force (RAF) signals intelligence (1968); and Sub-Lieutenant David Bingham, for filming secret documents at the Portsmouth naval base (1972).

Defections of Soviet agents continued during the 1960s. Three occurred in Berlin. The most notable was that of Oleg Lyalin, who provided MI5 with sabotage plans for Western capitals.

John and Arthur Walker and Geoffrey Prime. The KGB recruited its two most important SIGINT spies early in 1968: Corporal Geoffrey Prime of RAF SIGINT in Berlin and a few days later U.S. Navy Chief Warrant Officer John Walker, connected with submarine forces in Norfolk, Virginia. For the next eighteen years, Walker sold decoded communications and encryption material to the Soviets, also recruiting Michael Walker, his brother Arthur, and a friend, Jerry Whitworth, all military personnel with access to various levels of secure information. These agents helped the KGB to reorganize SIGINT and to separate ciphers and communications security in separate departments. The Walker spy group, perhaps the most damaging to the West in the entire Cold War, was sentenced in 1985, and Prime was sentenced in 1982.

1976–1991: Further Intelligence Failures

Détente, escalation, collapse, and the Iranian hostage crisis. The flight of the Shah of Iran and the ensuing Iranian hostage crisis of 1979 reinforced charges that American intelligence focused too much on TECHINT and too little on HUMINT and analysis. The discovery that secret documents in the seized U.S. embassy had fallen into the hands of militants evoked charges of incompetence, as did the CIA's role in EAGLE CLAW, the abortive operation to rescue the American hostages.

Soviet intervention: Afghanistan and Poland. The Soviet invasion of Afghanistan in December 1979 marked the end of East-West détente. Throughout the occupation, the KGB maintained a steady presence, sending detailed reports and setting up an Afghan security service, Khedamat-e Etela'at-e Dawlati (KHAD). Meanwhile, the CIA provided funds and arms to anti-

Soviet rebels, and matériel from both sides left rival factions in the subsequent civil war well armed after the last Soviet troops withdrew in 1989.

Poland's Solidarity movement exacerbated the USSR's problems abroad and further heightened East-West tensions. As earlier in Czechoslovakia, the KGB sent in agents posing as tourists, while Polish security services sent detailed reports to the KGB. Still, realizing that armed intervention would destroy all hope of superpower arms control, Moscow did not resort to invasion; instead, a coup supported by the KGB and Polish security forces installed General Wojciech Jaruzelski, who imposed martial law on 13 December 1981.

American covert operations. American intelligence continued to focus on South and Central America beginning with Nicaragua in 1979, where Marxists had just ousted Anastasio Somoza II. To arm the anticommunist Contras and skirt a congressional mandate forbidding intervention in Nicaragua, the CIA began arms sales to Iran in 1981 to raise money covertly. Shortly after a U.S. cargo plane was shot down over Nicaragua on 5 October 1986, the Iran-Contra Affair erupted, embarrassing the Ronald Reagan administration. In El Salvador, right-wing leader Roberto D'Aubuisson's assassination of Archbishop Oscar Romero led to civil conflict in 1980, with the CIA providing equipment and intelligence to D'Aubuisson. After Operation URGENT FURY, which deposed Grenada's Marxist government in 1983, in 1989 U.S. forces invaded Panama and overthrew Manuel Noriega, who allegedly had been on the CIA payroll since 1966.

PSYOPS, Operation RYAN, and Star Wars. With the rise of Cold War tensions in the early 1980s, disinformation took on a prominent role when the Reagan administration adopted psychological warfare, or PSYOPS, consisting of air and naval operations designed to confuse the Soviets and to probe for deficiencies in the Soviet early warning intelligence system. Subsequently, KGB chief Yuri Andropov announced in May 1981 a worldwide intelligence operation code-named RYAN (Raketno-Yadernoye Napadenie, or Nuclear Missile Attack), whereby the KGB and GRU were to monitor and provide early warnings of U.S. preparations for a nuclear attack. The Stasi's HVA, headed by Wolf, played a prominent role in this undertaking.

Reagan's get-tough stance continued with the 1983 Strategic Defense Initiative (also known as Star Wars), which foresaw the use of space-based laser technology to destroy Soviet missiles in flight. In addition, during 2–11 November 1983 NATO's Able Archer 83, war games intended to practice nuclear release mechanisms, may also have served as disinformation, an attempt to convince Soviet forces that the West was ready to strike should the need arise.

Spies, defectors, and double agents to 1991. As the Cold War wound down, spying continued. The focus of Soviet espionage shifted from the military to the technological, with California's Silicon Valley technology companies a priority; a second focus monitored European integration in the European Community; and a third evaluated the Arctic fringe, where oil and natural gas resources attracted Western interest after the 1973–1974 oil crisis. The U.S. embassy in Moscow continued to be vulnerable, confirmed by the 1987

discovery of an American informant, Sergeant Clayton Lonetree, who gave KGB agents access to the mission. Bulgarian intelligence joined forces with the KGB in a bizarre espionage development in October 1978, murdering the Bulgarian dissident writer Georgi Markov with the poisoned tip of an umbrella. In 1989, Felix Bloch, a former high-ranking Foreign Service officer, was accused of having spied for the KGB, but the charge was dropped.

Defectors continued to move westward. One of the most valuable double agents proved to be KGB officer Oleg Gordievsky, who began spying for SIS in 1974. Called back to Moscow on a pretext after American spy Aldrich Ames had identified him, Gordievsky was briefly held until his extradition to London in 1985. A. G. Tolkachev, an electronics expert at a Moscow military-aviation institute, was a valuable CIA mole in the early 1980s until former CIA officer Edward Howard exposed him in 1985. Vitali Yurchenko, KGB security officer in Washington during 1975–1980, was a short-term defector who, before returning to the USSR in 1986, informed on two moles: Ronald Pelton, who provided intelligence on NSA SIGINT for some six years until his arrest in 1985, and former CIA trainee Edward L. Howard. Angry at his dismissal by the CIA, Howard had offered his services to the Soviet Union in 1984 and compromised several agents. Fleeing arrest, he received asylum in the USSR in 1986.

The collapse of the Soviet Union. The collapse of the Soviet Union in 1991 took the worldwide intelligence community by surprise. And as with earlier failures to assess the military situation in Korea and Vietnam or the deposal of the Shah of Iran and the hostage crisis (1979), the CIA again came under attack.

Post-1991: The Legacy

The legacy of Cold War espionage still casts long shadows. Richard Millar, an FBI member, received a life sentence on 4 February 1991, as did Ames, arrested in 1994. Ames, a thirty-one-year veteran of the CIA, was blamed for causing the deaths of at least nine agents whom he exposed and for divulging vital covert operations and counterintelligence measures. His wife Rosario, also a CIA employee, was found guilty of direct involvement in her husband's activities and was sentenced to sixty-six months in prison.

Two FBI agents, first Earl Pitts and then Robert Hanssen, were sentenced for espionage in 1996 and 2001, respectively. Pitts was sentenced to twenty-seven years for having turned over secret documents to the KGB, and Hanssen, who received a life sentence, was found guilty of having compromised a large number of intelligence agents and turning over sensitive intelligence and counterintelligence documents. Both men had served both the KGB and its successor, the Sluzhba Vneshney Razvedki Rossii (SVRR, Russian Defense Intelligence Service).

One of the spy messages in the Aldrich Ames case. (Corbis Sygma)

In Britain, post–Cold War spy exposures took a dramatic turn when, on 24 March 1992, Vasili Mitrokhin, a former member of the KGB’s First Directorate, contacted the British and offered to turn over a number of volumes detailing KGB activities from 1948 to 1984, some of them listing hundreds of agents and contacts. The British Labour government commissioned Christopher Andrew, a prominent Soviet historian, to research and collate the archive, but before the book was released *The Times* serialized a number of chapters. A furor erupted with allegations that two British spies for the Soviets—Melita Norwood and John Symonds—were still alive and had never been prosecuted.

East European nation, formerly part of the Soviet empire. The Republic of Estonia covers 17,462 square miles, which includes 1,520 islands in the Baltic

Estonia

Sea. It is bordered by Latvia to the south, Russia to the east, and the Baltic Sea and the Gulf of Finland to the west and north, respectively. The country's terrain is made up of lowlands that are flat in the north and rolling in the south. Estonia's official language is Estonian, a Finno-Ugrian language that is closely related to Finnish. Estonia had a 1945 population of 854,000 people. In that year the ethnic composition was 97.3 percent Estonians. By 2002, that figure had dropped to 65 percent Estonians, with Russians comprising 28.1 percent and the remainder Ukrainians, Belarusians, Finns, and others. Since its independence from the USSR in 1990, Estonia has been a parliamentary republic divided into fifteen counties.

Estonia was first settled in approximately 2,000 B.C. and remained an independent nation until the thirteenth century, when it was overrun by crusading Danes and Germans. The Swedes controlled Estonia from 1561 to 1710, when the Russian empire took over. Estonia gained its independence in 1918, but in August 1940, thanks to the Soviet-German Nonaggression Pact of the year before, it was taken over by the Soviet Union.

The Cold War was a difficult period for Estonians. Estonian politics, society, and the economy were all controlled by Moscow. Contact with the outside world was sharply limited, and arrests and the sudden disappearance of people—which had actually begun with the mass deportation of Estonians in 1941 to prison camps in Serbia—were common.

During the time Estonia was under Soviet rule, unemployment rates remained astronomically high, approaching the entire population in some areas. Politics greatly affected job opportunities. In Estonia's industrial plants, both raw materials and workers were brought in from other parts of the Soviet Union, and the vast majority of finished goods were exported. In 1947, Moscow began a policy of forced collectivization, along with the liquidation of what remained of the private sector. Russian culture predominated. In 1953 Estonian partisans carried out attacks in retaliation for the collectivization and the deliberate destruction of Estonian cultural treasures.

After Soviet dictator Josef Stalin's 1953 death and especially during 1956–1968, Moscow allowed some economic liberalization and decentralization. Guaranteed prices enabled farmers to receive monetary payments instead of payments in kind, which slightly improved the economy. Estonians who had survived earlier deportations were allowed to return, and attempts were made to restore some Estonian culture. Society also became a bit more open.

Moscow, however, made several attempts to reinforce more orthodox policies in Estonia after 1968. As a result, the economy began to stagnate, and foodstuffs and consumer goods became increasingly scarce. During the tenure of reformist Soviet leader Mikhail Gorbachev (1985–1991) and his glasnost and perestroika policies, a movement for independence quickly gained ground in Estonia. By late 1989, a free press had been established, new political parties had been formed, and free elections had taken place. On 11 March 1990, the Estonian Supreme Court declared that Soviet rule in Estonia was illegal; one day later, Estonia announced its independence.

Although Moscow initially resisted this move, it was practically powerless to stop it and came under considerable international pressure not to do so. In September 1991, Moscow officially recognized Estonia's independence.

Estonia is now a member of the World Trade Organization (WTO), and on 1 May 2004 it became a member of the European Union (EU). In April 2004, Estonia became a member of the North Atlantic Treaty Organization (NATO). Since its independence Estonia has rapidly transformed itself into a pro-Western democracy fully engaged in regional and global politics, although difficulties remain, especially with the substantial Russian minority.

Ethiopia

East-central African nation. Ethiopia, with a 1945 population of 8 million, covers 435,184 square miles, about four times the size of the U.S. state of Arizona. It is bordered by Sudan to the west, Somalia and Djibouti to the east, Kenya to the south, and Eritrea to the northeast. Because of its strategic location and position within the African community, Ethiopia was considered the prize of the Cold War as it played out in the Horn of Africa. Following World War II, Emperor Haile Selassie established close ties with the United States, but after the 1974 revolution that unseated Selassie, the new Ethiopian leader, Lieutenant Colonel Mengistu Haile Mariam, reoriented Ethiopia toward the Soviet bloc. The Soviets provided Mengistu with military and financial aid, enabling him to repulse the 1978 Somali invasion and maintain his hold on power during the 1980s. However, the demise of the USSR in 1991 ultimately contributed to the collapse of Mengistu's authoritarian regime and its replacement by a representative government.

Ethiopia's proximity to the oil-rich Arab states and its prestige within the African continent made it strategically important. Thus, Selassie persuaded the United Nations (UN) Economic Commission for Africa and the Organization of African Unity (OAU) to base their headquarters in Addis Ababa. Anxious to strengthen relations with Ethiopia, in 1953 the United States offered economic and military aid to the country in return for access to military facilities, beginning a special relationship that would endure for more than twenty years.

Ethiopia benefited from Agency for International Development (AID) programs, a large Peace Corps contingent, and advanced American training of Ethiopian military personnel, while one of the most significant American gains was access to a communications facility at Asmara. Named Kagnew Station in honor of the Ethiopian legion that fought as part of the UN force in the Korean War, it provided important intelligence until the 1970s, when technological advances made it obsolete.

The Soviet Union also recognized the strategic importance of Ethiopia and thus attempted to court the Ethiopian emperor. Selassie accepted \$100 million in Soviet aid in 1959 but maintained his alignment with the West. Hopeful that new leadership might prove more receptive to Soviet overtures, the USSR attempted to generate change by aiding internal opposition movements. The Ethiopian population is ethnically diverse, so secessionist movements flourished. The most serious one was in Eritrea, which the UN federated with Ethiopia in 1952. As Eritrea provided the only access to the sea, however, Selassie wanted complete control of the area. Consequently, in 1962 he made the region an Ethiopian province, igniting an Eritrean struggle for independence that would last for thirty years.

Soviet hopes of gaining a foothold in Ethiopia were boosted in September 1974 when social problems, exacerbated by famine the previous year, and discontent within the military over pay and working conditions provoked the overthrow of Selassie. Ethiopia was then ruled by the provisional military government, led by the provisional military administrative council known as the Derg, the Amharic word for “committee.” In December 1974 the Derg announced a program of Ethiopian socialism. This included the nationalization of industries, the closing of schools and universities, and land reform.

Committee rule ended in February 1977 when Mengistu seized sole control of the government by having his political rivals shot. The same month, the new U.S. president, Jimmy Carter, sharply condemned the Ethiopian government-sponsored violence and suspended military aid to the nation. Mengistu used the American action to sever ties with the United States in April and then turned to Moscow for support.

The onset of the Ogaden War with Somalia (1977–1978) consolidated the relationship between Ethiopia and the USSR, as the Ethiopian victory was a direct result of communist bloc support. The war also resulted in a vast increase in the size of Ethiopian armed forces. Until 1977 the Ethiopian military had been relatively small, but during 1977–1980 it increased from 53,000 to 229,000 men. By 1987, with continued Somali incursions as well as internal unrest, that figure grew to 320,000.

Meanwhile, Mengistu created a Soviet-style state, culminating in the 1984 creation of the Workers' Party of Ethiopia. He launched the new party with great ceremony as part of the festivities celebrating the tenth anniversary of his coup. *Time* magazine estimated that the total cost of the celebrations was upwards of \$150 million. Days later, journalists broke the news of the famine that had gripped the northern part of Ethiopia for months, which Mengistu had attempted to conceal. In February 1985, he publicly admitted the crisis and announced a major resettlement program, financed by increased taxes. Dissent against Mengistu intensified as the truth about his lavish spending in a time of famine became widely known. In 1984 the Eritrean People's Liberation Front (EPLF) had regrouped, while farther south the Tigray People's Liberation Front (TPLF) and the Oromo Liberation Front (OLF) were among the main opposition movements.

A common determination to oust Mengistu from power led the EPLF and TPLF to coordinate their activities beginning in 1988, while increasing dissatisfaction within the army resulted in an aborted coup in 1989. Mengistu responded by executing or imprisoning a number of army officers but nonetheless agreed to make some concessions to the growing opposition. He abandoned Ethiopian socialism and introduced free-market principles, but the economy continued to deteriorate, exacerbated by a drop in the price for coffee (Ethiopia's main export) and increases in the price of oil.

In 1989 the TPLF led a coalition of resistance forces to form the Ethiopian People's Revolutionary Democratic Front (EPRDF). Over the course of the next two years, the EPRDF took control of the countryside, then advanced on Addis Ababa. With little internal support and no external support (Soviet military aid had ceased that year), Mengistu fled the country on 21 May 1991. On 23 May the besieged Ethiopian army in Asmara, cut off since the EPLF had seized Massawa in 1990, surrendered, giving Eritrea de facto independence. Five days later, leaders of the EPDRF entered Addis Ababa and, in a move endorsed by the United States, set up a new democratic government comprised of representatives from the major ethnic groups and political organizations.

Eurocommunism

Political movement initiated by the communist parties of France, Italy, and Spain in the second half of the 1970s. Eurocommunism aimed at boosting the appeal of communism to the West European electorate by attempting to reconcile its tenets with democratic values and the rules of Western-style parliamentary politics. It also touted the three parties' autonomy from the Soviet Union and the larger international communist movement. In spite of the efforts to unify the parallel, but somewhat diverse, initiatives of its French, Italian, and Spanish parties, the movement eventually ground to a halt, and by the end of the 1970s it petered out, with each party reverting to a national strategy designed to fit its own political agenda.

The term "Eurocommunism" itself was not coined by any of the three parties; it is supposed to have been invented by the Italian journalist Franco Barbieri in order to describe the almost simultaneous attempt of the three West European communist parties to redefine their identity. Stirrings inside the Italian Communist Party (PCI) became more conspicuous after the Soviet invasion of Czechoslovakia in 1968, and in the following years the PCI stepped up its efforts to renovate its political image at both the domestic and international levels. Beginning in 1972 a new party secretary, Enrico Berlinguer, intensified these initiatives while at the same time trying to establish closer contacts with other West European communist parties. By the mid-1970s, the end of the Francisco Franco dictatorship in Spain provided an opportunity for the PCI to link up with the Spanish Communist Party, which its secretary, Santiago Carrillo, was struggling to reestablish as a legitimate political force in the new regime. During 1974–1976, the leaders of the two parties discussed their strategies among themselves and with the secretary of the French Communist Party, Georges Marchais, to work out a common position. In 1975, for instance, a joint Franco-Italian declaration described the need for "continuous democratization" of political and economic conditions in France and Italy in order to build up a socialist society in the two countries.

Behind these somewhat vague statements, however, it was sometimes easier to define what the three parties were against rather than to state what they were for. They openly criticized the Portuguese Communist Party, which, in the wake of the 1974 regime change, restated its allegiance to the traditional tenets of the revolutionary approach to power. Some conspicuous differences emerged, however, when the time came to identify a common platform or to define an overall relationship with the Soviet bloc. The Spanish Communist Party, in particular, was in the forefront of the effort to maintain distance from the Soviet model and as such came under strong criticism from Moscow. The French, on the contrary, followed a more ambiguous path, often taking a more pro-Soviet line than either the Italians or Spaniards. The Italians tried to steer a middle course, gradually moving away from Moscow without breaking relations altogether.

The United States initially exhibited much interest in Eurocommunism, hoping that it might further weaken Moscow's grip on the three parties. But it also ultimately took a more defensive position and retained a deep suspicion

that if successful, the movement might bring the communist parties into the governments of West European countries and eventually weaken the Atlantic Alliance. Both the Ford and the Carter administrations repeatedly warned West European governments against such a danger. U.S. Secretary of State Henry Kissinger displayed his strong dislike for the ambiguities of the movement, openly cautioning in 1975 that the domestic evolution of a number of European countries might become a major problem in transatlantic relations. The Carter administration was somewhat less blunt in its official statements but nonetheless remained strongly skeptical about the real intentions of Eurocommunists. Privately, U.S. diplomats were instructed by the Carter administration to convey to their European counterparts the concern of their government about any possible cooperation with communist parties.

In a paradoxical mirror image of American suspicions, Soviet leaders also seem to have been very apprehensive about Eurocommunism. They evidently feared a destabilizing domino effect among their East European satellites if the Eurocommunists succeeded in loosening their ties with Moscow and in providing an alternative, more liberal model to the other communist parties. In 1976 a conference of all European communist parties was held in East Berlin to display the unity of the communist movement, but it ended up revealing the increasing cleavage between Eastern bloc and Eurocommunist parties. While Soviet leader Leonid Brezhnev preferred that the Soviet Union maintain a reserved attitude toward the movement, the task of displaying Eastern bloc antipathy was assigned to hard-liners such as the Bulgarians and the East Germans, who were encouraged to adopt an openly hostile attitude toward Eurocommunism. Eurocommunism thus ended up being opposed by both Cold War superpowers, as it was intrinsically linked to a progressive vision of détente that implied the gradual loosening of both blocs, obviously a prospect that neither Washington nor Moscow relished.

During 1945–1989 the term “Eastern Europe” generally described the countries with Soviet-controlled regimes in Europe. After 1945, the term gained

Europe, Eastern

SOVIET TERRITORIAL GAINS, 1946

common currency with the Soviet domination of much of Central Europe. Therefore, this term included not only former Mitteleuropa, or Central Europe, but also Balkan nations such as Albania and Bulgaria. During the Cold War, Eastern Europe consisted of Poland, Czechoslovakia, Hungary, the German Democratic Republic (GDR, East Germany), Yugoslavia, Romania, Bulgaria, and Albania. This area stretched from the Baltic Sea to the Mediterranean Sea. Eastern Europe had traditionally occupied a region located between Germany, Russia, and the former Ottoman Empire, with prominent geographic features such as the Danube and Vistula Rivers and the Carpathian Mountains cutting across it rather than defining it.

Politically, the Cold War defined the borders of Eastern Europe. Cultural unification of Eastern Europe proved more difficult, however. Soviet-supported regimes introduced communist holidays as well as the Sovietization of cultural life, including schools and universities. But beneath this veneer, national traditions remained and throughout the years grew even stronger. Social and cultural transformation was perhaps most thoroughly accomplished in the artificially constructed GDR and in Bulgaria, Albania, and Romania.

The political reshuffling of Eastern Europe also brought economic restructuring. Moscow established the Council of Mutual Economic Assistance (Comecon) in 1949 with the aim of creating economic autarky within its sphere of influence and sealing its empire off from the forces of capitalism. All Comecon members were united by a commonality of fundamental class interests and the ideology of Marxism-Leninism and took common approaches to economic ownership (state versus private) and management (planned versus market-driven). By the end of the 1970s, with the exception of Poland's agricultural sector, all Comecon countries had converted to a socialist system.

Soviet domination of Comecon was a function of its economic, political, and military power. The Soviet Union possessed 90 percent of Comecon's land and energy resources, 70 percent of its population, and 65 percent of its income as well as industrial and military capacities second only to those of the United States. The location of many Comecon committee headquarters in Moscow and the large number of Soviet nationals in positions of authority also testified to the power of the Soviet Union within the organization. In addition, from 1955 on East European Comecon members were also militarily conjoined with the Soviet Union via the Warsaw Pact.

Nevertheless, trade between East and West never completely stopped. The GDR was indirectly connected to the West European Common Market through its ties with the Federal Republic of Germany (FRG, West Germany). The Hungarian economy also became intertwined with the global market in the years after 1956. Beginning in the 1960s, other Comecon members developed economic relations with the outside world, especially with the industrialized West.

Thus, from the early 1950s to the early 1970s, during a time in which there was no world shortage of energy and raw materials, the Soviet Union inexpensively supplied its East European clients with hard goods in exchange for finished machinery and equipment. This indirect subsidization ceased in

the 1970s, when oil prices soared. The Soviet Union decreased its exports to Eastern Europe and increased its purchases of soft goods. This policy forced Eastern Europe to turn to the West for hard goods despite the fact that they had fewer goods to export in return for hard currency. Both economic interdependence with and indebtedness to the West grew enormously and in the end contributed to the economic and political collapse of the Soviet bloc.

Moscow's political control of Eastern Europe was the decisive factor in defining the region. World War II also brought societal transformation to Eastern Europe. The Yugoslavian revolutionary Milovan Djilas recalled that Soviet leader Josef Stalin once said to him during the war that the victors' armies would bring their social systems to the territories they occupied. In Eastern Europe, communist parties (usually backed by the Red Army) began nationalizing industry and dividing up large estates among the peasantry as soon as the war ended. The implementation of Stalinist rule was completed throughout Eastern Europe during 1944–1949, but not to the same extent in each country.

Immediately after the war, indigenous communist regimes in Yugoslavia and Albania were installed without any serious resistance and without the need for Soviet support. In Poland, Romania, and Bulgaria, communist-dominated states were set up with substantial help from Moscow. Poland was not only occupied by the Red Army in 1944–1945, but its borders were also redrawn by the Soviet Union. Moscow claimed the eastern territories and extended the western boundary at the expense of Germany. These border changes were accompanied by the forced resettlement of 4.5 million Poles, more than 8 million Germans, and thousands of Ukrainians.

In Bulgaria, a new communist-dominated republic was proclaimed in September 1946 after which the royal family was forced to flee. Industrialization and agricultural collectivization there made the country one of the most prosperous in the Soviet bloc. In Romania, it took until 1948 before the monarchy was abolished and a communist Romanian People's Republic was proclaimed. Industrialization was forced upon this mainly agricultural country, leading to serious food shortages and widespread deprivation. In Germany, the Red Army had to deal with the Allies, which delayed Sovietization of their occupation zone, partly to keep safe access to the coal mines of the Ruhr area and to postpone Anglo-American control of West Germany. Only in 1949, after the FRG came into being, did Stalin approve the proclamation of the communist-dominated GDR.

In Hungary and Czechoslovakia it took until 1947–1948 before a single-party state was created. Czechoslovakia was an especially uneasy Soviet ally. Klement Gottwald, chair-

Visitors at the fruit and vegetable stand of the Krasny Partizan collective farm during an agricultural exhibition in Kishinev, Moldova, 1949. (Library of Congress)

man of the Communist Party of Czechoslovakia, became prime minister in 1946, but a power struggle had already developed between communist and democratic forces in early 1948. This struggle ended with the communist-staged and Soviet-backed coup d'état that February. Gottwald remained in power.

Beginning in 1947, a clearly visible rift between East and West had emerged. Comecon and the U.S.-sponsored Marshall Plan divided Europe economically into two camps. Militarily, Western Europe sealed its alliance against the Soviet bloc in 1949 with the formation of the North Atlantic Treaty Organization (NATO). These developments and the explosive 1948 Soviet-Yugoslav split compelled Moscow to stage a fierce campaign against Yugoslav leader Josip Broz Tito. In its wake, all socialist regimes were purged of revisionist elements, and the Kremlin tightened the reins of its client states. In the following years, harsh repression and purges were common in most East European states, during which thousands were imprisoned and executed.

The years 1953–1956 saw a process of de-Stalinization across the region, which ended with violence. In October 1956 student demonstrators in Budapest demanded the withdrawal of Soviet troops and were fired upon. Imre Nagy, the Hungarian reformist minister of agriculture, was named prime minister and tried to establish peace. He promised to abolish the hated secret police. The conflict intensified, Hungarian military forces joined the rebels, and Nagy announced that Hungary would leave the Warsaw Pact. Soviet troops then moved into Budapest and crushed the uprising. Some 25,000 people were killed in the fighting, and 2,000 more, including Nagy, were executed in subsequent reprisals. Another 200,000 fled the country. Following the revolt, the Hungarian Communist Party reorganized, and János Kádár became party head and premier. After 1956, Hungary maintained the party line politically but abandoned strict central economic control in favor of a limited market system.

The Berlin Wall, built in 1961, effectively sealed off the GDR from the West. Because the Berlin question was now resolved but painfully so, the focus of the Cold War shifted to other areas. Eastern Europe literally disappeared behind a wall.

There was nevertheless maneuvering room within the Eastern bloc. Soviet troops withdrew from Romania in 1958, and after 1960 Romania adopted an independent foreign policy under two leaders, Georghe Gheorghiu-Dej and his protégé Nicolae Ceaușescu. Albania too loosened its close collaboration with the USSR after a conflict with Moscow over a submarine base. Albania broke off diplomatic relations with the Soviets in 1961 and reoriented itself toward the People's Republic of China (PRC). In 1968, Albania also left the Warsaw Pact.

The Prague Spring constituted the last hope for many sincere adherents of socialism. In April 1968, the new first secretary of the Communist Party of Czechoslovakia, Alexander Dubček, introduced "socialism with a human face," an attempt to liberalize the regime. The Prague Spring provoked Moscow, leading to the invasion of Czechoslovakia by 200,000 Warsaw Pact

Shipyard strikers hoist Lech Wałęsa on their shoulders after the official founding of the independent trade union Solidarność (Solidarity) in Warsaw, Poland, on 24 September 1980. (Alain Keler/Sygma/Corbis)

soldiers on the night of 20 August 1968. The Prague Spring was crushed. Renewed dictatorship resulted in the removal of thousands of communist officials. Many party members, intellectuals, and educated professionals lost their jobs.

A decade later, in 1977, this repression led to the formation of a Czechoslovak citizens' movement, Charter 77. This human rights group explicitly linked itself with the outcome of the 1975 Helsinki Final Act. This small group of Prague intellectuals functioned as an underground opposition throughout the 1980s.

In the meantime, in Poland, waves of strikes and protests in 1970, 1976, and 1980 signaled growing dissatisfaction with the communist-dominated regime there. Polish officials responded with coercion and concessions but became more and more isolated from the Polish population. This culminated in the strikes of 1980–1981, led by the Solidarność (Solidarity) Movement. The regime survived only by imposing martial law in 1981, thereby preventing a Soviet military intervention. The opposition, backed by the large nationalist Catholic Church, grew more confident.

From 1985 on, the USSR's new leader, Mikhail Gorbachev, implemented a process of fundamental restructuring, known as perestroika (reform) and glasnost (openness). This political change was most visible in Hungary. In June 1987 Károly Grosz took over as Hungary's premier. After Kádár's forced

retirement in 1988, Grosz also became party secretary-general. Hungary then began moving toward full democracy, and communists gave up their power monopoly in February 1989. Hungary was the first country to literally cut through the wire fences of the Iron Curtain in May and September 1989, thereby allowing East Germans and others to flee to Austria. The democratic opposition won elections in March 1990, and Hungary changed political systems with little turmoil.

In Poland, the opposition was able to force the regime to hold free elections in June 1989. The communists failed to win even one seat, while Solidarity became the political embodiment of Polish independence and nationalism. These elections triggered a succession of events that soon brought about the collapse of the entire Soviet bloc.

The opening of the Berlin Wall on 9–10 November 1989 symbolically and definitively tore down the Iron Curtain. In the GDR after 1953, the population never again had dared to stand up against the regime. In the summer of 1989, the exit of thousands of refugees via Hungary to the West and the GDR's civil rights movement together created a momentum that grew into mass demonstrations. On the eve of 7 October 1989 the regime celebrated its fortieth anniversary. But Gorbachev, who was present at the celebration, no longer assured GDR leader Erich Honecker of Soviet backing. Without this support and in the face of mounting protests, the regime could not survive, and a peaceful dissolution took place.

Gorbachev's reforms and the fall of the Berlin Wall raised expectations elsewhere in Eastern Europe. A student march in Prague on 17 November 1989 was smashed, however, by the Czechoslovakian police. Finally, daily demonstrations and a general strike on 27 November culminated in the wholesale resignation of the Communist Party. This Velvet Revolution brought opponents of the regime to power in June 1990.

In Bulgaria, an internal communist coup in November 1989 led to the resignation of President Todor Zhivkov. The Communist Party subsequently abandoned its monopoly on power and changed its name to the Bulgarian Socialist Party. In the first parliamentary elections in 1990, the former communists were elected to power again.

Only after the death of Premier Enver Hoxha did Albania revise its isolationist path, and under Ramiz Alia it began a liberalization program. In June 1990 student protesters and refugees incited the collapse of the regime. In December, the government allowed the formation of opposition parties. The March 1992 elections finally ended forty-seven years of communist rule.

Romania was the last Soviet satellite to fall. Ceaușescu, president since 1974, conducted a chaotic and megalomaniacal domestic policy characterized by nepotism. The West had always regarded Romania as an ally, however, because of its independence within the Soviet bloc. Only in the late 1980s did the United States withdraw Romania's most-favored nation trading status. On 15 December 1989, Father László Tökés ignited an uprising, causing Ceaușescu to proclaim martial law. The same month, demonstrators urged the police to arrest the dictator and his wife, who were summarily executed

by a firing squad. In May 1990, however, former communists were elected back into power.

Europe, U.S. Armed Forces in

U.S. military forces in Europe formed the central military element of the defense of Western Europe during the Cold War. These forces symbolized not only America's commitment to the defense of Europe but served as a forward defense for the United States itself. The United States contributed to the region substantial ground, naval, and air forces capable of both conventional and nuclear operations.

The American presence in Europe was a consequence of World War II. When the fighting in Europe ended in May 1945, some 2.6 million U.S. troops occupied much of Western Europe, including the former Axis territories of Italy, the Federal Republic of Germany (FRG, West Germany), and part of Austria. Although American military planners had foreseen the need for a limited occupation, they had not anticipated the antagonisms that would develop into the Cold War with the Soviet Union, nor had they envisioned that U.S. forces would assume a role far beyond that of short-term occupation and constabulary duties or that these troops would still be in Europe more than a half century after the end of the war.

After May 1945, the United States removed significant numbers of men from the continent for the anticipated Allied invasion of Japan. Following the Japanese surrender that August and given the worsening of relations between the Western powers and the Soviet Union, the United States re-

deployed considerable military assets to Europe, including B-29 strategic bombers and naval units. A year after the end of the war, U.S. forces in Europe numbered some 278,000 men.

The first major European crisis faced by American forces in Europe came with the Soviet imposition of a blockade of West Berlin in June 1948. Rather than risk a shooting confrontation with the Soviets, U.S. President Harry S. Truman decided to airlift supplies into the city. When the Soviets raised their blockade and the airlift ended in September 1949, some 2.3 million tons of supplies had been delivered, and the West had registered a significant victory. That same year, the North Atlantic Treaty Organization (NATO) came into existence.

In June 1950 the Korean War (1950–1953) began, imposing a severe strain on already-stretched U.S. resources. The Truman administration made the political calculation that it could not afford to maintain as large a presence in Europe as its allies would have preferred, although in December 1950 President Truman pledged to send four additional divisions to Europe to bolster NATO defenses. That deployment began the next year. At the same time, Truman named General of the Army Dwight D. Eisenhower as NATO's first Supreme Allied Commander Europe (SACEUR), a post he took up in January 1951.

Part of the American solution to defend Europe with reduced strength was President Eisenhower's New Look defense posture. This policy, also known as "more bang for a buck," was opposed by General of the Army Omar Bradley, chairman of the Joint Chiefs of Staff. It placed greater reliance on nuclear weapons in the event of war with the Soviets. Beginning in 1955, nuclear weapons were stored in Germany, Britain, Italy, and Turkey. Ten years later these weapons numbered slightly more than 7,000 warheads. That number would remain constant until 1979, when it began to decline; by 1986 about 4,500 remained.

Following the Korean War, Washington demonstrated the primacy of Europe in its military policy. U.S. troop strength increased so that by 1955, the American commitment stood at 356,800 men, a dramatic difference from the low of 80,000 troops deployed there in 1950. In the early 1960s, flexible

response replaced the New Look. Flexible response held that the deployment of a larger number of ground troops would permit more options in the decision-making process before the employment of nuclear weapons. One consequence of this policy was that until 1968, troop levels never went below 300,000 personnel.

The late 1960s saw substantial changes in the American military presence in Europe and in European attitudes toward the Americans. The war in Vietnam became the first priority. By 1968, with troop levels in Europe at 268,000 personnel, below-strength units endured maintenance and supply problems, low morale, heavy drug use, and racial conflict. At the same time, the crime rate, especially violent crimes against local civilians, increased dramatically. During this time, changes in the U.S. economic situation became apparent. The value of the dollar declined vis-à-vis many local currencies. The standard of living and contributions to the local economy were declining, and many soldiers and their dependents lived in near poverty. In addition, organized opposition from peace activists protesting the deployment of nuclear weapons as well as terrorist bombings of military facilities seemed to demonstrate that Americans were not as welcome as had once been the case.

A. U.S. Army M-113 armored personnel carrier mounting a 12.7mm machine gun passing a German road sign during the multinational NATO exercise REFORGER 82. (Department of Defense)

In the 1980s, the deployment of Pershing II missiles and cruise missiles led to increased hostility toward the American military presence on the part of many West Europeans. Although nuclear weapons had been in Europe for almost thirty years and Pershing missiles had been deployed since 1965, deployment of the improved Pershing IIs in the early 1980s proved controversial. The government of West Germany, however, approved deployment of Pershing missiles in 1983.

Before the year's end, the first units were declared combat-ready. The number of Pershing IIs, all positioned in Germany, reached a maximum of 118 until 1990, when their mission was considered completed. The Pershing missiles were not the only source of controversy, as the United States also stationed cruise missiles in West Germany, the United Kingdom, Italy, and Belgium. These deployments were vocally opposed by a number of people in the localities of the deployments.

Military dependents were an important part of the American presence, whether they lived on base or off the economy. In the mid-1980s, half of the approximately 326,000 U.S. military personnel in Europe had dependents there. While there were many benefits to families being located with the military, there were also problems. Not the least of these were concerns over the evacuation of military dependents in the event of a Warsaw Pact invasion.

U.S. military strength did not match that of the Warsaw Pact or even its Soviet elements. In the mid-1970s,

Americans fielded 9,000 tanks against the Soviets' 40,000, 22,000 armored vehicles against 40,000, and 6,000 artillery pieces as opposed to 18,000 Soviet guns. The one area of American quantitative superiority was in tactical helicopters: 9,000 American attack helicopters to 2,000 for the Soviets. In the areas of tactical attack airplanes, the United States maintained in Europe only some 300 (about 15 percent of the NATO total). These faced more than 7,200 Warsaw Pact airplanes. In the same time frame, the disparity in manpower was even more stark. To oppose the total American force of more than 300,000 personnel, the Soviets deployed 825,000 men in East Germany, Czechoslovakia, Poland, and Hungary. This was in addition to 425,000 indigenous soldiers from those countries. It was for that reason that nuclear weapons early on became and remained an integral part of American strategy during the Cold War.

World War II dramatically influenced the history of Western Europe. Wartime damage, particularly from bombing, had been uneven but was nonetheless severe. Particularly hard-hit were transportation systems. Many people had been displaced from their homes, and food shortages plagued the cities. During the Cold War, the threat of Soviet expansion generally led West European states, with the exception of neutral Switzerland, toward alliances with the United States.

The end of World War II presented Western Europe with Herculean challenges. War casualty estimates suggest that in addition to some 4.5 million military deaths, Western Europe suffered more than 1 million civilian deaths. The Holocaust also claimed the lives of several hundred thousand West European Jews.

Europe, Western

Conditions were made worse at the end of the war by a mass influx of displaced persons and refugees, many of them Germans and Poles from Eastern Europe, who had fled the advancing Soviet armies. These people often had only the clothes on their backs and required food and shelter as well as employment. Although damage from bombing was not as severe as it seemed at the time, factories would have to be put back into operation and people given work. The job of rebuilding was the preeminent task occupying most West European nations in the first half decade or so of the Cold War.

In the immediate postwar period, the political Left was in power. For the most part, the rightist parties had been largely discredited by their association with fascism. But the broad coalition of the leftist parties soon fractured, and bright hopes of the resistance were soon quashed as the old vested interests reasserted themselves. Nonetheless, in the immediate postwar years, socialists and communists attracted considerable electoral support in Western Europe. Italy and France were home to the region's two largest communist parties, while the Labour Party came to power in Britain.

The Americans, British, French, and Soviets occupied vanquished Germany. Wartime agreements had divided Germany and the city of Berlin into four occupation zones. With the coming of the Cold War these divisions became permanent. In 1947 and 1948, the British and Americans (Bizonia), followed by the French (Trizonia), combined their zones economically. This move and the deadlock over reparations and other issues prompted the Soviet Union to blockade West Berlin in June 1948. The Soviets hoped to drive the Western powers from the city, which lay deep inside their zone of Germany. The United States responded to the blockade with a massive airlift. The blockade, which Soviet leader Josef Stalin lifted in May 1949, was tangible proof to many West Europeans of the Soviet threat.

The Berlin Blockade hastened the establishment in 1949 of both the North Atlantic Treaty Organization (NATO) and the Federal Republic of Germany (FRG, West Germany). The proclamation of a West German state in turn led directly to the creation of the Soviet-sponsored German Democratic Republic (GDR, East Germany). Konrad Adenauer, a Christian Democrat, served as chancellor of West Germany from 1949 to 1963, whereas Walter Ulbricht dominated the GDR from 1949 to 1971.

In Britain, the wartime coalition came apart even before the end of the war, with the Labour Party demanding new elections after the defeat of Germany. Labour won the July 1945 elections by focusing on domestic issues that had been ignored during the war, and Labour leader Clement Attlee replaced Winston Churchill as prime minister. To Churchill's chagrin, Labour's anti-imperialist stance led to the dismantling of much of the British Empire and resulted in precipitous and bloody departures from both India and Palestine. Attlee and Labour introduced the cradle-to-grave welfare state and nationalized the Bank of England; coal mines; the electric, iron, and steel plants; and other industrial sectors.

In France, General Charles de Gaulle governed by general consent, the rightist parties having been discredited by their support for the wartime Vichy regime. The vote in the first postwar elections was evenly split among the

new Popular Republican Movement (MRP), the socialists, and the communists. Despite de Gaulle's pleas for constitutional reform that would bring a strong presidency, the new Fourth Republic emerged as a near carbon copy of the flawed Third Republic. De Gaulle resigned in protest over developments in January 1946. Major changes were undertaken, however, in centralized economic planning, in the nationalization of certain industries, and in improving social services.

In Italy, the involvement of King Victor Emmanuel III with Benito Mussolini's fascist regime brought a postwar referendum on the monarchy in which the republican north overwhelmed the monarchist south. Italy officially became a republic on 10 June 1946. The new Christian Democrats emerged as the leading political force in Italy, but the communists remained influential and continued as the largest communist party in Western Europe. As in France, however, much of its appeal was on domestic issues, particularly demands for improved worker benefits.

The Benelux states—Belgium, Luxembourg, and the Netherlands—established a close relationship at the end of the war. Wartime damage was particularly severe in Belgium, although there had been considerable damage through flooding in the Netherlands. Belgium abandoned neutrality, and the three states worked to enhance regional economic cooperation and were at the forefront of European integration and the establishment of NATO.

Spain emerged from the war as a pariah state not only because of the Nationalist defeat of the Republicans in the Spanish Civil War (1936–1939) but also because of Head of State General Francisco Franco's support for Germany in World War II. The attitude of the United States toward Spain changed with the coming of the Cold War, however, when Washington provided extensive aid to Franco's regime in return for air and naval bases. Many Spaniards were angry at the United States, believing with some justification that this policy helped continue Franco's authoritarian rule.

Western Europe rebuilt rapidly after the war. Emergency economic assistance, particularly under the United Nations Relief and Rehabilitation Administration (UNRRA), helped, and prompted by state economic planning such as the Monnet Plan in France, Western Europe began to approach prewar economic levels by 1947. But recovery depended on continuing American assistance, including food, fuel, and raw materials. Concerned that long-standing economic turmoil could bring the communists to power and believing that a healthy European economy would be to the benefit of the United States, Secretary of State George C. Marshall announced a program of American economic assistance in June 1947. In this program the United States insisted that recipient states work out internal reform programs of their own and cooperate economically. This and the perceived Soviet threat were key factors promoting European economic integration.

European culture in the immediate postwar years reflected profound disillusionment with societies that had given birth to fascism, Nazism, and the Holocaust. The existential movement, responding to a feeling of moral bankruptcy, argued that all knowledge was relative and that man lived and made decisions in a world without meaning. The chief proponents of existentialism

were two French writers, Jean-Paul Sartre and Albert Camus.

Soviet threats and bellicose behavior ensured continued close cooperation between Western Europe and the United States. Among events unnerving West Europeans were the establishment of the people's democracies in Eastern Europe, the 1948 communist coup in Czechoslovakia, the Berlin Blockade, the June 1953 Soviet crackdown in East Berlin, and the Soviet interventions in Hungary in 1956 and Czechoslovakia in 1968.

As the economies of most of Western Europe continued to improve and wartime memories receded, moderate and even rightist political parties reappeared and vied for power. Adenauer's right-of-center Christian Democratic Union (CDU) dominated the early decades of the FRG. Adenauer held power from 1949 to 1963, reaching out to both France and Israel. German hard work (*fleiss*), the CDU's social-market approach to the economy, and U.S. assistance combined to produce a West German "economic miracle."

The most fractious domestic issue in the FRG in the Adenauer years was German rearmament, which was strongly opposed by the Social Democrats, who feared that it would prevent German reunification. The Korean War (1950–1953) drove the United States in particular toward this solution to countering the seemingly monolithic and overwhelming global communist threat. Efforts to subsume German rearmament within a West European military structure, however, were torpedoed when the French National Assembly failed to approve the European Defense Community (EDC). The FRG was then permitted to rearm within NATO.

Adenauer resigned in 1963. In 1969 Social Democrat Willy Brandt became chancellor of the Grand Coalition between the socialists and the CDU; his most striking achievement was to continue and extend the trend of Ostpolitik that he had pursued as foreign minister. Brandt fostered better relations with the Soviet Union and Eastern Europe, especially Poland and the GDR.

France experienced considerable political turmoil in the 1950s, with frequent changes of government under the Fourth Republic. The principal shocks to the political fabric came from abroad, however. From 1946 to 1954, France fought a war to retain Indochina. The defeat of French forces in the Battle of Dien Bien Phu allowed the politicians to shift the burden of failure onto the military. The 1954 Geneva Conference extricated France from what had become a very unpopular war.

Almost immediately thereafter, fighting broke out in Algeria. The Algerian War became a vast imbroglio, with Paris unwilling to grant independence to what was, technically, an integral part of France. In May 1958, fearful that the politicians in Paris were about to sell them out, French Army leaders and

European colons in Algeria combined to topple the Fourth Republic and bring de Gaulle back to power.

Under de Gaulle, France adopted a new constitution with a strong presidency, a system tailor-made for its new leader. Whereas the Fourth Republic had seen twenty-five cabinets between 1946 and 1958, the Fifth Republic marked the beginning of great political stability, with just three cabinets in its first eleven years. Chief among de Gaulle's accomplishments were the new political framework for France, *détente* with Adenauer's FRG, and the ending of the Algerian War. This torturous process involved the elimination of options until Algeria received full independence in 1963.

De Gaulle remained controversial, however, as he sought to carve out a major role for France in world affairs. Although a strong supporter of the Western alliance, he took France out of the NATO military command and built an independent nuclear strike force (the Force de Frappe), vetoed British membership in the Common Market, and reached out to the Soviet Union and Eastern Europe. France also extended full diplomatic recognition to the People's Republic of China (PRC).

In Britain, Labour lost its majority in Parliament in 1951, and the Conservatives governed for the next thirteen years. Britain continued to experience financial problems and imperial decline. The 1956 Suez Crisis was a watershed in British history. Prime Minister Sir Anthony Eden worked with France and Israel in an attempt to topple Egyptian President Gamal Abdel Nasser and restore British control of the Suez Canal, which Nasser had nationalized. When U.S. President Dwight D. Eisenhower opposed the British action, however, Eden was forced to back down and, indeed, soon resigned. The Suez Crisis marked the end of Britain's pretensions as a major power.

Meanwhile, the economic unification of Western Europe proceeded apace. West European leaders sought to improve the economies of their states by opening a wider free market that would both compete more effectively internationally and prevent Germany from being able to go to war independently. The easing of trade restrictions prompted economic growth, larger markets, and increased prosperity. The six nations (France, the FRG, Italy, and the Benelux nations) that had signed on to the European Coal and Steel Community (ECSC) in 1951 initialed the Treaty of Rome in March 1957, creating a free-trade area known as the European Economic Community (EEC) or Common Market. Demographic changes also allowed for rapid industrial growth. Between 1940 and 1970, the population of Western Europe grew from 264 million to 320 million.

Culturally, the 1960s movement known as structuralism replaced the existential pessimism of the immediate postwar years. Claude Levi-Strauss, an anthropologist and the father of the movement, argued that studying relations among the various units in society, social myths, and underlying conditions present in all societies would allow human beings to understand greater truths. The response to his theses, called poststructuralism, or postmodernism, concentrated on language, time, and existence. Among the leading post-structuralists were Jacques Derrida, Michel Foucault, and Roland Barthes. None of these philosophers believed in a universal, timeless structure or truth.

Marxism also reemerged as an intellectual force in the 1960s, although West Europeans for the most part rejected Stalinist Marxism in favor of humanistic Marxism.

Popular European music exerted a powerful international influence in the 1960s. Rock bands such as the Beatles, the Kinks, and the Rolling Stones dominated the music charts and set trends in fashion, lifestyle, and sexual attitudes. Although the most successful rock bands hailed from the United Kingdom, they attracted legions of fans worldwide.

Europe also experienced a film renaissance that included directors Jean-Luc Godard, Federico Fellini, Eric Rohmer, François Truffaut, and Wim Wenders. Godard, Rohmer, and Truffaut epitomized the French New Wave movement of 1958–1964. Drawing on existentialism, French New Wave films often portrayed characters who rejected societal conventions and played by their own rules. These young loners symbolized the amoral antihero, who flagrantly broke the law. A less influential New Wave movement also occurred in Britain, where directors created stark, working-class cinema that eschewed the gloss of Hollywood productions.

In the late 1960s, popular dissatisfaction with postwar society boiled over into the streets. German students and intellectuals who believed that the FRG was dominated by the same interests that had given rise to the Third Reich took to the streets in large numbers. Some eventually formed terrorist groups such as the Red Army Faction that would be prominent in the 1970s. It was France, however, that experienced the greatest popular discontent.

In May 1968, students at the University of Paris at Nanterre demonstrated against proposed changes in French higher education. The Events of May soon spread, leading to widespread strikes and street rioting. Ultimately, more than 10 million French workers went on strike. France appeared poised on the brink of revolution, but a popular backlash, skillfully managed by Premier Georges Pompidou in a snap election, led to a Gaullist triumph at the polls.

The 1970s and 1980s were a period of difficult transition for Western Europe. Although women had long had the vote in most West European countries, women's movements became more radical in the 1970s, fueled in part by the fact that women's salaries were usually about half those paid to men. Inflation and the economic downturn that increased the need for two wage earners persuaded women to increase their efforts to achieve equal pay and other rights. Women made up a surprisingly large percentage of the terrorists who emerged in West Germany during this time. Problems also abounded over immigration issues such as the influx of Turkish workers in the FRG and of North Africans in France.

The 1970s saw Europe's position as a capital of art, fashion, and culture fade, but European artists continued to make major contributions. In film Jean-Jacques Beineix led an international postmodern movement that juxtaposed the past and the present and high culture with pop culture.

Pop culture influenced art and music, creating new genres. An anti-authority, antimilitary movement that glamorized narcotics and championed

sexual liberation emerged. Artists reacted against abstractionism by using strong colors and returning to art in which objects were clearly represented. Classical music continued to decline in popularity, as a new generation embraced punk, hip-hop, and other forms of popular music, much of it drawn from the United States. More West Europeans watched American television programs because, aside from Britain, European countries produced few shows of their own. To the chagrin of many Europeans, American culture became pervasive.

In major political developments, Margaret Thatcher became the first woman to serve as British prime minister. Holding office from 1979 to 1990, she reenergized the Conservative Party and in 1983 took the nation to war to retain possession of the Falkland Islands (Malvinas). The war was expensive but nonetheless emotionally satisfying to the British people.

Thatcher also established a close relationship with U.S. President Ronald Reagan, whose conservative beliefs mirrored her own. She forged strong ties with French socialist leader François Mitterrand and Chancellor Helmut Kohl of West Germany. Despite her firm anticommunist stance, Thatcher established cordial relations with Soviet leader Mikhail Gorbachev in the mid-1980s.

Mitterrand was the first of his party to hold the presidency of the Fifth Republic (1981–1995). National elections in 1986, however, forced him to share power with conservative Premier Jacques Chirac. The French Communist Party continued to decline in importance. A greater threat came from the National Front, a racist, chauvinistic party that espoused anti-immigration policies and was led by Jean-Marie Le Pen.

In Italy the communists distanced themselves from Moscow and adopted a policy of operating within established parliamentary procedures. Eurocommunism was born. Italians enjoyed an improved standard of living, but growth was uneven, with the agricultural south lagging behind the industrial north.

Spain also underwent significant change after Franco died in November 1975. He was succeeded by King Juan Carlos I, who played a pivotal role in both the restoration and survival of democracy in Spain. Spain still suffered from serious economic problems, terrorism by Basque separatists, and attempted coups from the political Right, however. Juan Carlos's strong support for democracy was vital in surmounting these threats, and Spain eventually became a European success story.

Dictatorship also ended in Portugal, which had to undergo the difficult challenge, following costly colonial wars, of divesting itself of its overseas empire. Belgium survived considerable ethnic tension in the period as agitation increased between Flemings and Walloons.

Thousands of people fill the Île de France in central Paris on 1 May 1988 to show their support for the right-wing National Front and its leader, Jean-Marie Le Pen. (Corbis Sygma)

In the FRG, Brandt resigned in 1974 and was succeeded by fellow Social Democrat Helmut Schmidt. Schmidt was more conservative economically but failed to secure the coalition with the Free Democrats in the 1982 elections. The Free Democrats transferred their support to the CDU, elevating Kohl, leader of the CDU, to the chancellorship. Among Kohl's challenges were maintaining a strong economy and confronting growing concerns over the placement of Pershing missiles in the FRG.

By the 1980s, West European per capita spending on social programs far exceeded that of the United States. Britain's Thatcher privatized state-owned industries, undertook policies that sharply reduced inflation, and also reduced the power of labor unions. Mitterrand in France and Kohl in Germany struggled with many of the same problems, seeking to curb unemployment and curtail the growth of the welfare state, but with only mixed success.

European integration affected the economic policies of all West European countries. In 1973, having overcome French opposition, Britain joined the EEC, along with Ireland and Denmark. But discussions regarding closer economic union often faltered on individual, national agendas. Only after

Londoners read newspaper headlines announcing Great Britain's entry into the Common Market, January 1973. (Hulton-Deutsch Collection/Corbis)

Jacques Delors became president of the EEC in 1985 did that organization make progress toward greater cooperation and fewer trade restrictions.

Delors' efforts resulted in the Single European Act (SEA) in 1987, which bound member countries to the goal of creating a single EEC market. The collapse of communism in Eastern Europe and the reunification of Germany added unforeseen dimensions to the debate over the direction the EEC should take. EEC members met in Maastricht, the Netherlands, and signed a treaty on 11 December 1991. It renamed the EEC the European Union and offered three principles upon which further European integration would be based: continued economic integration including the introduction of a common European currency (the euro was introduced in 1999), the development of a common foreign and security policy, and increased cooperation in justice and internal security issues.

In the 1990s, Germany took center stage. On 3 October 1990 the Cold War division of Germany ended as the two German states merged into one. Hopes for a quick and easy reunion were dashed by the tremendous costs and cultural shocks of bringing together two societies that had gone separate ways for nearly half a century.

At the end of the Cold War, West Europeans enjoyed a high standard of living, and democracy was strongly entrenched throughout the region. Problems remained, including questions over the degree of political integration within the EEC, agitation over the end of subsidies, and social services issues. Nonetheless, West Europeans had come a long way since 1945.

European Coal and Steel Community

Organization established on 18 April 1951 among France, the Federal Republic of Germany (FRG, West Germany), Italy, Belgium, the Netherlands, and Luxembourg (Benelux) to place coal and steel production under a supranational Common High Authority. The European Coal and Steel Community (ECSC) became Western Europe's first supranational arrangement, beginning the process of European integration and essentially ending the state of war between France and Germany. By providing for industrial and economic cooperation between France and the FRG particularly, the ECSC removed the bitter rivalry and tense relations between the French and Germans that could be traced as far back as the Franco-Prussian War of 1871. The ECSC was the logical result of French Foreign Minister Robert Schuman's May 1950 proposal, the Schuman Plan, that called for the pooling of French and German coal and steel industries.

In many ways, however, the ECSC was more wish than reality, for the six member nations soon discovered that they could find little common ground. First, and perhaps most critically, the Common High Authority could not solve the problem of the future of the Saar. As with the Ruhr, the Saar was rich in coal. Both France and the FRG sought the Saar, and they were unable to reach agreement concerning it.

Second, when the foreign ministers of the six signatories met on 25 July 1952 to decide on the location of the seat of the Common High Authority, they almost deadlocked. After fourteen rancorous hours of debate, the ministers finally agreed that Luxembourg would temporarily serve as headquarters of the community, but the die had been cast. Problems and disagreements such as these continued to flare as the idea of integration took a backseat to the reality of nationalistic competition.

Further complicating matters, each nation had its own intricate, internal controls that resisted quick transformation to the new ECSC. Currencies, taxation, credit, wage levels, general business and union practices, and government subsidies differed widely across national barriers. All of these factors made setting and controlling prices next to impossible. The ECSC failed to dissolve the more than eighty coal and steel cartels that dominated the industries, and the goal of establishing free movement of labor within the ECSC remained an ideal at odds with the reality that individual unions remained strong enough to veto any such moves. Thus, the establishment of a truly market-oriented community remained a grand concept rather than a solid actuality.

Studies have shown that the ECSC had little if any economic impact. Nor did coal or steel production rise appreciably above prewar levels in spite of pledges of cooperation. Trade increased among the six nations, but in all probability this was due to the continent-wide economic recovery, particularly in the FRG, that proceeded throughout the 1950s.

Despite these failures, the ECSC symbolized two important new realities that were directly related to Germany's defeat in World War II. First, integration, not nationalism, became the accepted ideology and practice of post-

war European politics. Second, a Germany integrated within the larger European community could not dominate the continent. The ECSC thus naturally complemented the European Defense Community (EDC), which sought to integrate German defense forces into a supranational defense organization. Tying German armed forces as well as Germany's industrial production to a larger entity would serve as a powerful impediment to a revival of German militarism. Germany's vast industrial resources and technical know-how would thus become the engine that drove the West European economic recovery while preserving political, economic, and military equality among European nations. As one historian has noted, the ECSC symbolized "the success of a failure" because in the long term it moved Europe toward true integration.

Proposed multinational West European military force consisting of six members: France, Italy, the Benelux countries, and the Federal Republic of Germany (FRG, West Germany). The European Defense Community (EDC) originated amid the backdrop of growing Cold War tensions in the early 1950s. One of the thorniest military issues of the time was the rearming of West Germany to share the burden of West European defense. The Korean War (1950–1953) added new urgency to this difficult decision, for a divided Germany appeared to resemble a divided Korea. In late 1950 Washington suggested that the FRG be admitted to the North Atlantic Treaty Organization (NATO). France, however, was especially wary of an autonomous West German army and did not support the admittance of the FRG into NATO.

In 1952 the French government unveiled the Pleven Plan, which called for a multilateral European military force that would help protect Western Europe from attack. The military forces of all six members of the European

European Defense Community

Coal and Steel Community (ECSC) would thus be integrated into a single-force structure under supranational control. The Pleven Plan was endorsed by NATO in May 1952, despite the grave reservations of the Pentagon. In addition, Great Britain distanced itself from the concept of a West European military force.

On 27 May 1952, the six ECSC members signed a treaty to create the EDC based on a plan that anticipated six divisions under NATO command. In 1953 the Council of Europe proposed the creation of a European parliament, whose members would be elected directly, that would supervise the ECSC, EDC, and the incipient European Economic Community (EEC). It was clear, however, especially to the Americans, that the EDC would only be duplicating NATO's military command structure. The FRG and the Benelux countries ratified the treaty almost immediately; however, France and Italy demurred. Italy refused to ratify the treaty before knowing what the French planned to do. In France itself, the EDC met stiff resistance. Many French politicians were wary about joining a military enterprise that did not include Great Britain or the United States, and many more were increasingly preoccupied by colonial insurgencies in French North Africa and, of course, in Indochina. The last thing the French wanted was to dilute their military forces when they were concerned with holding on to the last remnants of their empire.

French Prime Minister Pierre Mendès-France finally—and reluctantly—presented the EDC Treaty to the French National Assembly in the summer of 1954 but without endorsing it. The Assembly unsurprisingly defeated it on 30 August 1954. After the defeat of the EDC, German rearmament was achieved through existing NATO structures via the European Union (EU), a by-product of the 1948 Brussels Treaty. The EU was an alliance consisting of France, Britain, and the Benelux countries to provide for the general defense of Western Europe, although it had been largely subsumed by NATO in 1949. Upon the recommendation of British Foreign Minister Anthony Eden, Italy and the FRG were admitted to the EU. Its name was changed to the Western European Union (WEU), and it was incorporated into NATO. The WEU and NATO would supervise West German rearmament and would stipulate the size and strength of its forces. When the British agreed to keep troops in West Germany, French fears were allayed, allowing the FRG to be rearmed and admitted into NATO.

The European Economic Community (EEC) was created in 1958 and comprised France, the Federal Republic of Germany (FRG, West Germany), Luxembourg, Belgium, the Netherlands, and Italy. These six countries came together to establish a customs union and a common external tariff. The EEC, commonly known as the Common Market, was formed during the height of Cold War tensions. In the 1960s, many Europeans wanted to distance themselves from the United States, resulting in even closer economic integration through a common agricultural policy for the member countries of the EEC.

While the EEC did not result in political cooperation as some had hoped it would, it was certainly the most successful of the three European communities formed during the early days of the Cold War. As a result, the six member countries merged the other two European communities—the European Coal and Steel Community (ECSC) and the European Atomic Energy Community (EURATOM)—into a single European Community in 1967. The emphasis on intergovernmentalism became the model for further economic integration, such as the December 1991 formation of the European Union.

The foundation of the EEC was laid in the late 1940s and early 1950s, a time of profound Cold War tension between the United States and the Soviet Union. Wanting Europe to become responsible at least partially for its own defense, the United States proposed the creation of a West German army. This led the six countries of the ECSC (France, the FRG, Italy, Belgium, the Netherlands, and Luxembourg) to consider forming a community for defending Western Europe from advances of the Soviet Union. France was particularly alarmed about the prospects of German rearmament, and it vetoed the European Defense Community (EDC). One motivation for the subsequent EEC was the desire to integrate the West German economy into that of Western Europe, lengthening the odds of Germany going to war again on its own.

Following defeat of the EDC, ECSC members began discussing a common market during 1956–1957. EEC negotiations occurred in the midst of the Suez crisis. At the same time that British Prime Minister Anthony Eden telephoned French Premier Guy Mollet in Paris to notify him that the British had agreed to a cease-fire, Mollet and FRG Chancellor Konrad Adenauer were meeting to discuss the formation of a common market. Four months later, in March 1957, France, the FRG, the Netherlands, Luxembourg, Belgium, and Italy signed the Treaty of Rome, creating a new economic bloc in Europe.

The 1957 Treaty of Rome, the founding document of the EEC, created four new institutions designed to govern relations among the FRG, France, Italy, Luxembourg, the Netherlands, and Belgium. The four institutions were the Commission, the Council of Ministers, the Assembly, and the European Court of Justice. Although the Council of Ministers contained national representatives and was designed to act as the main coordinating body among the six EEC states, it was the Commission that quickly emerged as the most dynamic branch of the EEC structure. It could initiate new policy

Ministers from six European nations sign the Treaty of Rome on 25 March 1957 that established the European Economic Community. The agreement was the first step toward the creation of the European Union. (Bettmann/Corbis)

and also had the responsibility of ensuring that agreed-upon treaties were enforced. The nine commissioners were not representatives of their states and indeed took an oath of loyalty to the EEC. Under the leadership of its first president, Walter Hallstein, the Commission became an active force in European politics.

In January 1959, the EEC took the first step toward implementing a common tariff by reducing intracommunity tariffs by 10 percent and increasing quotas by 20 percent. However, the first true test of the Common Market involved negotiations over a European free trade area. The British launched this idea in an effort to lure the FRG and the Netherlands away from the EEC, which London opposed. In early 1959 the British invited the six non-EEC states of Austria, Denmark, Norway, Portugal, Sweden, and Switzerland to begin negotiations to establish a rival trade bloc, the European Free Trade Association.

The United States strongly supported the EEC. Washington hoped that it would anchor the FRG in Western Europe, strengthen Western Europe's ability to withstand communist subversion and Soviet pressure, and bring the EEC to stand with the United States in a strong transatlantic community.

In the 1957 Treaty of Rome, the EEC countries agreed to develop common approaches to such areas as commerce, transportation, fair competition in trade, monetary policy, and the coordination of macroeconomic policy. Although the Rome Treaty did not mention a common agricultural policy, this was the most successful area of cooperation among the EEC states. French President Charles de Gaulle was the strongest proponent of a Common Agricultural Policy (CAP), because France produced more food than it consumed. De Gaulle could not afford to offend the powerful French agricultural lobby by reducing subsidies to farmers. France sought to export its agricultural surplus; however, its subsidized products were not competitive internationally. France therefore needed either export markets with guaranteed high prices or generous export subsidies to bridge the gap between higher French prices and lower international prices. France could get both through the CAP: an EEC-wide market with guaranteed high prices and subsidies for exports outside the EEC. Thus, de Gaulle pursued the formation of a CAP even though the Treaty of Rome did not provide for such a policy.

The CAP ultimately set France on a collision course with the FRG and the United States. Not self-sufficient in agricultural production, the FRG therefore sought to import significant amounts of agricultural products at the lowest possible price. France wanted to sell its agricultural products to the FRG but was stymied by cheaper imports from other countries including the United States, which did not wish to be excluded from EEC markets.

The West German government finally acquiesced to a common agricultural policy even though it did not make economic sense for them to do so. The West Germans wanted further economic integration because of their policy of *Westpolitik*, linking their policies to the alliance with the United States. The West Germans also subordinated their economic interests to the larger geopolitical interests of further European economic integration.

Cold War politics again impinged on EEC development when Britain applied for membership in August 1961. Britain sought easy access to West European markets and could get it only by entering the EEC. Britain's application happened to coincide with U.S. President John F. Kennedy's Grand Design for transatlantic relations. This plan sought to mollify Europeans' resentment of America's preponderant power while strengthening the Western alliance's political cohesion. Thus, the United States wanted a strong EEC to emerge as part of a stronger Western Europe, which in turn would strengthen the Atlantic Alliance.

De Gaulle, however, had a radically different understanding of the European union and the transatlantic partnership. He envisioned a Europe based on intergovernmentalism rather than supranationalism, a Europe of the states rather than a federal Europe, and a Europe genuinely equal with the United States in NATO rather than militarily subservient to Washington. The British government agreed with de Gaulle's antipathy toward supranationalism, but it shared Washington's vision of the transatlantic relationship. Yet the United States viewed Britain's absence from the EEC as politically awkward. The Americans were thus pleased when the British government signaled in early 1961 its intention to apply for EEC membership.

In December 1962, Kennedy and British Prime Minister Harold Macmillan struck a deal that would provide U.S. missiles for Britain's supposedly independent nuclear force. De Gaulle saw this as further evidence of British subservience to the United States. At the time the missile program was announced, negotiations over British admission to the EEC were at a critical stage. The British had made many concessions but were unwilling to accept the principle of supranationalism or a CAP. In January 1963, de Gaulle abruptly announced at a press conference that France would veto the British application.

The political consequences of de Gaulle's action were profound. A week after the press conference, de Gaulle and Adenauer signed a treaty on Franco-German cooperation. The United States saw this as a rejection by de Gaulle of its Grand Design and of the Atlantic Alliance. De Gaulle's vision of France and Europe placed him on a collision course with Washington. Despite the difficulties between Paris and Washington, the customs union remained intact, and European integration remained on course.

The CAP provoked another crisis that was even more significant to further European integration. The so-called Empty-Chair Crisis began over EEC Commission proposals for a new financial arrangement for the CAP for the period after July 1965, when the existing system of national contributions would expire. In 1970, following completion of the third stage of the transition to the customs unions, the EEC was supposed to acquire its "own resources," consisting of duties from agricultural and industrial imports, from which the CAP would be permanently funded. The Commission proposed moving the budgetary authority up to 1965. As this would result in the transfer of power from national parliaments to the Commission, de Gaulle opposed the Commission's proposal. Because the negotiations for the added budget authority for the Commission went past the deadline of 30 June 1965, de Gaulle's foreign minister, Maurice Couve de Murville, abruptly ended the meeting in the early hours of 1 July.

France then withdrew its representation from the Council of Ministers but pointedly continued to participate in routine Community business. In a September 1965 press conference, de Gaulle declared his refusal to accept policies that were to come into force in January 1966. He had two objections: on principle, he refused to countenance qualified-majority voting, which smacked of supranationalism; in practice, he feared the impact of qualified-majority voting on French agricultural and trade interests (under qualified-majority voting, a coalition of liberal member states could alter the CAP and thwart French efforts to protect agriculture in the General Agreement on Tariffs and Trade, or GATT). De Gaulle threatened to continue the boycott until member states agreed on a new financial regulation for the CAP, the Commission curbed its "political ambitions," and provisions for qualified-majority voting were dropped from the Treaty of Rome. The EEC Council of Ministers agreed to a member state's right to veto legislative proposals, which became known as the Luxembourg Compromise. With that, France agreed to take its seat again in the Council of Ministers.

Resolution of this crisis cleared the way for negotiations of a new financial arrangement for the CAP. As part of the deal, France agreed to a West German request that all remaining intra-EEC tariffs on industrial goods be abolished by July 1968, when the common external tariff would take effect. Thus, the customs union would come into being eighteen months ahead of schedule. In 1967, the institutions of the other two European Communities were folded into the EEC.

After 1967, these institutions were known as the European Community (EC). The combination of supranationalism and intergovernmentalism embodied in these institutions became the basis of the EC. So successful was the EC that Denmark, Ireland, and the United Kingdom decided to join it. This first enlargement, from six to nine members, took place in 1973. At the same time, the EC took on new tasks and introduced new social, regional, and environmental policies. In the early 1970s, EC leaders realized that they had to bring their economies into line with one another and that, in the end, what was needed was monetary union. In 1979, the member states of the EC introduced the European Monetary System to help stabilize exchange rates and encouraged the member states to implement strict monetary policies.

Further enlargement of the EC occurred throughout the 1980s. In 1981 Greece joined, followed by Spain and Portugal in 1986. This enlargement placed further pressure for structural reform on the EC. Meanwhile, the political shape of Europe was changing with the fall of the Berlin Wall in 1989, the reunification of Germany in 1990, and the coming of democracy to the countries of Central and Eastern Europe. The countries of the EC signed a new treaty at Maastricht in December 1991. This treaty came into force on 1 November 1993. It added areas of intergovernmental cooperation to the existing EC system, creating the European Union (EU).

The EU expanded in 1995 to include three more countries: Austria, Finland, and Sweden. In 2004, the EU welcomed ten additional countries: Cyprus, the Czech Republic, Estonia, Hungary, Latvia, Lithuania, Malta, Poland, Slovakia, and Slovenia. This enlargement ended the traditional split separating the free world from the communist world. It also brought pressure on the EC to consider the application of Turkey, the first non-European country that might join. This raised questions about how large the EC could become as well as where to draw the boundaries of the EU.

Current members of the EC are Austria, Belgium, Cyprus (Greek part), the Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Poland, Portugal, Slovakia, Slovenia, Spain, Sweden, and the United Kingdom.

European Integration Movement

The European Integration Movement, which really began in the aftermath of World War I but reached fruition in the 1950s, has as its purpose the integration of the West European states into a unified, supranational bloc. The nature of this effort has varied greatly, for European integration encompasses many facets and describes attempts to unify Europe economically as well as integrate the European states politically, judicially, socially, and culturally. Immediately after World War II, a strong movement emerged proposing the establishment of a “United States of Europe”; however, it was the economic efforts that were initially the most successful.

Visions of a unified European continent are as old as the political organization of the continent itself. Since the times of Charlemagne and the Holy Roman Empire, visionaries had called for some form of European unity. Pierre Dubois, a courtier of Phillip IV of France, called for a military confederation of European kingdoms to reconquer the Holy Land in 1306. Thomas Campanella proposed a European union for security and prosperity in 1620, while William Penn advocated a federated Europe in 1693. Over the next 250 years, the philosophers Jean-Jacques Rousseau, Immanuel Kant, Claude-Henri Comte de Saint-Simon, Pierre-Joseph Prudhon, and José Ortega y Gasset all developed plans for the political and economic unification of Europe. So too did French writer Victor Hugo, Norwegian explorer Fritjof Nansen, and the Bohemian aristocrat Richard Coudenhove-Kalergi, among many others. Nationalism, statism, and politics always triumphed over internationalism, however; it took the devastating effects of World War II to secure serious, concerted action toward this goal.

World War II, in large part, resulted from the fundamental inability of European states to achieve cooperation; as Frenchman and European visionary Jean Monnet put it, “Europe was not built, and we had war.” At the same time, the war was the chief catalyst for cooperation, first among the governments-in-exile in London of a number of European states but also among national resistance movements opposing the Axis powers in many European states. British Prime Minister Winston Churchill, at least nominally a supporter of Coudenhove-Kalergi’s 1923 plan for a “Pan-Europe,” had called

While the sense of a need for cooperation among European states remained alive after World War II, the wartime unity of resistance forces proved to be fragile and nonenduring.

for a Franco-British union just before the French defeat of 1940. Altiero Spinelli (1907–1986), an Italian radical politician, convened the Movimento Federalista Europea (MFE, European Federalist Movement) in Geneva in July 1944 and became an outspoken proponent of European unity. While the sense of a need for cooperation among European states remained alive after World War II, the wartime unity of resistance forces proved to be fragile and nonenduring.

Nevertheless, a number of organizations were founded after the war with the goal of promoting European unity and some form of a supranational organization in Europe. Among the first was the United Europe Movement (UEM) in Great Britain, organized by Churchill and Duncan Sandys. In a speech in Zürich in 1946, Churchill again argued for a “United States of Europe.” The UEM was primarily an Anglo-French organization designed to coordinate various national groups that advocated some form of European union. On 17 July 1947 the UEM convened the congress of the Committee for the Co-ordination of the European Movements in Paris. The congress, which included representatives from La Liga Europeenne de Cooperation Economique, l’Union Europeenne des Federalistes, and l’Union Parlamentaire Europeenne, met again in November 1947, this time as the Joint International Committee for European Unity. In May 1948, the organization convened the Congress of Europe at The Hague, the Netherlands.

The meeting was attended by some 800 delegates from sixteen West European states, including occupied Germany. The United States and several East European nations sent observers. Sandys was the official president of the congress, while Churchill served as an honorary president along with politicians Léon Blum of France, Alcide de Gasperi of Italy, and Paul-Henri Spaak of Belgium. Anthony Eden of the United Kingdom and Paul von Zeeland of Belgium chaired most of the plenary sessions. The primary political debate concerned what form a unified Europe should take: a federation or a union of national governments.

The congress dealt not only with the political or economic organization of Europe but also with European cultural and social unity. The congress’s cultural committee demanded a European charter of fundamental rights and advocated the creation of a European center for youth, education, and culture. The congress as a whole adopted a resolution stating that “unity, even in the midst of our national, ideological and religious differences, is to be found in the common heritage of Christian and other spiritual and cultural values and our common loyalty to the fundamental rights of man.”

Although the Congress of Europe was not a resounding success, it did realize some of its goals. In October 1948, the Joint International Committee

The first meeting of the Congress of Europe, which took place in the Ridderzaal (the Hall of Knights), the castle in The Hague, Netherlands, on 29 May 1948. The interior of the meeting room is draped with a large “E” for Europe to mark the historic occasion. (Hulton-Deutsch Collection/Corbis)

for European Unity changed its name to the European Movement (EM) and became a permanent organization, based in Geneva, Switzerland. Sandys now assumed the presidency of the organization, with the honorary presidents from the Congress of Europe continuing their roles as well. The European Center for Culture (ECC), the College of Europe, the European Organization for Nuclear Research (CERN), and the Assembly of the Council of Europe were all established within a year after the congress, with the EM coordinating the work of several national committees for European unity. The ECC, located in Geneva, was the first of many think tanks established to create and express a common European identity. The Council of Europe was founded in May 1949 with the aim of creating a federal European union.

Since then, the EM has played an important role in European integration on the national and supranational levels. EM leaders have campaigned for direct elections to the European Parliament, assisted in the effort to create a European constitution, and worked in support of the Treaty of European Union. As of 2004, the EM was active in forty-one European nations and represented twenty international associations. José Maria Gil-Robles, a Spanish politician who had previously served as president of the European Parliament, chaired the EM.

Yet the role of the EM in the political and economic integration of Europe was limited. The British Labour government of Prime Minister Clement Attlee was wary of any Pan-European organization and offered only lukewarm support to the EM. Great Britain focused instead on its relationship with the Commonwealth and on fostering the so-called special relationship with the United States during the first twenty-five years of the Cold War. British leaders believed, by and large, that these relationships offered a security that a European union could not, and the aim of European federalists to create an entity that would, ultimately, compete with the United States—at least in economic terms—therefore tempered British enthusiasm for the project.

The interplay of politics and economics in the Cold War era was the most important driving force for European integration, particularly as the United States grew to see the importance of West European solidarity. When in 1947, for instance, the British government announced that it could no longer bear the costs of maintaining Greek democracy in the face of a rising communist insurgency, the United States responded with the Truman Doctrine, which pledged political (and financial) support for “free peoples who are resisting subjugation by armed minorities or by outside pressures.” The United States thereby confirmed its commitment to a free and capitalist Western Europe. However, this required the stability of West European governments, which in turn depended on success in rebuilding their war-torn economies.

European reconstruction thus became the primary focus of the United States, with European cooperation as the first building block. The 1947 Marshall Plan, which followed logically from the Truman Doctrine, explicitly called for coordination of activities between those states receiving U.S. financial assistance. This led directly to the creation of the Conference for European Economic Cooperation, which took permanent form in April 1948 as the Organization for European Economic Cooperation (OEEC). Based in Paris,

the OEEC's main function was to coordinate Marshall Plan aid, although it also acted as a clearinghouse for inter-European payments via the 1950 European Payments Union. Mainly because of British concerns, the OEEC acted only by unanimous decision. When that task came to an end, the OEEC was transformed into the Organization for Economic Cooperation and Development (OECD) in 1961. The OECD, operating largely through a council of ministers representing its member states, concentrated more on developing free and efficient markets in Europe as well as fostering continued growth and inter-European trade.

Both the OEEC and the OECD, because they acted more as regulatory bodies than governmental ones, had only limited effects on integration. The movement for European union went forward in other areas, however. The Benelux states (Belgium, the Netherlands, and Luxembourg) already had shown the possibilities for integration by creating a customs union on 1 January 1948. This was followed in May 1950 by a proposal, put forward by Maurice Shuman, the French state secretary for foreign affairs, to merge French and German steel and coal resources under a single authority in order to create a more efficient distribution network and resolve disputes over the resources. This proposal, known as the Schuman Plan, became the European Coal and Steel Community (ECSC) in April 1951, with Italy and the Benelux nations joining the Franco-German organization.

This seemingly small step established several important principles and was the beginning of a long process of European economic integration that extended from the ECSC through the European Economic Community (EEC) of 1957, to the Treaty of Maastricht of 1991, and to the European Economic and Monetary Union (EMU) in 1999. With the ECSC, economic cooperation and Franco-German coordination were established as the basic tenets of integration. The organization brought Germany back into the European and international communities while still offering France security guarantees. With its intergovernmental council and supranational High Authority, the ECSC also offered a model for resolving international disputes. In addition, it demonstrated the utility of an incremental approach to integration, and the incorporation of Italy and the Benelux nations created a geographic core that was economically viable without the participation of either Great Britain or the United States. This step-by-step approach made it possible for European integration to survive even a major failure, such as the 1954 rejection of the European Defense Community (EDC).

The ECSC and the integration process it catalyzed were not without flaws, however. While some provisions of the ECSC treaty aimed at ensuring fair competition, the organization's main goals were defined largely by market

Signing of the Maastricht Treaty created the European Union with twelve founding member countries, Maastricht, Netherlands, 7 February 1992. (European Community, 2006)

results. This allowed governments to establish price controls, investment controls, and quantitative planning. In later years, these policies would result in serious imbalances in the coal and steel sectors. Even at the time, many economists—including Wilhelm Röpke and Friedrich August von Hayek—doubted the value of integrating specific sectors of the economy in fostering European integration.

With the elaboration of sectoral planning in national economies, especially in the French system of indicative planning (*planification*), the conflict between planning and competition as guiding principles of the European integration process intensified. While French General Commissioner for Planning Étienne Hirsch envisioned the extension of French planning methods to a common market, for instance, West German economic minister Ludwig Erhard, a proponent of the social-market economy, warned that integration could not be achieved by administrative harmonization. He advocated abandoning the existing national regulations in favor of new European regulations. By and large, Erhard's ideas have prevailed. Macroeconomic planning has been largely discarded in Western Europe, while the market economy is enshrined in the European treaties. The degree of harmonization on the European level, however, has remained a contentious issue in the European Integration Movement.

The second sector to be integrated on a large scale was agriculture; its governing principles, defined by the Common Agricultural Policy (CAP), are a vivid example of this discord and one of the prime causes of Euro-skepticism (i.e., frustration with the integration process) during the 1970s. The CAP remains a major bone of contention to this day. As European economic integration moved forward, however, more and more areas of agreement emerged. The Single Market Program of 1985, for example, listed more than 400 national regulations that were slated to disappear by 1993. The successful completion of this project gave a significant boost to the economies of Western Europe and helped create a more positive attitude on the part of citizens, politicians, and business interests toward European integration. The dynamism of the Single Market Program, together with the revolutionary changes in Eastern Europe since 1989, not only made the decision for the EMU possible but also renewed the drive for closer political integration, resulting in the establishment of the European Union (EU) in 1991.

After the end of the Cold War, not only did the formerly neutral states of Europe (Austria, Sweden, and Finland) join the EU, but immediately after freeing themselves from Soviet domination, Central and East European states applied for membership in the EU. The first enlargement of the EU saw ten former Central and East European states become members in May 2004. A second round of enlargement is scheduled for 2007, with even further expansion on the table.

While overcoming the divisions of the Cold War, the European Integration Movement today must cope with the increasing problems of governing a greater Europe. Institutions originally planned for six states now have to accommodate three times that number and must be prepared to handle half again as many in the future. This has raised questions of efficiency in policy

making at the European level. Processes must also be found so as to balance the competencies of various levels of governance as well as allow for greater institutional diversity in the form of institutional competition in order to reduce the rise of centrifugal forces inherent in the process of widening and deepening the area of integration.

The European Integration Movement was pivotal in mastering the great challenge to unite a war-torn and antagonistic Europe, increasing its strength, and even overcoming the Cold War division of Europe. It remains to be seen if it is equally successful in maintaining the political stability and economic dynamism of the new united Europe.

One of the five original institutions of the European Union created in 1952 to represent the populations of the six West European states—France, Italy, the Benelux countries, and the Federal Republic of Germany (FRG, West Germany)—in the European Coal and Steel Community (ECSC). When the European Economic Community (EEC) and European Atomic Energy Community (EURATOM) were formed by the 1957 Treaty of Rome, the European Parliament (EP) was expanded to include the ECSC, EEC, and

European Parliament

EURATOM, now known collectively as the European Union (EU). The 1987 Single European Act finally formalized the term for Parliament members (MEPs) at five years.

With enlargement of the EU in 2004, 732 MEPs are now elected to represent twenty-five member states. Since 1979 the MEPs have been elected through universal suffrage every five years, and seats are distributed proportionally among the EU member states based on their respective populations. Members are grouped in seven transnational European political parties, the most important ones being the center-rightist Popular Party and the leftist Socialist Party. Female members currently make up approximately 30 percent of the MEPs. The EP holds plenary sessions in Strasbourg, France, while several of its seventeen committees meet in Brussels, Belgium. The general secretary of the EP, along with most of the secretariat staff, is based in Luxembourg.

The powers of the EP are limited by the more powerful Council of Ministers and the European Commission, which are the legislative and executive branches of the EU's system, respectively. Nevertheless, the EP's powers have increased in recent years, especially after the 1991 Maastricht Treaty, which gave the EP joint legislative powers with the Council of Ministers, although final decisions are still left to the latter. The EP has budgetary powers and is empowered to dismiss the commission, although this has occurred only once. The legislative authority resulting from the Single European Act (SEA) and the Maastricht Treaty gives the EP the power to force a second reading of legislation proposed by the commission and voted on by the council, binding the latter to approve a law by a full majority if the EP rejects the law. The EP also exerts a joint decision-making process on accession treaties and association agreements with non-EU countries. Finally, budgetary control over the commission (which presents some 5,000 questions yearly) has been tightened due to poor administration and scandals. The main limit on the EP's power is the fact that final decision-making power is in the hands of the national states and, therefore, in the Council of Ministers.

European Recovery Program

See Marshall Plan

An international organization of twenty-five European states, established by the Treaty on European Union (TEU), also called the Maastricht Treaty, in December 1991. The European Union (EU) member states have set up common institutions to which they delegate part of their sovereignty in specific fields of common interest.

The EU has its roots in the European Community (EC), composed of three originally separate organizations: the European Coal and Steel Community (ECSC), created in 1951, and the European Economic Community (EEC) and the European Atomic Energy Community (EURATOM), both established in 1957. These three institutions merged in 1967, creating the EC and setting up headquarters in Brussels, Belgium.

French statesman and European integrationist Jean Monnet, along with French Foreign Minister Robert Schuman, believed that France and the Federal Republic of Germany (FRG, West Germany) might cooperate economically to avoid future conflict, so on 9 May 1950 Schuman proposed the creation of a common authority to regulate the coal and steel industries of West Germany and France that would be open to other West European nations. Thus West Germany, Belgium, Italy, Luxembourg, and the Netherlands, along with France, signed the Treaty of Paris in 1951. The ECSC was formally established in August 1952.

In June 1955 the foreign ministers of the ECSC promoted a better integration of the six economies, which resulted in the two Treaties of Rome of March 1957, forming the EEC and EURATOM. The basic economic features of the EEC treaty were gradually implemented, and the three communities (the EEC, the ECSC, and EURATOM) merged in July 1967 under one umbrella institution, the EC.

The Single European Act (SEA), introduced in December 1985 and approved by all twelve members by July 1987, established the first major changes to the EC structure since 1957. Among these was the introduction of the weighted-majority system that helped speed up implementation of the single market.

Representatives from each of the EC countries negotiated the Treaty on European Union in 1991, and in December the European Council met at Maastricht, the Netherlands, to finalize the treaty. The treaty mandated that the population of each member state had to approve the EU by popular referendum. The treaty was duly ratified by all members in October 1993, and the EU was established on 1 November when the treaty went into effect.

Initially, the EC consisted of just six countries: Belgium, West Germany, France, Italy, Luxembourg, and the Netherlands. Denmark, Ireland, and the United Kingdom joined in 1973, Greece joined in 1981, and Spain and Portugal joined in 1986. Austria, Finland, and Sweden voted in 1994 to enter the EU and did so in 1995, while Norway failed twice by popular referendum to enter. Norway's economic strength was one reason for its decision to remain independent, although the country entered the Schengen Treaty and adopted

Flag of the European Union (EU). Formed by twelve nations in 1991, the EU is a powerful economic and political bloc promoting European unity. The list of member states has grown since the EU's formation, but the process of securing entry involves meeting rigorous economic and political conditions. (European Community, 2006)

the EU legislation. Ten more European countries began membership negotiations for entrance into the EU in 1996.

Other potential EU applicants included members of the European Free Trade Association (EFTA). In 1991 the EC and the EFTA completed an agreement to establish the European Economic Area (EEA), which would provide a single, unified market for goods, services, and capital. The EEA, which took effect on 1 January 1994, eliminated trade barriers between the EU and the EFTA, each of which is the other's largest trading partner.

In 2004 the EU's greatest enlargement took place with the admittance of ten new countries: Cyprus, the Czech Republic, Estonia, Hungary, Latvia, Lithuania, Malta, Poland, Slovakia, and Slovenia. The treaties signed by the member states ensure that the rule of law is fundamental to the EU and member states and give force to all EU decisions and procedures.

The EU has five main institutions: the European Parliament (EP), elected by the people of the member states every five years; the Council of the European Union, representing the governments of the member states; the European Commission (CEC), acting as the executive body; the Court of Justice, ensuring that the various bodies act according to the European

law; and the Court of Auditors, tasked with budget management. To these should be added the European Central Bank (ECB), responsible for monetary policy within the Eurozone; the European Economic and Social Committee (ESC), representing the opinions of civil society on economic and social issues; the Committee of the Regions, which gives voice to the local authorities; the European Ombudsman, to whom the European citizens may direct complaints; and the European Investment Bank, used to finance capital investment to further European integration policies.

From the beginning, cooperation among EU states was focused on trade and economic issues, building a single European market, and launching the Euro, the single European currency to ease money transfer and free flow of capital. The cooperation among the member states ensured half a century of peace during the Cold War and stability in Europe, but the EU now must deal with several problems, including the development of economically indigent regions, environmental protection, and internal security.

The EU is a major economic rival to North America and Asia, and the establishment of an EU military force rivaling the North Atlantic Treaty Organization (NATO) is also in the works.

Philosophical construct and corpus of ethical thought developed in the nineteenth century and expanded upon in the twentieth century. Existentialism explores both the solitude and uniqueness of the human condition within a universe that is unconcerned—or even antagonistic—toward humankind. Existentialism holds that the reason and purpose for human life is unknowable and thus that free will and personal responsibility govern the consequences of one's actions. In its broadest application, existentialism has been embraced in some form by twentieth-century theologians (Karl Barth and Reinhold Niebuhr), psychologists (Viktor Frankl and Rollo May), writers (Albert Camus and Franz Kafka), and philosophers (Simone de Beauvoir,

Existentialism

Martin Heidegger, and Jean-Paul Sartre). Existentialism has its roots in the thinking and writings of such nineteenth-century luminaries as Friedrich Nietzsche, Fyodor Dostoyevsky, and Søren Kierkegaard, among others.

Existentialism, like its immediate philosophical predecessors, is a sharp departure from traditional Western thought that holds that rationality and consciousness are paramount to understanding the human condition. According to Sartre, “existence precedes and rules essence.” Otherwise stated, there is no preexisting, predefined nature to humanity other than what the individual creates for himself. And because existentialism does not acknowledge God or a supreme, all-knowing entity, human beings are free to make their own choices and will be judged exclusively by the actions and choices they take.

In the 1950s and 1960s, existentialism experienced a resurgence with the popularity of Camus’ writings (although Camus eschewed the use of the term “existentialism” to describe his work). Also influential at this time were the so-called Beat writers and poets such as Jack Kerouac, Allen Ginsberg, and Lawrence Ferlinghetti who borrowed heavily from existentialist thought. Finally, the idea of random absurdity that existentialists see as part and parcel of the human condition became the subject of many influential plays and films during the Cold War period. Some of the more influential playwrights who explored the theater of the absurd included Alain Robbe-Grillet, Eugene Ionesco, Samuel Beckett, Luigi Pirandello, and Edward Albee.

Existentialism became a powerful force during the Cold War. It certainly is not difficult to understand how the onset of the Cold War that brought with it the constant threat of almost instantaneous annihilation might have given impetus to existentialist thinking.

Explorer I (31 January 1958)

First successful U.S. Earth-orbiting satellite, launched from Cape Canaveral, Florida, on 31 January 1958. *Explorer I* was launched just 119 days after the Soviets launched *Sputnik I*. The thirty-pound satellite was boosted by a Jupiter C rocket, an intermediate-range ballistic missile (IRBM), also known

as *Juno I* when used as a launch vehicle. The Jupiter-class rocket was developed by the Army Ballistic Missile Agency (ABMA) team under the directorship of Dr. Wernher von Braun. *Explorer I* carried a variety of scientific instruments, and its readings contributed to the identification of radiation belts around Earth.

The *Explorer I* system was a backup to the primary American satellite effort, *Vanguard I*. President Dwight Eisenhower gave the Vanguard system priority in large part because of its civilian nature and his desire to showcase the peaceful uses of space flight. He also sought to establish a precedent for orbital overflights of other nations. Forming legal rights for orbital overflights was important for the reconnaissance satellites then being developed.

The launch was planned to be part of the 1957–1958 International Geophysical Year research effort, although the motivation increased with the successful Soviet *Sputnik* launches. When the Vanguard system exploded on the launch pad on 6 December 1957, the Explorer team was allowed to proceed with its already-established military rocket design. The successful *Explorer I* mission and the valuable scientific results that stemmed from it helped restore some of America's confidence and prestige that had been lost to *Sputnik*. Explorer marked the initial American engagement in the emerging space race between the two Cold War superpowers.

F

Secretary-general of the largest Dutch peace organization, the Interchurch Peace Council (IKV). Born on 14 December 1940 in Coevorden, Mient Faber studied mathematics and physics at the Free University of Amsterdam and graduated in 1968. In 1974 he obtained a doctorate from the same university. Also in 1974, Faber became secretary-general of the Interchurch Peace Council, a peace organization founded in 1966 by the Roman Catholic Church and mainstream Protestant churches.

In 1977 the IKV began a campaign for multilateral nuclear disarmament. Two years later, the North Atlantic Treaty Organization (NATO) decided to deploy Pershing II and cruise missiles in Western Europe. The IKV succeeded in mobilizing huge demonstrations against nuclear weapons in general and the deployment of cruise missiles in the Netherlands in particular. As a consequence, the Dutch government was forced to postpone the deployment decision in December 1979. Faber addressed a gathering of an estimated 400,000 people in Amsterdam in 1981 and a demonstration of 550,000 in The Hague in 1983.

Faber not only inspired anti-NATO protests but also declared solidarity with East European dissidents. In 1981, after martial law was declared in Poland, the IKV grew into a lobbying organization for freedom and human rights in Eastern Europe. This approach was called *Détente from Below*. Because of his advocacy activities, Faber was banned from the German Democratic Republic (GDR, East Germany) and Czechoslovakia, and he was viewed with misgivings by many Western peace activists.

After 1989, Faber's involvement in human rights activities became even stronger. Together with Charter 77 and European Nuclear Disarmament (END), the IKV founded the Helsinki Citizens' Assembly (HCA), a human rights organization. The HCA campaigned for safe havens in Bosnia (1992–1993) and supported humanitarian intervention in Kosovo. Faber retired as secretary-general of the HCA in 2003.

Faber, Mient Jan

Faeroe Islands

An archipelago of eighteen small islands and a few islets located in the North Atlantic, almost midway between Iceland and Norway and 200 miles north of Britain. A Danish autonomous dominion with no military forces of their own, the Faeroe Islands (in Danish, Færøerne, and in Faeroese, Føroyar) are just 540 square miles in area, less than half as big as the U.S. state of Rhode Island. Seventeen of the islands are inhabited, and in 1945 they had a combined population of 29,178 people.

British forces occupied the Faeroes during World War II, both to prevent Germany from capturing them and to aid Allied operations in the North Atlantic. A Loran-A (Long-Range Navigation) communications station was built on the Faeroe Islands during the war. Danish authorities maintained it following the end of the war.

When the North Atlantic Treaty Organization (NATO) was formed in 1949, the United States concluded that Danish membership was crucial in part because the Faeroe Islands would be included. Yet in the first few years after the war, the islands were not deemed to be of great strategic importance. That changed by 1950, however, because various technological advances made them important in communications, radar, and advanced-warning system applications. Fear that the Soviet Union might wish to gain a foothold there also made them strategically vital.

In 1959, the United States funded and oversaw the construction of a Loran-C station on the Faeroe Islands in connection with the planned introduction of the submarine-launched Polaris missiles. The station was operated by Danish personnel and was used for both civilian and military aviation and navigation. It also served as a master station for other Loran-C installations in Iceland, Norway, and later on the island of Jan Mayen. In addition, a NATO-operated radar station was built in the Faeroe Islands.

Immediately after World War II, Faeroe Islanders narrowly defeated a bid to gain full independence from Denmark, settling instead for home rule that kept foreign affairs and defense in Danish hands. During the Cold War, Copenhagen and Washington sometimes worried that nationalist tendencies in the Faeroes might lead to calls for secession from Denmark and even a claim of official neutrality. Friction with Britain over fishing limits (fishing

is the chief industry of the Faeroe Islands) also caused concern. While a number of Faeroe Islanders did at times protest against military installations on the islands, the danger of secession was never that great. Throughout the Cold War, the Faeroe Islands remained an important surveillance and communications post for the United States and NATO.

King of Saudi Arabia from 1982 to 2005. Born in Riyadh in 1921, Fahd Bin Abdul Aziz was the eleventh son of the founder of Saudi Arabia, Abdul Aziz ibn Saud. He was educated at the Princes School in Riyadh and later at the Religious Knowledge Institute in Mecca, where he studied the Islamic faith and the traditions and culture of Arabia. In 1969 he became deputy prime minister of Saudi Arabia, and in 1975 he was named crown prince when his elder brother Khalid became king.

Upon Khalid's death in 1982, Fahd became king of Saudi Arabia. During the 1980s, King Fahd established closer ties to the United States in response to perceived threats that included the 1979 Iranian Revolution and the 1980–1988 Iran-Iraq War. Partly because of this shift toward the West, Fahd and the Saudi royal family came under increasing criticism from outspoken Muslim clerics. In 1986, Fahd adopted the title “Custodian of the Two Holy Mosques” (referring to Mecca and Medina) in an effort to add legitimacy to his rule.

The Iraqi invasion of Kuwait in August 1990 led to an even stronger U.S.-Saudi relationship with the stationing of several hundred thousand American troops on Saudi soil. This resulted in even greater criticism from Muslim clerics and further challenges to the royal family, including a protest in November 1990 by more than forty Saudi women who illegally drove cars in the streets of Riyadh.

In 1992, Fahd initiated a series of reforms aimed at bolstering the credibility of the royal family as well as appeasing religious critics. The reforms included the creation of a Consultative Council to ensure that secular legislation remains in line with the requirements of Sharia, or

Fahd, King of Saudi Arabia (1921–2005)

Failsafe

Term used to describe techniques put in place to avoid the start of an accidental nuclear war. These include safeguards to prevent the accidental launch of nuclear weapons as well as the means to abort missions in progress. The term also means a secondary method for accomplishing a given goal.

In seeking to prevent accidental nuclear war, failsafe involved double checks at various stages to ensure that a valid order had indeed been issued to begin a nuclear exchange. The most visible sign of this was at the strategic level, via the hotline connecting U.S. and Soviet leaders.

On the operational level, bombers responding to a perceived enemy attack might be authorized to fly only to a certain point without further approval. This allowed the nation's leaders to determine both that an enemy attack had indeed occurred and that the nature of the response was warranted. The United States also required approval of two separate officers to launch an intercontinental ballistic missile (ICBM). Once the ICBM was fired, regular computer checks determined whether the mission should be aborted.

Such procedures varied widely, however, depending on the nation involved. Concerns over failsafe practices intensified with the proliferation of nuclear powers—in part the consequence of the breakup of the Soviet Union and the dispersal of its nuclear weapons beyond Russian territory.

King of Saudi Arabia from 1964 to 1975. Born in 1905 in Riyadh, Faisal ibn Abdul al-Aziz ar-Rahman al-Saud was the fourth son of King Abdul Aziz ibn Saud. In 1927 King Saud appointed Faisal the governor of the Hijaz, and in 1928 he was made head of the Council of Ulama, a body of Islamic scholars that acted as an advisory council to the state. Faisal often represented the kingdom in foreign affairs. He served at the 1945 United Nations Conference and later as ambassador to the United Nations (UN).

King Saud died in 1953 and was succeeded by his eldest living son, Prince Saud, Faisal's half-brother. Faisal was then duly designated crown prince and appointed deputy prime minister and foreign minister. In 1958 a power struggle ensued within the royal family, and Saud was forced to give Faisal control over Saudi fiscal, internal, and foreign affairs. Faisal was appointed prime minister in 1962, effectively stripping King Saud of power. In 1964 Saud demanded the restoration of his power, but on 2 November 1964 the Council of Ulama issued a fatwa to depose Saud, who then went into exile. Faisal was thus proclaimed king.

In the 1967 Arab-Israeli War, Faisal supported the Arab cause. His reign witnessed the development and modernization of Saudi Arabia, mainly accomplished with the nation's vast oil revenues. The educational system was greatly expanded; however, other social reforms were few and far between in the ultraconservative Wahhabi theocracy.

In 1973 Faisal promoted the Arab oil embargo against the United States, the Netherlands, and other Western nations for their support of Israel in the 1973 Arab-Israeli War. This action strengthened his position and increased the prestige of Saudi Arabia in the Islamic world. It also solidified the Saudi dynasty's legitimacy as the guardian of the holy cities of Islam.

On 25 March 1975, Faisal was hosting a reception in the royal palace at Riyadh when he greeted his twenty-seven-year-old nephew, Saudi Prince Faisal ibn Musad Abdel Aziz. When King Faisal bowed to receive the traditional kiss of greeting, his nephew shot him in the face, killing him instantly. The assassination was apparently motivated by revenge for the death of ibn Musad's older brother, who had been killed by Saudi police in an armed attack on a television station. Ibn Musad was subsequently tried in an Islamic court and publicly beheaded.

Falklands War (1982)

A seventy-two-day war between Argentina and Great Britain over control of the Falkland (Malvinas) Islands. The Falklands War officially began on 2 April 1982 when Argentina landed thousands of troops on the islands and ended on 14 June 1982 when Argentina surrendered to British forces. The war was the product of a long-running dispute between Great Britain and Argentina over the Falkland Islands, or the Malvinas as Argentina called them. The Falklands are a rugged collection of islands in the South Atlantic some 300 miles off Argentina's coast. Various nations—Spain, England, France, and Argentina—had vied for control of the islands since the seventeenth century. Britain frequently intervened in the region in the early 1800s and had been in continuous possession of the Falklands since 1833. Argentina repeatedly protested the British presence, although the Argentine dictator of the 1830s and 1840s, Juan Manuel de Rosas, offered to sell the Falklands to Britain. Britain refused to pay for what it already possessed.

Through the decades, Argentina never renounced its claim to the Falklands, even coaxing the United Nations (UN) in 1965 to classify the islands as a colony of Great Britain. Sporadic negotiations between Britain and Argentina in the 1970s yielded some progress but no substantive agreement on the key issue, namely sovereignty over the islands.

The United States never played a major role in the Falklands controversy. The Argentine government attempted to entice the United States into backing its position by claiming that British possession of the Falklands violated the Monroe Doctrine; however, the United States rejected the application of the doctrine to the Falklands case, arguing that Britain had a claim that antedated its seizure of the islands in 1833. During much of the twentieth century, the United States maintained only a marginal interest in the controversy.

The United States played an even smaller role in the dispute in the 1970s as U.S.-Argentine relations deteriorated. Because of the Argentine military regime's continued violation of human rights, U.S. President Jimmy Carter publicly criticized Argentine leaders and cut aid to the nation. When Ronald Reagan was elected president in 1980, Argentina had hoped for better relations with the United States. Reagan indicated that he was willing to improve U.S.-Argentine relations in return for Argentina's support of America's tougher anticommunist policies, particularly in Central America.

The dispute over the Falklands came to a head in 1982. Argentina had long expressed disenchantment with what it considered the slow pace of negotiations with Britain. The approach of the 150th anniversary of the British

FALKLANDS WAR, APR 2 – JUN 14, 1982

Signaling the end of the Falklands War, British troops raise the British flag over Port Howard, West Falkland, for the first time in more than two months, 16 June 1982. (UPI/Corbis-Bettmann)

takeover also played a part in the Argentine decision to resort to force. Growing domestic opposition to military rule encouraged some in the military leadership to conclude that a move against the Falklands would help unite the country behind the regime. Military action would also be a distraction from the sorry state of the Argentine economy. The Argentine leadership doubted that Britain would move militarily to prevent seizure of the islands.

In late March 1982, U.S. intelligence reports indicated that Argentine forces appeared to be preparing for an invasion of the islands, prompting a lengthy telephone conversation on 1 April between Reagan and the Argentine President, General Leopoldo Galtieri. Reagan warned Galtieri that an invasion would compromise U.S.-Argentine relations and provoke a military response by Britain. Nevertheless, Argentina invaded on 2 April, quickly subduing a small detachment of British Royal Marines.

Britain responded diplomatically and militarily. The British convinced the European Economic Community (EEC) to impose economic sanctions on Argentina and the UN Security Council to condemn the invasion and call for an Argentine withdrawal. Britain dispatched a large military contingent to retake the islands by force, if necessary.

The United States responded with a spurt of shuttle diplomacy led by U.S. Secretary of State Alexander Haig. Haig made the diplomatic rounds of

London and Buenos Aires trying to broker an agreement based on a cease-fire, Argentine withdrawal, and a commitment to negotiate on the long-term status of the islands.

Argentina mounted its own diplomatic offensive, calling for a meeting of consultation under the provisions of the Rio Pact of 1947. The meeting produced only a tepid resolution criticizing the economic sanctions of the EEC and calling for an end to the fighting. During the meeting Haig characterized Argentina as the aggressor in the crisis.

Haig's shuttle diplomacy soon unraveled as the negotiations demonstrated America's pro-British position. American efforts at mediation ended on 30 April when the United States announced that it was imposing economic sanctions on Argentina and would provide military assistance to Britain, although there would be no direct U.S. military involvement.

British forces landed en masse in the Falklands on 21 May 1982, resulting in another meeting of consultation under the Rio Pact. The meeting passed a resolution—with the United States abstaining—that condemned Britain for its “unjust attack on Argentina” and called upon the United States to lift its economic sanctions on Argentina and end its assistance to Britain. With little substantive diplomatic action, the struggle for the Falklands would be determined by military action alone. The lopsided conflict came to a predictable conclusion with the surrender of Argentine forces on 14 June 1982. Argentina sustained 655 killed in action, while Great Britain suffered 236 killed in action.

The Falklands War was more a colonial war than a Cold War conflict, but it certainly had Cold War implications. First, the Reagan administration lost one of the strongest supporters of its anticommunist policies in Central America. Second, the crisis strengthened ties between Argentina and Cuba, which had prominently supported the Argentine position. Finally, the crisis produced widespread doubts about the role the United States played in mediation efforts, especially given the rapid U.S. switch from quasi-impartial mediator to supporter of Britain. Many Latin Americans were horrified at the prospect of the United States actively aiding a European country in an attack on a Latin American nation. In addition, in the wake of the war two of its most prominent players lost their positions. The Argentine military regime was humiliated, bringing a return to civilian rule in 1983 and the prompt resignation of President Galtieri. Secretary of State Haig resigned on 25 June 1982, partially as a result of his controversial role in the crisis. Only British Prime Minister Margaret Thatcher benefited politically from the war, as it raised her sagging popularity and ultimately led to her success in upcoming elections.

Fallout Shelters

A civil defense measure intended to protect civilian populations from atomic or hydrogen bomb blasts and the attendant toxic radioactive fallout caused by nuclear explosions. Civil defense simply refers to nonmilitary activities designed to protect civilians and their property from enemy actions in times of war. Civil defense measures such as blackouts were common during World War II. Civil defense took on newfound urgency upon the advent of the Cold War.

After the Soviet Union detonated its first atomic weapon in August 1949, the concept of civil defense was transformed from localized protection from enemy attack to the survivability of the human race. Be that as it may, the U.S. government provided little more than literature and instructive film shorts concerning civil defense in the nuclear age. Civil defense measures were left primarily in the hands of local and state authorities, and civil defense efforts in general stressed self-help, privatization, decentralization, and volunteerism. After the Bravo tests of the hydrogen bomb in 1954, however, radioactive fallout became a significant public concern. Debates grew louder as to what the proper role of the federal government ought to be in terms of civil defense and, in particular, in building shelters.

The Federal Civil Defense Administration (FCDA) was created in January 1951 to educate the public about what type of civil defense measures could be taken in the event of a Soviet nuclear attack. The FCDA recommended fallout shelters as part of a comprehensive civil defense program. Despite FCDA recommendations, however, civil defense always took a backseat to broader national security imperatives, and no coherent national policy on civil defense was ever promulgated.

Presidents Harry S. Truman and Dwight D. Eisenhower both believed that the costs involved in passive defense measures such as blast or fallout shelters were simply too high. Even when President John F. Kennedy coaxed \$207 million from Congress to reinforce existing community fallout shelters, he quickly retreated from his initial proposal of a five-year shelter-building program designed to protect the entire population because of the prohibitive costs. He instead continued Truman's and Eisenhower's policy of encouraging citizens to take up a shovel and build home shelters themselves, which many Americans had begun to do in the early 1950s.

Kennedy did this, in part, via a letter he wrote for the 15 September 1961 issue of *Life* magazine. The story headline in that issue read "How You Can Survive Fallout" and included within its pages Kennedy's letter encouraging Americans to build their own fallout shelters. The article, which even included

sets of blueprints for the do-it-yourself homeowner, coincided with increased tension between the two superpowers over the fate of Berlin. Once the tension eased, particularly after the 1962 Cuban Missile Crisis, Americans were less inclined to build fallout shelters. In fact, construction of homemade fallout shelters peaked in 1961. The introduction of ever more powerful nuclear weapons and the use of ballistic missiles, which could reach their targets in a matter of minutes, also rendered fallout shelters and duck and cover drills hopelessly inadequate.

King of Egypt from 1936 until 1952, when he was ousted by a military coup. Born on 11 February 1920 in Cairo, Faruq Al-Awwal (Farouk) was the son and successor of King Ahmad Fuad I. Farouk was just sixteen years old when his father died and he ascended the throne, although a regency council ruled for him until July 1937. As king, Farouk continued his father's policy of opposing the popular Wafd Party and was usually successful in keeping it from power.

During World War II Farouk, who was anti-British, sought to keep Egypt neutral. Nevertheless, Britain pressured him to honor Egypt's 1936 treaty obligations to lend it wartime support and to dismiss profascist sympathizers from the government and army officer corps. In 1942 the British forced him to accept as prime minister Mustafa an-Nahhas Pasha, a Wafd Party leader sympathetic to their interests. In October 1944 an-Nahhas helped to negotiate the Alexandria Protocol as a step toward the creation of an Arab league of states. Farouk, seeking to head the movement himself, promptly dismissed an-Nahhas.

Farouk's reign and reputation were seriously compromised by defeat in the 1948 Arab-Israeli War. Revelations of rampant corruption in the palace and in the Egyptian bureaucracy also discredited him with the Egyptian military. Farouk's position was further damaged by his reputation as an inveterate womanizer and playboy who amassed fantastic wealth but was never quite

satisfied with what he had. He owned hundreds of thousands of acres of land, dozens of palaces, and hundreds of automobiles. He was known as a hard-driving gambler and a man of the nightclub circuit, and his apparent kleptomania earned him the nickname “The Thief of Cairo.” These excesses would be a major catalyst to his downfall.

In 1952 Farouk sponsored unpopular candidates for minister of defense and other key positions. On 23 July 1952 the clandestine Free Officers organization, led by General Muhammad Nagib and Colonel Gamal Abdel Nasser, forced Farouk to abdicate and sent him into exile in Monaco. His infant son was immediately proclaimed King Fuad II, but the monarchy was formally abolished in 1953 when Egypt was declared a republic.

In exile Farouk continued to lead the high life. His love of food and drink rendered him dangerously obese, and by the time he collapsed after a heavy meal on 3 March 1965, he weighed almost 300 pounds. He died on 18 March 1965 in Rome.

Faure, Edgar Jean (1908–1988)

Prominent French politician, cabinet minister, and premier of France (1952, 1955–1956). Born in Béziers, France, on 30 March 1908, Edgar Faure studied legal history at the Sorbonne and Russian at the Paris École des Langues Orientales. He was admitted to the bar at age twenty and then practiced law in Paris, focusing on Russian émigrés and the petroleum industry. In 1938 he published his doctoral thesis on the French petroleum industry.

Rejected for military service because of a minor heart defect, Faure practiced law in Paris. In late 1942 he immigrated to Tunis and shortly thereafter became chief of legislative services in the provisional French government in Algiers headed by General Charles de Gaulle. Returning to Paris at the end of the war, Faure served in the new Ministry of the National Economy under his friend Pierre Mendès-France. In November 1946, Faure won election to the National Assembly as a deputy from the Jura. He was either a deputy or senator from 1947 to 1980.

As finance minister during 1953–1954 and as premier in 1955, Faure played a major role in shaping the economic and social policies of the Fourth Republic. In 1950 he helped secure funding for the Monnet Plan to rebuild the French economy and to bring inflation under control. In 1953 he drastically cut expenditures and government benefits, precipitating the worst strikes

in French history since 1936. In 1954 he helped stimulate the economy with government initiatives in such areas as housing construction and the restructuring of the tax system.

As premier, Faure played an important role in colonial affairs, agreeing to grant independence to both Tunisia and Morocco, although public pressure forced him to take a hard line regarding Algeria. His own Radical Party expelled him from membership after he dissolved the Chamber of Deputies and scheduled new elections for January 1956 (the first time a premier had invoked this right since 1877). Faure then allied his followers with the conservatives but lost to a leftist, Republican Front coalition that brought socialist Guy Mollet to power. Faure did not return to the cabinet until a brief tenure in 1958.

Elected a senator in 1959, Faure represented the Jura in the new Fifth Republic. Never a member of the Gaullist party, Faure was nonetheless French ambassador to the People's Republic of China (PRC) in the early 1960s, minister of agriculture (1966–1968), and minister of education following the student riots of May 1968. In this post, Faure was responsible for a series of educational reforms during 1968–1969 by which twenty-three existing French universities were broken up into seventy-six. Faure then returned to the National Assembly and served as its president during 1973–1978.

An active writer, in addition to his memoirs Faure wrote several historical studies as well as detective stories (under the nom de plume Edgar Sunday) and was elected a member of the Académie Française. At the time of his death in Paris on 30 March 1988, Faure was chairing the French Revolution Bicentennial Commission.

Chief domestic law enforcement and intelligence-gathering agency of the federal government of the United States. The Federal Bureau of Investigation (FBI) originated in 1908 when a group of special agents in the U.S. Department of Justice were organized to investigate federal crimes. These agents became prominent during the First Red Scare (1919–1921) that followed World War I and played an important role in identifying and arresting

scores of Americans—mostly resident aliens—for alleged subversive and communist activities. At the same time, the First Red Scare brought to the fore a young and ambitious law enforcement bureaucrat by the name of J. Edgar Hoover who would lead the special agent division beginning in 1924 and went on to serve as director of the FBI until 1972, acting as head of domestic U.S. law enforcement for forty-eight years. The Department of Justice's legion of special agents officially became known as the Federal Bureau of Investigation in 1936. FBI personnel engaged in intelligence-gathering and counterintelligence activities in addition to law enforcement. Under the directorship of Hoover, the FBI pursued communists and other purported subversives in the United States well before the Cold War and often trampled constitutional rights and civil liberties while doing so. During his long tenure, Hoover became one of the most powerful—and feared—men in Washington, cloaking many of his directives and FBI operations in secrecy.

During the 1930s, Hoover worked diligently to professionalize FBI agents, many of whom were trained as attorneys and accountants rather than detectives or policemen. Hoover's enforcement of Prohibition (until it was nullified in 1933) and the FBI's apprehension of several high-profile criminals in the 1930s lent him and the agency an air of invincibility and respect. They also allowed Hoover entrée to the highest levels of power in the Amer-

ican government. It was not at all unusual, in fact, for Hoover to meet with the president on a regular basis.

World War II and the early Cold War brought dramatic expansions in the FBI's personnel and operating costs. During 1936–1945, the number of FBI agents grew from approximately 600 to nearly 4,900. To maintain a sizable postwar force and budget for the FBI, Hoover contended that the Cold War confronted the United States not only with the external threat of a Soviet attack but also with an internal threat of communist subversion. He asserted that there were operatives within the United States who were conducting espionage for the Soviets and scheming to overthrow the U.S. government and that communists and communist sympathizers held jobs in the federal government. The advent of McCarthyism, a four-year-long anticommunist witch-hunt (1950–1954), only added to the urgency of Hoover's exaggerated warnings. By 1952, the FBI had more than 7,000 agents.

The FBI investigated federal employees suspected of belonging to or supporting the Communist Party of the United States (CPUSA) in addition to many other citizens who were neither members of the Communist Party nor connected to it in any way. Frequent targets of investigation also included labor unions and civil rights organizations such as the National Association for the Advancement of Colored People (NAACP). The FBI helped investigate and take into custody Julius and Ethel Rosenberg, who in 1951 were convicted and sentenced to death for conspiracy to commit espionage by allegedly passing atomic secrets to the Soviet Union. The Rosenberg case fueled Americans' fears that domestic subversives were indeed plotting against the nation and bolstered public support for the FBI.

To counter the alleged domestic Red menace, FBI agents sometimes engaged in illegal activities, many of them conceived and authorized by Hoover, including break-ins, use of secret listening devices, mail searches, and the leaking of confidential information about subjects under surveillance to the press and congressional representatives, such as members of the House Un-American Activities Committee (HUAC). HUAC interrogated Americans who were currently or formerly associated with the Communist Party or who had supported liberal causes or criticized the U.S. government.

In 1956, the FBI launched a counterintelligence program, known as COINTELPRO, to infiltrate and sabotage organizations that Hoover regarded as national security threats. Although in the 1960s the FBI did investigate certain right-wing associations such as the Ku Klux Klan, it chiefly targeted a wide array of liberal and left-wing groups and individuals, including civil rights organizations, free speech advocates, Vietnam War protesters, black nationalists, women's rights activists, and student radicals. Hoover believed that such individuals and groups aided communist subversion by destabilizing and attempting to destroy American society. One of COINTELPRO's most notorious cases was the clandestine surveillance and harassment of civil rights leader Martin Luther King Jr. Hoover discontinued COINTELPRO in 1971.

Over the years, Hoover helped cultivate popular support for the FBI by encouraging favorable portrayals of agents in the press and in literature, film,

During his long tenure, Hoover became one of the most powerful—and feared—men in Washington, cloaking many of his directives and FBI operations in secrecy.

and television. But in the Watergate era of the mid-1970s, many of the FBI's abuses of power came to light through citizens' activism, the news media, and the 1975 U.S. Senate investigations of the FBI and the Central Intelligence Agency (CIA). Americans were shocked to learn of decades of surveillance of millions of U.S. citizens deemed subversive, thereby denying them their constitutional rights. They also discovered that both Democratic and Republican presidents, beginning with Franklin D. Roosevelt, had used the FBI to investigate critics of their administrations. Detractors of the FBI charged that Hoover's obsession with communists and alleged communist sympathizers had resulted in the FBI violating the rights of the citizenry it was supposed to protect. Hoover died in 1972 and was succeeded by a host of directors, none of whom proved to be as tenacious or controversial as he. After Hoover's death, subsequent directors worked to purge the FBI of the excesses of the Hoover era. Hoover's successor, L. Patrick Gray, ordered the FBI to hire its first female agents, a notion that would have been anathema to the old-school Hoover.

Increases in federal oversight of FBI activities in the late 1970s were partially lifted during Ronald Reagan's administration (1981–1989). Cold War concerns about leftist insurgencies in Central America in the early 1980s led the FBI to investigate the Committee in Solidarity with the People of El Salvador, a social justice organization, and to assert its involvement in terrorism, which later proved to be unfounded. The capture of several FBI agents who had spied for Moscow during the 1980s and 1990s further marred the FBI's image.

Fermi, Enrico (1901–1954)

Nuclear physicist, atomic scientist, and one of the lead scientists involved in the Manhattan Project. Enrico Fermi was born in Rome, Italy, on 29 September 1901, the son of an Italian government official. His great aptitude for mathematics and physics manifested itself at an early age, and encouraged

Enrico Fermi seated at the control panel of a particle accelerator, the world's most powerful atom smasher. A Nobel laureate, Fermi refined the process of nuclear fission. His work led to the development of nuclear reactors and the Manhattan Project, which produced the atomic bombs dropped on Japan. (Library of Congress)

by his father he received a scholarship at the age of seventeen to the University of Pisa. In 1922, at only twenty-one years of age, the brilliant Fermi had earned a doctorate in physics from the University of Pisa.

Fermi went to work in Germany until 1924 and then took a position as a lecturer at the University of Florence. In 1926 he discovered the statistical laws governing particles, also known as Fermi Statistics. In 1927 he was elected to the prestigious post of professor of theoretical physics at the University of Rome. He stayed in that post until 1938, when he won the Nobel Prize in physics. By then, he was the world's undisputed expert on neutrons. That same year, he fled fascist Italy for the United States and assumed a professorship at Columbia University, a post he held during 1939–1942.

In 1942 Fermi began work on the top secret Manhattan Project, which produced the world's first atomic bomb in 1945. Under Fermi's direction, the first controlled nuclear chain reaction was achieved at the University of Chicago in December 1942. He went on to help lead the quest for an atomic weapon, which was finally achieved in July 1945. Less than a month later,

the United States dropped two nuclear bombs on Japan, on Hiroshima and Nagasaki, hastening the end of World War II.

In 1946 Fermi accepted a faculty position at the University of Chicago and turned his attention to high-energy physics. In 1946 he was appointed to a panel charged with advising the newly established Atomic Energy Commission. In 1949 he joined a number of other scientists in voicing opposition to the development of a hydrogen bomb, but a year later he assisted in that project although continuing to raise concerns about the efficacy of employing such a weapon. Fermi died on 28 November 1954 in Chicago.

Figl, Leopold (1902–1965)

Austrian chancellor and foreign minister. Born in Rust in Lower Austria on 2 October 1902, Leopold Figl studied at the College of Soil Sciences and became a secretary for the Lower Austrian Association of Farmers in 1927. He rose to deputy director of that organization in 1931 and became director in 1933. In 1937 he accepted appointment as director of the Federal Farmers' Union. He also served as a member of the Federal Economic Council from 1934 to 1938, helping organize a Pan-European economic conference in Vienna in 1936. Arrested in 1938 and sent to Dachau, Figl was released in May 1943. He was rearrested in October 1944 and sent to Mauthausen, where he remained until the war ended in April 1945.

After the war, Figl resumed his political activity, leading the drive to reinstate the Austrian constitution of 1929. As governor of Lower Austria and president of the reformed Farmers' Union, Figl helped relieve the postwar famine in Vienna. He became undersecretary without portfolio and a member of President Karl Renner's Political Cabinet Council in the Provisional Government. A sophisticated negotiator and political improviser with close ties to the Austrian Socialist Party (SPÖ), Figl was elected to parliament as a representative of the conservative Austrian People's Party (ÖVP) and named chancellor of Austria in December 1945.

Figl's program as chancellor emphasized cooperation in the name of Austrian unity and independence. He stressed democracy, de-Nazification and the depoliticization of the police and the judiciary. Although he approved the formation of Austro-Soviet joint-stock companies in July 1945, Figl resisted Soviet pressure to legitimize the transfer of Austrian properties in 1946, protesting the Soviet usurpation of control over the Danube Steamship Com-

pany in particular. During his term as chancellor, he was also instrumental in establishing a neutral, independent identity for Austria. Figl resigned under pressure in 1953, but he immediately became foreign minister and served in that post until 1959. The crowning achievement of his political career was the conclusion of the Austrian State Treaty in 1955. Following his party's defeat in the 1959 elections, Figl served briefly as president of the Austrian parliament before becoming governor of Lower Austria. He died in Vienna on 9 April 1965.

Key Costa Rican political figure for more than half a century and president during 1948–1949, 1953–1958, and 1970–1974. Born on 25 September 1906 in San Ramon, José “Don Pepe” Figueres Ferrer took up university studies in Costa Rica and, briefly, in the United States at the Massachusetts Institute of Technology (MIT) but did not earn a degree. During the 1930s, he farmed a small mountain plantation. In 1942 Figueres was exiled to Mexico by the National Republican Party (PRN) after he criticized President Calderón Guardia in a radio address.

Figueres was allowed to return in 1944 and emerged as the leader of the National Liberation Party (PLN). In 1948 the PRN lost the presidency but attempted to remain in power. Figueres and other PLN leaders led an insurrection against the PRN government and quickly won a brief civil war. Figueres and a military junta assumed power at the end of the war. Despite having banned the Communist Party, Figueres led Costa Rica through a mild socialist reformation, abolishing the army in 1948 and introducing social welfare, education, and land reform programs. He also nationalized banks and insurance companies, which paved the way for state intervention in the economy. After eighteen months in office, Figueres handed over the presidency to Otilio Ulate, the rightful winner of the 1948 election. Figueres returned as president during 1953–1958 and 1970–1974 but remained politically influential until his death.

Figueres Ferrer, José
(1906–1990)

During the Cold War, Figueres received backing and support from both Cuba and Guatemala, and he continued to push for mild socialist reforms, much to the consternation of the United States. Nevertheless, he was able to advance his reform agenda while maintaining relatively cordial relations with Washington. Figueres died in San José on 8 June 1990.

Film

Throughout the Cold War, the grand ideological struggle between communism and capitalism raged with particular intensity in motion pictures. During this period, several national cinemas came to challenge Hollywood's dominance. In particular, postwar Italian, French, British, and Swedish films added significant artistic touches to the Cold War film genre. While U.S. films tended toward stereotyping and even mild anticommunist hysteria in the late 1940s and early 1950s, West European films took a more nuanced and introspective look at the times. Most East European films suffered from heavy censorship, with a few notable exceptions.

In the late 1940s and early 1950s, the House Un-American Activities Committee (HUAC) shook the U.S. film industry. There were genuine concerns at the time that communists had infiltrated the industry, and congressmen seeking the political limelight found Hollywood to be a perfect foil. The film industry also attracted the most notorious of all anticommunists, Senator Joseph R. McCarthy. Screenwriters in particular had been notably leftist in their sentiments, and some actors had flirted with the Communist Party in the 1930s. Now all were being called to account for past affiliations, however fleeting and uncommitted they might have been.

Lillian Hellman, a major dramatist, managed to salvage her career with self-serving newspaper editorials and a highly publicized letter to HUAC, despite evidence of past Soviet sympathies. Actors such as Sterling Hayden, José Ferrer, Lucille Ball, and Edward G. Robinson survived their HUAC encounters. Others were not so fortunate, as a blacklist of writers, directors, and actors expanded. The careers of many who found themselves on the list were derailed for a decade or more, and others never found high-profile work again.

Because no Hollywood experience is truly assimilated until it has served as a subject for films, it is not surprising that blacklisting has been the theme

Selected U.S. Films of the Early Cold War, 1948–1965

<i>Film</i>	<i>Year Produced</i>	<i>Director</i>
<i>The Iron Curtain</i>	1948	William A. Wellman
<i>The Red Menace</i>	1949	R.G. Springsteen
<i>The Red Danube</i>	1949	George Sidney
<i>The Woman on Pier 13</i>	1949	Robert Stevenson
<i>The Big Lift</i>	1950	George Seaton
<i>It Came from Outer Space</i>	1951	Jack Arnold
<i>The Day the Earth Stood Still</i>	1951	Robert Wise
<i>Walk East on Beacon</i>	1952	Alfred L. Werker
<i>Them</i>	1954	Gordon Douglas
<i>Strategic Air Command</i>	1955	Anthony Mann
<i>On the Beach</i>	1959	Stanley Kramer
<i>The Manchurian Candidate</i>	1962	John Frankenheimer
<i>From Russia with Love</i>	1963	Terence Young
<i>Dr. Strangelove</i>	1964	Stanley Kubrick
<i>Moscow on the Hudson</i>	1964	Paul Mazursky
<i>Doctor Zhivago</i>	1965	David Lean

of several movies. *The Front* (1976) featured comedian Woody Allen as a saloon cashier and numbers runner drafted by an old school friend to serve as a front for several blacklisted television writers. In a later film, *Majestic* (2001), actor Jim Carey played a blacklisted screenwriter suffering from that old radio soap opera affliction, amnesia.

As the Cold War deepened, Hollywood's tendency to stereotype became more prominent. Before World War II, Russians had been portrayed with something akin to veiled admiration as people willing to make sacrifices for the greater good of their homeland. During the Cold War, however, Russians appeared on screen in a very different light. They now were depicted either as sinister figures intent on forcing communism upon the world or as political prisoners through accidents of birth. Even American communists featured in Hollywood films were portrayed as shady, mentally unstable underworld characters.

Comedic films were generally more sympathetic to Russians than were dramatic ones. *The Russians Are Coming, The Russians Are Coming* (1966) was a lighthearted farce about a Soviet submarine that ran aground on American soil. After a period of initial suspicion, the Russians gain the affections of the locals by rescuing a child dangling precariously from a church steeple. In *Moscow on the Hudson* (1984) Robin Williams played a Russian circus performer who defects while discovering the delights of American consumerism in Bloomingdale's.

A more serious attempt to convey the Russian character to Western audiences came with *Doctor Zhivago* (1965), adapted from Boris Pasternak's autobiographical novel. Pasternak was already a martyr-hero in the West because the Soviet government had forbidden him from accepting the 1958 Nobel Prize in Literature. His novel outlined the struggle of a sensitive, gifted individual against a ruthless government machine. The film, a smash hit, featured a cast of glamorous actors and a haunting though not very Russian musical score.

In the early Cold War period, Hollywood produced several openly propagandistic films designed to persuade Americans to view the Soviet Union

as a menacing threat instead of a former wartime ally. *The Iron Curtain* (1948), based loosely on the memoirs of a Soviet dissenter, unconvincingly featured Dana Andrews and Gene Tierney as struggling Russians. *The Red Menace* (1949) engaged in crude propaganda and hyperbole. *The Red Danube* (1949) was the only film in this group with artistic merit. Ethel Barrymore, Walter Pidgeon, and Janet Leigh headed the cast. The film's German-expressionistic cinematography was exactly right for a tale of the forced repatriation of ethnic East Europeans scattered about postwar Europe.

The Big Lift (1950) was less melodramatic as it portrayed the peril and heroism of the hugely successful Berlin Airlift. Montgomery Clift and Paul Douglas were the only professional actors used in the military scenes; the rest were real soldiers filmed on location in war-torn Berlin, giving the film a documentary feel. In the same self-congratulatory category was *Strategic Air Command* (1955), a patriotic look at the supremacy of U.S. airpower.

As Hollywood embraced the Cold War, screenwriters and directors exploited every film genre. By its very nature, the Western was a forceful declaration of rugged individualism, self-reliance, and the American Way. In film noir, sinister communists replaced gangsters, and double agents took the place of the private eyes who had previously darkened film noir alleys and back streets. Horror films replaced Frankenstein, werewolves, and Dracula with mad nuclear scientists. Espionage became a chief subject for screen thrillers, and science fiction films often featured atomically mutated monsters and

alien invaders who represented either internal or external communist subversion. Cinema farces sometimes tried to lighten the mood, assuring audiences that communists were ultimately more bumbling clowns than serious threats, while black comedies encouraged audiences to “stop worrying and love the bomb.”

The Cold War produced new grist for film noir. “The city that never sleeps,” film noir’s familiar setting, became the lair of those who wished ill to America in such films as *Walk East on Beacon* (1952), *I Was a Communist for the FBI* (1951), and *The Woman on Pier 13* (1949). One particular film from this genre, *The Third Man* (1949), quickly became a true classic. With ruined Vienna and zither music in the background, the picture featured Orson Welles as a murderous black marketeer moving between the American, British, French, and Soviet occupation zones and playing each off against the other. The city’s serpentine sewers and the Riesenrad—the giant Ferris wheel in the Prater—provided powerful visual symbols.

During the Cold War, several science fiction films highlighted fears of the atomic age. In *Them* (1954), exposure to atomic radiation creates giant ants that threaten the human race. *It Came from Outer Space* (1951) showcased well-meaning Martian visitors horrified by the human propensity for violence. *The Day the Earth Stood Still* (1951), the

Orson Welles appears out of the shadows as Harry Lime in a publicity still for the film *The Third Man*. (John Springer Collection/Corbis)

most durable of these films, featured a wise interplanetary visitor arriving as a peace missionary to Earth.

Closely related to science fiction were apocalyptic films. *On the Beach* (1959) told a chilling tale of a group of Australians awaiting the deadly fallout from nuclear war that had already exterminated the rest of the world. Stanley Kubrick's outrageous dark comedy *Dr. Strangelove* (1964) is the recognized masterpiece of apocalyptic Cold War films. Its veiled caricatures of Henry Kissinger, Edward Teller, and Wernher von Braun are no doubt overdone, although audiences savored the performances of Peter Sellers, George C. Scott, and Keenan Wynn in roles influenced by the clash of military, political, and scientific personalities. General Jack D. Ripper, portrayed by Sterling Hayden, lover of all bombs, is generally assumed to represent General Curtis Le May, whose notable contribution to the Cold War was the development of the Strategic Air Command. Americans and Soviets alike appear either unhinged or inebriated in *Dr. Strangelove*, with the world unsafe in any hands. The film ends with global annihilation.

The Cold War proved an effective subject for pure thrillers. In *From Russia with Love* (1963), James Bond dealt with Russian villains and sensual yet sneaky Russian women. *Gorky Park* (1983) was a convoluted tale of murder and collusion between American criminals and the KGB. In *The Manchurian Candidate* (1962), a taut political thriller, a Korean War veteran is cleverly brainwashed by communists and programmed to kill on command so that his buffoonish stepfather, a caricature of Joseph McCarthy, can take over the American government. Alfred Hitchcock made several films against the backdrop of the East-West struggle, including *Torn Curtain* (1966) in which Paul Newman played an atomic scientist pretending to defect to the Democratic Republic of Germany (GDR, East Germany) to uncover communist military secrets.

The cinematic scene in Cold War Europe was markedly different from that in the United States. Postwar Italian movies gained distinction by adopting a documentary-like neorealism in pictures such as *Rome Open City* (1945) and *Umberto D.* (1952) that were filmed in demolished cities or among the haunts of societal loners and the poor. Film directors such as Federico Fellini and Michelangelo Antonioni were obsessed by the malaise and decadence of the rich. Italian films tended to reflect the currents of Marxism, existentialism, socialism, and psychoanalysis. Two of Italy's most gifted filmmakers, Luchino Visconti and Pier Paolo Pasolini, were ardent communists.

French cinema of the time devoted itself mainly to juxtaposing human relationships against changing moral codes and social conditions. A good number of French films dealt with the residue of guilt stemming from Nazi collaboration and were often preoccupied with wartime occupation and liberation. Greatly influenced by the film noir sensibility of American B movies

from the 1930s and 1940s, the so-called New Wave directors such as Claude Chabrol and François Truffaut introduced heavy doses of existentialism into their movies. Although intellectuals much admired the New Wave, a group called Communist Travail et Culture spoke of the need to deliver film sophistication to French working-class people, who preferred American escapist movies.

During the 1950s and early 1960s, British movies were chiefly noted for their distinctive comedies, Hammer Studio horror films, and a British New Wave. The British New Wave was the chief domain of the so-called Angry Young Men, whose narratives of drab, working-class lives had distinctly Marxist undertones. Films such as *Room at the Top* (1950) viewed life in British industrial towns with a grim realism sometimes referred to as the kitchen-sink school of British drama.

Swedish films of the period were dominated by the chilling images of Ingmar Bergman, the ultimate auteur. He was preoccupied by things philosophical and metaphysical rather than sociological. Although they were not overtly political, the films of former Bergman assistant and protégé Vilgot Sjöman explored the seamier side of postwar Swedish life.

East European movies were hampered by Cold War censorship. Adaptations of national classics, sometimes with subtle political messages embedded, competed with scenarios based on popular but innocuous novels. Only after the Cold War thaw was Polish filmmaker Agnieszka Holland able to bring to the screen her powerful, fictionalized account of events that had transpired in Poland in the early 1980s. Her film *To Kill a Priest* (1988) was based on the brutal murder of Father Jerzy Popieluszko and the persecution of the Catholic Church in Poland.

The Russians had always been celebrated for their cinematic feats, but the heavy hand of state censorship loomed large. Sergei Eisenstein, one of the great geniuses of film history, was forced to suppress his *Ivan the Terrible, Part II* (1958) until after Stalin's death in 1953. The Soviet government tended to demand patriotic films or narratives that faithfully followed the principles of so-called socialist realism. These pictures glorified life on collective farms, extolled factory labor, or celebrated Soviet heroes. Sporadically, however, some Soviet Cold War filmmakers were able to produce a few masterpieces, sometimes even indulging in social criticism under the guise of allegory, parable, or historical narrative. Grigory Kozintsev released brilliant interpretations of *Hamlet* (1961) and *King Lear* (1971) based on Pasternak's translations. Sergei Bondarchuk's multifilm magisterial adaptation of Tolstoy's *War and Peace* (1956–1967) was one of the most ambitious film projects ever and one of the most successful, too. Equally impressive—and still daring—was Andrei Tarkovsky's *Andrei Rublev* (1971), a historical study of the most famous painter of Russian religious icons.

Internationally, both popular and artistic filmmaking is flourishing, now liberated from Cold War pressures. India is churning out its Bombay talkies, while Japan is using the cinema to reexamine its past and to reconcile tradition with modern life. Performers, directors, and film locations have shifted rapidly from place to place as a truly international cinema scene has emerged

in the wake of the Cold War. Still, movies of the Cold War period will offer new audiences key insights into the social, political, cultural, and moral conditions of this critical era in twentieth-century history.

Scandinavian nation covering 130,127 square miles, about three times the size of the U.S. state of Ohio. Finland, with a 1945 population of approximately 3.8 million people, is bordered by Sweden and the Baltic Sea to the west, Russia to the east, Norway to the north, and the Baltic Sea/Gulf of Finland to the south. World War II, in which Finland at first fought against the Soviet Union alone and then alongside Germany, came to an end for the Finns in September 1944, followed by the short Lapland War. The terms of the treaty with the Soviets were considered harsh by contemporaries, yet Finland did not lose its independence. Finnish President Juho Paasikivi (1946–1956) initiated a so-called Russian policy as a way of dealing with the Soviets while maintaining a modicum of independence. The most compelling reasons for this policy were the military superiority of the Soviet Union and the new Cold War environment.

Finland narrowly escaped becoming a Soviet satellite in the fashion of the states of Eastern Europe. The strong showing in the March 1945 elections of the Finnish People's Democratic Union (SKDL)—an alliance of the Communist Party and leftist socialists—gave it an important role in the coalition government. The communists planned to seize power in 1948, but President Paasikivi placed the army and police in the Helsinki area on alert and prevented the attempt. He also persuaded the Soviet Union to accept Finland's neutrality between the two states in the 1948 Treaty of Friendship, Cooperation, and Mutual Assistance.

Finland

The Paris Peace Treaty, signed on 10 February 1947 between Finland and the USSR, imposed significant military constraints on the Finnish armed forces. Finland was permitted only 34,400 army personnel, 10,000 tons of naval ships, and no more than 60 aircraft for the air force. The treaty also included a provision for the signatories to refrain from attacking one another or forming an alliance aimed against the other.

The second cornerstone of Finland's new Soviet-friendly foreign policy was the 1948 Treaty of Friendship, Cooperation, and Mutual Assistance, which formally integrated Finland into the Soviet Union's external security sphere. However, any assistance from the Soviet Union would have had to be agreed upon separately. In spite of the treaty, Finland was in fact considered a neutral nation in the Cold War. To avoid conflict with the Soviet Union, Finland refrained from joining international organizations, including the United Nations (UN), up to 1955, and initially the Nordic Council as well.

Finnish foreign policy assumed a more active role after Uho Kekkonen became president in 1956. Foreign policy initiatives during his twenty-five-year presidency included the establishment of a Nordic nuclear weapon-free zone and organization of the Conference on Security and Cooperation in Europe (CSCE), culminating in the signing of the Helsinki Final Act on 1 August 1975 with the consent of the Soviet Union. Whereas the beginning of Kekkonen's lengthy presidency was marked by various crises in Soviet-Finnish relations (such as the 1958 Night Frost Crisis and the 1961 Note Crisis, both of which were linked to Finnish domestic politics), the late 1960s and 1970s were clearly, as the CSCE initiative demonstrates, a time of decreasing international tensions, which provided the Finns more room to maneuver.

The Soviet Union applied more pressure to break the Finnish doctrine of neutrality in the 1970s. Kekkonen, however, was adept at preserving Finnish neutrality. In fact, while Finland often favored the Soviet Union's strategic interests in the 1970s, it attempted to further its own goals at the same time and gain more recognition for its Cold War neutrality. Overtures toward the West, whether political or economic, were nonetheless difficult in practice. Moreover, Finnish trade policy was in reality subjugated to security considerations.

The Finnish economy recovered relatively quickly after the war, with exports and imports reaching prewar levels by 1950. Finland developed extensive commercial ties with the Soviet Union following its payment of war reparations to the Soviets, most of which were in the form of metal goods. While the early Cold War years were a time of developing trade links, Finnish trade with the Soviet Union grew especially strong during the 1970s. This growth was related to the more hostile international economic environment and new trade agreements. Oil was central in Finnish-Soviet trade and comprised roughly 74 percent of Soviet imports from Finland. Soviet-Finnish trade peaked during the oil crisis of 1979–1989. The oil trade also opened up possibilities for Finnish companies operating inside the Soviet Union.

Finland was among the Soviet Union's most important Western trading partners. In 1987 Finnish trade with the Soviet Union was second among Western countries to that of the Federal Republic of Germany (FRG, West

Germany). Finnish trade was export-oriented, although exports to the Soviet Union were declining already by 1987.

Finnish foreign policymakers and business elites, however, viewed the downward spiral of the Soviet economy in the 1980s with some trepidation. Under the leadership of President Mauno Koivisto (1981–1993), Finland responded with great caution to the dissolution of the Soviet Union during 1990–1991. Only when that was a reality did Finland renounce the restrictions imposed by the 1947 and 1948 treaties and provide unofficial encouragement to Baltic independence. Similarly, many Finnish companies continued to hedge their bets on the Soviet markets in the late 1980s, which declined sharply and contributed to the onset of a deep economic depression in Finland.

Often, the Finnish experience during the Cold War has been linked with the notion of Finlandization, a pejorative term implying subservience to the needs of the Soviets. The reality of the foreign policy environment and Finnish-Soviet business links were much more complicated. Usually, the Finns were engaged and alert negotiators, and it is often argued that they simply had to adjust to the geopolitical realities at hand.

"First strike" refers to the strategy whereby a nation seeks to stage a preemptive military attack that will wipe out its opponent's strategic offensive capability. The term has come to be applied almost exclusively to nuclear attacks. With the development of allegedly invulnerable second-strike missiles in hardened sites, the term has come to be applied to an attack on those forces of another power capable of an attack in kind—the expectation being that one's own secure second-strike forces would deter the decision by an enemy power to launch a preemptory retaliatory strike.

First-Strike Capability

The United States enjoyed first-strike capability against the Soviet Union in the years immediately after World War II, until the Soviets developed their own atomic bomb and the long-range strategic bombers capable of delivering it. By the 1950s, the U.S. advantage in numbers of atomic bombs had largely disappeared. A so-called balance of terror existed between the United States and the Soviet Union, with both sides reluctant to consider a first strike for fear of a devastating, retaliatory second strike by the other power.

First-strike capability came into play during the 1962 Cuban Missile Crisis, when the John F. Kennedy administration concluded that if the Soviets were allowed to install their offensive missiles in Cuba, they would be able to wipe out 85 percent of U.S. offensive strategic capability. This led to plans to develop the MX missile system—a mobile ballistic missile program—and later the Strategic Defense Initiative (SDI).

Flexible Response

Military strategy prescribed by U.S. Army General Maxwell D. Taylor pertaining to the development and equilibration of both nuclear and conventional military forces, subsequently adopted by President John F. Kennedy.

The term “flexible response” was first popularized in Taylor’s book *The Uncertain Trumpet* (1959). In it, Taylor issued a scathing critique of President Dwight D. Eisenhower’s New Look defense posture as he described the internal military debates that raged within the Eisenhower administration.

Taylor proposed a new military strategy that would enable the United States to continue to compete with the Soviet Union at a time of approaching nuclear parity. Flexible response would provide the United States with more options in future crises by downplaying the concept of massive nuclear retaliation, which was clearly not applicable to many military confrontations. Critics of Eisenhower's New Look policy argued that it actually made the nation less safe, increased the likelihood of a nuclear exchange, and presented only two options in a face-off with the Soviets: surrender or suicide.

Taylor was particularly incensed about the disparity in spending among the various branches of the military that had developed under Eisenhower's tenure. The army's share of military spending had declined precipitously during the 1950s as Eisenhower shifted resources to nuclear deterrence via the air force and, later, the navy. Accordingly, although flexible response called for maintaining and modestly expanding the existing U.S. nuclear arsenal, the strategy expected that conventional military forces would be used in instances and in places where nuclear weapons might not provide a decisive military victory or would be disproportionate to the situation at hand.

By supporting a substantial increase in spending for conventional arms, flexible response implicitly rejected the economic principles that underlay Eisenhower's New Look strategy. Eisenhower had argued that the United States could not sustain a level of military spending in excess of 10 percent of gross national product; thus, the New Look policy sought to achieve and maintain a stable deterrent to the Soviet Union without bankrupting the economy. By contrast, in advocating flexible response, Taylor maintained that the U.S. economy could sustain higher defense expenditures, and he specifically called for tax hikes to pay for these increases.

Flexible response was put into practice in early 1961 under the direction of President Kennedy and Secretary of Defense Robert McNamara. Believing that relative nuclear parity between the two superpowers had given cover to Soviet Premier Nikita Khrushchev's "wars of national liberation," Kennedy expanded conventional forces and also encouraged unconventional and counterinsurgency military forces, including the U.S. Army's Special Forces and the U.S. Navy's Sea, Air, and Land (SEAL) teams.

Forces created under the guise of flexible response largely failed to play a decisive role during Kennedy's administration, but a newly expanded army was increasingly deployed in Southeast Asia in the late stages of Kennedy's term. Flexible response was given its greatest practical test during Lyndon B. Johnson's tenure as president. Constrained in the use of nuclear weapons by Soviet and Chinese threats, Johnson and Taylor prosecuted a conventional war in Vietnam using the very forces and weapons that had been constructed as part of flexible response. Aircraft designed to drop nuclear weapons rained conventional bombs on Vietnam, and naval forces patrolled the waters of the South China Sea.

Flexible response was never formally abandoned as military policy, but the fallout from the Vietnam debacle prompted future presidents to adopt alternative strategies for competing with the Soviet Union.

CHRISTOPHER A. PREBLE

Kennedy believed that relative nuclear parity between the two superpowers had given cover to Soviet Premier Nikita Khrushchev's "wars of national liberation."

Fonda, Jane (1937–)

American film star, fitness guru, and controversial anti-Vietnam War icon. Born the daughter of the legendary American actor Henry Fonda on 21 December 1937 in New York City, Jane Fonda spent two years at Vassar College and brief periods in Paris and New York before enrolling in the Actors Studio in 1958. She made her film debut in *Tall Story* (1960) and in 1968 played the title role in *Barbarella*, a film directed by Roger Vadim who later became her first husband. In 1971 she starred in *Klute*, for which she won an Academy Award.

Jane Fonda came to be more infamously known as “Hanoi Jane” for her illegal 1971 trip to Hanoi, the Democratic Republic of Vietnam (DRV, North Vietnam), during the Vietnam War. In Hanoi she made a series of propaganda broadcasts to American servicemen. She came under intense criticism for her actions, which many Americans, especially Vietnam War veterans, viewed as treasonous. After a second trip to Hanoi with Tom Hayden, at the time her husband and a leftist, counterculture figure, Fonda made a documentary, *Introduction to the Enemy* (1974). In 1978 she starred in *Coming Home*, an anti-war film that dealt sympathetically with the struggles of severely wounded soldiers. She won her second Academy Award for the film. In 1988 she apologized for her earlier actions in Vietnam on the ABC television program *20/20*.

Still politically active in the 1980s, Fonda reinvented herself as a fitness master through her *Jane Fonda Workout* videotapes. She also reemerged as a major film star, making *The China Syndrome* (1979) and *On Golden Pond* (1981). In the 1990s she was perhaps best known as the wife of her third husband, media mogul Ted Turner, whom she divorced in 2001.

U.S.-sponsored program employing American economic might and agricultural surpluses to foster international trade and increase humanitarian efforts, mainly in the developing world. In 1954, the U.S. Congress initiated an effort aimed at using American surplus agricultural commodities to bolster allies and counter communist influence. Over the years, the program evolved and was renamed Food for Peace, with the proceeds from sales of commodities used for educational, scientific, and humanitarian purposes as well. By 2004 the focus of the program was mainly on food aid for developing nations.

During debate in the House of Representatives in 1954, the legislation was hailed as an important weapon in opposing communist expansion. Public Law 83-480, or PL 480, was signed into law on 10 July 1954 by President Dwight D. Eisenhower. Among other objectives in the original legislation, Congress declared its intention to expand international trade among “friendly nations,” facilitate currency convertibility, and make maximum use of American agricultural commodities to further U.S. foreign policy objectives. A “friendly nation” was defined as any country other than the Soviet Union or a nation dominated by the world communist movement.

The act authorized the president to negotiate agreements with foreign countries to provide for the sale of surplus agricultural commodities, to be paid in foreign currencies. These agreements would be used to purchase strategic materials, satisfy U.S. obligations abroad, “promote collective strength,” and further the foreign policy of the United States. The Commodity Credit Corporation was directed to carry out Food for Peace agreements.

Other provisions of the act provided for international famine relief and domestic disaster relief. Congress provided \$700 million to carry out the program over three years, plus an additional \$300 million for emergency assistance.

In the years since it was initiated, the program has been amended numerous times. In 1958 it was expanded to cover the collection of scientific and technological information and the support of scientific endeavors overseas. That part of the program was moved from the Department of State to the Smithsonian Institution in 1966. Early in his administration, President John F. Kennedy renamed the program Food for Peace and placed it in the newly formed U.S. Agency for International Development (USAID).

Food for Peace Program (1954–)

A nun distributes food donated by the U.S. Food for Peace program to the poor of Recife, South Africa, ca. 1955.
(Hulton-Deutsch Collection/Corbis)

USAID celebrated the half-century anniversary of the program in 2004. By that time, 135 countries had received food aid under the program. The agency now works in partnership with 35 organizations and focuses primarily on sub-Saharan Africa and Asia.

British journalist, socialist politician, and Labour Party leader (1980–1983). Born on 23 July 1913 in Plymouth, Devon, England, the son of Liberal member of Parliament Isaac Foot, Michael Foot joined the Labour Party at an early age and became president of the Oxford Union while studying at Wahdam College, Oxford. Much of his life was devoted to leftist journalism. He first gained journalistic notoriety in 1940, when he coauthored a blistering denunciation of the British prewar policy of appeasement toward Nazi Germany in a tract published as *The Guilty Men*. Elected to Parliament in 1945, Foot was an ardent supporter of the left-wing Welsh politician Aneurin Bevan, whose biography he would later write. Foot would remain a Labour member of Parliament until his 1992 retirement, except for the 1955–1960 period. He was a founding member of the Campaign for Nuclear Disarmament, established in 1958.

In February 1974, Foot was appointed secretary of state for employment and in 1976 stood unsuccessfully against James Callaghan for the leadership of the Labour Party. The victorious Callaghan named Foot deputy leader of the party that same year. Foot won the party leadership spot in 1980, taking the post when the party had moved to the Left, with calls for withdrawal from the Common Market (European Union, EU), abandonment of Britain's nuclear arsenal, and opposition to the basing of U.S. cruise missiles in Britain—policies that very much reflected Foot's political values. Prime Minister Margaret Thatcher's charisma and confidence after victory in the Falklands War (1982), combined with Foot's clumsy leadership style and commitment to nuclear disarmament, resulted in Labour's crushing electoral defeat in 1983. Foot subsequently resigned as party leader and was replaced by Neil Kinnock.

Foot retired from the House of Commons in 1992 but remained politically active. He defended the novelist Salman Rushdie, the subject of a fatwah by Ayatollah Khomeini, and argued strongly for intervention in the Balkans against Serbia and on behalf of Croatia and Bosnia. Foot also remained active in the nuclear disarmament campaign. A distinguished author, he has written highly regarded biographies of British Labour leader Aneurin Bevan and novelist H. G. Wells.

Foot, Michael
(1913–)

French term for “Strike Force” to deliver French nuclear weapons. On 13 February 1960, France exploded its first atomic bomb in the Sahara desert. This event led directly to the development of a delivery system.

Force de Frappe

Development of a nuclear deterrent was one of French President Charles de Gaulle's principal policy goals when he returned to power in 1958. On 3 November 1959, at the École Militaire, de Gaulle publicly announced his intention to create a nuclear strike force. There was sharp criticism by Washington of de Gaulle's decision, chiefly because U.S. policymakers did not believe that France had the means to develop a strategically effective nuclear force. They also contended that France was already protected by the United States and the North Atlantic Treaty Organization (NATO), and no country was directly threatening France. De Gaulle, however, was angered by the close cooperation on nuclear weaponry between the United States and Britain and by their nuclear monopoly within the Western alliance but also because the two powers had refused to share atomic secrets with France. (In the early 1990s it was revealed that the U.S. government did assist French scientists indirectly by providing hints in nuclear weapons development that enabled them to realize substantial savings in both money and time.)

De Gaulle rejected an appeal from U.S. President Dwight D. Eisenhower for an integrated NATO military command as well as efforts by Secretary of State John Foster Dulles to get France to forego the development of nuclear weapons. On its part, the United States rebuffed de Gaulle's calls for a NATO tridirectorate of the United States, Britain, and France to oversee defense policies. De Gaulle believed that no such arrangement was possible without France possessing nuclear weapons.

Harking back to mistrust beginning in World War II, de Gaulle believed that France could not count on Britain and the United States. He and many other French citizens saw Britain as an unreliable ally that was not committed to Europe. De Gaulle also believed that the United States would not risk a Soviet nuclear attack on its own soil to employ nuclear weapons in the defense of Western Europe, a position strengthened by the failure of the U.S. government to consult with France during the Cuban Missile Crisis.

De Gaulle insisted that "the defense of France must be French." His intense nationalism played an important role, but de Gaulle also saw French possession of nuclear weapons as helping to establish a new geopolitical dynamic, with France the leader of a "second" Western force that would include Eastern Europe and operating in partnership with, and not as a pawn of, the United States.

On 25 July 1960, after two successful French atomic bomb tests, Premier Michel Debré presented to the National Assembly a four-year, \$2.3 billion plan for a nuclear bomber force. A bill providing \$1.2 billion through 1964 passed the National Assembly on a close vote. The Senate twice rejected the legislation but was prohibited by the constitution from preventing the third passage of a bill in the Assembly. The legislation became law on 6 December 1960.

The Force de Frappe was, nonetheless, one of the most fractious issues in French domestic politics during the de Gaulle presidency. There was general agreement in France in favor of such a program (even the French

Communist Party went on record as favoring an independent French nuclear deterrent). The opposition occurred primarily because of its high financial cost and because it became a rallying point to attack de Gaulle personally.

Beginning in 1962 the French armed forces were reshaped into an interior defense force intended solely for the defense of France, an intervention force for emergency deployment beyond the French borders, and the Force Nucléaire Stratégique, a strategic nuclear force of fifty Mirage IV bombers. The first French nuclear bomber units became operational in 1964. On 7 March 1966, de Gaulle announced the withdrawal of French forces from NATO. Development of the Force de Frappe was sped up and included sixty Mirage IV aircraft, each capable of delivering a 60-kiloton nuclear bomb. In 1967 France launched its first nuclear submarine. In August 1968 France achieved its first thermonuclear explosions in a series of South Pacific tests. Nuclear ballistic missiles in underground silos became operational in 1971, while submarine-launched ballistic missiles (SLBMs) completed the triad.

Although the end of the Cold War diminished the justification for the Force de Frappe, which became the Force de Dissuasion (deterrent force), it continues in place and is supported by virtually the entire French political spectrum.

Prominent U.S. congressman, vice president (1973–1974), and president (1974–1977). Gerald Ford, born Leslie Lynch King Jr. on 14 July 1913 in Omaha, Nebraska, was brought up by his mother and stepfather in Grand Rapids, Michigan. After graduating from the University of Michigan, where he was a star football player, Ford received a law degree from Yale University in 1941. He served in the U.S. Navy in World War II, attaining the rank of lieutenant commander.

Ford returned to Grand Rapids to practice law before entering politics and was first elected to the House of Representatives in 1948. He remained in the House for twenty-five years and became an influential force among
